MICHIGAN BUSINESS FARMING

The only Independent Farmer's Weekly owned and Edited in Michigan

State-Owned Elevator Pays for Itself

By MARTHA CANDLER and WILL BRANAN

Solution Found for Michigan's Marketing Problems

IN THIS, the second story on the state-owned marketing facilities so successfully worked in Louisiana, and now urged by many farmers in Michigan for our own state, the authors state:

"The Louisiana state elevator is the most perfectly equipped grain elevator in the United States. Its rates are reasonable. It pays its own way. It has never cost the people of Louisiana one dollar in taxes or other assessments. And at the present time is promises never to do so."

The evidence in this article from brother farmers in the South refutes the arguments made by the enemies of the farmers in Michigan in the battle in the Michigan Legislature for state-owned marketing facilities.

A PHASE OF PUBLIC ownership in Louisiana, which deals concretely with the needs of Michigan, is the public grain elevator at New Orleans, because it applies the system to one of the specific products which Michigan has to handle and store. It proves that the farmer can market his grain better, and without paying extra taxes for the service.

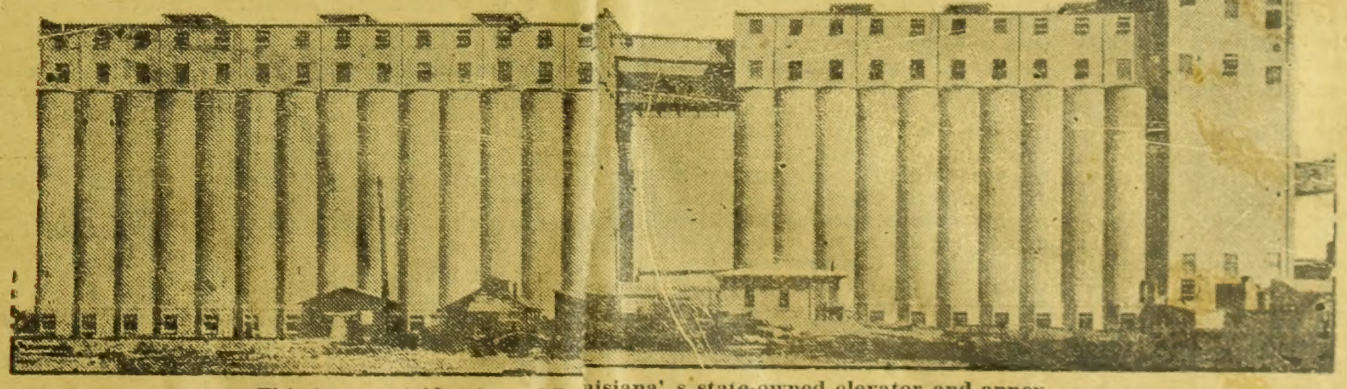
Prior to the building of this grain elevator, the situation in Louisiana was much the same as it is in Michigan now. All the elevators were owned by railroads and private interests and were operated primarily to promote the business of these interests and used by them for competitive purposes. When the grain industry began to increase in the South, it became apparent that new grain facilities must be instituted, either by grants to private corporations to build elevators or by the erection of a state-owned public elevator. The unqualified success of public ownership, as exemplified in the public wharves and cotton warehouses, decided the preference of the people for the state-owned elevator which could serve all interests on equal terms. In this connection, it may surprise the Northern farmer to know that the value of the South's grain crops now exceeds that of King Cotton.

The project of building the elevator was, like all the other port facilities, placed under direction of the Board of Commissioners of the Port of New Orleans, and was financed by the issue of bonds backed by the state sufficient to cover the cost of the plant.

The plans first presented provided for a storage capacity of 1,000,000 bushels, with four shipping legs, two receiving legs, one utility leg and adequate conveyors which would make it possible to unload 160 cars in ten hours, and to load a vessel at the rate of 100,000 bushels per hour.

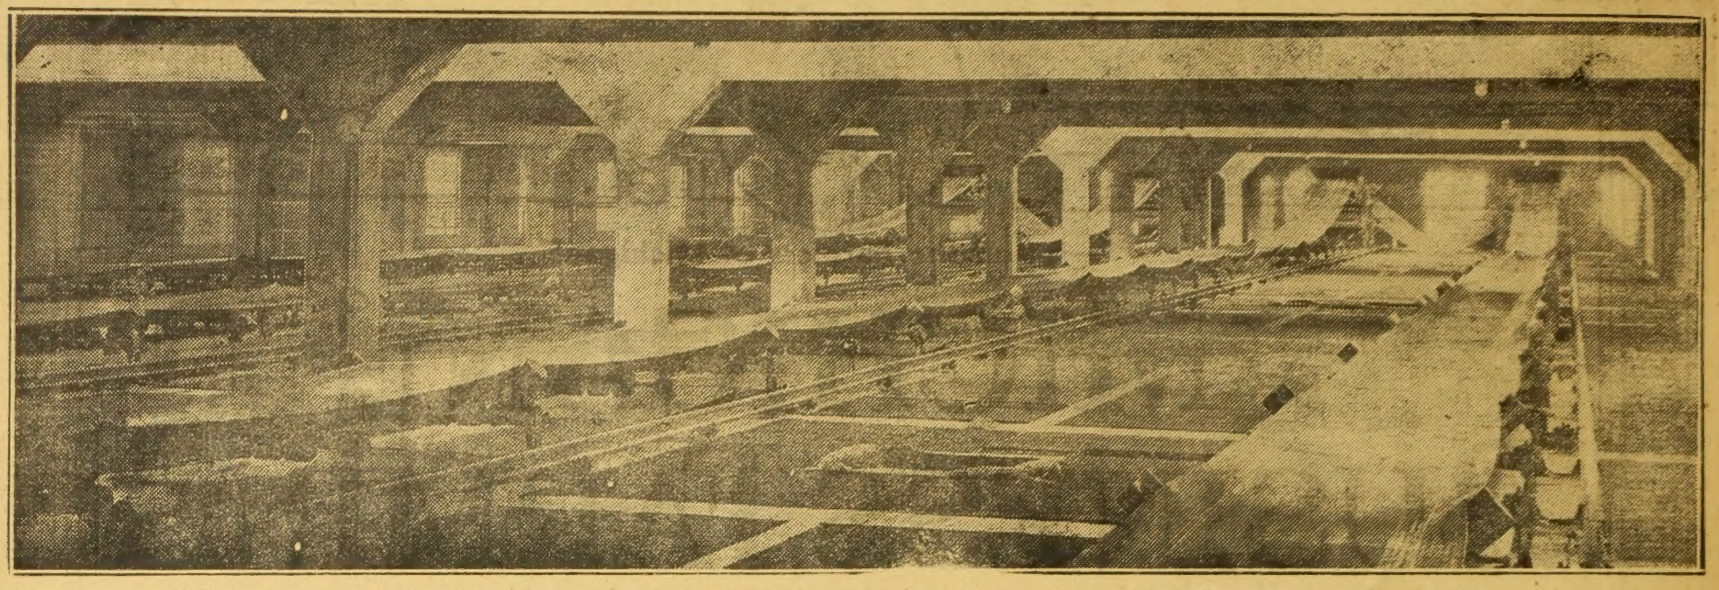
After considerable discussion these plans were finally accepted, with the provision that they would be so arranged that the plant could be enlarged from time to time as the demand for space increased. Since that time the plant has been increased to a storage capacity of 2,622,000 bushels and covers thirty-seven acres of ground. In 1918 it handled $40,000,000 worth of grain not only from the South, but from the Middle West and California as well. So far, it has cost $3,200,000; and it has paid its current operating expenses, interest on its bonds and has set aside a reserve for a sinking fund, in spite of the fact that the rates are most reasonable.

In addition, it is considered by authorities to be the most perfectly equipped grain elevator in the United States. Considering this fact, a somewhat detailed description of its facilities may be of interest to the reader. It is built of reinforced concrete, is fire-proof and explosion proof, besides having the most modern fire sprinklers and Zeleny thermometer system in all the larger bins. This enables it to give an insurance rate of 133 cents per hundred on grain in storage. It has a wharf 1500 feet in length, and a marine leg which makes it practicable to unload grain from



This is an outside view of Louisiana's state-owned elevator and annex.

Here is an Interior View of Louisiana's State-Owned Grain Elevator Which is a Material Help to the Farmers of that State



a ship as well as from a car, an appliance which brings river transportation of grain into competition with the railroads, to the very obvious advantage of the producer.

Efficiency Reigns Supreme

There as a daylight basement seventeen feet high, equipped with a steel drain at the lowest place, which insures dryness. The drainage is taken care of by an electric pump. There are four inclined gallery belts that lead to the marine tower or directly into the dock spouts. These can be discharged into one hold or split and discharged into as many as six holds, either in the same vessel or in three separate vesse'

In order to increase the efficiency of the elevator in its unloading ... decided that a pneumatic conveyor will be installed in the near future.

When grain is unloaded from the cars, it is weighed. For this purpose the elevator has three automatic scales and seven Fairbanks Registering Beam Hopper scales. All weighing is done under the supervision of the New Orleans Board of Trade Inspection and Weighing Department.

Drying is done by means of two Morris Dryers, each having a capacity of 1,000 bushels per hour and connecting with the utility leg directly and indirectly by reversible conveyors with all the other legs. After the grain has been dried it is sent through the conveyors to the department where it is sacked. This is done on a floor built for the purpose ten feet above the main floor; in this way, the cars can be loaded by gravity at the rate of two per hour without congesting the other operations.

Modern Appliances Galore

When cleaning and clipping are necessary, it is done by means of a Monitor Separator with a capacity of 3,500 bushels per hour and two Monitor Oats Clippers, each with a capacity of 1,500 bushels per hour.

There are a great many other modern appliances which go to make up the equipment of the plant, such as the ball-bearing motors, the splendid Journal Alarm System, et cetera, which might be described here, but this article is intended to deal primarily with the economic and commercial advantages of the elevator, rather than the technical details which enable it to do its work efficiently. It is sufficient to say that it has done its work well and has proven in every way satisfactory.

Since its opening on February 1, 1917, the Public Grain Elevator has handled:

	Bushels
Wheat	6,840,000
Barley	11,345,000
Corn	4,106,000
Oats	7,963,000
Total	30,154,000

Of course, had this elevator belonged to private interests, they would naturally have charged a considerably higher rate than has prevailed— in fact, as high as the traffic would stand—but because this facility is public, the rates are much more reasonable than those of inferior warehouses, as these rates are merely for the purpose of paying running expenses, interest on bonds, and creating a sinking fund sufficient to pay the bonds when they come due. It has never cost the people of Louisiana one dollar in taxes or other assessments and at the present time bids fair never to do so.

Because the Public Grain Elevator furnishes the best storage conditions for grain, its warehouse receipts form as perfect collateral as those of the Public Cotton Warehouse. Let us take a specific example of just how this is an advantage to both the producer and banker:

"A" in New Orleans buys a shipment of grain from "B" in Kansas and in payment arranges with his New Orleans bank for "B" to draw on that bank at sixty days sight, documents attached. The bank accepts the draft when presented, payable in sixty days after that date, and then returns it to "B" who can sell this acceptance immediately in New York or Chicago, realizing its face value, less the current rate of interest for sixty days on this kind of paper. Thus the producer would be paid for his grain while neither "A" nor the bank would have as yet paid out any money.

Excellent Security Provided

When the grain arrives in New Orleans the bank has it stored in the Public Grain Elevator and gets a warehouse receipt for it from the Board of Port Commissioners and a certificate as to the grade of the grain from the New Orleans Board of Trade. This gives excellent security if a good margin above the market price of the grain is maintained. When the sixty days have expired, "A" must have the amount of the acceptance in the bank; or, in case he should wish to reship the grain, he may substitute any other satisfactory collateral to the bank as security for the acceptance.

In addition to the advantages already mentioned, this elevator has furnished the state of Louisiana with waterside grain storage equipment which co-ordinates all river, rail and sea-going activities.

Other grain states need state-owned grain elevators as much as Louisiana. Public elevators mean that grain is stored at lower rates and under better storage conditions. They mean a better balance of distribution and the more stable market which must inevitably result. Grain storage facilities could be operated on a larger scale—operated for the building up of the grain industry, so that every producer would benefit, however small his production. In a word, public grain elevators have already proven a business success, and are now proving almost a business necessity. It is only by means of them that the farmer can enjoy the greatest benefits of his produce.

(This is the second of a series of three articles on the terminal, state-owned marketing facilities of Louisiana, showing a way out for Michigan's market troubles.)

CURRENT MICHIGAN AGRICULTURAL NEWS

STATE FAIR OPERATING BEFORE RECORD CROWDS

Hundreds of thousands of farmers and city folks have been swarming day and night into the biggest exposition in America, which happens to be the affair gotten up due to the farm business of Michigan. In other words the Michigan State Fair is being packed to the gates with what is considered to be by far the biggest crowd in its history.

Women's activities marked the bill for Wednesday, and the Gleaners Day, of Thursday, was probably the biggest single eulogy paid to the farmers of the state. "Michigan Day" is on the boards for Friday, and Saturday is styled "Canadian Day." Sunday, the closing day, is to be made resplendent by championship races.

SMUT PREVAILS IN WHEAT

Stinking smut prevails in wheat in Michigan this last year, and the importance of planting clean seed, has led the botany department of the M. A. C. to establish a free wheat testing service for farmers. Samples of a pint or half pint will be examined by the centrifuge method. Information as to the proper smut treatment will be sent free to farmers.

With Michigan's County Agricultural Agents

More than 5,000 farmers in Wayne County and from all Southern Michigan assembled at the Avondale Stock Farm in Wayne County, where County Agent Gregg had arranged a big Farm Bureau Picnic, with a tractor demonstration in the morning and with speeches by prominent farm leaders in the afternoon. Bate's Steel Mule, Fordson, Cleveland, Titon, Moline, Oil-Pull, Case and Sampson were on the list of the machines competing. A track meet was held for boys and girls. Grangers, Gleaners, Farmers' Clubs and other community groups were all present and dined together to emphasize the growing get-together-ness-to-win which has been found necessary in Michigan.

* * * *

Otsego County has good prospects for its corn crop this year, according to A. C. Lytle, Otsego County Agent. Favorable weather in August did much good to crops, though hoppers and other pests have done considerable damage. He recommends a method of shipping butchered lambs to market by parcels post, due to the success of this method in another ...te. The Farm Bureau picnic was ...d August 29.

* * * *

...Macomb County is to have a new ...nty agent, due to the resignation ...ch took effect Sept. 1, of H. V. ...ttle, who has been working in the ...nty for a long time. Mr. Kittle ... shown tremendous activity in his ...k for organizing clubs and con... in securing labor for farms, in ...k for the Dairy Councils and in ...erous other lines, which has won ... a large number of friends among ... farmers. He intends to resume ... farm work in Livingston County.

...ginawasee farmers are welcome to ...services of an expert in poultry ...ing, according to a report of H. ... Dennison, county agent at Cor...ia.

LEAF HOPPERS DAMAGE NORTHERN SPUD OUTPUT

Leaf hoppers are doing great damage to potatoes in the northern part of the lower peninsula of Michigan and in the upper peninsula. Dry weather is said to be responsible for the excessive number of the pests, which have caused a million dollar loss in the Upper Peninsula alone. The hopper causing the injury is a little green leaf-hopper which causes the leaves to curl and become brown at the tips and edges, producing tipburn.

PRESQUE ISLE ALSIKE PAYS

John G. Krauth, of Millersburg, Presque Isle County, writes that the returns on alsike clover seed averaged $7 per acre, not counting the value of the straw and chaff which remained after the clover was hulled, and which was worth for feed purposes, at least $5 more per acre.

John W. Egbert, secretary-treasurer of a new Farmers Union, recently organized at Munger, Township of Portsmouth, Bay County, has sent a report of the organization. This is one of a ...s of Farmers' Co-operative Un... ...ng organized through the state.

Bankers Push Partnership Work With Farmers

By LEON F. TITUS

Cashier First National Bank, Traverse City, Michigan, and Chairman Agricultural Commission Michigan Bankers' Association

FOR MANY years the bankers of the United States have been working along fairly well defined lines for the improvement of agriculture. Although haphazard to a certain extent, lacking co-ordination in some essentials, their methods have served their purpose well enough in the past.

Now, however, the problems of the farmer, arising from the war and the reconstruction period, have assumed new angles and phases of bigger import which the plans of the past, formulated originally as a solution, no longer fit.

Recognizing these facts—really for the first time—and realizing the need as never before for the development of a program of constructive effort, based on the underlying principles of a sound platform, for the support of national agriculture, the National Agricultural Commission of the American Bankers Association and the association's state agricultural committees convened in joint conference in Washington recently with officials of the Department of Agriculture, the United States Bureau of Education and the Farm Loan Board. There were present sixty bankers representing the agricultural committees of thirty-seven state bankers' associations, including thirteen state secretaries, two state presidents and representatives of a number of clearing house associations.

Historic Conference Held

That conference, in my opinion, will go down in history as the most remarkable of its kind ever held in American banking. For out of it has emerged a program more specific than any yet conceived whereby the bankers of America may be genuinely helpful to the farmer in his time of need. It means, virtually, a standardization of effort with the bankers and the government as partners; a clear outline of the specific things the banker must do in every phase of banker-farmer helpfulness in order to accomplish the desired results; and it establishes definite sources of information—agenciesfrom which or from whom the individual may seek and find the solution of the problems peculiar to his own locality.

First, it is recognized that the labor question is so dependent upon the high cost of living that all our national social problems can be safely laid to its successful solution. To this end the bankers are working, establishing concrete co-operative effort in every agricultural locality in the United States, outlining such plans that an active and constructive program can be worked out by the local bankers, and helping to solve the problems existing in their own home communities. The plan of organization adopted by the Michigan Bankers' Agricultural Commission is the plan to be suggested to all state associations that are not so organized.

Farming Source of Prosperity

If the foundation of national prosperity rests upon agriculture—that is, the production of food at lower cost to the consumer and with more profit to the producer—agriculture must prosper, and in order for agriculture to prosper, it is imperative that:

1. The boys and girls must be kept on the farm.
2. In order to keep them there, home conditions must be vastly improved, affording the young people on the farm the same facilities making for comfortable and happy living that the city boys and girls enjoy.
3. Rural education must be bettered and broadened; consolidated schools must be installed.
4. Good roads must be constructed to make easy access to the social and educational advantages of the city; the use of the automobile (and the good roads resulting) occupies an important place in cementing the social and community advantages of town and country.

Each of these "musts" is absolutely necessary (each dependent upon the others) in giving stability to the entire program. In every phase of each of the points mentioned, the banker is among the active factors in getting results. And results are being obtained, not as swiftly as might be desired in some quarters, perhaps, but none the less surely.

Of inestimable importance in the method of operation proposed is the county agricultural agent.

Of 2,500 agricultural counties in the United States, 2,200 now have county agents, all conscientiously performing their duties.

Only a few of the counties in Michigan have no county agents and the Michigan Agricultural Commission is now preparing to supply them and "make it unanimous." A bill has already passed the house of the Michigan state legislature and will probably pass the senate, repealing all former and contradictory laws and providing authority for boards of supervisors to co-operate with the Michigan Agricultural College and with the federal government to appropriate money to be raised by taxation for this purpose. Under the bill the county board may establish a farm bureau to act as representative of the board in co-operative work of this character.

Real Co-Operation Wanted

Laws passed by other states, notably Iowa and Kansas, are somewhat of the mandatory character and have therefore automatically reacted upon the public sentiment so as to prevent the desired results to some extent. In some cases the opposition of supervisors has resulted in litigation. In the opinion of the attorney general of Michigan, such a measure was deemed unconstitutional for Michigan.

After home and community conditions have been corrected, the next important step in promoting farm prosperity is improvement of conditions that govern marketing.

While the home market is the one upon which the individual depends, the constructive program starts in Washington, the Bureau of Markets having outlined plans the success of a farmers marketing association depends on the quality of co-operation received from the farmers and bankers in each locality. In other words, the energy and effort expended by the county agent and the co-operation of the bankers determine the efficiency of the association and are the only factors that limit the association's scope. The licensing of handlers affords protection at the point of delivery—and the licensing of handlers, by the way, is now an accomplished fact.

The Bureau of Markets is providing improved methods of distribution, refrigeration, etc., and through this bureau it is certain that the present wasteful cross-firing of transportation will be eliminated eventually. Michigan potatoes will be consumed nearer home than Pittsburgh. New Jersey potatoes will not be shipped to Indiana. Neither will western-central potatoes be shipped to other central potato-producing sections.

It is the desire and the aim of the Bankers Association working with the Bureau of Markets co-operate with state authorities to bring about uniformity in warehouse receipts and to standardize storage practice. Eventually, too, the association expects to enable persons holding staple non-perishable products to place them in a warehouse and receive a receipt showing the ownership, location, quantity, grade, etc., so that the receipt can be used readily as security for loans at any bank.

Regulations for cotton warehouses have already been completed and regulations for grain and tobacco warehouses will be completed in the near future.

For a long time bankers and warehousemen have realized the desirability of having warehouse receipts as nearly uniform as possible in all of the states. Several years ago a commission for the purpose of securing uniform state legislation was organized. This commission is composed of representatives of the American Warehousemen's Association, the American Bankers Association, and the American Bar Association. After the subject was studied carefully, what is known as the "Uniform Warehouse Receipts Act" was prepared and, largely through the efforts of this commission and the associations mentioned, the act has been adopted by thirty-nine states, Alaska, the District of Columbia, and

(*Continued on page* 15)

Bankers in Michigan have begun a campaign to provide real co-operation

Vegetable Growers of America Will Convene in Detroit Next Week

THE VEGETABLE Growers Association of America, which holds its eleventh annual convention this fall, will convene at the Statler Hotel, Detroit, Sep. 9 to 12. Many Michigan members are expected to attend the elaborate program. The program follows:

Tuesday, Sept. 9: 10:00 a. m., Address of Welcome, Mayor Couzens of Detroit; response, President Howard W. Shelby; business session; report of Secretary; report of Treasurer; President's Address and announcement of annual committees. 11:00 a. m., report of standing committees; membership, R. W. DeBaun; Vegetable Nomenclature, T. C. Johnson; Agricultural College, A. T. Erwin; Weights and Measures and Organization, C. W. Waid.

Tuesday afternoon: 2:00 p. m., "Co-operation Among Producers," Hale Tenant, in charge of government and state co-operative work in Michigan, East Lansing; 2:45 p. m., "A Producers Organization that Co-operates," Dorr Buell, manager of Michigan Potato Growers Exchange, Cadillac, Michigan; 3:15 p. m., "The Ashtabula Lettuce Growers Association," E. A. Dunbar, Ashtabula, O.; 3:45 p. m., "Co-operation Among Toledo Gardeners," Louis F. Miller, Toledo, Ohio; 4:15 p. m., "Co-operation in New England," Howard W. Selby.

Tuesday evening: 8:00 p. m., "Vegetable Growing in Foreign Countries," illustrated lecture, Alfred Vivian, Columbus, Ohio.

Wednesday, Sept. 10, Market Gardeners' Section, H. W. Selby, chairman: 9:30 a. m., "Experimental Work in Connection With Ontario Vegetable Growing," Prof. A. H. MacLennan, Toronto, Canada.

Wednesday, 10:15 a. m., "Developing Improved Strains of Varieties of Vegetables," Prof. J. W. Crow, Guelph, Canada; 11:00 a. m., "The Use of Commercial Fertilizers and Lime in Connection with Vegetable Growing," Prof E. O. Fippinfi Ithaca New York.

Greenhouse Section, Prof. H. F. Thompson, chairman. 9:30 a. m., "Past, Present and Future of Vegetable Forcing," Mr. Frank Luce, Ashtabula, Ohio; 10:15 a. m., "Vegetable Forcing at Cleveland, Ohio," H. H. Richardson, Cleveland, Ohio; 11:00 a. m., "Better Crops for the Greenhouse," an experience meeting led by Charman Thompson.

Muck Land Section, Prof. H. C. Thompson, chairman. 9:30 a. m., "Promising New Crops for Muck Lands," Mrs. Osborne, Ann Arbor, Michigan; 10:00 a. m., "Growing Drug Plants on Muck Soil," E. L. Woodhams, Mentha, Michigan; 10:30 a. m., "Muck Land Problems," Ezra Levin; 11:30 a. m., "Commercial Fertilizers on Muck Land," Prof. E. O. Fippin, Ithaca, New York.

Wednesday evening. Theatre night. "Pay your money and take your choice."

Thursday, Sept. 11. 7:00 a. m., inspection trip to East Market, Detroit. Market Gardeners' Section, Pres. Shelby, chairman. 9:30 a. m., "Work at the Virginia Truck Experiment Station," Prof. T. C. Johnson, Norfolk, Virginia; 10:15 a. m., "Work on a Two Thousand Acre Vegetable Farm," R. W. DeBaun, Bridgeton, N. J.; 11:00 a. m., "Muskmelon Culture," illustrated, H. B. Blandford, Fremont, Michigan. Greenhouse Section, Louis F. Miller, chairman. 9:30 a. m., "Development of Vegetable Forcing at Toledo, Ohio," Geo. Bayer, Toledo, Ohio; 10:15 a. m., "Experimental Work in the Greenhouses at the Ohio Experiment Station," Prof. W. J. Green, Wooster, Ohio; 11:00 a. m., "Some Diseases of Greenhouse Crops and Their Control," Prof. A. D. Selby, Wooster, Ohio. Muck Land Section, Ezra Levin, chairman. 9:30 a. m., "Growing Celery in the Kalamazoo Region," Ezra Levin, East Lansing, Michigan; 10:15 a. m., "Onion Growing on Muck Land," C. E. Downing, Vermontville, Michigan; 11:00 a. m., Round Table discussion on diseases of muck land crops, led by Prof. G. H. Coons, East Lansing, Michigan.

Thursday afternoon. 1:00 p. m., boat ride, courtesy Detroit Market Gardeners' Association.

Thursday evening, 6:30 p. m., banquet, Statler Hotel. Toastmaster, Pres. H. W. Shelby.

Friday, Sept. 12, "All Together Meeting," Pres. Shelby, presiding 9:30 a. m., "Storage of Vegetables," Prof. H. C. Thompson, Ithaca, New York; 10:10 a. m., "Extension Work for Vegetable Growers," C. E. Durst, Anna, Ill.; 11:00 a. m., "Possibilities of State Association Work," Prof. L. M. Montgomery, Secretary Ohio Vegetable Growers Association; 11:30 a. m., Round table discussion of diseases of vegetables and their control, led by Dr. G. H. Coons, East Lansing, Mich.

Friday afternoon, 1:30 p. m., business session; report of special committees; election of officers.

Saturday, Sept. 13, inspection trip to James B. Rice Seed Farms, Grass Lake, Michigan. Courtesy of Jerome B. Rice Seed Company.

Farmers Outwit Drouth with Overhead Watering

Pipe Lines Provide Timely Rain for Thirsty Crops on Michigan Farms

By VERNE E. BURNETT

OVERHEAD IRRIGATION is being tried out successfully on farms in various parts of Michigan and many of those in the business of farming are showing great interest in the new stunt of outwitting drouths and making farming pay in spite of bad weather. In the Northern part of Michigan, one may see these devices over potato tracts. In Western Michigan they are used in the Fruit Belt. In Central Michigan, vegetable and seed farming is made a paying proposition for many by the artificial rains. And in Southern and Eastern Michigan, various sorts of farming are known to be benefitted by sprinkling systems.

The business of overhead irrigation, of course, is really only an infant thus far, but it promises to become a powerful giant before long in the business of farming. We have yet to hear from a farmer in Michigan who has put in this device correctly without getting profitable results therefrom. Overhead irrigation is not yet to be urged as a cure-all for the many ills of farming, by any means, but when used wisely over small areas of crops which should pay especially well, it surely is tried and true as a profit-maker.

Take, for example, the farm of M. W. Lennon near Ann Arbor, in Washtenaw County. Overhead irrigation is used not only in connection with greenhouses, but also over a very large garden area, where the crops are growing luxuriantly. The writer passed the little farm one evening about sundown recently when the water had been turned on. Of course, as everyone knows, it is better to water plants early in the morning or in the evening when the sun is not glaring full blast on the fields.

The fine sprays of water on the Lennon farm, shot far and wide, covering practically every part of the growing field. The sprays were fine so that they did not wash out roots of the plants, and still were sufficient to insure good root-soaked irrigation. It is best when the wind is up, as it was this particular evening. The sprays were scattered thoroughly over the flourishing crops. Two illustrationsshown herewith, indicate the appearance of the Lennon system.

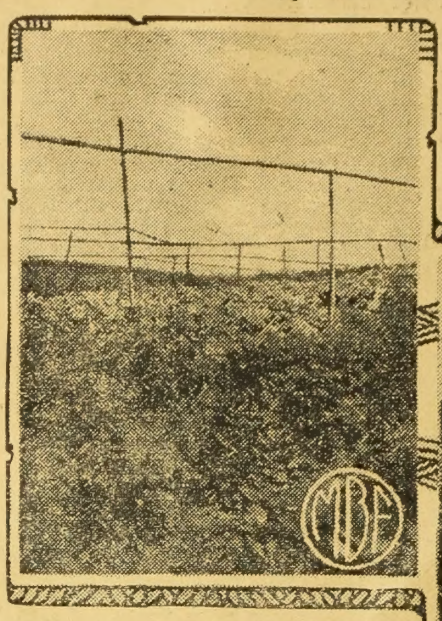
Many of the overhead irrigation systems in use in Michigan are more extensive and up-to-date (we understand that the Lennon system has been operating for several years.) But it is typical of what can be done with overhead irrigation.

M. A. C. Advocates System

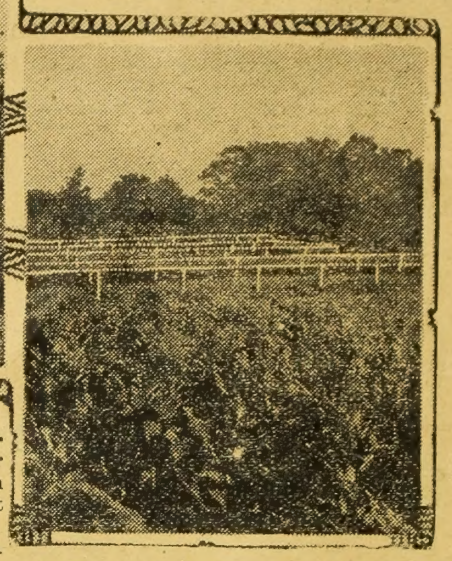
The Michigan Agricultural College has done some good work along the lines of overhead irrigation and for the asking will provide farmers who are interested with much more complete data than can be given here. The same is true of the United States Department of Agriculture, Washington, D. C. Anyone interested in learning more of the practicability of the various phases of overhead irrigation is urged to write to one of these sources.

The Michigan farm college has provided an illustration of a truck farm in Central Michigan, showing the water turned on and spraying over the furrows. The pipe lines in these pictures are around 50 feet apart, which is considered a handy distance. They can be used to spray the crops with paris green or almost any bug poison. The cost is reasonable, and the figures submitted by various farmers show that often within a year the system pays for itself. And after that time when the thing has paid for itself, the system brings in clear profit

Some farmers in Michigan had a little hope for the dynamiting experiments conducted near Battle Creek a few years ago. The idea was to explode dynamite or other high explosives, so as to cause sufficient commotion in the atmosphere to percipitate rainfall. At one such experiment, rain fell quite abundantly, only



Here is the Lennon irrigation system used in Washtenaw County, near Ann Arbor. It has been in operation for some years, and some excellent results have been obtained.



This isn't a fancy new kind of fence. It is a row of parallel pipes, several feet off the ground and about fifty feet apart, which throws out fine sprays of water over the crops almost any day when the ground gets the least bit dry.

it fell heavier in nearby districts where no blasting had been committed. The theory was based on the idea that great amounts of rainfall occurred near a battlefront.

But overhead irrigation with pipe systems is far more successful and farmers are considering it seriously, especially when they see a neighbor really making the business pay. There probably are a few who have not worked the thing successfully, although we have not yet heard of any specific cases where it didn't pay. Of course, there are some fizzles for nearly every good kind of venture.

Schemes are being worked out whereby big fields can be irrigated from overhead by movable pipes. In seasons of excessive drouth a large field could be irrigated a section at a time, by removing the system to various parts of the field. Supposing a farmer had merely one long pipe line over his field. Say the water squirted out 25 feet from each side of the pipe, making a strip fifty feet across the field. When that strip was wateredthe pipe could be moved, it is suggested, to a new line fifty feet away, and so on, till the field was watered. The prop posts could be left permanently in place and only the pipe would need to be moved, so long as the connections with the tank were O. K.

J. B. Hasselman, in extension work for the M. A. C., has gathered the following data:

"Under conditions which require that the crop being raised have an assured water supply, and provided that the crop is not one which covers too extensive an area of ground, the so-called overhead system of irrigation has proved itself within recent years to be a tried and practicable institution. In Michigan the use of overhead systems is as yet practically limited to greenhouse use and truck gardening where the necessary expense connected with the installation of the equipment can be justified by the forcing of profitable small-area money crops.

"Overhead irrigation systems are commonly called Skinner Systems, because of the fact that the Skinner Irrigation Co., of Troy, Ohio, has been the pioneer in such work and is today the leader in overhead work. Other reliable companies are, of course, in the game now, but the name "Skinner" has stuck in the language of overhead irrigation. A new name has yet to come. The benefits of overhead irrigation may be summed up as follows:

1. The water falls on the crop in fine spray; thus preventing washing or caking of the soil.
2. The foliage of tender crops is not injured by the force of water, as would often be the case with hose and heavy spray watering.
3. The water is distributed uniformly over the area to be covered.
4. The overhead system effects a considerable saving of labor in the care of a crop.
5. Insecticides, fungicides, and fertilizers may be applied through the overhead systems.

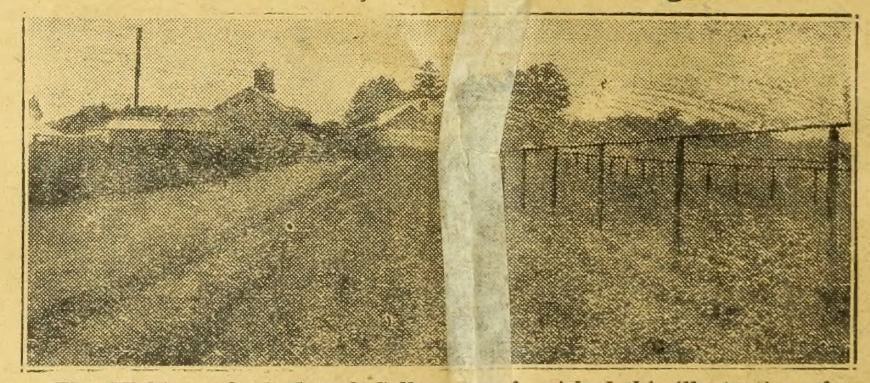
Among the requirements for the installation of an overhead system is, of course, a network of pipes with the accompanying nozzles and fittings. Prices of such equipment are so variable at present that it is difficult to get an accurate estimate of the cost of installation. Estimates of a few years ago gave from $90 to $150 as the average cost per acre, but present day estimates have been given at around $250.

"Pipe lines are generally strung 50 feet apart in outdoor irrigation of this type, the distance varying somewhat with the water pressure available. The size of pipe used varies from 3-4 inch to 1 1-2 inch, according to the length of the lines. Supports are commonly made of 2 inch pipe posts, placed at 25 foot intervals. The nozzles are set in the pipe line at about 4 foot spaces for outdoor work.

"The water supply is of prime importance in the overhead system. A pressure of from 20 to 25 pounds per square inch is necessary for the nozzles to work properly, while a pressure up to 40 pounds is considered better. This means that unless water can be obtained from a city plant some equipment must be installed to furnish the necessary pressure. Sometimes the water is fed to the system from reservoirs which will furnish the desired pressure. More commonly, however, the water is pumped directly into the system, gasoline engine furnishing the usual power.

"In many sections of the country, especially in the East, overhead irrigation has quite revolutionized the gardening industry. With the increasing demand for large production from small areas, it seems likely that the overhead systems will continue to increase in popularity. Aside from other advantages, they are an efficient insurance against the danger of crop failure during dry seasons."

This Isn't a Garden; It's Part of an Irrigated Farm



The Michigan Agricultural College furnished this illustration of a truck farm actually being watered by overhead sprinkler, or Skinner, system.

MECOSTA GETS SHORTHORNS

Thirty-five head of registered shorthorn cattle were recently purchased for distribution among farmers of Mecosta County. Jacob Klinefelter, supedvisor of Colfax Township, R. W. Wigle, cashier of the Big Rapids Savings Bank, and Paul H. Smith, county agricultural agent, for Mecosta County, were selected as a purchasing committee and made the purchases in the vicinity of Myrtle Station, Ontario. The car was made up partly of eight-month old heifers which will be used for Junior Calf Club work, a number of two year old heifers, a few three year old cows and three young bulls. The cattle arrived in Big Rapids Sunday, August 24, and were exhibited at the Fair Grounds until Friday, August 29, at which time they were distributed to farmers from nearly every part of the county.

CHESANING FARMERS SUCCEED

Saginaw County farmers who belong to the Chesaning Farmers' Elevator Company, made a net profit for the year of $11,286.31, upon sales totaling $634,024.31 for the past year. A dividend on capital stock of eight per cent was declared. Only $22,660 of capital has been invested in the last four years, and a total of $33,798.56 has been earned. At the annual meeting in August the farmers emphasized the value of sticking together, avoiding petty jealousies and working together with and efficient manager in order to succeed.

OAKLAND FARMERS S. O. L.

Oakland County farmers, many of them are working long hours at the hardest kind of labor, but the high prices prevailing everywhere are not even making decent wages for the farmer this year, according to C. B. Cook, county agent for Oakland, writing in the newspapers. "The hardest kind of labor, but with high necessary to his success," he writes. "As a matter of bread and butter it is good business for everyone to help play into the hand of the producer, for our country must live on what the farmer can spare."

Farmers Not to Blame for High Cost of Living

Farm Bureau Federations Discuss Causes and Remedies for Hard Times

Who is to Blame for it All?

WHO IS TO BLAME for the high cost of living? is the question everyone is asking. Naturally every individual wishes to put the blame upon another, so there is a general consensus of opinion that an unknown entity called the "profiteer" is at fault. Every man who deals in commodities is suspected of being a profiteer until he proves otherwise. But we think the answer is best provided by a group of state farm bureau federations who have been investigating the causes of the high cost of living and suggest remedies for the same. Their conclusions are identical with those stated in recent issues of Business Farming. "The high cost of living," say they, "is due to the failure of practically all folks to practice even ordinary economy in public and private life." The article, which is endorsed by officers of the Michigan, Ohio, Indiana, Illinois, Iowa and Nebraska Farm Bureau Federation is published herewith.—THE EDITOR.

THE HIGH COST OF LIVING is not due to the original price of the farm product to the grower. The Government minimum price for wheat does not determine the cost of a loaf of bread. Fixing a re-sale price at $1.50 per bushel would effect, if reflected to the consumer, very little the cost of living for the average family. Average wheat consumption in this country is about 6 1-2 bushels per year per person. Reduction in price to $1.60 per bushel would mean a saving of $4.94 per person, or $24.70 for a family of five. This is nothing at all compared with the reduction of wheat acreage and correspondingly small crop next season, which would result from discouragement of the producer.

The high cost of living is not due to the storage of meats, vegetables, fruits, eggs and poultry in the season when these are produced in surplus against the season of short supply. Popular as is the hue and cry against storage of foodstuffs, it is a palpable fact that modern storage methods are the greatest food savers in the world; at one and the same time saving food in time of plenty and supplying it in time of scarcity, and moreover, maintaing a steadier level of prices throughout all seasons for any given commodity. Indiscriminate restrictions on food storage will serve only to wastefully glut the market in the harvest season of meats, vegetables, fruits, eggs and poultry, at a price disastrous to the producer and create a dearth of these products out of season at prohibitive price. Food storage for speculative purposes is intolerable.

The high cost of living is not due to exportation of food and clothing any more than it is due to our heavy exports of manufactured goods, machinery, etc., of which the farmer is a heavy purchaser. An embargo on foodstuffs to bring down the high cost of living will be as demoralizing to American agriculture as the embargo placed on foodstuffs was to French agriculture in the time of Louis XIV. Moreover, the high cost of living is not merely a local or National consideration. It is a world matter. Applying a first aid remedy at home to create an foster anarchy and revolution abroad should not be the policy of the United States even at this critical juncture.

The high cost of living is not due to lack of desire or effort on the part of the farmers to produce to the limit of their physical ability. Not within the knowledge of the present generation have all the farmers of the country extended their every energy in a consecrated effort to produce to the last kernel and pound all the grain and wheat products needed to feed a hungry world. The operation of the short hour day in industrial centers and a talk of shorter hours and ever-advancing pay has made it well nigh impossible for anywhere near the normal supply of help to be maintained on farms. The daylight saving plan has mitigated against maximum production by reducing materially the practical working hours of the day on the farm, especially in so far as the hired man's labor is concerned. Following a beautiful promise of a bountiful wheat harvest, a most destructive attack of scab and rust cut the wheat yield very materially. Untimely heat and drouth shortened the oat crop and adversely affected the corn crop. The long hours and strenuous diligence of the farm operator have, in spite of these adverse circumstances, put the crop across; as he harvests and markets it he wonders somewhat if he, with his disregard of the time clock and his recompense based on a gambling game in which the natural elements deal the yield and the middlemen deal the price, hasnot been pulling the short end of the hitch. The farmer has not struck, walked out or otherwise slackened in production. He has increased his effort; extended his operations to the limit of physical ability and financial credit, and striven to feed the world, believing the world would fairly and gladly recompense him. Instead, he finds in many prominent places those who, in their eagerness to find an answer where there is none, and to shun the real facts of the situation, who point to him with scorn and malevolence, saying, "Thou are the culprit."

The high cost of living is due to a stagnation in production of manufactured goods and prepared foodstuffs. Every labor strike that shuts down any plant engaged in the preparation of foods or the making of clothing, that shuts down a mine or a mill, adds to the high cost of living. Shortly after a strike of the U. S. Yards and packing plant employees, the wholesale price of fresh meats advanced 15 to 35 per cent., directly due to the short mill and consequent small supply of fresh meats. In Chicago 100,000 men have been out of work for months and all building operations have been at a standstill because the carpenters refuse to work for 92 1-2 cents an hour. This strike tied up building operations in many small towns, within a radius of 100 miles of the city, as well as in Chicago. Following the Chicago street car strike, a strike of the Aurora, Elgin and Chicago Electric Railway employees, which threw thousands out of employment on account of lack of electric power in the towns along this line, left the small Aurora meat packing house without power to run its refrigerating plant. There were about 10,000 pounds of meat spoiling. It is said the manager appealed to the head of the union for power to keep this refrigerating plant running and prevent the spoiling of this meat, and the insolent reply hurled back was—"I don't give a damn if all the meat in the United States rots." Such are few, the daily press records the many instances of premeditated stagnation in production which shortens supply and plays into the hands of those who fix the price to the consumer.

The high cost of living is due to price manipulation and extravagant profits of middlemen. Referring again to a Chicago situation. A small group of milk wagon drivers at one of the milk distributing plants struck for $44 per week and regular commissioners. All the other milk distributors at once declared a lockout against their drivers. After two or three days of sparring, the employers agreed to meet the demands of the men, and announced a 1 cent per quart advance in the price of milk to the consuming public. Analysis of the arithmetic of the case shows that it took about four-tenths of that cent to pay the employees and that six-tenths of each cent was added to the profits of the distributors. Food on the table costs out of all proportion to the price to the producer.

Part of the reason for this is due to the short hours and high wages for labor, part to the exhorbitant prices of the several middlemen between the producer and the consumer, and a considerable part to the extravagant practices of the consumer in methods of purchasing supplies. Without going into an analysis of who gets it, compare the difference in price of choice beef on the hoof at 18c per pound with that of a moderate meal for five at one of Washington's modest hotels, the meal consisting of steak, potatoes, corn, bread and butter and coffee and costing $11. Of this $11, the producer of the food, the farmer, get about as follows: Beef, two pounds 30 cents; potatoes, 13 cents; bread, 2 cents; butter, 7 cents; coffee, cream and sugar, 4 cents; corn 20 cents; making a total of 83 cents. This is about 7 per cent of the total cost. A 50 per cent reduction in the price of these products to the producer would have lessened the total cost of the whole meal on the hotel table only 41 cents; smaller by half than the customary 10 per cent tip, which by the way is not included in the above price for the meal. This illustration shows the extremes of exorbitant profits of the middlemen and of extravagant practices of the consumers in purchasing, including probably all the evils that are contributing in large measure to the high cost of living t othe consumer. A reduction to the producer in the price of these foodstuffs to a point which would stagnate production of grains, produce and meats, would have an inconsequential effect upon final prices to the consumer.

The high cost of living is due to the failure of practically all folks to practice even ordinary economy in public and private life. A program of hard road building, contracted at almost twice pre-war costs per mile, due to advance of price of material and labor, has been delayed and interefered with because of the fact that delivery of building material has been delayed by tying up transportation facilities.

This question of lack of economy in public spending was brought withing the focus of the American public's attention early in June, when the railway brotherhoods demanded of President Wilson that he bring down the cost of living immediately threatening a demand in wage increase amounting to a total of $800,000,000 a year, payable necessarily from one or two sources, revenues from increase of freight rates or from a deficiency appropriation, either of which would add to the cost of living. A lack of practicing economies in private life may be illustrated without end. Theatres and places of amusement, resorts and watering places are crowded with beautifully gowned women and handsomely tailored men. The price of shoe shines has doubled and trebled, yet one must wait his turn, though he could shine his own shoes at home for less than one cent. So illustration might be multiplied, all showing that lack of practicing plain economy is a great contributing factor in maintaining the high cost of living.

The high cost of living is due to shifting indivdual responsibilty for the present state of affairs and each component of the people of the nation seeking self-satisfaction rather than the answer to the great world question. This is our National state of mind. Instead of doing our National and individual best to produce more goods, so that there will be enough for all at a reasonable price, each is trying to better his own condition at the expense of the other fellow. There is a limited supply in the world. Just now we are quarreling over the division of what we have. If we would stop quarreling and go to work, we would soon increase production, so that all would have plenty.

Home of Nat'l Board of Farm Organizations

Here is the first Washington headquarters building of the greatest class of American business—namely, farming.

THE NATIONAL Board of Farm Organizations, which represents several hundred thousand farmers at the national capital, and has been very active in shaping legislation of interest to farmers, has recently purchased a building in the city of Washington for the sum of $60,000. It is the first farmer's organization to own a structure of that kind at the seat of government. It is to be greatly regretted that all the farm organizations of the country cannot be represented by a single agency at Washington. But the farmers and their organizations have not yet learned their lessons. Jealously still exists in the rank, and while there are at least two big central agencies at Washington claiming to represent the views of agricultural America it is a lamentable fact that frequently they cannot agree upon important issues and the strength of the farmers is thereby divided and brought to naught.

Organized agriculture will never get anywhere until the numerous organizations of farmers can act in unity and conjunction. Members of farm organizations should insist upon an early national federation of all societies, associations and other organizations claiming to represent farmers' views and interests.

—for all the farmers of Michigan

Where Does the Farmer Come In?

"NONE OF THE investigations to date," says a press dispatch, "have produced any evidence that the farmer is guilty of profiteering." The investigators probably likewise discovered that a few farmers are guilty of profiting, but hesitated to tell the public so. We are glad, however, for this half-way defense of the returns received from the farming business. It will put the farmer in a better [illegible] the buyer of his [illegible] been guilty of [illegible] may have been years when his profits seemed excessively large, but these were always succeeded by periods of very small profits or none at all. Wholly lacking the power of fixing the selling prices of his commodities to insure a fair return, a power not only had but exercised and abused by all other classes of people, the farmer has been obliged to take what other offered. And now when investigations are turning the light of scrutiny upon those who handle the necessaries of life and artificial means are employed to lower the cost of living the farmer is indirectly paying a penalty for an offense of which he has been declared not guilty. Those who deal in the commodities produced on the farm are not the greatest sufferers from the government's investigations. They may suffer the loss of excessive profits, but their legitimate profiits will not be impaired. Individually and collectively, they will exercise such means as are at their command to reduce the prices paid to farmers, if for no other reason than to re-establish themselves in the good graces of the public. If the present investigations result in any appreciable lowering in the cost of food to the consumer, a large part of the reduction will come out of the pockets of the farmers.

The action of the grain markets the past three weeks is pretty substantial proof of the truth of this statement. There is a desire on the part of everyone—farmer, dealer, consumer; the honest man and the profiteer—to lessen the cost of living, providing it can be done at the other fellow's expense. With the mind of the whole nation turned to the subject, it is entirely natural that there will be some adjustments, even tho temporary. We merely repeat what others have said, that it is very necessary that the government should take cognizance of the effect of these investigations and sentiment upon the prices of farm products, and take steps to protect the farmers from the unnatural depressing of the markets which may follow.

* * * * * *

Farm Bureau Movement Prospers

THERE IS considerable significance to the statement recently made by a mer ber of the agricultural extension department that members of the various farm bureaus in this state has increased several hundred per cent. during the past year. We hope there are none so blind within the organization of the extension department who can ascribe no reason for this rapid development except a natural growth.

Two years ago the average county farm bureau in this state was extremely unpopular with the average farmer. Some of the oldest bureaus, organized shortly after the law went into effect providing for them, had a membership of less than a hundred. Voters and boards of supervisors frequently rejected the proposal of hiring a county agent when given a chance to vote upon it. Many of the most successful farm bureaus in the state today were organized by a very small group of men and the county agent paid by popular subscription. While it may be said with all truthfulness that many farmers were needlessly prejudiced against the county agent and thought his work all tomfoolery, it is also quite true that more open-minded farmers were honestly of the opinion that the county farm bureau and the county agent had yet to demonstrate their value in dollars and cents to the community. It is not at all surprising that so many farmers rejected the county farm bureau idea as popularly conceived up to very recent times. The county agents, directed by their superiors at Lansing, who were in turn directed by their superiors in Washington—appointees of the Right Honorable David Houston, Secretary of Agriculture—formerly proceeded upon that now notorious Houstonian doctrine that the farmer's business is to produce, and immediately put himself and his work in bad with the people whom he had honest hopes of helping.

But criticism came from the farmers and the farm press and saved the county agent from the penalties of his blunders. Gradually at first but more rapidly as he saw the increasing popularity of his work, the county agent abandoned the doctrines of Houston and began to show a greater interest in the farm help, credit and marketing problems. In so doing, he discovered a new field of usefulness, and the past year the greater portion of his energies have been directed to a solution of these problems. The successful county agent is now doing the things the farmers want him to do. That is why he is successful. He has helped to organize co-operating marketing associations, farm loan associations, breeding associations and many other co-operative enterprises that have brought results which can be figured in dollars and cents. We admit with pleasure that many county agents in this state have become indispensible to the communities which they serve. We are glad they have thus awakened to the full responsibility and opportunity of their positions, and we hail the day when every farm bureau and every county agent in Michigan shall become so responsive to the wishes of the farmers that they can truly represent his voice in affairs of county, state and national scope.

Feeding Hungry Silos.

HAVE YOU F[illegible] seen many f[illegible] appetites of these farmers are taking pecially emphasized A lot of waste has due to lack of pro[illegible] our silo yet? We have [illegible]s busy quenching the [illegible]seful monsters. Some [illegible]ntage of a lesson es[illegible]ng the last year or so. [illegible]red in the silo filling, [illegible] precautions.

Some of the best [illegible] cracks in the sides, [illegible]ters and spoils the make farming a pay [illegible] than ever this yea[illegible] their silos before fill[illegible] are tightening then[illegible] the airtight effect, [illegible] buckles the staves. [illegible] silage moisture is [illegible] hoops are released [illegible] days following the [illegible]g of the silo.

[illegible]s have little chinks or [illegible]gh which the air en[illegible]d crop. In trying to [illegible]usiness, farmers more [illegible] carefully inspecting [illegible] Owners of stave silos [illegible] sufficiently to insure [illegible] not so tight that it [illegible]smuch as some of the [illegible]ed by the staves, the [illegible]hat after the first few

Masonry silos ar[illegible]g inspected more carefully than ever th[illegible]ar to fiud out the sand pockets, cracks, ro[illegible] spots and chinks of any description. Som[illegible]rmers are giving a thin coating of rich cement with a white wash brush to the inside walls. But old, experienced farmers don't advise this stunt unless the inside surface has become roughened.

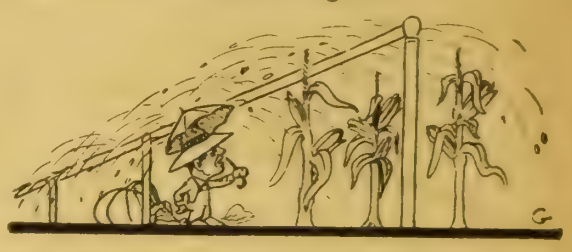
Another item which farmers are cutting down on their expense sheet is one in regard to the cutter and binder machinery. By careful overhauling of their machinery before extra help is on the grounds; by having the machinery tiptop and sure of making the run without unnecessary stops or repairs, farmers can often cut down old H. C. of L. on the farm.

Special kinds of paint are needed by numerous metal silos, depending largely on the make. Without these precautions metal silos often rust and wear out in spots.

Numerous crop reporters write in that the silo season is well under way and some big hungry giants have eaten up their big banquet of corn and gone to sleep for the winter.

* * * * * *

Overhead Irrigation.



THE PRICES of small fruits and garden truck have now become high enough to make the culture of those products highly profitable if properly managed. The fruit and vegetable grower may now make investments for purposes of increasing the yield and quality of the products grown with some assurance that he may secure proper returns from his investment. Most of the fruit growers in this state had fair crops this year and made a little money. The weather was very dry in some sections and the crops poor, but the high prices more than made up for the lesser yield and smaller size.

Small farms equipped with facilities for artifiicially watering plants and vines produced crops that brought the owners the largest returns ever had. The prices of small fruits and some garden truck will remain high for a number of years, and the grower should concern himself with ways and means for increasing the yield and quality.

In many states, the overhead irrigation system has been found to be an economical method of supplying water to famished vegetation during dry weather. It is coming into vogue in Michigan for various kinds of farming. Inasmuch as the state stands in the front rank of small fruit and vegetable producing states, it seems to us that more of our growers will find it to their advantage to investigate the merits of the system and install it on their farms. It is for this reason that we ahve started a series of articles on overhead irrigation for small farms.

* * * * * *

One city paper in Michigan has just published an editorial commanding the farmers to produce more and more; its just like ever so many a fat city capitalist sitting on our fence and telling us he needs more farm wealth in the world in order for him to keep increasing his millions in the way he'd like to have them.

* * * * * *

Michigan has gone over the top again, pulling off the biggest state fair in the world; perhaps its some of the big splendid things like that record that keeps more than 200,000 farm owners in our state plugging away at their jobs, although most of them aren't making any profit to speak of.

* * * * * *

Even if Congress has pushed the Daylight Savings repeal over President Wilson's veto the towns and cities and state governments hint they'll put it over on the farmer and choke the daylight saving regulation down Mr. Farmer's throat by means of state laws.

* * * * * *

The kids are starting off to school again. "Gosh all fish hooks," recollects Granddad. "Don't seen more'n yesttidy that I was bellowing like a calf because I had to go, and now I'd give an arm to have a little edication."

WHAT THE NEIGHBORS SAY

REGARDING INDUSTRIAL DEMOCRACY

Whatever definition is given to the world "democracy" it must be regarded and an all-inclusive term. You cannot have democracy in any field of life without necessitating, and in the end compelling, democracy in all fields. You cannot, to appropriate Lincoln's classic phrase, have your democracy "half free and half slave." You cannot have and maintain political democracy without having also industrial democracy. Organized industry has taken the control of industry out of the individual's control, just as political organizations have taken political control out of the hands of the individual; but that means only that in some way we must do these things together if we are to do them at all.

Now, democracy is inclusive in still another way. It must include the right of every well-behaved individual to the full development of his powers, limited only by the social good. Every well-behaved individual—that indeed is implied in the last clause of that definition, but it is well expressly to state it, that "well-behaved" does not mean my standard of good behavior, but socially good behavior. If one is not socially well behaved he must be dealt with in other ways; for his citizenry this social organism depends on his good social behavior. That is not an infringement on any man's personal liberty. Socially no man is free other than to behave himself. No member of society has the right to misconduct himself toward society.

Now, industrial democracy includes the same—the right of every well-behaved individual to his fullest possible possession, limited only by the social good. And that is not socialism. Socialism is social ownership, whereas democracy demands individual ownership. Socialism denies individual ownership in anything. It places ownership with the group and the individual becomes a steward of the state. Of course no one perhaps goes so far as to extend socialism to everything, though some socialists would extend it to such things as the family.

Now, democracy is widely different. It is based on individual ownership. It declares the individual to be possessed of "certain inalienable rights. These, that is, these rights, cannot and ought not to be taken from him. The only limitation in this ownership is the social good, that is, the individual cannot so possess his rights, or whatever else, if that denies the like right to any other. He may be the social good, be limited in the amount of his possessions, but he cannot be deprived of the right to such possessions as do not interefere with another's right.

Life itself begins with individual ownership. I have an individualism that is individually my own and for which I am individually responsible. Nothing can and nothing ought to blur that personality nor obscure that responsibility. Socialism in theory does both. It has been the favorite illustration of some to speak of death as the falling of a drop of water into the ocean, but socialism denies even the drop of water. We are always all in the ocean and indistinguishable. Of course, again no socialist can go as far as that, but fundamentally that is socialism. It seeks to deny ownership in anything, and yet it is only through ownership in personality that I become anything. It is only through ownership, personal ownership of things, that I ever establish the social theory of mine and thine, and ethically distinguish between yours and mine, but these individualties must learn to cooperate in their ownership of personality and things. That is the basis of industrial democracy.

The ocean may be a splendid illustration of death, but it is the land with its endless variety individual conformation of stream and hill and valley, of forest, field, climate and cloud, it is the land which is the abode of life and typical of life. Socialism is the ocean of death. Democracy is the land, living and co operative. In socialism we lose all in the whole. In democracy we use all as a contribution to all. Life itself is the assertion of individuality and the purpose is to develop individualism socially. Socialism is an impossibility. I must own some goods—my clothes, for instance, though some would even socialize clothes—also I must own my own family, wife and children, though some would socialize these. Socialism cannot and ought not prevail. Some socially needed things may and ought to be socially owned, the highways, for instance, possibly the railroads, etc., but individual ownership must be recognized not only as a right, but as needful for the purpose of discipline and individual development.

Politically in a democracy I own my own vote or ought to. That vote must not be socialized in the sense that I am denied the right to cast it. If you deny that right, then you take away my political right and citizenship ends.

Now the same is needfully true in industrial democracy. I must have and own a stake in the world's industry. You cannot have democracy in industry while withholding the right of individual ownership, no more than you can have political democracy while denying the ownership of the vote to the individual. The principal of ownership is fundamental and runs all through life. I must own my own body, but I must not use it to deny the like right to any other. I must own some things or life could not rise, and no doubt in the earlier stages of development, individual ownership is needful to teach the caution of life, to provide individual enterprise. Any of us, whatever stage of development he is in, will likely be more faithful with his own possessions than with those of another, and we learn to be faithful with others' possessions only by first guarding our own.

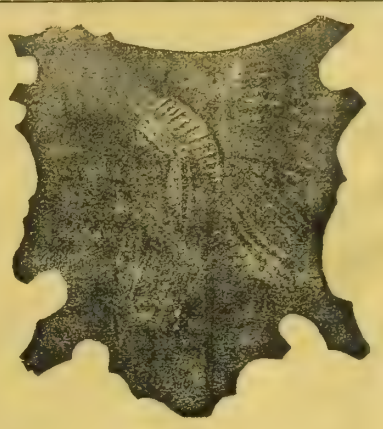
As to how this ownership may be attained. I refer you, the readers of the M. B. F., to my article printed in the May 24th issue of M. B. F. advocating a co-operative industrial commonwealth through corporations of the people, by the people, and for the people.—*Melvin W. Schultz, Mecosta Co.*

WANTED, LOTS OF BIG, REAL GRINS

Where are all those humorous, good-natured letters from farmers that used to be in print? Farmers are having about the same bad conditions as they always had, of course, but the farmer is the original optimist. He is the kind who has to grin and bear it more than any other class. He's got the original long, hard row to hill, and by Christopher, he'll some day come out of it all right. The farm business is going through its darkest period before dawn right now, and it doesn't want quitters. It wants fellows who can take their medicine with a grin and keep on working and organizing and improving things till we've won out and shown the world.—*E. B., Macomb Co.*

THE BIG FOUR

As for the proposed Peace Treaty, articles 10, 11 and 16 would prove a war factory and a sort of international white salvery, headed up by the Big Four nations. The Big Four did not give even a pleasant look to the American delegates to Ireland, but the delegates went on their way rejoicing. The Big Four thinks the Russian people committed a world crime by overthrowing czardom and autocracy. And so on. When will the people get busy.—*C. A., Iosco.*



We Tan the Leather and Make the Shoes for the Man Who Works

There are shoes, and shoes. Rouge Rex Shoes are different. It is because they are different that they are in such demand. It is just that difference that exists between just ordinary work shoes and work shoes that please and satisfy.

Durability and comfort are the most important requirements of any work shoe. These features are emphasized in Rouge Rex Shoes.

The manufacturers of Rouge Rex Shoes have their own tannery, which is operated for the sole purpose of furnishing the quality of leather above referred to for Rouge Rex Shoes, and are thereby enabled to give more shoe quality for the money than would be possible under any other conditions.

The leather for Rouge Rex Shoes is tanned for Rouge Rex Shoes only. So when you put up the price asked for a Rouge Rex Shoe you know that you will get a good long dollar's worth of service.

A Department for the Women

CO-OPERATE WITH YOUR RURAL SCHOOL TEACHERS

By MABEL CLARE LADD

THERE ISN'T an interest which the mother of the home should have secondary to that of the school in which her children receive their education. Now that women have the vote, they can easily group together, talk over what they want their children to have, and then request that those studies be embodied in what is taught in the rural school which your child attends. It is in this tender, impressionable age that the child will receive impressions which will be life-lasting, and therefore the teacher who is selected to spend hours with your child each day should be selected with a double purpose in view: first, because of her ability as a teacher; and secondly, because of her moral standing and her patriotism.

Then you should co-operate with the teacher once chosen. The life of the country school teacher is not a bed of roses. Most teachers start out, ambitious to please and with a little encouragement and help, they will be only too ready to help you meet the problems which your child presents.

Perhaps a foreigner has moved into your locality with a lot of children, and the parents, anxious to make money, are keeping them out of school. Then, as a citizen, it is

cratic citizens by being properly instructed in our laws. Little fear of their children growing up to be Bolsheviks if they are educated in a good school where patriotism is taught along with the rest of the lessons. We have the problem of the foreigner with us, the same as that of the negro. We cannot eject them from this country; we need their help. Then let's endeavor to help them by insisting that they become familiar with our laws, and that their children are educated in our schools, and then the future will take care of itself.

The question of the consolidated schools should receive your thoughtful consideration. It is coming and coming fast, and it is simply a question of whether you in your district will have this form of school this coming year, so that your children shall have the benefit of it, or will you simply say, 'Oh, doubtless it is a good thing," and then just do nothing. If you do the latter, your children will be the losers, and will be just that much less able to cope with the problems presented in the future, and just that much less able to hold their own with the children of some surrounding neighborhood where the consolidated schools with their attendant advantages are enjoyed.

SCHOOL MEANS LUNCH BASKETS

TO MANY MOTHERS the reopening of school brings with it the problem of filling a lunch basket for the children. And, while it is indeed a problem to provide a dainty, appetizing lunch, I frankly confess my sympathies lie almost wholly with the children who are obliged to eat them. After much observation (and considerable practice in eating them) I say the woman who can daily pack a dainty, wholesome lunch box is indeed a rarity.

All of us are apt to fall into ruts so far as the serving of food is concerned. It is easy to wait until it is almost time to pack the lunch box and then discover we have but a few odds and ends to put in.

But, if your child has to carry his lunch to school, you know then that for five days a week a lunch must be prepared and so provide the materials for packing it well. Get some oiled paper for wrapping up sandwiches, for they look and taste so much better if kept moist; and *DO* make a thin sandwich.

In many schools nowadays the noonday lunch is served at school, but in the vast majority of cases it must be carried from home, and this means a cold lunch. If such be the case, I should consider the money spent for a small thermos bottle a necessary investment, for so many things can be carried in it and it gives the opportunity of having the warm drink with the lunch. But don't fill it with tea or coffee for a child. A little hot soup, hot milk if liked, or some cocoa can fill it upon occasion.

Try These for Sandwiches

Sandwiches seem always to form the basis of the packed lunch, and surely one can make a variety of them. But this week I am giving you a number of different fillings, enough to satisfy any appetite:

1. Chop preserved figs and moisten with lemon juice. Use on graham or whole wheat bread.

2. Mix equal quantities of grape jam and cream cheese.

3. Mix a bit of lemon juice with raspberry jam. Place a thin slice of banana on and top with a thin slice of unbuttered bread.

4. Four boiled egg yolks, one tablespoon butter, several chopped olives or a little chopped pickle. Mash the boiled yolks and blend in the butter and seasoning. Cut the bread lengthwise of loaf and place slice upon slice. Wrap in a da cheese cloth and put between tins and press by putting a flat-i on top. Slice the layers into t slices.

5. Mix honey with nut meats cream cheese.

6. One-half cup flaked fish, hard cooked egg, one tablespc pickle. Season with salt and mo en with cooked salad dressing. with dark bread.

7. Cook one cup chopped raisi until soft. Add one cup chopped c ery and moisten with one teaspo of lemon juice and mayonnaise.

8. Mix together one cup chopp celery, one tablespoon walnuts a six olives, or a small pickle. with dark bread.

9. Mix one cup chopped chick with one-half cup walnuts. Mois with mayonnaise.

10. Spread bread lightly w chopped ham and thin slices of mato and mayonnaise.

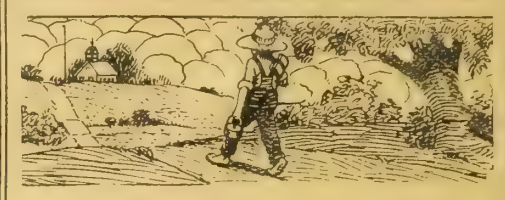
11. Instead of the tomato thin slices of chicken.

12. Spread bread with choj ham and thin slices of dill pickle

Almost any of these sandw are improved by the addition of a bit of crisp lettuce but in a lunch box the lettuce is wilted by the time lunch is eaten,

Children should receive definite instructions about how to eat their lunches. If at the top of the box are put a couple of paper napkins, one can be used as a little tablecloth and the lunch laid out on this. If the thermos bottle contains hot soup, instruct them to eat that first. If a hot drink, a little drink slowly before beginning to eat warms up the stomach and starts the flow of digestive juices. Then if they eat their plain sandwiches, followed by a tasty or a sweet one, a little fruit, raw if possible, and a few pieces of good candy, eaten at the close of the lunch, they have variety enough. Do not make the mistake of giving a large variety of things in one day. Vary the lunch from day to day, but a simple lunch is best each day. Just see they have plenty of it. And then when they come in from school, make a bargain with them if necessary, but see that each one has a glass of milk and a thick slice of bread spread generously with butter and brown sugar.

But the success of the lunch in the rural schools depends in a large measure upon the co-operation between the mothers and the teachers. In many cases a little added labor will make it attractive and healthful even, especially to some of the delicate children who cannot thrive on cold food alone.



The Little Old Red School House

The little old red school house is the cradle of our dreams,
The little old red schoolhouse that we see from every train,
Standing bravely by the roadways, by the hills and by the streams,
Is the birthplace of the splendors and the joys we shall attain.

There the voice of Freedom whispers mighty secrets to our youth,
There the seeds of faith are planted in the brave and sturdy hearts,
There tomorrow's men and women by the shining light of truth
Learn the majesty of service and the joy which it imparts.

The little old red school house, with the teacher at the door,
Is the bulwark of our glory and the guardian of our pride,
From the feet of grim invaders it shall long protect our shore,
And no vicious reign of terror in its presence can abide.

There all tyrants meet their downfall, there the force of might is stayed.
There the hand of hate is withered, and the blows of evil vain,
In the little old red school house Freedom's children, unafraid
Learn the paths w[illegible]lead to glory and the goals they shall [illegible].

-Edgar A. Guest.

The following sample lunches were prepared by Mrs. Janet M. Hill, the editor of *American Cookery*, and will be of help as a basis for other lunches:

One cup Vegetable flavored Beef broth in Thermos bottle.

Two Graham Bread and Bacon Sandwiches.

Four Olives.

One Wheat Bread and Jelly Sandwich.

One Cookie.
One Banana.
Four Chocolate Nougatines.

One cup Thin Cream of Corn Soup in Thermos bottle.

Two Graham Bread, Cheese and Sliced Nut Sandwiches.

One White Bread and Orange Marmalade Sandwich.
Three Atlantics.
One square Gingerbread. Chocolate frosting.

Six prunes stuffed with nuts.
One cup Lamb and Tomato Soup in Thermos bottle.
Three Rye bread and Corn Cheese sandwiches.
Four small pickles.
Two Jelly Tarts.
Four Macaroons.
One Orange.

One cup Chicken Broth in Thermos bottle.
Two Dried Beef and Wholewheat bread sandwiches.
Four sweet pickle Cucumber rings.
One Wheat bread and jelly sandwich.
One square Chocolate Cake.
1-4 cup Salted Almonds.
Six date.

One cup beef broth flavored with Vegetables in Thermos bottle.
Two Bread and Corned Beef sandwiches.
Two Mustard pickles.
Two Rhubard Tarts.
Two Best Macaroons.
Six English Walnut Meats.

One cup Tomato Soup in Thermos bottle.
One cup Potato and Egg salad.
One White bread and Ham sandwich.
One Graham Bread and Ham sandwich.
Two Rhubarb Tarts.
Two Atlantics.
Three Stuffed Prunes.

One cup Tomato and Beef Bouillon in Thermos bottle.
One Cheese sandwich.
One Peanut Butter Sandwich.
One Graham Bread and Jelly sandwich.
Six Stuffed Olives.
Two Marmalade Tarts.
Two Atlantics.
One Apple.

EVENTFUL DATES IN SEPTEMBER

WITH THE IDEA of learning some new thing each issue, r reviewing a subject which we had forgotten, why not take some of the eventful dates which occur in September as a basis for study and get up a paper for some organization you belong to.

Sept. 1, 1850—Jenny Lind, the "Swedish Nightingale" arrived in America. The story of Jenny Lind and what Sweden has contributed to the world in the way of music would form and interesting short paper.

September 6, 1620—The Pilgrims finally left for Plymouth in the "Mayflower."

September 10, 1813.—Perry's Victory on Lake Erie, near Put-in-Bay. Let each one of you folks who has visited this historic spot, including the famous cave in which the whole of Perry's army hid, write an interesting story of that victory and then recount the beauties of the spot today as a resort If pictures of the caves with their histories can be obtained, it will add to the pleasure of the study. Every visitor at the caves is supplied with little folders giving the story of the caves.

Sept. 12, 1869—Convention of 500 delegates organized National Prohibition party at Chicago. The progrees of prohibition from then until now, and ways and means of keeping our nation dry and enforcing the law in your local community, are interesting.

September 15, 1769.—James Fenimore Cooper, American novelist born. Let a list be made giving the books of Cooper's which are best known and which give true insight into early American history.

September 17, 1787.—The Constitution of the United States was signed by the convention, and articles of Confederation were set aside. How well do we know the contents of our constitution? While the Constitution may seem rather long to be read in its entirety at a single sitting, it does not take long after all, and we none of us can become too familiar with the laws governing our country

The Children's Hour

OFF TO SCHOOL AGAIN

DEAR CHILDREN: We are off to school again with another year of work and play ahead of us. Do you know that school offers more opportunities than simply learning the lessons each day? It offers more friendships. Ask your parents if they didn't form some very dear friendships during their years in school, and they may tell you many an interesting story of the boys and girls who are now men and women who went to school with them and the different occupations in which they are now engaged. Some are successful and some who didn't improve their opportunities to learn when in school haven't improved any opportunities since and are just ordinary men and women. Just make up your minds to be above the average man and woman. The first step is learning your lessons well.

All of our little folks tried hard; some of them very, very hard to win the books promised in the great men contest, but there wasn't a single one who won the whole ten. The last one, Dr. Crane, the famous minister, seemed hardest of all. However, I feel that I should tell you that Arlene Schutt, of Rives Junction and Elizabeth Martin of Holton, guessed them all correctly, but one. And because of this I would very much liked to have sent them each a prize but that wouldn't be fair to those who stopped as soon as they missed the first time, for had they continued, there might have been more who would have guessed all but one. However, there is still a way you can win these books and there won't be any guess work about it either. Just clip out the little coupon and send it in and I will be glad to send you full particulars and there will be plenty of time to earn the book before Christmas. This coupon appeared a couple of weeks ago, but I am publishing it again as some of you may have missed it and I want everyone to have a chance to get these beautiful presents in time for Christmas.

Affectionately yours.
LADDIE.

Laddie,
% Rural Publishing Co.,
Mt. Clemens, Mich.
Please send me full particulars about the Christmas presents by first mail so that I can get busy right away.

.....
P. O. Address.....

THE JUNIOR COOK

Spoon Biscuit

Three cupfulls of flour.

Three tablespoons of baking powder.

Three-quarters teaspoonful of salt into a sifter and sift twice.

Add three level tablespoonfuls of lard or cooking oil and work it in well with the finger tips.

Grease muffin tins for 18 rings.

Measure out one cupful of milk.

Pour the milk into the flour mixture and with a fork work it gently into a soft dough.

Take a big spoon and drop the dough into the muffin rings.

Bake 18 minutes in a hot oven.

This is the same as baking powder biscuits except that the dough is softer and is dropped from a spoon—much easier for a Junior Cook to make you see.

OUR BOYS AND GIRLS

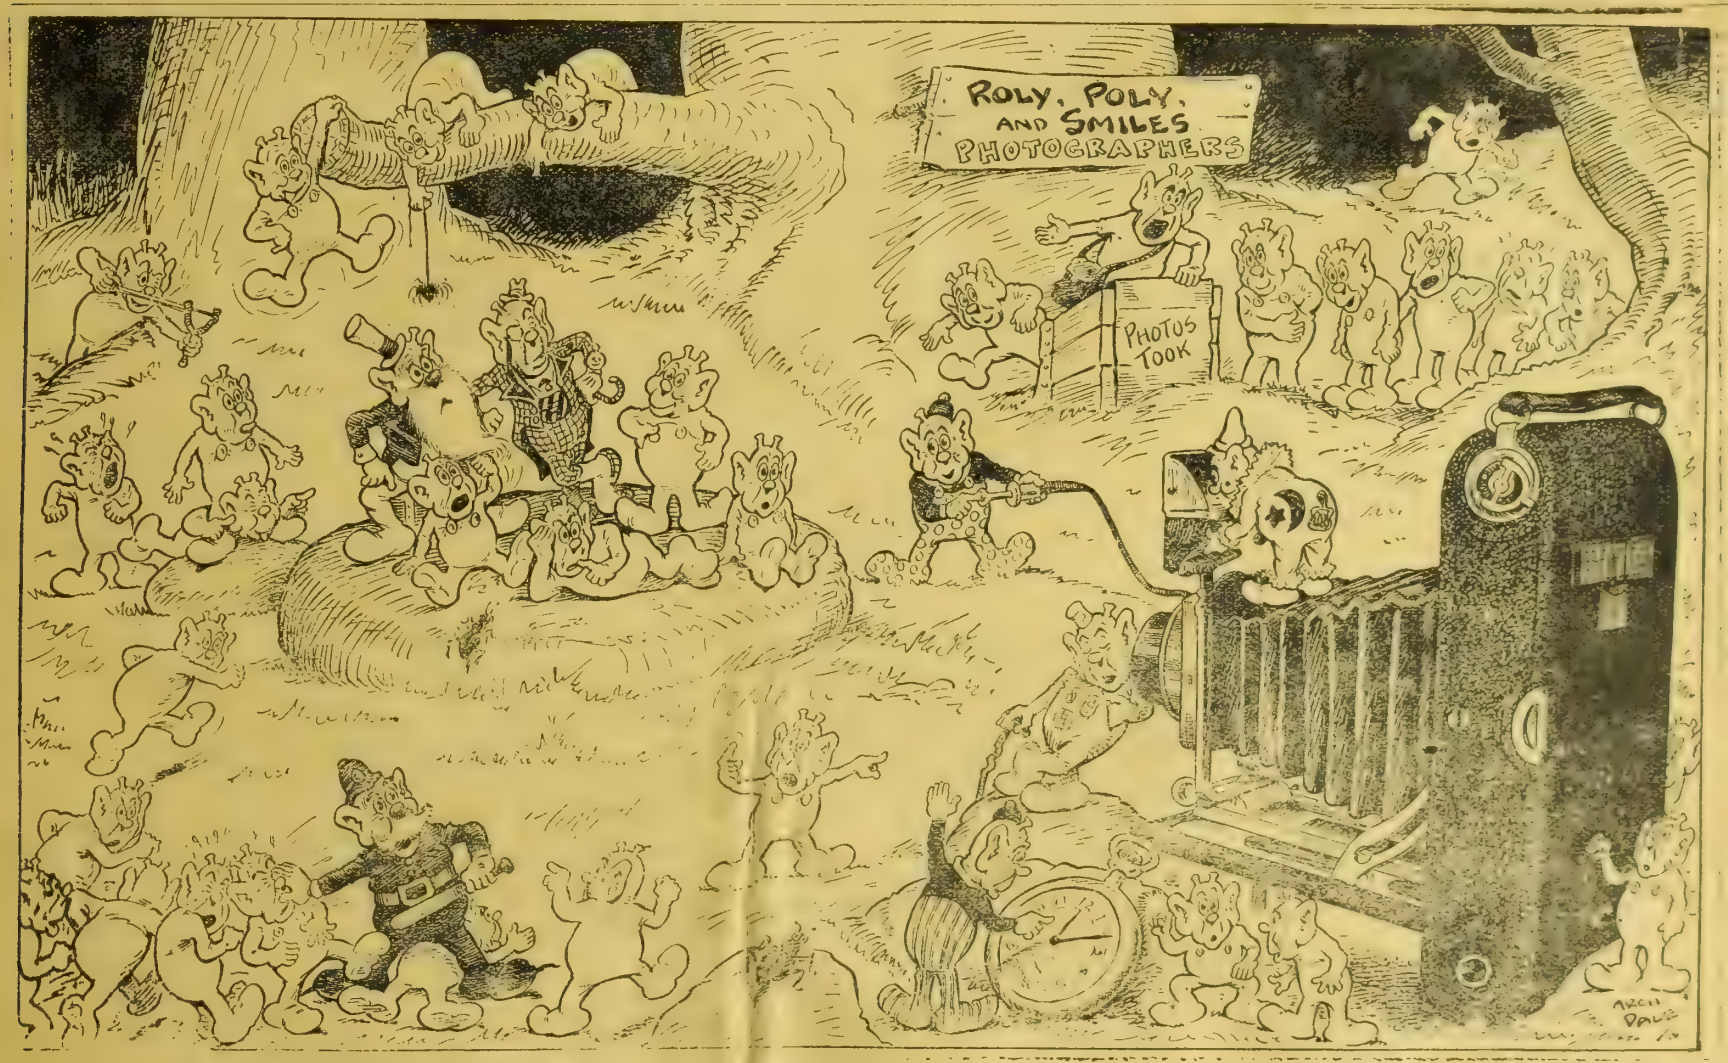
Dear Laddie—I have never written to you before so I made up my mind that I would. I am a girl twelve years old and am in the seventh grade. I have three sisters and two brothers. We have three horses and three young colts. I like the boys and girls page very much. As my letter is getting long, I will write my story. When I graduate from grammar school I expect to go to high school I am going to Battle Creek high school and stay with my aunt who lives there. I will stay there all the while I am going to high school. After I get through high school I will go to normal six months. To normal I will learn to be a school teacher. After I am a teacher for a while I am going to be an office girl for the rest of my life. Yours truly, Ethel Evans, Grand Junction, Mich.

Dear Laddie—This is my first time I have written to you. My name is Madge Underhill. I live in Antrim county. I am on a farm of 180 acres We have 17 head of cattle and two horses. I have two sisters and one brother. I am 11 years old and in the fifth grade. My father takes the M. B. F. We haul 13 pigs and one dog I would like to see my letter in print. Well I will close.—Madge Underhill.

Dear Laddie:—I have never written to you before, but thought I would try my luck. I have three sisters and three brothers and one little nephew. For p... I have a dog, and eight white rats. I am in the fourth grade and have one-half mile to go to school. We keep four cows and four pigs and two hors... We take the M. B. F. and I enjoy reading the Doo Dads and letters. I will close, hoping to see my letter in print next week. Yours truly, Ernest L. Brown, Cass City, Mich.

Dear Laddie:—I have never written to you before but thought I would like to. I am a girl, eleven years old. My birthday was June 19. I have two sisters, and a little brother. My grandpa has sold his farm and we are going to move in a few days. My sisters and I will have about 100 rods to go to school this winter. I will close for this time, hoping to see my letter in print. Erma Parshall, Fountain, Mich.

Dear Laddie:—I would like to become a member of the Children's Hour. I have been reading the Children's Hour page over to my playmate Helen Cline. She is a member of the Children's Hour page We have been spending many happy hours reading the M. B. F. paper. Our folks and I was on a trip about two weeks ago. We were to Detroit, Jackson, Lansing, Ypsilanti and Mt. Clemens and other places. We had a very nice time. I go to school and I am 13 years old and in the seventh grade. I have two brothers, one 15 years name Harold, the other 17 years, named Harvey. Harvey is working on the road for the Rice Seed Co. He likes it very well. He was home last Wednesday night. Harold works around home or on the farm. We have two little pigs, 39 little chickens, 14 hens. We get about 5 or 6 eggs a day. We have two little pigs and a cow. We get lots of milk and mama makes butter. Well our school will start soon, in about five weeks I guess, I will be glad when it comes. Our teacher's name last year was Mis sCharlet MacDonald. But I think this year our teacher's name will be Miss Monroe, but I am not sure. Well I think I will have to close as I have nothing else to say. I wish to see my letter in print. I very much wish some of the member to write. My address is, Neva Jewell, Deckerville,



The Doo Dads' Out-Door Photograph Studio

There is always something amusing going on among the Doo Dads. This time it is a camera that is causing the excitement. Somebody lost a camera in the Wonderland of Doo. Roly and Poly, the twins and Smiles, the clown, found it. They thought this was a good chance to make some money taking pictures. Smiles is focusing the camera; Roly is snapping it while Poly is counting the seconds. Old Doc Sawbones and Percy Haw Haw, the dude, are the first to get their photos taken. See how Percy is trying to look his best. Those other little rascals shouldn't be there at all but they were so curious to see what would happen that they couldn't wait. That young fellow can't keep old Doc's whiskers out of his eyes. Do you see the young Doo Dad hanging on the limb by one hand? He is bound that he will be in the photo. Those saucy little fellows at the back will be sure to spoil the picture making those naughty faces. Flannelfeet, the cop, has his hands full. He is trying to keep the Doo Dads back but some of them are getting past him. One is even crawling right through between his legs. The Doo Dad on the stand is also having trouble. Some are lined up and getting their money out but one is getting around behind him without paying. That little simpleton at the back of the camera thinks it is a house. He is wondering why nobody answers to his knock. Look at that lad holding his ear. He is listening to the tick of the watch and thinks it must be alive. If the watch were to stop he would likely think that it had died. But in spite of all the trouble the Doo Dads will not get a photo this time, for there is Sleepy Sam, the Hobo, leaning right against the lens and snoozing away peacefully. All they will get is a picture of his big ear. There is only one Doo Dad who has noticed the sleepy head, and that is the little fellow who is calling on the cop to come and arrest him. Sleepy Sam might have chosen some other place for his nap but he is such a lazybones that he can fall asleep anywhere. However, if the Doo Dads don't get their picture it won't matter much for the artist draws them every week.

MARKET FLASHES

BUSINESS AND TRADE

Undoubtedly the dominant influence on the financial markets was the ultimatum sent out to the railway strikers of California by the government railroad administration. The firm tone of Director-General Hines' declaration, his notification that any attempt to interefere with traffic will be severely punished, and his announcement that all strikers who fail to report for duty on the set morning "will be regarded as having terminated their employment, and their places will be filled," could hardly have failed to make a good impression. This was naturally much emphasized by the fact that in this action the railway union leaders are alone with the government.

This controversy, it is true, has to do with a peculiarly aggravated case of violated contracts and disobedience to orders. But the financial community's view was that it nevertheless reflected a far more sober and conservative attitude by the responsible representatives of labor than had been imagined to exist.

Considerable nervousness and bearishness continues in nearly all markets due to profiteer hunting. It is felt by most real thinkers that prices are bound soon to resume their upward journey again.

WHEAT

Grade	Det'ot	Chg'o	N. Y.
No. 2 Red	2.24		2.35½
No. 2 White	2.22		2.32
No. 2 Mixed	2.22		2.32

One of the most interesting things of the past week of interest to farmers in Michigan with wheat on their hands is the news from Grand Rapids that premiums will be given to farmers to hold their wheat for 30 days. The full story on this matter is given at the bottom of page 12 in this issue of M. B. F. and its meaning is great. For many a time Michigan wheat has been shipped out of the state and then some of it is shipped back in again, at prices enough higher to pay all the freight charges which have taken place. The Valley City Milling Company is one which realizes that this is inefficient and that the farmers might as well get a higher price and the milling company also save, due to the doing away with needless freight rates.

Wheat has been reported quiet in most markets lately. But the people concerned in Michigan are taking a sudden interest in the market due to the premium news. Detroit has stocks of 51,000 bushels on hand at present, compared with 21,000 bushels at this same time last year. Spring wheat farmers are reported to be anxious to obtain a big crop next year due to the losses suffered this year.

Missouri farmers, who realize the same inefficiency we see in Michigan, held a recent conference at the capital at which a protest was made on behalf of wheat growers "who are the losers," against methods and discounts of the Grain Corporation. Farmers, the clip sheet of the State Board of Agriculture says, "are urged to avoid shipping wheat direct to the Corporation for in so doing the grower at this time loses the premium which is paid practically every day by the mills and elevators." The conference protested that the discounts below No. 1 are unfair "because they nearly double the discounts established for these grades established by long custom of milling and grain buying."

CORN

Grade	Det'o't	Ch'go	Toledo
No. 2 Yellow ...	2.04		2.03
No. 3 Yellow	2.02		
No. 4 Yellow ...	2.00		

After several days of weakness and decline it was only to be expected that prices would cover before the double holiday, but they were hurried up a little by a very bullish report from Kansas which stated that the state crop report just issued made a cut of about 25 million bushels in the prospective crop of corn. This decrease in the estimate was caused by dry weather and many earlier complaints have been received that might have warned dealers of what was coming, but the decrease seemed to be a surprise to nearly all. The covering that followed gave the corn deal the first good showing of strength in a long time. Other conditions were bearish, including lower exchange and another decline in the price of hogs.

Trading in the Detroit market did not show much improvement. Corn was as scarce as ever here and elsewhere.

Some of these days when the investigations stop and temporary measures against high prices have worn out, the grain markets are likely to cut loose from their moorings and go high, probably to stay high.

OATS

Standard	.81	.77	.84
No. 3 White	.80	.76	.83
No. 4 White	.79	.75	.82

Oats have been only in moderate supply while the demand has been good in most markets thus making the price fairly firm in spite of agitations and labor unrest. In the Chicago markets oats took a slight slump in company with corn late last week, due to the general bearishness of the situation. In ordinary times oats would probably be climbing high at this time due to shortages in the crop outcome.

In Detroit oats have struggled upward a cent or so during the past week. Prospects in this market are for [illegible], present uncertain as they are in n[illegible] every other section.

O[illegible] Chicago held within a compara[illegible] narrow range and showed muc[illegible]e strength than corn. Ther[illegible]s considerable buying at times [illegible] looked big against export s[illegible] and liberal quantities were sold t[illegible] seaboard from the various marke[illegible] Country offerings were small. [illegible]shing returns disappointing, a[illegible]e average weight of this year's [illegible] is about 3 to 4 lbs. lighter tha[illegible] 1918. Foreign financial situati[illegible] against a big export business, b[illegible]here is no great pressure on th[illegible]rket at the time being. farme[illegible]owing a disposition to hold b[illegible]heir grain.

BEANS

Ope[illegible] with a rush the bean market re[illegible]l its peak of this season the e[illegible]- part of August, several causes [illegible]g in bringing the market to a h[illegible]t that surprised many of the w[illegible]nes who, when the jump came, [illegible] rapidly and bemoaned their [illegible] when the market continued t[illegible], according to the Bean-Bag, [illegible]uis.

"In [illegible]ssing the probable cause for th[illegible]e in price of domestic beans, [illegible]ch was influenced somewhat [illegible]he price of Oriental Pea Beans [illegible]ost every correspondent of the B[illegible]Bag reported increased demand [illegible]n legitimate sources, in[illegible]lmost every large city [illegible]. This is thought to have [illegible]ccessary demand, and we do not think that the price was a consideration. The grocers needed beans and they bought, not because they thought the market would rise or drop, but rather because their stocks were low.

"Grocer demand as the month neared its end Aug. 23 to be exact, was light in some sections with some activity reported from Michigan. No heavy demand is expected until the new crop begins to move, which will hardly be under six weeks. Sales to domestic jobbers and wholesalers should be heavy, the high cost of living being a big factor to consider at present, and beans at any price under fifty cents a pound, retail, are cheap when nutriment value and ease of preparing for the table are considered in comparison with other foods.

"Export demand helped quite a bit to bring about the price rise, and it is now said that the falling down of some large export sales is one cause of the drop in prices of Orientals, which became so pronounced this week. Ten telegrams to large export firms on both coasts, however, fail to reveal the cancellation of any contracts, and the Bean-Bag is inclined to believe that someone has overestimated the export demand and now is realizing their mistake.

"Michigan prices have declined slowly for over ten days, and wise jobbers were prepared for a drop in price of Kotenashis before it arrived. The drop was quick, as it seems to be the regular rule for these beans, and one or two large firms were caught without a great deal of information. Late advices from the coast report a steady market, and one or two correspondents at press day offer the opinion that the market is as low as it will go."

HAY

Bullish reports are coming in about hay. Indiana tells of practically no surplus, and Kansas tells of damaged conditions. In general in the central part of the country, the offerings are increasing, but the demand has not specially improved. Farmers in some parts of Michigan are disappointed with insufficient prices. In the East stocks and receipts are light while in the South the demand is very light.

RYE AND BARLEY

There is nothing doing in the rye and barley market in Detroit. Cash No. 2 rye hovers around $1.49 and barley, Cash No. 3, goes at around $2.35 per cwt

September rye in Chicago closed a trifle higher. September corn in the meantime declined from $1.94 to $1.82. The comparison is of importance in showing a tendency of the rye market to break away from corn's influence and assume an independent position where its price will be governed by its flour value. A reported sale of 1,000,000 bushels of rye for export was the main feature of last week's trading.

The new crop is not yet moving in volume but with improved railroad conditions, receipts should increase.

CHICAGO—The barley market has been very strong. Prices advanced from day to day till the high point of the season was reached, after which there was a reduction. It is now dull and uninteresting

POTATOES

Information in August bears out earlier estimates of a general decrease in acreage from that of last year from 5 to 10 per cent. Conditions, particularly in the Rocky Mountain states, are not promising; the stand is poor and the acreage is considerably less than last year. In the East the conditions in Maine are very good and the crop is reported in excellent condition in Aroostook County. In New York the condition is rather poor, with the exception of Long Island, where conditions are most promising. In the heavy producing centers in Michigan, Wisconsin and Minnesota the crop is indicated at considerably less than last year. Michigan is 10 points lower in

Every Dollar Goes for Service

The people of this country demand of the Bell System the best possible telephone service. The one endeavor of the company, its only reason for existence, is to give the best possible service.

Every dollar the Bell System receives goes to provide telephone service.

Its entire receipts are expended on operation, upkeep and development. More than half goes directly to labor. The remainder is expended for materials, for the maintenance of plant and equipment, for the interest on money borrowed, for dividends on the investment of tens of thousands of shareholders, and for the payment of taxes assessed by public authorities.

In its last analysis all telephone money goes for wages; wages for labor and wages for the necessary capital which investors have put to work in the Bell System.

The telephone management is the agent of the public. It is entrusted with the task of providing the quality of service the intelligent public demands. The wages of loyal, well-trained employees and the wages of the capital that provide the finest of mechanical equipment and most efficient operation, must be paid. As a public servant, one duty of the telephone management is to obtain rates sufficient to pay for these necessities of service.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY
AND ASSOCIATED COMPANIES

One Policy One System Universal Service

condition than at this time last year, while Wisconsin is 20 points lower. On the other hand, the condition of the crop in Minnesota is considerably better.

In Detroit the price of Michigan potatoes is quoted at $5. The short crop this year indicates the likelihood of good potato prices in sight.

DAIRY MARKETS

DETROIT—Butter: fresh creamery, 52c per lb. Eggs: fresh eggs, 43@47c, according to quality. Cheese—Michigan flats, 31@31 1-2c; New York flats (June make) 34 1-2c Michigan single daisies, 32c; brick, 34 1-2c; long horns, 33 1-2c; Wisconsin double daisies, 32c; Wisconsin twins. 31 1-2; limburger, 33 1-2@34 1-2; domestic block Swiss, 40@42c; domestic wheel Swiss, 45@56c per lb.

CHICAGO—Butter, higher, creamery, 49@54 1-2c. Eggs, higher; firsts 42@43c; ordinary firsts, 36@38 1-2c; at mark, cases included, 38@41c; storage pack firsts, 43 1-2@44. Poultry alive; lower; springs, 30 1-2c; fowls, 31c.

NEW YORK—Butter, firm. creamery higher than extras, 57 1-2@58c; creamery extras (92 score) 57c; firsts 53@56 1-2c; packing stock current make No. 2, 46c. Eggs, steady; fresh gathered extras 55@56c; extra firsts 52@64c; firsts 48@51c; state, Pennsylvania and nearby western hennery whites, fine to fancy. 70@72c; state, Pennsylvania and nearby hennery browns, 60@64c; do gathered browns and mixed colors, 54@56c. Cheese, firm: state whole milk flats, current make, special, 30 3-4@31 1-2c; do average run 29 3-4@30 1-4c; state whole milk twins current make special 30 1-2@31c; do average run 29 1-2@30.

DETROIT MARKETS

Spring chickens are coming to market in liberal lots and an easy market is quoted, but other lines are scarce and firm. The tone in the dressed hog deal is steady and in dressed calves a little easier owing to a moderate increase in offerings. Jersey potatoes are in fair supply and easy at lower prices. Demand is moderate. A few Michigan potatoes are reaching the market, but are not attractive owing to small size. Other vegetables are firm and active. Peaches are scarce and higher. California fruits are scarce and firm owing to lack of receipts. Cheese is firm and other dairy products are not active.

Berries, huckleberries, $6@7 per bu.; grapes, Concord, 8c; Niagara, 10c per lb.; Oranges, California navels, $5.75@6 per box; Plums, 80@85c per 1-5 bu. basket and $3.50@4 per bushel; Pears, Bartlett, $3@3.25 per bu; small, $2@2.25 per bu.; Apples, Michigan, best, $1.75@2; ordinary, $1@1.25 per bu.; Peaches, Elbertas, $4@4.50 per bu.; white clingstones, 35@40c per 1-4 bushel basket. Farm and garden popcorn, shelled, 15c per lb.; Green corn, 20@25c per doz.; honey, white comb, 32@33c per lb.; celery, Kalamazoo, 20@22c per doz.; cabbage, home grown, $1.25@1.50 per bu.; tomatoes, home grown, $1.25@1.50 per bu.; lettuce, leaf, 12c per lb.; head, $2.00@2.25 per crate. calves, dressed) fancy, 29@30c; choice, 27@28cc per lb.; dressed hogs, light, 26@27c; heavy choice, 24@25c per lb.; nut meats, Almonds, 60c; walnuts, 85c; pecans, $1.45 per lb.; potatoes, Michigan, $5; Jersey cobblers, $5.50; Jersey giants, $4.50@4.75 per 150-lb. sack. Onions, Western, $2.75@3 per bu. and $5.50@5.75 per 100 lb. sack; Indiana, $3.75@4 per 100-lb. sack; watermelons, 50@50c each; turlocks, $2@2.25 per case; Osage, $2@2.50 per bu.; live poultry, broilers, large, 36@37c; leghorns, 30@34c; hens, 35@36c; small hens, 33@34c; roosters, 21@22c; geese, 18@20c; ducks, 30@32c; spring ducks 34@35c per lb.

BOSTON WOOL MARKET

There is a better tone to the market this week. Sales have not been of large proportions, but there has been somewhat more business, and with the improvement in exchange and manufacturers a long way from "covered" on raw material more confidence exists. The foreign markets are firm and the tendency is higher in Europe. The manufacturing situation is hardly changed, the call for deliveries being very insistent.

Quotations are: Michigan and New York fleeces: Fine unwashed, 63@64c; delaine unwashed, 78@82c; 1-2-blood unwashed, 75@78c; 3-8 blood, unwashed, 68@69c.

LIVE STOCK

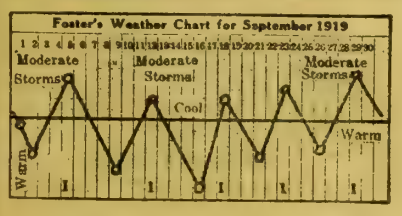
High cost of living agitation and general unrest in the labor situation has again entered the live stock markets as a bearish factor. Intention of the government to start a chain of retail stores to undersell others and lower the living cost was looked upon seriously and worked for lower prices.

DETROIT—cattle, receipts last week, 2,217; steady; best heavy steers, $13@14; best handy weight butcher steers, $10@11.50; mixed steers and heifers, $9.50@10.50; handy light butchers, $7.50@8.50; light butchers, $6.75@7.75; best cows, $9@9.50; butcher cows, $7.50@8.25; cutters, $6.50@6.75; canners, $6@6.26; best heavy bulls $9@9.75; bologna bulls, $8@8.50; stock bulls, $7@7.75; feeders, $9@10; stockers, $7@8.50; milkers and springers, $75@125. Veal calves: receipts last week, 1,112; steady; best, $22@22.50; mixed, $8@18. Cheep and lambs: receipts last week, 5,523; dull; best lambs, $14@14.50; fair lambs, $12.50@13.50; light to common lambs, $10@11; fair to good sheep, $7.75@8; culls and common, $4@6. Hogs, receipts last week, 3,571; 50c to $1 lower; pigs, $19, mixed higs, $19.25@19.50.

CHICAGO—Hogs: mostly 50c lower to $19.50. Heavy weight $16.25@18.50; medium, $16.75@19.40; light $17.75@19.50; light light, $17.50@18.50; heavy packing sows smooth $15.25@16.00; packing sows rough, $14.50@15.25; pigs, $16.00@18.50. Cattle; native and western beef steers mostly 25 lower; she stock, yearlings and calves mostly steady; feeders and buls 25c lower, more in spots. Beef steers, heavy and medium weight choice and prime $15.50@17.75; medium and good, $11.50@15.50; common, $9.50@11.50ffi light weight—good and choice $13.50@17.25; common and medium, $9.25@13.50; butcher cattle, heifers, $6.75@14.50; cows $6.50@13.00; canners and cutters, $5.50@6.50; veal calves light and handy weight $19.50@20.50; feeder steers $7.25@12.75; stocker steers $6.75@10.25; western range beef steers, $9.00@15.75; cows and heifers, $6.75@12.75. Sheep—lambs mostly 50c lower, some medium grades lower, sheep 25c to 50c lower.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Sept. 6, 1919—Last Bulletin gave forecasts of warm wave to cross continent Sept. 10 to 14, reaching meridian 90 about 12 and eastern sections 14; storm wave following about one day behind warm wave and cool wave about one day behind storm wave.

Next warm wave will reach Vancouver about Sept. 15 and temperatures will rise on all the Pacific slope. It will cross crest of Rockies Sept. 16, plains sections 17, meridian 90, great lakes, middle Gulf States and Ohio-Tennessee valleys 18, eastern sections 19, reaching vicinity of Newfoundland about Sept. 20. Storm wave will follow about one day behind warm wave and cool wave about one day behind storm wave.

Disturbances described in above paragraphs will control weather events from Sept. 10 to 20. Temperatures will average lower than usual east of Rockies crest and higher than usual on Pacific slope. Light frosts in central provinces and middle northern states during five days centering on Sept. 16. No very severe storms. About normal rains in eastern sections, decreasing westward. In plains sections most rain south of the high ridges and mountain ranges that run east and west. August and September were expected to be rather quiet months with fair crop weather, except in the dry districts.

Too Valuable to Lose

A wide-awake farmer sees in his corn crop something besides "golden ears". There is also "gold" in the stalks, leaves, silk and husks when properly prepared for feeding. These by-products represent one-third of the feeding value of the corn at husking time.

In McCormick and Deering huskers and shredders wide-awake farmers see a quick, easy, economical way to save this stover. There is no waste.

As a husker the ears are stripped clean. The snapping rolls cannot get out of alignment, no matter how far apart they are forced by the corn. In hard or frozen corn, bars can be set opposite each other. The shaker separates shelled corn, weeds, seeds, dirt, etc., from the shredded stover. Cast rolls, equipped with agitators, keep the ears straight so that more effective husking can be done, helping also to keep the snapping rolls free from short or broken stalks.

The McCormick saw-tooth shredder head slits and shreds the stalks, leaves and husks into fine pieces, turning them into an excellent roughage that cattle like.

These are only a few of the features that make McCormick and Deering huskers and shredders so favorably known. You have put in a lot of time on that corn crop. You cannot afford to sacrifice any of it. Write us for catalogues and let us show you why you need not lose an ounce of it.

Crop Reports

WHITE PLAGUE STRIKES CENTRAL MICHIGAN FOWLS

One of the startling bits of news in the crop reports this week was the fact that in Central Michigan a disease thought to be tuberculosis and with symptoms of cholera has broken out among chickens and ducks. The week before hog cholera broke out in Clinton and Shiawasee counties, and the week preceding that, the army worm started to march around in the Thumb district. Farmers are taking precautionary measures against the spread of these pests. The northern part of the state has been suffering greatly from the green leaf hoppers, the total damage to the Upper Peninsula alone amounting to more than a million.

The national crop report follows:

There is a little change in the condition of last week in the national crop conditions. Corn is holding its own. Thanks to the good results obtained in winter wheat, the wheat crop will prove itself better than average. Cotton is very uncertain. Potato estimates declining. Sweet Potatoes good. Numerous states have improved by more favorable weather conditions.

CORN—In the eleven great corn producing states the general conditions are as follows: five states good to very good; one state very fair; three states fair; and two states poor to 66 per cent. Taking the minor corn producing states into consideration, the crop in general is well above the average

WHEAT—The ten states, producing the major portionof winter wheat range, one. fair to good; eight, fair; one, poor to fair. The five spring wheat states range two fair; three, poor to fair.

POTATOES—The estimates on the Irish potato crop are still declining. This is particularly true in Utah and some of the heavy potato producing states in the east.

COW PEAS—As pointed out in a former report this crop is proving itself to be scarce.

GRAPES—All report on grapes indicate that this crop will be rather heavy.

APPLES—The early varieties of western apples such as Jonathan and Kings are of good size and are coloring rapidly. Canning plants in the west have been receiving fruit in such abundance that part of it had to be placed in cold storage for the canneries to catch up. This was due to warm favorable weather maturing crop all at once.

TOMATOES—This crop was heavily damaged in the large canning centers of Maryland and New Jersey by severe storms. Crop probably having been cut to one-third of the normal.

COUNTRY AT LARGE—A recapitulation of forty-one states reporting indicates that eleven, are good ;sixteen, average or better; fourteen, fair. This summarized indicates that the country as a whole is in a good average condition agriculturally

JACKSON (S)—Drought is broken by rain but not so much rain as is needed. It is too dry for good plowing. Wheat was a good yield, but rye did not turn out well. Heavy straw. Light yield of grain. Light supply of vegetables. Many farm gardens entirely ruined by the drought. Not much fruit except blackberries and huckleberries. Many small farmers are disposing of their young stock and extra cattle as they do not thi[illegible] will pay to buy hay to winter the[illegible] ay is scarce and will bring a fan[illegible]ce. An epidemic has broken out am[illegible]ickens in Liberty Township. The sta[illegible]pector diagnoses tubersulosis. On [illegible]rm where about all the old fowls wer[illegible]d to be in various stages of the dise[illegible] The fowls had been fed rye. The[illegible]oms are about the same as in wha[illegible] to be called cholera. Sick fowl[illegible] to be killed and their bodies burn[illegible] the well ones disposed of, and the [illegible] thoroughly disinfected with a coal [illegible]sinfectant. The little chickens, duck[illegible]d geese are immune to the disease.

O[illegible] **Premium for Wheat Held**

The [illegible]ers of Michigan have been marke[illegible] heir bumper wheat crop much more[illegible]dy that the grain can be cared for wi[illegible] result, it is said, that when elevat[illegible]d warehouses are filled the grain [illegible]g shipped east. If this is long continu[illegible]e reserve stock of grain in Michig[illegible]ll not be sufficient to carry the st[illegible]rough to next harvest and mills [illegible]forced to buy outside and ship in[illegible]pply the ordinary demands. It is [illegible] with the view of checking the ma[illegible]g of the grain by making it an obj[illegible] the farmers to hold it back the Va[illegible] City Milling Co. announced recently[illegible] will pay 2 cents above the governi[illegible]price for wheat that is marketed i[illegible]ober. This in effec t pays the far[illegible] cents a bushel for carrying the gra[illegible]nonth he furnishing his own storage

This [illegible] was taken after correspondence of [illegible]dent W. S. Rowe of the Valley Cit[illegible]ling Co. with the United States [illegible] corporation. Mr. Rowe set forth t[illegible]ditions in Michigan and the large n[illegible]ent of grain out of the state and as[illegible] the government had any objection[illegible] payment of a storage premium to[illegible]vers. The grain corporation replied[illegible] the government did not contempla[illegible]h premiums on its own account[illegible] a sufficient surplus had been accum[illegible] to meet probable needs but that[illegible] was no objection to private conce[illegible]ing so provided that the arrange[illegible] did not extend more than 30 days[illegible].

Partition Fence Again

A. and B are adjoining owners and entered into an agreement relative to the partition fence whereby one was to own and maintain one half and the other another half. Thereafter A sells the land along the line of the fence assigned to B, leaving A the owner of all the fence between A and B. Can A have fence viewers divide the line fence now between the parties? Could A remove one-half of the fence?—*B. L. P., Pewamo, Mich.*

Ans.—Without more facts concerning the agreement entered into it is impossible to answer the question definitely. Where adjoining owners enter into an agreement as to a partition their rights and liabilities are controlled and determined by the agreement. A could not remove the fence. It is possible that A might have fence viewers divide the fence in spite of the agreement. Section 2210 provides that when any controversy shall arise about the rights in partition fences of their obligation to maintain the same either party may apply to two or more fence viewers who may after due notice assign in writing to each his share. Section 2211 provides that if any party refuses or neglects to erect and maintain the part of the fence assigned to him by the fence viewers he may erect and maintain the same and shall be entitled to the value thereof ascertained as directed by the statute.—*Victor H. Hampton, associate legal editor.*

Trespassing Cattle

I am a buyer of property on land contract and took into custody certain cattle trespassing upon the land and kept them for two days when the owner came and got them in my absence without paying damages. What can be done.—*J. H. P., Hanover, Mich.*

Ans. In answer to a previous question we have discussed the right to take trespassing cattle for damages done at length and refer the writer of the above to same for provisions of the statute regulating the right. If you have complied with the statutory provisions requiring written notice upon the owner so that your taking of the beasts was lawful you could under the provisions of Section 14793 retake the beasts within seven days after the owner rescued them and hold and dispose of them in accordance with the statute as if they had never been taken away. Presumably the seven days has elapsed hence this remedy is not open. You can, however, bring an action on the case against the party taking the beasts for all damages sustained by you by reason of the rescue and all fees and charges which shall have been incurred before the rescue in addition to a forfeit of a sum not less than $5 and provided for by Section 14794, C. I. 1915 and the Supreme Court in a case similar in facts sustained the injured parties hight thereunder.—*Victor H. Hampton, associate legal editor.*

A Widow's Pension

Please inform me about a widow's pension in Micigan?—*W. M. B., Jackson, Mich.*

Ans.—We take it that the writer has reference to the law providing for the payment of money to the mother of dependent children for their care, not exceeding $3 for each child. This amount is payable where a child has been found to be dependent by the probate court under the statute and the mother of the child is unable to properly care and provide for said child but is a proper guardian. To take advantage of this law it is necessary that a petition in the probate court be filed.—*Victor H. Hampton, associate legal editor.*

Filling a Silo

I am writing you in regard to using the engine of the auto to fill the silo. Will it be practical and profitable? Has any reader in M. B. F had any experience in so doing? Four men in this neighborhood own a silo filler but have to hire an engine to do thefilling, though if they could use their auto engine it would save hiring, providing it would not be too hard on the engine.—*Chas. Button, Williamsburg.*

PRINCE ALBERT

Copyright 1919 by R. J. Reynolds Tob. Co.

Toppy red bags, tidy red tins, handsome pound and half-pound tin humidors—and—that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition.

PLAY the smokegame with Prince Albert if you're hunting for tobacco that will cheer your smoke-appetite! For, with Prince Albert, you've got a new idea on the pipe question that frees you from stung tongue and dry throat worries! Made by our exclusive patented process, Prince Albert is free from bite and parch and hands you about the biggest lot of smokefun that ever was!

Prince Albert is a pippin of a pipe tobacco; rolled into a cigarette it beats the band! And, what you're going to find out pretty quick thousands of men discovered as long as ten years ago when P. A. started a smoke revolution!

Get the idea that P. A. is simply everything that any man ever longed for in tobacco! You never will be willing to figure up the pleasure you've missed once you get that Prince Albert quality flavor and quality satisfaction! You'll talk kind words every time you fire up!

R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

When you write any advertiser in our weekly will you mention the fact that you are a reader of Michigan Business Farming? They are friends of our paper, too!

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.
——it tells you when and where to get the best prices for what you raise!
——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!
——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! ONE YEAR.....$1 THREE YEARS...$2 FIVE YEARS.....$3 — No Premiums, No free-list, but worth more than we ask.

MICHIGAN BUSINESS FARMING, Mt. Clemens, Mich.

BANKERS PUSHING WORK OF FARMER PARTNERSHIP

(*Continued from page* 3)

the Phillipine Islands. This, as you will realize, goes a long way towards accomplishing the desired results. It should be remembered, however, that most of the states modified the act to a certain extent, and it has not been uniformly enforced in the various states.

In 1916 Congress passed what is known as the United States Warehouse Act. This act follows the Uniform Warehouse Receipts Act in most respects. It authorizes the Secretary of Agriculture to license warehouses for the storage of cotton, grains, flax seed, wool and tobacco. In order to become licensed it is necessary for the warehousemen to agree to abide by the terms of the act and the regulations promulgated thereunder, his warehouse must be a suitable place for the storage of the product for which the license is applied, and he must give bond to guarantee his obligations under the laws of the state in which the warehouse is located, under the federal act and the regulations thereunder, and such warehouseman as may be assumed by him.

So far as practical work for the individual banker in his own locality is concerned, it is the policy of the national commission:

First, to outline plans for national advancement in this fundamental problem of national need.

Second, to pass this general policy on to each organized state, the state in turn to reconstruct these plans so as to meet to best purpose the needs of the individual state and of the state organization.

Third, to submit these plans to the county organizations, when the individual banker, co-operating thru the county agricultural agent, becomes the direct force that puts the plans through and brings about practical results in the locality. Each locality has its particular local problem. And the banker who is wide awake realizes what these needs are. As he studies the situation, the proper steps necessary to solve his community's own special questions become known to him. It is found that wherever the local banker is alive, he is co-operating absolutely and practically, to the fullest extent, with the county agent in effecting solution. For instance, suppose that the banker and business interests and the county agent believe that a co-operative or farm marketing association is a local need. The banker assumes the responsibility of arranging a meeting between the Chamber of Commerce, the business men and the local farm bureau in regular weekly or monthly sessions, or thru committees, when the proposition is capable of fruitful development.

Banks Should Spread Farm News

Every bank should see that it is put on the mailing list of the nearest district office to receive the Bureau of Markets' daily market reports on the crops raised in the bank's locality. These daily market letters should be hung in a prominent place in the bank where they will attract the attention of the farmer. The farmer, also, should obtain these letters for himself.

Farm tenancy, which has always been a severe handicap to progressive farming, also received considerable attention in the discussions of the conference.

The entire subject of tenancy was covered most thoroughly in an address by Joseph Hirsch, chairman of the National Agricultural Commission. He said in part:

"As long as 40 per cent of the farms of the country are worked by tenants we cannot hope to attain a full measure of agricultural prosperity. The Federal Farm Land banks have pointed a way by which tenant farmers may be assisted in the purchase of farms, and I hope that as a result of this meeting we may formulate some plan by which the bankers' agricultural committees may work more closely in touch with the Federal Farm Loan Board and help it in its great mission to convert a nation of farm tenants into one of contented farm owners. I think it quite possible for the bankers' agricultural committees to engage upon a nation-wide campaign to this end.

"I have in mind a plan for the appointment of a banker in every agricultural county in America who will devote his attention to this purpose. I believe it entirely feasible for the bankers to start a movement for the sale of farms by present farm owners to existing tenant farmers—picking men of character an dability, especially young men—selling them farms at fair prices, taking a moderate cash payment and permitting the purchasers to make use of the facilities of the Federal Farm Land Banks for the maximum amount available. This money to be turned over to the vendor, while the remainder of the purchase price would be paid for in a series of notes extending over a reasonable period of time. In short, the sale of the land on such terms as will permit the purchaser opportunity to pay for it from the proceeds of the crop yields.

Farm Ownership Drive?

"Why should we not start a nation-wide farm ownership drive? Let's take a lesson from the county oCuncils of Defense. Our great drives for the Red Cross, Liberty bonds, War Savings stamps, and what not, were put across by the county and community unit plan. Let me remind you that for several years the Agricultural Commission has been urging the state committees to adopt the county unit plan of organization, and I tell you now, emphatically, there is nothing unsound, nothing visionary about this plan, if you will put a banker on the job in every one of the 2,800 agricultural counties of the Union and give him a quota. Can you not see the possibilities in such a movement? If we could succeed in getting even five hundred bankers in five hundred counties to head this movement, and if each of these committeemen succeeded in making home owners out of twenty tenant farmers the first year, it means that American bankers would have created ten thousand new home owners. Put in motion the machinery that will permit hundreds of thousands of farm tenants to own their own farms and you will have bound these men firmly to the soil. When they own it they will enrich it, but as long as they rent it, and especially on the one year leases which generally prevail in this country, they will continue to impoverish it. Sell the tenant farmer his farm and you make a better citizen of him, and then, when you furnish the educational facilities that will permit his children to obtain as good an education as the children of the cities, you will have gone a long way toward solving the problems which are now confronting American agriculture. Nay—more than that—you will have lifted the clouds which now darken our social horizon."

Get Rid of Worms

Always keep one compartment of your self-feeder supplied with Dr. Hess Stock Tonic. Make it half Tonic, half salt. Animal instinct will do the rest. Mr. Hog will not only help himself to this great worm destroyer, but—

He'll get a Tonic that will keep his appetite on edge and his digestion good. He'll get a laxative that will keep his bowels moving regularly. He'll get a Diuretic that will help his kidneys throw off the poisonous waste material.

Remember that worms are not a hog's only trouble—making a six-months market hog calls for a stuffing and cramming process with corn, or its equivalent. You are laying on fat faster than nature ever intended. Let your hog's system clog and your hog is in trouble; if there is any disease in the neighborhood, your hog gets it.

Dr. Hess Stock Tonic

Put it in the Self-Feeder

Here's the remedy—Always keep Dr. Hess Stock Tonic before your hogs in the self-feeder; or add it to the swill, or the drinking water—anyway, just so they get it.

Here are your results—You have a herd with good appetite—you have a herd free from worms—you have a healthy herd. Their systems are free from poison, free from fever, because the bowels and kidneys are active. They throw off and carry off the waste material.

Dr. Hess Stock Tonic is good alike for cattle, horses, hogs and sheep. It makes the ailing animals healthy, the whole herd thrifty. It expels worms. **Now, listen to this:** You buy Dr. Hess Stock Tonic according to the size of your herd—2 pounds for each average hog to start with. Add it to your self-feeder, or the swill, or the drinking water. You'll see the good results, or the dealer will refund your money. Always guaranteed.

The Same Old Price

WHILE many of our competitors have raised the prices of their motor trucks recently, we are glad to say that International Motor Trucks can be purchased at the same old price that has been in force for over a year.

In the face of rising costs, the International organization has been able to maintain present prices through a substantial increase in production.

International Motor Truck owners tell us that the International Harvester Company is building a better motor truck for less money than any other company. They know that the price is in keeping with the cost of labor and materials, and that it is the Harvester Company's policy to build the best motor truck that can be built and sell it for a price actually determined by conditions. One nationally-known user complimented us by saying that he could not understand how the International organization could build so good a truck for so little money.

International Motor Trucks

are built with service as the foundation—service from the truck and service from the manufacturer. These trucks serve because they are factory-built, not assembled, and because the company that makes them insists upon every piece coming up to a high standard.

International Motor Trucks are being used by up-to-date farmers, merchants and business houses in all parts of the country. There is a size of truck and style of body to meet your requirements. There is no obligation involved in asking for complete information, and remember, **the price remains the same on each of the seven sizes.**

How Public Storage Can Help Solve Living Cost

By J. W. HELME

YOU ARE HEARING much about the high cost of living. Various officials, state, national and county are holding "investigations." They are going to find all the profiteers and send them to jail, so they say.

But I am here to predict that no profiteer will go to jail and that there is only one way to lower the price the consumer pays for foodstuffs, and that is by cutting out a large number of unnecessary middlemen, who now draw a profit for unnecessary service, until the sum total of these parasitical exactions exceed the price the farmer receives for growing his products. The marketing of farm products is much different than that of manufactured products because they are not produced uniformly throughout the year, but they are consumed uniformly throughout the year. In March the old hen starts laying and in three months she lays enough eggs to last the consumer a year; in May the old cow starts off with grass to produce a needed surplus of butter. In October and November the potato grower rushes his surplus to market to escape loss from our cold winters by frost. Now the consumer doesn't want all his butter, eggs and potatoes at one time; he has no place to store them. The farmer has no facilities for storage so he has to sell. Result, a glutted market and low prices. Just here the food speculator steps in. He owns storage facilities in terminal markets; he buys and stores at the low price on a glutted market.

After the old hen has stopped laying and the old cow has had her milk flow decreased by bare pasture, then the food speculator comes into his own. Having a monopoly of these stored commodities he proceeds to charge all the traffic will bear and the consumer finds himself paying 70c a pound for butter and the same for a dozen eggs. Potatoes that net the farmer 75c a bushel in the fall are sold to the consumer in the big cities for three times that amount. I am not opposed to cold storage; it helps stabelize the market and carry over the surplus to times of want. It is an absolute necessity for both producer and consumer, but something has got to be done about the abuse of cold storage by the food speculator and the profiteer hog. Every one admits this now and a great cry is going up for government control but we have seen government control of private railways and telephones, and we know it doesn't control.

There is just one way for the government to effectively control the distribution of foodstuffs and that is to own the terminal warehouses.

The State Warehouse Proposition

The monopoly control of the packers lies in their private ownership of warehouses and refrigerator cars which are merely traveling warehouses.

These facts appear clear to most persons now; they appeared clear to the legislative committees of the Gleaner Grange and Farmers' Clubs last winter. To carry out this project it was necessary to amend the constitution and these farmers' organizations approved a bill which was introduced by Senator McNaughton to bond the state to erect terminal warehouses at Detroit and other populous centers of the state. The question before the last legislature was not the merits of this project It was merely to let the people vote on it. The farm organizations would still have to put up an educational campaign and convince the voters of the merits of the proposition. A future legislature would enact a bill providing for the building and management of these terminal warehouses. What the farm organizations had in mind for this bill was this. The state should store all products offered by farmers and farm co-operative organizations, charging the bare cost of operation of the storage warehouse. It should sell these products whenever ordered by the storers at such price and such time as the storers should designate. City consumers and consumers' leagues could get these articles in wholesale quantities direct from the warehouse at the farmer's price. Thus all middlemen and their profits would be eliminated if these middlemen's profits were divided between producer and consumer, the farmer would get a good price for his products and the consumer would pay less. But it was claimed that the farmer would thus become a monopolist profiteer. To prevent this the commission that managed the warehouse would be given the right, whenever the price afforded the farmer a reasonable profit, to order out the products stored and thus prevent exorbitant prices, and on this commission both producers and consumers would be represented. It was a safe and sane proposition, economically correct, that would insure fair treatment to both producer and consumer.

But it would eliminate middlemen's profits. The middlemen (*Continued on page* 15)

Scenes of the Million Dollar Live Stock parade of prize winners at the State Fair. Few states in the union produce the quality of live stock that is represented in this picture.

* * * *

SIDELIGHTS ON THE STATE FAIR

"It ws the greatest fair we ever held," said Secretary-Manager George Dickinson, "and puts us in second place among all the fairs of the country. Give the farmers our thanks for their splendid co-operation. They filled every department with the finest exhibits I have ever seen."

* * * *

"Some crowd," sighed tired Mrs. Eisenbrey, the assistant secretary who looks after a million or so details in connection with the fair, "wonder where all these people came from, anyway."

"Phew," said E. D. Ball, superintendent of sheep and handy live stock man for the fair management, wiping the sweat from his forehead, "I've put in an awful week. Exhibits? Say, there wasn't a spare pen left. And class? I don't believe any state in the union's got better live stock than Michigan."

* * * *

"Many farmers out this year?" we asked Junior Owens, the live-wire publicity manager. "Gosh, you know, I can't tell a farmer from a city guy any more," said Junior, "but I reckon by looking through the cattle barns we had most of the farmers here."

West Michigan State Fair

Fruit Center of the State to be the Scene of a Great Agricultural Exposition

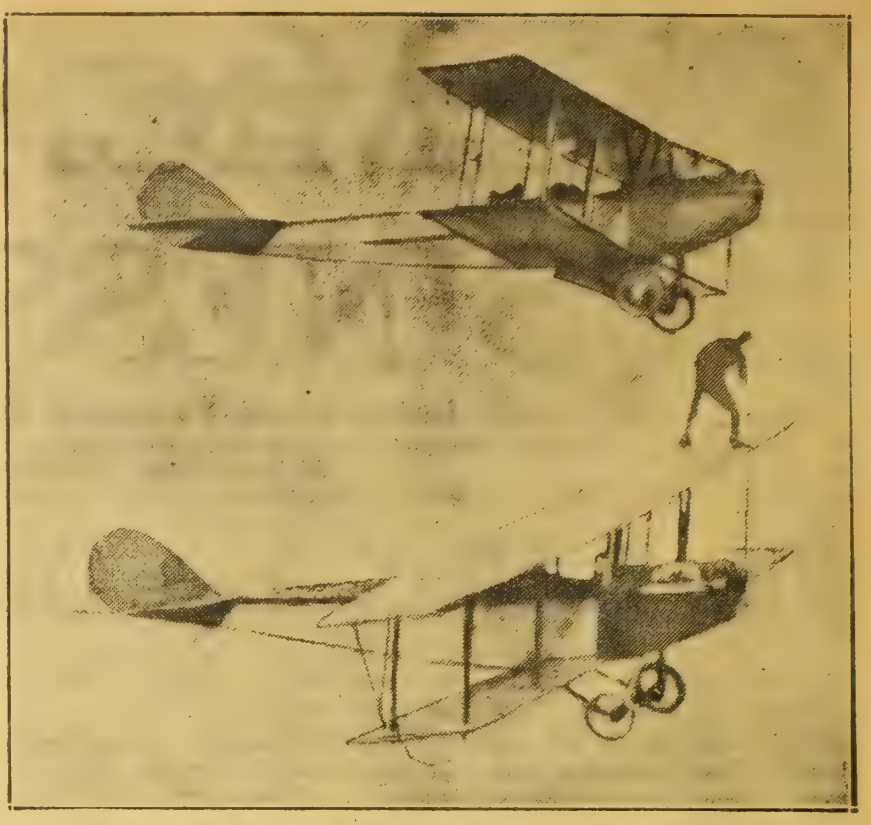
THE WEST MICHIGAN FAIR is distinctively an agricultural and live stock exhibition. In other words it has always kept the exhibits from farm and barn far above those from cabaret and theatre.

Built for and encouraged by the farmers and fruit growers of the state, more especially encouraged by those of the western portion, it has become the "show window of Michigan." No fair surpasses it in the wealth and merit of its vegetable, grain and fruit exhibit, nor for that matter, save in numbers, is its live stock exhibit beaten by many. Visitors from many states carry every year to the folks back home the message that at the West Michigan Fair they saw the very greatest apple show they had ever seen.

No department of the fair is neglected for any other part. The president, Dr. S. E. Dodson, and the secretary, L. A. Lilly, both believe in the well-balanced show and this year the indications point to as good a show as this fair ever had with the possibilities of something even better. At all events there will be no backsliding.

The fair is in its eighteenth year but is the successor of a line of fairs extending back for a half century. It has always been an agricultural and live stock show and nothing else.

In addition to the excellent exhibits which have been entered there will be a large number of free attractions. One of the most thrilling and difficult aerial stunts ever performed will be witnessed this year at the West Michigan Fair when Lieut. Ormer Locklear will pass from one plane to another in midair. If you want a thrill that will last you for days, come to this fair at Grand Rapids, Sept. 15 to 19.



Lieut. Locklear dropping from one plane to another in mid-air. This thriller will be seen at the West Michigan State Fair, September 15 to 19.

ter Fill Up a Silo for Use Next Summer

IT IS a noticeable fact that with the coming of a hot, dry "spell," flow of milk from the dairy herd decreases very rapidly. Why should that be? The main reasons are: (1), extreme heat, which has a physiological effect on the cow; (2), dryness of the atmosphere which causes the cow to become thirsty; (3), flies, mosquitoes and other insects which make life miserable for the animal, and (4), an insufficient quantity of succulence and nutriment in the dried-up pasture. The extreme heat can be guarded against by furnishing shade for the herd; the thirst of the cow can be quenched if she be allowed access to the water tank; and flies, mosquitoes, etc., can be made practically harmless by the use of proper sprays. But how is the farmer to supply the cow with sufficient food? The answer is, "By the use of the summer silo." The summer silo is no different than the one used in winter except that it is sealed up when filled and its contents are not used until needed in the summer. By using ensilage in summer, the farmer not only keeps production up during the time of drought, but he materially lengthens the period of lactation of the cow by preventing her from becoming a stripper when the drought strikes.

olstein Calf Takes Aeroplane Ride--Almost

D. D. AITKEN, president of the National Association, was the speaker at the annual basket picnic of the Washtenaw County Holstein-Friesian Cattle Breeders Club of Ypsilanti. A fine crowd was out as might be expected when Mr. Aitken was to be the speaker and they were well repaid by listening to an address filled with the thoughtful advice and suggestions from our president. Mr. Aitken pointed the folly of our boys leaving the farm to become only a cog in the wheels of the large manufacturing plants of our cities, when they should become independent manufacturers themselves, manufacturing dairy products, for the sale of which there is no need of a force of traveling salesmen, the market being already established and the demand bound to become greater each season.

Mr. Aitken also spoke of the scarcity of Registered Holstein cows and urged each breeder to send in the census blanks properly filled out at an early date in order that we might determine the exact number in the United States today.

He also emphasized the necessity of playing the game on the square if we wish to make our business a permanent success and told us something about the work of a certain herdsman who failed to play on the level and of his punishment through loss of records and loss of the right to ever test more cattle.

At the completion of Mr. Aitken's talk, a heifer calf, Shady Knoll Ray Apple Jane, belonging to the Shady Knoll Farms Company of Ypsilanti was led out to be sold at auction and delivered by aeroplane to the highest bidder. The sire of the calf was Rag Apple Segis Korndyke DeKol No. 217984, the herd sire at Shady Knoll Farms and a son of Rag Apple Korndyke and Orchard Grove Rose Segis, a 38.65 lb. granddaughter of King Segis. The dam of the calf was Rag Apple Segis Calamity, sister to Topsy Hartog Pet Canary who recently made a record of 32.11 lb. butter in seven days.

After some spirited bidding the calf was struck off at $500 to John Bazley, owner of the Bazley Stock Farm at Ypsilanti.

The plane was in the aviation field adjoining the park as per schedule, waiting to deliver the calf but when Mr. Robinson, pilot of the machine looked the little lady over it was decided to be too risky a proposition and he flatly refused to take her up.

Fortunately for Shady Knoll Rag Apple Jane a dummy was substituted in her place and the plane started on its way only to fail in making the necessary climb for a get away and crashed into some of the trees on the park. As the pilot and his mechanician were uninjured and the calf was on the ground, the only loss was on the plane which was badly damaged.

The accompanying picture shows the plane before the accident and left to right we find Mr. D. D. Aitken (president of the National Holstein Association,) Mr. Keating (mechanician,) Mr. Roomson (pilot,) Glen Bird (superintendent at Shady Knoll,) Shady Knoll Rag Apple Jane held by her new owner Mr. Brazley. Next comes Billy Bazley and then Col. Chas. Thompson, auctioneer who sold the calf.

Preparing Hides and Skins for the Market

Much may be done to improve the branch of the hide and skin industry by marketing the hides and pelts on a graded and selected basis, according to relative merits, and by avoiding many of the profit-absorbing, intermediary agencies through more direct marketing by the rural producers. In this way, says the United States Department of Agriculture, country producers will not only derive more profits, but the profits will be commensurate with the quality of their products, a condition which will prove an incentive to produce hides and skins of the best possible quality.

The preparation of hides and skins for market is of great importance, as where they are not properly prepared and shipped they are subject to great deterioration. The farmer who has thoroughly cured a number of hides and skins by the green salting method commonly followed should place them over some elevated object, such as a barrel. They should remain there over night, to drain free of excess moisture; after which the surplus salt should be swept off or removed by thoroughly shaking the hides. If the hides are handled in this manner, and thoroughly cured before being shipped, the shrinkage should be relatively small when they are finally weighed at the hide house. If the hides are not thoroughly cured, if they have been in salt, only a day or two before shipping, do not remove any of the salt as the hides may spoil.

Folding the Hides

As a rule hides are folded so that the hair side is out. It is essential to fold in the head and neck on the body of the hide, flesh surfaces together, and to turn in the tail in a similar manner. Then a narrow fold on each side should be made by throwing back the body edges and legs upon the body of the hide, flesh surfaces together, keeping the lines of the folds parallel. The legs should then be folded back and these lapped with the hair surfaces together, bringing the break of each fold near the middle line of the back. The side folds should then be completed by bringing together the two breaks of the folds, with the middle line of the back as the main fold, in this way making one long rectangular bundle. The butt end of the folded hide should then be thrown forward about four-fifths of the distance to the neck fold, whereupon the forward portion of the bottom lap should be folded back on top of the first fold, bringing the break of the rear fold even with that of the fold just made.

Each hide should be bundled separately and tied securely, about seven feet of strong cord being necessary to tie one hide bundle. A soft rope or line at least one-fourth inch thick is suitable for this purpose, although regular hide rope is preferable. Wire should never be used, as it is likely to damage the hide by rusting. Calf skins should be folded in the same manner as cattle hides. However, when more than one is to be shipped two folded calf skins should be placed together and tied into one bundle instead of tying each one separately.

Sheep Skins Bundled Differently

Sheep skins are bundled differently from either cattle hides or calf skins. The wool sides are laid down and the skins are folded along the meridian line of the back with the wool side out. As many as five skins folded in this manner can be placed in a single bundle for shipment. It is not advisable to pack more than this number in one bundle, as the wool helps to generate heat very rapidly. Two pieces of stout rope should then be wound around the pack from back to belly, one passing around the back portion just in front of the hind legs and the other passing around the front portion immediately back of the fore legs. All bundles should be tied securely, using the nautical bow-line knot, as it does not slip easily. Bundles often become untied or otherwise lose their identification marks, in which cases the railroad employees have no means of determining the identity of either shipper or consignee, especially if there are other hide shipments in the car. All shipments of hides should be tagged with good, strong linen tags with a paper finish and brass eyelets, and all addressing should be done plainly with moisture-resisting ink. Hides and skins should be shipped as soon as possible after bundling without needless exposure to sun, draft, water or rusty or corroded metals.

Complete information regarding the best methods for skinning, curing, and preparing hides for market is given in *Farmers' Bulletin* 10555 which may be obtained upon request to the United States Department of Agriculture, Washington, D. C.

Farm Organizations Show Strength at Capitol

MANY CALLS are made upon the farmers for their support for legislation at Washington. Many efforts are made to detract attention from the major issues. The Farmers' National Council, after a careful survey of the situation and conditions in America today, believes that a few major economic issues should have the attention and concentrated efforts of farmers until they are solved, and solved in a democratic way to protect the rights of the tillers of the soil. We do not underestimate the importance of other issues, which arise from time to time, such as the minor methods of big business to coerce and exploit the farmers. We recognize that mistakes, and sometimes worse, on the part of administrative officials at Washington, harrass the farmers and often injure them financially. Such conditions can, however, with few exceptions, be remedied by application either to cabinet members or to those directly responsible for administration.

The big economic issues, which must be solved, however, for the benefit of the farmers, also of all other workers or decided against them are:

1. Control of the meat packing industry.
2. Our policy on paying for the war.
3. Disposition of the railroads.
4. Disposition of the ships constructed by the government at the expense of the tax payers.
5. Our policy on our natural resources.
6. The money and credit system.

It is almost of equal importance that the Department of Agriculture should be made an agency to improve economic conditions of the farmers and not chiefly to increase production, and that the farmers of America should know the exact cost of production of farm products so that agriculture may be put upon a business basis; while a system of marketing must also be re-organized and put upon a really efficient and business basis to encourage co-operative business and to eliminate unnecessary speculative middlemen. In order that the farmers may have the facts upon which to proceed, the Federal Trade Commission should not only be maintained, but its activities should be increased and its power to serve the people should be multiplied.

Control of Meat Packing Industry

The Kenyon-Anderson Bill to deal with the meat packing industry, while drafted primarily to remedy the situation under which the Big Five packers have accumulated a wealth of about $1,000,000,000, and a capitalization of well over $500,000,000 and increased their annual sales to around $4,000,000,000, nevertheless applies a new principle to the industrial life of America. This principle is that the public interest must be the test of the methods, size and activities of a corporation. During the last decade the packers have marvelously increased their financial resources, their profits and their power. A packer representative recently stated publicly in a middle western state: "The packing business is as large as the government iself." Such a challenge must not go unrebuked.

The investigations of the Federal Trade Commission and the testimony brought out at the hearings last winter on the meat packing industry show that the packers have monopolized the meat packing industry. They are reaching out for, and are well on the way to, domination of the whole food supply of America. No greater menace could exist for the farmers of America, as well as for the consumers. The farmers know from their own experience the control which the packers have exerted since the Civil War and that the forces of righteousness and democracy have never been lined up in a more clear cut and urgent battle on special privilege than today in this test between the packers and the people.

While modifications of the Kenyon-Anderson Bill may be necessary, the demonstration that the packers do not control the government has been long overdue. This must be made by the enactment of the Kenyon-Anderson bill, no matter how many millions of dollars the packers may spend to prevent the enactment of this measure. We estimate that the enactment of this bill will give farmers $80,000,000 to $100,000,000 a year additional for their livestock and other farm products.

Our Policy on Paying for the War

Our total national debt is now about $26,000,000,000 and from present indications it will be by the end of this year about $30,000,000,000, or nearly one-eight of the total national wealth. Some $9,000,000,000 of this is loans to our allies which may or may not be repaid as all of Europe is in financial chaos and fundamental economic reform is necessary to enable European countries to produce while they must greatly increase production to enable them to pay their debts.

A national debt of $30,000,000,000 means a per capita debt of $275 or $2,250 for a family of eight and $1,650 for a family of six. At 4 1-2 per cent the interest charges on this debt for a family of eight are almost exactly $100 and for a family of six, $75. This burden will be on them for decades if we may judge from our experience following the Civil War, through refunding the debt unless we tax very heavily incomes, war profits, estates and the value of land held for speculation. By the end of the fiscal year, our own national debt exclusive of the loans to our allies, which we must realize may not be paid, will be around $22,000,000,000. Including interest on this at 4 1-2 per cent, the amount to be raised by taxes to clear off our national debt will amount to $40,000,000,000, and will be much more than this, if the plans of the big interests are adopted. A very large proportion of this debt is held by one per cent of our population.

Mr. McAdoo, while Secretary of the Treasury, stated that the annual federal budget for many years after the war will be about $4,000,000,000, that is, close to $40 per capita, or $320 a year for a family of eight. About 22,500 persons, less than one-fiftieth of one per cent of the total population, own approximately $70,000,000,000 or nearly one-third of the total national wealth.

The financial interests of the country are attempting to have a system of taxation adopted which will exempt these beneficiaries of monopoly and special privilege from paying their share of the cost of the war and put it upon the workers of the country, of whom the farmers constitute about one-half. In 1917 the total net income of individuals making returns under the income tax law was about $9,000,000,000 and the total corporate income was nearly $10,500,000,000. The Farmers' National Council, through its National Committee on War Finance tried to get Congress to levy taxes which would have raised nearly $12,000,000,000 instead of the approximate $6,300,000,000 raised in the last revenue bill. I urge that not only the highest rates of taxes levied during the war should be continued until the full cost of the war has been paid but that the government should levy as high taxes as have been levied in any country during the war. Had we adopted the British income tax rate up to $40,000 taken all incomes of over $100,000, and levied rates similar to the British rates on incomes of $40,000 to $100,000, we would have raised in the last revenue bill nearly $4,500,000,000 more by the personal income tax than the rates actually adopted will raise.

The program of the Farmers' National Council for paying for the war would save the farmers of America at least $1,500,000,000 a year for many years to come by getting this revenue from the war profiteers and monopolists of America. This the Farmers' National Committee on war finance is trying to have done.

(This interesting article dealing with great national issues, will be completed in the Sept. 20th issue. We want every reader to digest this article thoroughly that he may better understand how the great problems of the day affect him and his interests and how he may act to solve them to the best advantage to all concerned. Opinions of our readers upon this are heartily invited.)

Farmers' National Council and National Board of Farm Organizations Protect Farmers' Interests

Congress and the Farmers

"NOWADAYS," said Milo Campbell, addressing a large gathering of farmers at the State Fair on national issues, "congress votes with its ear to the ground, to hear what the folks back home have to say. The farmers are making themselves heard for the first time, and Congress respects their demands as voiced through their powerful national organizations, such as the Gleaners, Grange, Farmers' National Council and National Board of Farm Organizations. Look what they did to the daylight saving law. I am not here to question the President's motives in vetoing the clause repealing that law. I am only here to say that the farmers were against it, and after the president had vetoed it, the farmers got busy, and a separate bill was introduced and passed. Again the President exercised his veto. Again the organized farmers brought their pressure to bear and congress passed it over the President's veto with votes to spare.

* * * * *

It is safe to say that no congress has been kept more closely informed of the farmers' wishes than the present one. There was a time, of course, when the preponderance of the population was rural that it was unnecessary for the farmers to take the initiative in protecting their interests against unwise legislation. For then nearly every member of congress was elected by farmers and the principal legislation adopted reflected the wishes and welfare of the rural folk. But as time went on and the city population began to over-top the rural, congress paid less and less attention to the farmers, so it became necessary for the farmers to organize and have their representatives in Washington to watch legislation. And that is what the Farmers' National Council and the National Board of Farm Organizations have been doing. They represent probably three to five million producing farmers and when acting in harmony with each other, exert a powerful influence. The accompaning articles are descriptive of the efforts of these two organizations to represent and protect the interests of agricultural America in the enactment of the nation's laws.

* * * * *

"We conservatively estimate the gains to farmers will total well over $2,500,000,000 a year, through the adoption of our program as follows: $80,000,000 to $100,000,000 through the adoption of the Kenyon-Anderson Bill to deal with the meat packing industry; at least $1,500,000,000 through the adoption of a democratic method of paying for the war; $400,000,000 through the adoption of our program for government ownership and democratic operation of the railroads; $100,000,000 through the adoption of our program for a government owned merchant marine; and $200,000,000 to $300,000,000 through our program on natural resources; and at least $200,000,000 through a better money and credit system."—GEO. P. HAMPTON, Managing Director, Farmers' National Council.

Farmers Appeal to Congress to Protect Right Collective Bargaining

THE NATIONAL BOARD of Farm Organizations from its headquarters in Washington has issued an appeal to farmers of the country to protest by petition, ballot, or other lawful or orderly means against the unfair and un-American methods being used against farm organizations engaged in the collective sale of their farm products. The immediate cause for this appeal is the arrest on August 9 of seven prominent farmers in Ohio who were acting as representatives of the Ohio Farmers' Co-operative Milk Company in the sale of the farmers' milk to the dealers of Cleveland. These men were arrested at their farm homes in the night and thrown into an overcrowded vermin-infested room of the city jail. In the appeal, Congress and Legislatures are asked to take early action to clarify a situation which the Farm Board asserts is widening the breach between city and country and which is viewed with fear and alarm by the farm leaders. The statement follows.

On the 9th day of August, 1919, seven farmers who were acting as officers of the Ohio Farmers' Co-operative Milk Company, were indicted by Grand Jury in the city of Cleveland, Ohio, for having acted as representatives of the farmers who were selling milk to the dealers of that city.

"The price charged was below cost of production by the farmer as found by all investigations, and was lower than in most of the other cities of like class in the country. The offense consisted of "collective bargaining" and not because of inordinate profits. The men indicted were among the most prominent and respected farmers of the state. Several of them were township and county officials.

"In order to make their humiliation or intimidation more pronounced and public, these men were arrested at their farm homes in the night, taken to the city of Cleveland and there thrown into jail without opportunity to secure bail until the next day. The jail itself was full of vermin and the treatment accorded these men was barbarous and extreme.

"The National Board of Farm Organizations standing at all times for law and asking no immunity for violators of the same, nevertheless, records its vigorous protest against the use of our criminal laws for the personal advancement of ambitious city politicians and for the benefit of profiteering combinations operating between the farmer and the consumer.

"The National Board of Farm Organizations calls attention to the fact that if farmers shall be denied the right to do collective bargaining in the sale of their products; if they are to be branded as criminals for doing openly what all business is permitted to do unmolested, that such class distinction will not always be borne with patience by the farmers of the country.

"The National Board of Farm Organizations recalls that in almost every large city of the United States within the last two years, farmers from outside such cities have been caught within their boundaries and branded as felons for daring to confer with their neighbors or for joining with them in the sale of their milk or other common products; that some of these indictments are still pending; others are being threatened and all without regard to the farmers' increased cost of production.

"The National Board of Farm Organizations believes that organization and collective bargaining in the marketing of farm produce is essential if profiteering and unnecessary expense shall be eliminated between producer and consumer. These indictments by cities against milk producers whose industry cannot survive without this right, are being justly construed as indictments against all farmers whether they be named or not in the indictments themselves. We view this widening breach between city and country with fear and alarm.

"The National Board of Farm Organizations confidently asks:

"1. That every farmer through petition, by the ballot, or by other lawful or orderly means makes his protest known against the unfair and un-American methods so being used against him

"2. That Congress and Legislatures by early action make clear the original purpose of our anti-trust laws that are now being misinterpreted and misdirected so that by unmistakable terms farmers shall have the right to do collective bargaining in accord with the original intent of the law."

CURRENT MICHIGAN AGRICULTURAL NEWS

OTSEGO COUNTY CO-OP. MAKES GOOD REPORT

The ten per cent taken out by the Otsego County Ass'n covers all overhead expenses which include the following items: salary of manager, clerical help, labor, taxes, interest, insurance, depreciation, office supplies, warehouse equipment, telephone and telegraph costs, lights and water, fuel and sinking fund. A summary of the financial statement for the year's work follows:

Potatoes were sold to the value of ...	$83,839.09	
Commission at 10 per cent equal ...		$ 8,383.90
Cost of hay, grain and seeds handled .	12,698.47	
Net gain on hay, grain and seed sales		159.85
Totals	$96,537.56	$ 8,543.75
Sacks were handled to the value of ..	7,512.52	
Loss on handling above sacks		2.93
Total net commissions		$ 8,540.82
Income from error Cadillac office refuses to acknowl-		200.00
nses of conduction business:		
r and administration expense ..	$ 4,550.72	
Interest, taxes, insurance, water and light, telephone, telegraph, travelling, advertising and all other incidentals ..	1,516.14	
Storage at Vanderbilt	312.85	
Total expenses ..	$ 6,379.71	
Total receipts ..		$ 8,740.82
Deduction of expenses, or		6,379.71
net gain to the Association		$ 2,361.11

Due to close competition and the prevailing high prices of hay and grain no effort was made after the first two weeks to carry on this part of the business at the 10 per cent rate, merely enough being charged to cover necessary expense and play safe. Seven per cent was sufficient for this and was the rate charged after the business was under way.

Because of this decreased percentage the farmers purchasing hay, grain or seed thru the association have in their pockets an amount equivalent to $1,015.88 which otherwise belongs in the treasury of the association. In addition to this sum there will be a rebate from the Cadillac office to our ass'n of approximately $375.00, the 8 cents per cwt. more than covering expense to that extent. Thus there is approximately $3,752.00 accrueing to the credit of our ass'n thru their business as it was conducted last year. This is entirely over and above the membership fees paid in which amounted to $1,820.00 at the time of the annual meeting ,making a net earning on the capital stock paid in of 150 per cent., using the $2,361.11 surplus and the $375.00 (approximate) rebate from Cadillac as a basis.

Some of the local associations charged 15c and some 17c per cwt. instead of doing business at the 10 per cent as did the Otsego County Association. While this 10 per cent was adequate with potatoes at last year's prices it would not cover expenses were the price to be much lower. To avoid any trouble from this source the rate was changed from 10 per cent to 15c per cwt. The annual cost of handling locally was 11.7c per cwt, which plus the 8c taken out at Cadillac makes a total of 19.7c per cwt. cost thru the Otsego County Ass'n, while some neighbors' costs were near 50c per cwt.

Had the same margin prevailed between the price to the jobber and the grower as last year's government report gives for Michigan, each farmer shipping thru the local assn' would have received 29c per cwt. less for his potatoes than he did get, other conditions being equal.

The Otsego County Co-operative Association shipped 5,437,015 pounds of potatoes, and at 89c per cwt. these returned to the members $15,767.34 more than as though the same marketing methods and margins had obtained as the government indicates for this state last season. I sincerely hope this data will be of some use to you, and believing that you paper is doing a very excellent work for the farmers.—*H. G. Ward, Pres. and Gen. Mgr.*

Macomb Agent Makes Fine Record

Farmers of Macomb County express their regret over the resignation of H. V. Kittle, who relinquished his duties as Agricultural Agent of this county on Sept. 1st, to take active charge of his farm in Livingston county. Mr. Kittle's success as a county agent has been pronounced. He went to Macomb County under rather trying circumstances, after the Board of Supervisors had picked out a local man for the job, a selection that did not suit the heads of the extension department at Lansing. But Kittle was not long in establishing himself in the good graces of the farmers and by his energy, sincerity and practicability, soon demonstrated that he was the man for the job. During the comparatively brief period he acted as County Agent he made a record for service which stands ace high among the accomplishments of the county agents of the state. Among his numerous activities, may be cited the following:

Organized threshermen for standard prices; organized county for study of cost of milk production; organized bee keepers association; started Farm Bureau; organized boys' pig club at Armada; organized boys' corn club at Warren; organized Macomb County Dairy Council; organized New Haven Agricultural Association; organized Warren Agricultural Association; organized Washington Agricultural Association; assisted in 7 two day schools in county at Warren, Milton, New Haven, Richmond, Memphis, Romeo and Davis; responsible for 681 bushels of Red Rock Wheat in the county and 224 bushels of Rosen Rye; assisted in encouragement of Acid Phosphate to the extent of several car loads; recommended lime in all localities. Result, 30 tons in the county; carries on county corn show, first of its kind in county, result 1000 ears and 24 bushels of crates, also grain samples; controlled hog cholera; arranged for poultry demonstration, farm and cutting work in fall; organized Cow Testing Association; attended 70 meeting, 2,300 present; written 195 articles for the press; written 3,500 far mcircular letters; written 1,400 letters; spent 127 days in the field; spent 122 days in the office; placed 75 men on farms; made 314 farm visits during the year; made bulletin library available for distribution. Future plans: at least one more cow testing association; complete organization of Farm Bureau; at least two or more buying and selling associations; taking care of work of existing orgar izations; continuation of county corn show; assisting in labor problem; giving advice when requested concerning farming operations.

Benton Prosecutor After Farmers

For several weeks the prosecuting attorney of St. Joseph county has been trying to unearth evidence of illegal collusion among the milk producers of that county to control the price of milk. Inspired perhaps by the outrageous proceedings of Cleveland authorities against Ohio producers, the Michigan prosecutor has been conducting an investigation and the officials of the local producers' association have been hailed into court and publicly grilled. There was evidence of collective bargaining. It was shown that the farmers had organized to secure a profitable price for their product. Aside from that horrible crime, however, the prosecutor could get no evidence that the farmers were profiteering or had even been responsible for forcing the price beyond what it should be. The prosecutor is trying to ascertain among other things, first, what it costs to produce and deliver milk; secondly, if the present retail price of milk is exhorbitant; and third, if the Milk Producers' Ass'n is guilty of attempting to stifle competition and control distribution in the cities of Benton Harbor and St. Joseph.

Sugar Beet Yield Claimed Good

Sugar manufacturers claim that the yield of sugar beets this year will be larger than the average, and total production will beat all records. It is optimistically stated that the yield per acre will average around eleven or twelve tons as compared with six to nine tons the last two years. Usually the estimates of the manufacturers are higher than the prospects warrant, but our crop reporters tell us that fields which have been given proper care will yield somewhat better than last year. In some sections, poor seed was planted and did not germinate. In other sections it was impossible to secure help for thinning the beets and the fields had to be plowed up. Except for these scattering instances where the crop was a complete loss, the situation is quite favorable. The manutacfurers are of course in exceedingly good humor over the prospects and are able to see how their surrender to the farmers' demands for a profitable price was a good piece of business for everyone concerned

There is much speculation in political circles as to what the farmers are going to do in the next campaign. The active engagement of Canadian farmers in the Dominion political affairs has established a precedent which the peninsula politicians fear Michigan business farmers may follow. Should the farmers put a man of their kind in the field ther's bound to be a scattering among the "regulars."

BAY COUNTY FARMERS PERFECT ORGANIZATION

Representatives of the eight township unions organized in Bay County since last spring, recently met in a convention and perfected a county organization, with the following officers: president, John Purtell; vice president, David Colbert; secretary-treasurer; Charles Kitchen, executive committee, George Forster, George Adams, Mr. Armour.

Speaking of the development of the farmer union idea, one of the officers said: "We hope to have all of Bay County organized within another month or two. The movement has attracted the attention of our best farmers and already a number of the unions have demonstrated their value in the way of marketing the products and buying supplies for their members. The president of the Bay County Farm Bureau is an officer of one of our township unions, and very enthusiastic over our plans. As soon as possible, we shall organize unions in the townships of adjoining counties and hope within the very near future to incorporate and apply for a charter. There is no reason whatever why we should not soon cover the entire state and have a strong organization which can wield an influence in politics and in the more efficient methods of marketing."

The first township in Bay to be organized was Auburn, and other townships quickly followed suit. The work of organizing has been considerably handicapped by the summer work and the shortage of farm help. But despite these handicaps the meetings have been well attended and the farmers have shown a great interest. Membership in the union is open to any person, male or female, who is an American citizen and who derives his or her principal support from the business of farming. No person whose primary interests are in any other trade or vocation may become a member.

The objects of the farmers' unions of Bay County are declared to be as follows:

(a) To promote the happiness and prosperity of those engaged in the business of farming.

(b) To establish social justice and secure equity.

(c) To protect and fortify our institutions of government; raise the standard of citizenship; disseminate knowledge of the rights, powers and duties of citizens in relation to government and to the selection of men to administer the affairs of government.

(d) To secure laws providing a more equitable system of taxation, adequate protection from the practice of usury and better credit facilities.

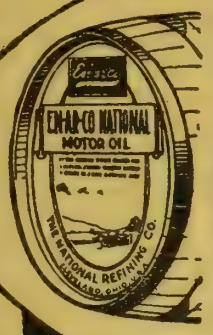
(e) To study and to promote systematized methods of distribution; to eliminate speculators, and, so far as possible and practicable, all others engaged in the distribution of farm products that producer and consumer may be brought closer together; to secure and maintain profitable and uniform prices for the products we raise.

(f) To strive for harmony and good will among all mankind, and brotherly love among ourselves.

Western Grapes Bring Good Prices

The western grape harvest has been in full swing the past two weeks. Daily shipments of grapes and melons have run from twenty to fifty cars, and with prices better than usual, the growers will have a most prosperous year. Grapes are being sold readily at 20 to 24c per basket. Crates of melons averaged from $1 to $1.50, while early sales of peaches were around $3.75 per bushel. Grapes are not quite so large as usual owing to the extremely dry weather, but the quality and flavor are excellent. The peach crop is way short of normal, but such as there is is high in quality.

How En-ar-co Solves the Motor Lubrication Problem



En-ar-co National Motor Oil

Made by "Graduate Workmen"

Our Scientific Refining processes eliminate even the possibility of carrying residue or coke-like substances in this oil. In the making it first comes off in the form of a distillate or vapor. This is condensed into a liquid and then further refined and filtered. Thus we produce an oil that is ALL OIL—oil that assures a motor's greatest strength and power. Order it by the barrel or half-barrel—the economical way.

En-ar-co National Light Oil

Buy Your Winter Supply Now

A bright, clear light—without charred wick or sooty chimney—is assured when you use this oil in lamps or lanterns or oil stoves. Buy it by the barrel.

This "better oil" insures uniform heat with no smoke, no smell. It does not leave a carbon deposit to clog wick and burner.

Also best for incubators and brooders and the most economical tractor fuel.

En-ar-co Motor Grease

For Every Grease Point

It is no longer necessary to have a special grease for compression cups, another kind for differentials, and still another grease for transmissions.

En-ar-co Motor Grease will give perfect lubrication for all purposes, all around the motor car or tractor.

Our refining experience of half a century has made this grease possible. Buy a supply now.

En-ar-co White Rose Gasoline

The Powerful Motor Fuel

You can't afford to use ordinary gasoline. You want "White Rose." It has made a sensational record for dependability, power and extra energy. It gives your motor "dash" and "pep" and results in a greater satisfaction.

En-ar-co Black Beauty Axle Grease

Takes the "squeak" out of the old wagon—making it run easier and last longer.

All the rich lubricating qualities of crude oil are retained in its manufacture, insuring a smooth, friction-free, wear-resisting axle. No compounds to clog and gum. Packed in useful galvanized pails.

Scientifically Refined by Graduate Workmen

Regardless of the motor you use, whether automobile, tractor, motor boat or engine, En-ar-co National Motor Oil produces the best results.

This Scientifically Refined oil protects the moving parts with a soft, velvety film that guards against friction, and permits the motor to develop its greatest power and speed. En-ar-co quality never varies.

Here is the reason why:

Each Man An Expert

In En-ar-co National Motor Oil, and all other En-ar-co products you get not only the results of the finest laboratory formulas and the most advanced mechanical methods, but also the work of the most highly skilled refiners.

Each En-ar-co Refiner is carefully trained. Each must pass through a rigid primary course of refining instruction. Then through grade after grade of En-ar-co training. Each grade must be successfully completed before the workman graduates. And not until then is he entrusted with responsible tasks.

Thus have we developed Scientific Refining, and thus have we eliminated all quality fluctuations and produced the perfect lubricant.

Put En-ar-co to the Test

We want you to prove our claims. Try En-ar-co and note the difference in your motor.

If your local dealer cannot supply you with En-ar-co, mail your order direct to us.

It Is a Time for Calm Judgment—and Action

THESE ARE DAYS of snap judgment and frenzied actions. It is hard to think clearly and act wisely. Class is arraigned against class in a bloodless war for economic supremacy. Capital and labor, both selfish and arbitrary, have yet to find a common ground. Both are well organized and exerting large influence upon national legislation and policies. The farmer, unorganized and slow to take up weapons in his own defense, is pushed to the back-ground. But he cannot long remain there. Self-preservation will force him to take a stand and protect his own welfare against the injustices that government, backed by the rabble and a press without conscience would visit against him. The farmer is in danger. The production of food is in danger. It is time for calm judgment—and action. Unity among farmers can no longer be considered as a mere advantage. It is a necessity, vital and pressing. The farmers MUST make their voice heard today before all the councils of the nation. There is no choice. Michigan Business Farming is impressed with the magnitude and the gravity of the problems that are before the farmers today. We have seen them shaping for many months. We have done what we could to ward them off. There must be no question as to what stand we shall take in the future. We must think calmly, judge impartially and act quickly, but fairly. A united agriculture, speaking thru farm organizations, farm press and farm college, can perform a great service for itself and the nation by insisting upon equal representation and equal rights in the solution of these mighty problems and a square deal for all.

* * * * * *

Food and its Distribution

THE DISTRIBUTION and sale of food is not solely the business of a few people. It is or should be the business of all the people. Food is life. To place the handling and the storage of human food at the disposal of private capital is in a sense to place human life in the same position. This applies, of course, only to those who do not produce the things they eat. The welfare of the non-producer is vastly more wrapped up in the intricacies of modern food distribution methods than is the welfare of the producer. All the channels of distribution might be clogged in a single day but the farmer would go on living. But not so with the man who produces no food.

The government's investigation into the high cost of living should have at least one beneficial effect. It should convince the consumer who lives far from the source of the food he eats that he has been very careless in the past in leaving the distribution of his food in indiscriminate hands. The fundamental purpose of our great transportation systems, and of those engaged in the business of handling food, should be to distribute this food for the sake of distribution that the people of the nation may be fed plentifully and most economically. But food is only handled by private individuals for the purpose of private gain. Food is stored or hoarded for the same purpose. Food is seldom passed on from one point to another except as profits accrue as a result of the operation. This is perfectly in accord with the nature of man which cannot be changed. But a more even and cheaper distribution of food may be had by taking away from private capital the right to engage in the handling of food and confining that privilege to state and national government which would have no other purpose than to distribute food economically and uniformly.

Opposition to such a plan would be found on the ground that it is akin to socialism, but theoretical objections count for little when the physical well-being of the people is at stake. It might also be argued that it would be useless for the state to control the distribution of food if it could not at the same time control the production of food. The first is possible and practical. The second is impossible. Progress along any line has never stopped to argue about the impossible and unsolvable. It has surmounted what difficulties it could, leaving the insurmountable to another day and generation. It should so conduct itself with the present tremendous problem of cheap food distribution. By reason of the great numbers engaged in food production, the highly competitive nature of their business, their widely differing points of view, farmers could not possibly control to an extent harmful to the consumers' interests, the prices of their products. There may come a time, true enough, when the farmers may so exercise their right of collective bargaining as to determine a basic production cost and sell upon that figure, but the financial condition of millions of those engaged in farming will always be such that when a profitable selling price is secured they will be forced to exchange the food they have produced for the commodities of the industrial places.

We know that the power of competition and of the laws of supply and demand has not been great enough to prevent the great packing and storage interests of the country from hoarding necessaries of life and controlling their price. Unless curbed and controlled there is nothing to prevent these same interests from continuing the same tactics. But it is absurd to claim that any group of farmers could become powerful enough to control food products against the natural laws which great combinations of capital have circumvented.

* * * * * *

The Soldier and Prohibition

TIMOTHY SULLIVAN, who is secretary of something or other opposed to national prohibition, announces that ninety-eight per cent of the soldiers are opposed to prohibition as an abridgment of their constitutional liberties. Timothy would like to have the American people who voted the nation dry believe that their sons fought to make the world safe not only for democracy but for booze as well. But we refuse to believe. The intelligence of the American people is of a high enough order we hope, to detect the flaws in Timothy's statements and be not stirred by any compassion because of the alleged injustice they are charged with having visited upon their absent soldier boys.

We are inclined to idealize the men who offered their lives for democracy. We know them to be men of courage. We know them to be men of ideals. But we are apt to forget that despite the heroic part they have just played in the world's affairs, they are yet men. They have their faults and their weaknesses as other men do. They are not all clean in mind and body as we would like to picture them. They are not all free from debasing habits. There are those among them just as there are those among the civilians to whom nothing is more sacred than personal liberty. We do not, therefore, expect that all our returned soldiers are pleased with prohibition. We rather think the percentage of them who are opposed to it is about the same as the percentage of civilians. We do expect that the organized brewers, distillers and saloonmen of the country will seize upon the dissatisfaction of a few soldiers to play upon the sympathies of the people. That is Timothy Sullivan's job. He is getting paid for it. We presume that every booze-fighter and every booze-seller in the country will take up the cry that the soldier has not been given a square deal, and insist that we must fight this prohibition question all over again.

But that argument will not wash. The rank and file of the American people had no immediate voice in the adoption of the prohibition amendment by the various states. Congress considered it a war necessity, and tho every man who wore an American uniform had remained upon American soil, we may reasonably expect that the prohibition legislation would have been adopted just the same.

Red Cross Society Loses Fifty Dollars

IT WOULD NOT be fair to ourselves or our readers to pass by without comment the failure of a certain farm paper to produce certain proof of the authenticity of a letter which it published containing several very uncomplimentary references to Business Farming and its readers. The letter referred to was purported to have been written by a farmer and was upon the subject of the Sheep-Wool society which has been discussed to some extent in our columns. Not only did the writer of the letter take us to task for publishing the facts about the Sheep-Wool society, but the editor of the paper intimated that those of our readers who had shown an interest in the plan were not intelligent farmers and that we were working hand in glove with a "slick city promoter" to graft upon the farmers.

Satisfied that no farmer would have written such a letter, we offered to give $50 to the Red Cross society upon the submission of proof that the letter was genuine and not "faked" by someone interested in the publication referred to. We have waited nearly two months for this evidence. It has not been forthcoming. The Michigan Red Cross society is out $50, and the publication referred to stands convicted of tactics that are not only unethical and unmoral, but positively detrimental to the interests of Michigan agriculture. Any publication that will fake a letter for the purpose of attacking a contemporary surely cannot retain the confidence of its readers in the reliability or sincerity of its editorial columns.

"Prices Coming Down"

"PRICES are coming down," announced the packers as the price of hogs dropped a few dollars a hundred. "We did it with our little monopoly. We simply quit buying, and lo, the market tumbled."

But bacon still brings 60 cents a pound at the corner store.

"Prices are coming down," say the bean jobbers, as the market slumped a peg or two; "we did it with our little bear story. We can keep the farmers from profiteering because we control the markets. They have to take what we offer and we will not offer much this year."

But strange as it may seem beans bought from the farmer at 8 cents a pound are still selling for 16 cents at the city grocery.

"Prices are coming down," say the storage hogs with a sly smile, "yesterday's report showed we dropped the price a few cents on butter and eggs. You can depend upon us to keep the farmers from getting exorbitant prices."

But Mr. Consumer wondered next day why he paid the same old price for butter and eggs.

"Prices are coming down." Down, down, slowly, surely. The packers, middlemen and food hoarders are responding to the public demand and paying the farmer less. They control the buying prices on farm products. They also control the selling prices on farm products. Less money to the farmer means more money to the speculator. But the poor foolish public; for a moment disarmed over the news of the drop in the food markets, orders up a double ration of ham and eggs and still can't understand why it pays the same old price. The explanation is simple: "Prices are coming down, but profits are staying up."

WHAT THE NEIGHBORS SAY

ANOTHER GUBERNATORIAL CAMPAIGN

The whole country is being stirred with calls to probe all vendors of food and other merchandise from the packing houses down to the retail dealers who are as a class are charged with having kept themselves busy marking up large margins of profit.

It is indisputable that business has never before reaped such dividends as during the last few years. The air is full of statements, of the dishonesty, mismanagement and greed of corporations, partnerships and individuals sufficient to warrant grave apprehension on the part of the average citizen.

Anarchy and socialism are making the old world red with the blood of thousands while in this country the coal miners and railroad men have it in their power to visit the nation with cold, hunger and suffering which suggests a situation unsettled and threatening.

The great masses of laborers are unable to organize, combine or co-operate and as a result are being ground and are yet to be ground by their more fortunate and powerful neighbors. Trusts and combinations, both great and small, are withholding untold millions of the necessaries of life from the channels of trade. The domestic hog used to sell on foot at four dollars per hundred and now at the other extreme ham and bacon retail at 50 to 60c per pound and many other products nearly in proportion, thereby oppressing all classes of labor.

Over all and through all the baleful hand of politics has been swinging billions into the pockets of profiteers and high public officials, cowardlike, have bowed their heads submissive to the party boss.

Now that the probe has started, will it be the real thing or only another form of political advertising ending largely in nothing except a wink and a forward nod to the swag gatherers.

With all these things on hand or imminent it seems as if both the nation and state are calling men, iron blood men, to take hold and manage our affairs. In the past Michigan has had several farmer governors; notably Cyrus G. Luce and John T. Rich, who did not hark back to the county and take orders from any political ring or clique; men were removed from office without fear and trembling on part of the chief executive; evil doers were punished; resignations demanded; stern and steady hands guided the Ship of State.

We have another farmer just like them; who should be honored with the gubernatorial nomination; a man broad enough to weigh both sides of a question; the man who brought the sugar manufacturers to time when they refused the just demands of the beet growers; the man who has more than once rendered valuable assistance to the farmers in their battles for a living price; a man who can strike a reasonable ration between the producer and consumer and of a moral caliber that would prefer to serve honestly and faithfully for one term rather than compromise the people's rights with profiteers and politicians. He is a product of Shiawassee county, Mr. A. B. Cook, of Owosso, and he has the size, courage and energy to cope with the problems of the hour and settle them with a due consideration for the interests of all.—*C. M. K., Stanton, Mich.*

CAMPBELL DENIES TELEGRAM

I have just read your comment upon the fake telegram which has been circulated from the Hearst papers of New York in which I am pictured as sending to the Dairymen's League of New York a message reading as follows:—

"Neither poverty nor want of milk in New York should compel farmers to sell milk."

The telegram was a pure fake and without the slightest basis. I never sent such a telegram to anyone at any time. But you are right in your analysis.

It is high time there should be a better understanding between city and country. The farmer cannot be reasonably asked to sell milk or other products to the city at less than cost of production. If there are poor or starving people in the city, the farmer is not to be charged with moral or criminal wrong, because he does not care for the city's unfortunate. He is willing to bear his share of public burdens, and his property is generally found for assessment.

I thank you for the opportunity to nail this lie. It has been found to be some job to sue and prosecute a big newspaper. I have asked them to correct their statement.—*Milo D. Campbell, Coldwater, Mich.*

N. E. MICHIGAN "CLOVER SEED BELT"

The settlers in Presque Isle County are realizing $20.00 a bushel for uncleaned alsike clover seed and $15 a ton for alsike chaff—the by-product for stock feed.

Owing to the hot and dry spell, at seed forming time, the seed yields, as with grains, has been very much reduced, but at that, the returns in dollars and cents, per acre, vary from $75.00 to $125.00. The farmer in the vicinity of Millersburg who has not twenty-five to fifty bushels of clover seed to market is an exception.

As you have no doubt observed, the upper peninsula has copyrighted the magic word "Cloverland," and Minnesota not to be out-done goes one better, in their claim to "Greater Cloverland"—while with becoming modesty Northeast Michigan lays just claim to the "Clover Seed Belt"—there is glory enough for all of us—in the cloverleaf.—*John G. K., Presque Isle County.*

LET PEOPLE OWN RAILROADS

Now you begin to talk good logic.

In regard to the people owning or running the railroads or the government that is the only solution, then the people will get service. They will never get service by corporations running railroads. As Vanderbilt made the remark a few years ago, "I am not running this railroad for the benefit of the people; I am running it for my own benefit." There are not many that care much for the people's benefit; it's for their own individual profiteering the people be d— or the public. What do they care? It is blood money they are after and blood money they get, good and plenty and the public paid the bill.—*S. H. S., Wexford County.*

MAINE FARMER LIKES WAREHOUSE MOVE

I like very much the stand M. B. F. has taken in regard to government owned warehouses and other matters for the betterment of agriculture.

The farmers must have a better show for profitable marketing or there will be a food shortage which will be more severely felt than ever. When the producer gets only 25 or 30 cents of the consumer's dollars there is something unjust somewhere. I hope to live to see a nation-wide farmers' union which will demand and receive justice for all its members.—*R. L. Herrick, West Paris, Me.*

ANENT THE PACKERS

I see in an article of your August 23rd issue, "Kenyon Bill Now Before Congress," that Swift & Co. are afraid by reading Mr. Marsh's articles that the people might become socialists or communists. Well! They can put it down in their notebooks that that is what is coming. Just give it time, and as in the same issue "Would Business Suffer?" it reads thus: "Attorney having the matter in charge, tells me that by proper and vigorous prosecution our anti-trust laws can be enforced and that its violators including the Packers can be made to pay the penalty." I say so. Just like the Standard Oil Co. with the $29,000,000 fine. Some more action will do more to bring the people to their sober senses than all the writers on earth. Remember the old saying, "Actions Speak Louder Than Words."

Many a man abhors large combinations. I say they are blessings to mankind as they have a sobering effect on humanity. So let them go to it. Nothing appeals to man's mind as a hungry stomach and to see his family in want. A great system is this. If wages in a certain locality are $2 a day it means just a living in it; if it is $7 a day just a living too. They have you coming and going. The top fellow hands it to the fellow on the ladder round below him and he to the next one down and so on down until it comes to the fellow on the ground and he having nobody lower down keeps it. A fine system for the fellow on top. The only thing he has to look out for is that he does not fall to the ground, for in that case he would get it handed to him.—*J. F., Prescott, Mich.*

REMEDY FOR ANTS IN HIVE

In answer to a request by lady in last issue of your magazine for a remedy for ants in bee hives would say that we had successfully used the peelings of cucumbers around ant runs. This remedy was given by a lady from India. Our ants were red ones.—*F. T., White Pigeon.*

Sharpening Himself

"What do you call that?" he asked curiously of a native.

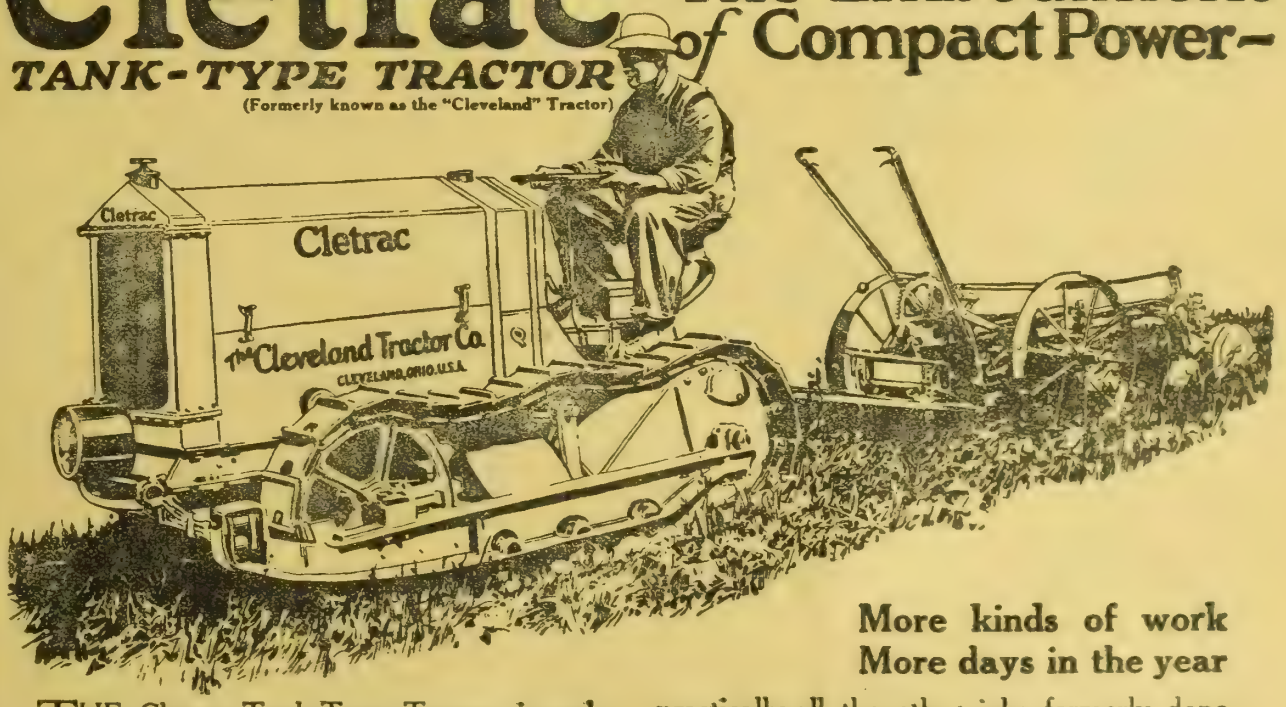
"Razorback hawg, suh."

"What is he doing rubbing himself against that tree?"

"He's stropping hissulf, suh, just stropping hisself."—[Ladies' Home Journal.

Cletrac
TANK-TYPE TRACTOR
(Formerly known as the "Cleveland" Tractor)

The Embodiment of Compact Power—



More kinds of work
More days in the year

THE Cletrac Tank-Type Tractor is only 96 inches long, 52 inches high and 50 inches wide.

But in spite of its small size it will do the work of six horses or mules—and has a speed of from forty to fifty per cent *greater* than the *average* tractor.

It is the embodiment of compact power. It produces food but consumes none of it. It never gets tired. It works all day—and all night too if necessary.

It does better, quicker, cheaper work—and does it *twelve months in the year.*

Plowing is *only the beginning* of its work. It harrows, plants and reaps, binds, threshes and hauls, grades, saws, and fills silos, spreads manure, digs potatoes and does practically all the other jobs formerly done by animal and stationary power.

Because of its distinctive tracklaying construction the Cletrac is specially adapted to seed bed work. Eight hundred square inches of traction surface enable it to go over soft plowed ground or moist or sandy surfaces *without sinking in and without packing down the soil.*

The Cletrac operates on a surprisingly small amount of gasoline, distillate or kerosene, but is specially designed to use kerosene or distillate.

See your Cletrac dealer *now*, or write us for information and our interesting booklet "Selecting Your Tractor".

The Cleveland Tractor Co.
18939 Euclid Avenue Cleveland, Ohio
Largest producers of tank-type tractors in the world

A Department for the Women

Edited by MABEL CLARE LADD

FLOWERS IN THE HOME

HAVE YOU never entered a home, after all the flowers outside had been frost killed, and had your spirits lightened by the cheery bloom of the fragrant hyacinth or the delicate beauty of the narcissus, and then resolved that another fall you too would secure some bulbs and have some flowers for Thanksgiving? Lest you forget that resolve we desire to remind you that very soon now, you should secure your bulbs if you would have flowers for Thanksgiving and Christmas.

Probably the most satisfactary bulb for the first planting is the Roman Hyacinth, which comes in either a delicate pink or white, and are not as firm and solid a bloom as the bulbs for later planting. These bulbs should be kept in a dark, cool room until the growth is about an inch or two above the ground, and then they should be transferred to a light warm room, where they will develop rapidly. These bulbs will blossom in about 12 weeks after planting. The larger bulbs which produce a sturdy stem full of bloom, should be planted as early as possible after October first. One of the best authorities in the State gives the following directions for the indoor culture of the hyacinth:

"Pot in light loam soil, allowing the tops of the bulbs to come just to the surface. Place the pots in a dark, cool room in basement or cellar and keep the earth moist. Some prefer to cover the pots with light cinders or coarse mulching and keep in a cool spot. In any case eight weeks or more, according to the variety, should be allowed for root formation. The growth may be from 1 1-2 to 3 inches high before bringing to light and heat. To hold them does no harm and they will stand a low temperature. They should next be brought to a shaded and rather cool room for another week or two. Bring to full light and heat when the flower spike is seen to be free from the bulb. Never allow gas fumes to reach the plants."

Narcissus is just about as popular for indoor forcing as the hyacinth. The Paper White or Narcissus Grandi Flora will be ready for Thanksgiving if planted in September. For cutting, of course, they are preferable to the hyacinth. They are planted and treated exactly as are the hyacinths, except that no treatment in a dark room is required.

Then there are the variety of narcissus commonly known as "daffodils," which bulbs are usually planted a little later to give to the home the first touch of spring, months before the frost is out of the ground.

Another bulb which has recently been grown indoors much is the Freesia. These bulbs are covered with not more than one half inch of soil and put in a light but cool room. These bulbs differ from the hyacinth in that they are kept in the light instead of the dark. The spare bedroom, which is not kept heated but is light would be an ideal place in which to start these bulbs. They need plenty of water. When they have attained a height of eight to ten inches, they can be brought into the warm living room and should bloom quickly.

Remember if you are interested in securing some bulbs and haven't a florist or seed store near you where you can obtain these bulbs, our Personal Shopper will be glad to send you prices, and if you desire, will purchase the bulbs for you. We are more than anxious that the women of the country should have every advantage their sisters in the city enjoy.

MUSIC IN THE HOME

Now that the days are getting shorter and the weather cooler, more time will be spent by the family in the home, and there is nothing which will bring more delight to every member of the family than music. Almost every family now owns some make of a music box and will want some new records this fall. Because the makers of records have had such heavy demand during the past few months, they have not issued any list of new records the past month, but from lists issued during the summer have made a selection of the choicest which they offer.

Soon the birds will be going to their southern homes for the winter, but you can have a very good reproduction of their singing by securing the record of Chas. Kellogg "How Birds Sing" and on the opposite side is the 'Bird Chorus."

"When I was twenty one I never had lots of money, but I always had lots of Fun" sings Harry Lauder in his inimitable way. The record is entitled, "When I was Twenty-One," and is just as funny as the ones he sang before sorrow came into his life. It will chase the blues away to hear him.

John McCormick, a favorite with all, sings "The First Rose of Summer," the catchiest song of a musical comedy. It is a love song full of gaiety and gallantry.

The war has brought back to popularity some of our old songs and no one sings them better than Madame Louise Homer, who has recently made "Hard Times, Come Back No More" a most wanted record.

If you love Gluck, you'll want to own the record entitled "Little Old Cabin in the Lane."

Then if you want something both catchy and funny, get the record "Take Your Girlie to the Movie" and "Baby," sung by Billy Murray and Arthur Fields. They are both tunes you will like to whistle.

The most beautiful waltz written for a long time and one which is played slowly enough so that you can really dance to it, is "Beautiful Ohio" while "Till We Meet Again" has a haunting melody you will love.

"Bring Back Those Wonderful Days" sung by Arthur Fields, tenor, is another popular song of the summer. On reverse side is "Jazz Baby."

"I'm Always Chasing Rainbows" is the most popular Fox Trot which has been made on the records.

And if you haven't a store near you which handles these records, our personal shopper will be glad to send you prices and buy for you.

Mother

By C. Shirley Dillenback

There's just a hint of silver,
Agleam in your silky hair—
And your cheeks once flushed with roses
Are furrowed with lines of care;
Time has not dimmed in your faded eyes
The love-light shining there.

For nigh on forty years you've stood—
A friend ot all—a trusted wife,
Though dark and stormy was the way;
You've proved a hero in the strife.
Methinks that when the Master calls
Thy crown shall be—eternal life.

In it I see eleven stars,
Symbols of sturdy girls and boys
Though three are with the Savior now—
Yet eight remain, your pride and joy,
And in your mother heart you know—
The love they bear is not alloy.

With books and dinner pail to school,
You've watched each baby trudge away
You prayed we'd keep the golden rule—
Nor from the path of honor stray,
And that our shoulders might be straight
You toiled for us the livelong day.

And as each baby journeyed on
You tried its every cross to bear
And taught us all as best you could—
The wondrous power of love and prayer;
Though meager was they recompense
You gave to each a generous share.

And as each baby trudges on,
To man and womanhood's estate—
Your heart is torn by every pain
You'd gladly carry all the weight;
How soon we learn in life's hard school
No other's love is half so great.

By C. Shirley Dillenbeck

WORK OR ALMS?

"Give work rather than alms to the poor. The former drives out indolence, the latter industry."—Tyron Edwards.

"A bank pass book showing a credit of $1,956, cash amounting to $177, 39 jack knives, ten watches, nine razors, three mouth organs, a box of cigars and tobacco pouch were found in the pockets of James Smith, arraigned here Tuesday as a vagrant. He begged the police for his breakfast."

The clipping above appeared in one of our morning papers recently, and the moral is plain: If you give to the professional beggar who comes to your door, you are but encouraging laziness shiftlessness and these two breed discontent and discontent often results in I. W. W.'s, anarchists, etc. For those whose hands are not busy have time to sit and talk about the "unequal distribution of wealth, the other fellows good luck, etc," when more often than not "good luck" is just another word for hard work, perseverance, etc.

There may have been a time when work was scarce, and only the skilled laborer could secure and keep a position, but those days are past. The nation right now is crying for more labor; wondering what we shall do when the foreigners return to their home countries. True, there are some who, because of sickness, are reduced in circumstances and unable to do a good, hard day's work, but there isn't a city or village that won't, out of the city funds, help such a one to regain his feet. You pay a tax to help care for the helpless ones of your county, then let the one who desires help, go to the city officials for such help and they will investigate and if there is a real need, be assured it will be met.

Just because a man has lost a hand, an arm or a leg is no reason why he is to be considered an object of charity. Men with only one leg have been known to do some of the finest tool work of any class of workmen, while special machinery has been designed for some of the large factories, etc., where men with but one arm can do as much work in a day and earn as much money as the normal men.

We would not disparage charity—"the poor we have with us always"—and there are always some who, because of sickness, fire, or some other calamity, need temporary assistance, but be sure of the need before giving to some one who perhaps, like the case of the man cited above, has a good sized bank account.

MID-SUMMER STYLES

2963. A Smart Gown. Cut in 3 sizes: 16, 18 and 20 years. Size 18 will require 5 3-8 yards of 36 inch material.

2809. Ladies' Dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 will require 6 yards of 44 inch material. Width of skirt at lower edge, is about 2 yards, with plaits extended.

2960. Girls Dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 will require 2 3-4 yards of 44 inch material.

2966. Girls Dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 will require 3 7-8 yards of 40 inch material

2961 A new Apron Cut in 4 sizes: Small, 32-34; Medium, 36-38; Large 40-42; Extra Large, 44-46 inches bust measure Size Medium requires 3 1-2 yards of 36 inch material

2774. Ladies' House Dress Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5 3-8 yards of 44-inch material. The dress measures about 2 1-4 yards at the foot.

2942. Boys Play Suit. Cut in 4 sizes: 2, 3, 4, and 5 years. Size 4 requires 1 3-8 yard of 27 inch material.

2813. Girls' Dress. Cut in 5 sizes: 2, 4, 6, 8 and 10 years. Size 6 will require 2 3-4 yards of 36 inch material.

Be sure to give number and size.

DEAR CHILDREN—Oh, I'm so excited and let me whisper in your ear and tell you why. It's because so many of our little folks have joined the Christmas Club and are going to have such wonderful gifts, both for themselves and all their family. If you haven't already joined, write me for particulars before it is too late. Just imagine it; about three hundred members already and it is still early enough so that as many more can join and still have time to earn almost anything you may desire for Christmas.

All our little folks are so interested in seeing their letters printed and we have so little space that I will not write you a long letter this week but will give all the space up to letters. Affectionately yours—Laddie.

OUR BOYS AND GIRLS

Dear Laddie—I have never written to you before so I thought I would now. I am a girl, eleven years old and will be in the seventh grade when school starts. Our school starts the second of September. I like to read about the Doo Dads very well. We live on an eighty acre about two miles from Brighton. We have three horses and six cows. We have nine calves. I have five brothers and two sisters. We have one dog named Teddy and a cat named Tommy. We have nearly a hundred little chickens that my sister Frances got in May. Well as my letter is getting long I will close, Oneita Peach, Brighton, Mich., R. F. D. No. 3.

Dear Laddie—I am a girl eleven years of age and I will be in the 6th grade this coming year. Where I live now used to be an Indian reservation of the Pottowattamie Indians. We have large trees and many birds build their homes in them.. I hope to see my letter in print. Affectionately yours, Helen Griswold, Scottville, Mich., R. F. D. No. 2.

Dear Laddie—This is the first time I have written to you, but my friend has written quite a few times. Our school starts next week Monday. I like to go to school and would like to go through the twelfth grade and become a teacher. I am a girl eleven years old and in the 7th grade. My teacher's name is Miss Jensen and I like her very much. I hope she stays and teaches my school until I pass the eighth grade. My father takes the M. B. F. and I like to read the letters from the boys and girls and read about the Doo Dads. I help my friend guess the names of the great men. I live on a forty acre farm and we have two horses and two cows. I have five pets, they are kittens. I have a brother that is in the 10th grade, his name is Don. I hope to see my letter in print. Jean VanAllen, Greenville, Mich.

Dear Laddie—I have never written to you before but thought I would try and see if I could get a letter in print. I am nine years old and in the fourth grade. I have three brothers and two sisters. We have eight little pigs, one old hog, one calf and four horses. I live on an eighty acre farm and we have eighty acres of wood lot. I helped my sister husk and cut off corn today. My father was going up near Beaverton and buy some land. A man told him he could buy land for 50 cents an acre and he was crazy to go but I guess he has got over being crazy about going. I think there must be something wrong with the land. I don't want to move away from here because I like it here. I help my sister gather the eggs and drive the chickens in the coop. Well I guess I will close and let some one else have the room for their letter. I will be very disappointed if you don't put my letter in print and I would like to have some of the boys and girls write to me. Harland Schermerhorn, R. 3, Stanton, Mich.

Dear Laddie—I am a girl, 9 years old and in the third grade We live on a farm of 20 acres. We have two horses, one cow and a calf and one pig. I go after the cows at night. I feed and water the chickens. For pets I have two cats. I have two little kittens. I like the Doo Dads very much, they are funny little fellows indeed. My papa has a Ford car. We go all over with it. Hoping to see my letter in print, I am, Margaret Kukib, Inkster, Mich .

Dear Laddie—This is the first time I have written to you. I am a girl, 15 years old in the 8th grade. I have one brother that will be in the 7th grade. He was 14 years old the 10th of August. My father and mother are dead so my brother and I live with grandpa and grandma on a 40-acre farm. I am on a visit to my uncle's at Williamsburg now. My uncle takes the M. B. F. and likes it very much. I like to read the Children's Hour and I think the Doo Dads are funny little people. I can tat and crochet.—Bessie Stoops, Williamsburg, Mich.

Dear Laddie—This is the third time I have written to you and have not seen it in either time. I am a girl, eleven years old and will be in the sixth grade this coming year. My father has eight cows and four horses. I have a dog named Brownie a chicken for pets. His name is Bill. Every morning he comes up to the porch for us to feed him. I like the Doo Dads very much. Our teacher's name last year was Ina Shannon and the one this year is Florence Finch. Well I will close, hoping to see my letter in print. Thelma Taylor, Brighton, Mich.

Dear Laddie:—I am going to write and have my letter printed in the M. B. F. like some of the boys and girls are doing. I wrote once before but didn't see my letter in print. I am a farmer girl and live on a homestead of 40 acres. We have three milch cows and four head of young cattle, three horses, eight pigs and about 30 chickens. I have four brothers and two sisters. Two of my brothers sisters and I go to school. I am in the seventh grade at school. Where we live is mostly all hills and valleys and for trees we have the oak and pine. There are lots of pretty flowers that grow here. We call the place where we live Flynn Valley, because of all the valleys I like our home and farm fine. We haven't a very large farm but expect to buy more land some day. Well I must close for my letter is getting quite long, hoping to see my letter in print sometime, with lots of love to the boys and girls. Evelyn Bugg, Ponca, Michigan.

Johnny's Mistake

"Run, Johnny, get some soda, quick !"
Cried mother in a flurry;
For she was making biscuits and
Was in an awful hurry.
So Johnny clasped his money tight
And scrambled off with all his might
When back again, all out of breath,
He cried, "I sure was quick !
I drank that soda down so fast
It almost made me sick !"

Dear Laddie—I have enjoyed the letters to the boys and girls. I am nine years old and in the fifth grade. I live on a 200 acre farm. We have 9 cows and a calf, 40 horses and 3 pigs, 12 rabbits. I have two brothers and one sister. Hoping my letter is not too long to be in print. Margaret Miller, R. F. D No. 2, Caro, Mich.

Little Boy Pigeon

I SUPPOSE they call me Squab because some time after I am hatched I some time after I am hatched I do not have any more feathers than a catfish, and my only clothes are a few scattering patches of yellow down. My skin is tender and pink, and the little pile of sticks that my mother calls a nest hurts awfully sometimes. My mother does not seem to think it is worth the trouble to make much of a nest, as we grow very fast and don't stay in it very long anyway. We live in a regular pigeon hotel, with lots of little rooms, and everyone of them an outside room, opening on a cute little porch. There are two of us in our nest, sister and myself. And at night mother comes in and covers us with her feathers, and you don't know how warm and nice it is. Father sleeps over in the corner, where he won't be in the way. Mother's feathers are so soft and warm when she snuggles down that we forget all about the hard bed, and the sharp sticks it is made of. Bright and early in the morning, long before the sun is up, our parents fly away to see about getting something for our breakfast. While we are very young, and before our stomachs have gotten used to grinding up food, they feed us on a kind of watery broth called "pigeon's milk"—it is really food that they have partly digested. When we are a bit older, they bring up grains of corn and wheat, and big brown cow peas, that are the very best things you ever put in your mouth. It's funny, but mother always attends to feeding me, the boy of the family, while father brings food to sister. While all this feeding has been going on, our feathers have been coming out in spots, mostly those on the wings and tail. At first, they are not regular feathers like the ones mother wears, but look more like little blue broomstraws than anything else. It is not long before our pink bodies are pretty well covered, and we begin to feel like sure-enough pigeons. But the little yellow tufts of yellow down that we wore at first can still be seen clinging to the ends of the feathers, and they do not come off until we learn to fly, when the wind blows them away. In about three weeks after we come into the world we are about as big as we ever will be, but our bills are still soft and unreliable and we have to be awfully careful not to bite anything too hard or we might bend them out of shape. Pigeons are among the best flyers of all the birds, and can stay on the wing all day, and think nothing of it. Mother and father and sister and myself are what are called just "common pigeons" but there are other branches of the family that are very uncommon. Some love their homelofts with such a great love, that no matter how far away they may be taken, the minute they are turned loose, they strike a bee-line for home. So when people want to send a message back, they take one of these pigeons, write the letter on a sheet of the thinnest paper, roll it up and fasten it to one of the wing feathers, and then turn the bird loose, and it comes straight back to the place where it was born, bringing the letter with it. Many of these birds were used during the great war.

Lily White

"The Flour the Best Cooks Use"

The color and texture of everything baked from it are splendid.

The flavor is perfectly delicious.

Thirty-five years of successful milling and an investment of more than a million dollars have brought LILY WHITE to its perfection of quality.

Remember, LILY WHITE is sold with the understanding that if it does not give as good or better satisfaction than any flour you have ever used, the purchase price will be refunded. No quibbling.

You could not ask more than that.

VALLEY CITY MILLING CO.,
Grand Rapids, Mich.

MARKET FLASHES

WHEAT

Under the new grading regulations the farmers of some states are suffering tremendous losses, as much of their wheat grades as low as No. 3 and some even lower. The congestion of shipping channels which was predicted some months ago is already being felt, and the offer of a Michigan buyer of wheat to pay farmers a premium for holding is a result of the inability of the concern to handle the abnormally large receipts to good advantage. Exports are very large and would be still larger if the ocean tonnage were available. A summary of the wheat yields shows a most surprising reduction in the estimates. "The spring wheat yield continues to diminish," says a correspondent, "and the total for wheat is after all not likely to exceed last year's grand total, so the increased acreage of winter wheat was a happy circumstance."

CORN

Grade	Det'o't	Ch'go	Toledo
No. 2 Yellow	1.75	1.66	1.73
No. 3 Yellow	1.75	1.65	
No. 4 Yellow	2.00	1.66	

Corn prices have reached a new ow level for the season. With harvesting of the new crop soon to begin the outlook is not encouraging to sellers of the grain. We concur in the opinion of the grain dealers, however, that prices cannot go a great deal lower and that the actual demands for this grain will make themselves felt. The sentiment and many of the conditions surrounding the corn market are extremely bearish and not at all conductive to higher prices.

OATS

Grade	Det'ot	Ch'go	N. Y.
Standard	.75	.70½	.83
No. 3 White	.74	.70	.81
No. 4 White	.73		.80

Of all grains, oats has maintained the most stability, and altho the export demand has taken a slump there have been no material changes in prices offered. Prices being offered at country points vary greatly, from 60 to 70 and even higher prices being paid in sections where the crop is sold and consumed locally. Sixty-five to sixty-eight cents we consider a fair average price to the farmers considering the present jobbing prices and condition of the market.

RYE AND BARLEY

Not much activity in these grains at the present time. Export demand has slowed up and domestic needs seem to be fairly well supplied. We do not anticipate any material changes, one way or the other, in the prices of these grains. Country points are offering around $1.30 for rye. The jobbing price is quoted this week at $1.36. Barley is bringing $2.30@2.40 per cwt in the city markets.

BEANS

The bean market is again struck with stage-fright or something or other. It's practically at a standstill, and no good reason for it either. Some jobbers, we hear, are contracting to sell beans at $8.50 for October delivery, and rumor says that the organized jobbers or at least a branch of them are conspiring to bear the market at the outset and open the season on a low basis. The two statements work well together. We want to warn our readers against becoming a party to these tactics of the bean speculators. Small fortunes are frequently made by bearing the market and then after having accumulated some supplies, sending the prices higher. Whatever money the speculators make by such methods comes out of the farmer naturally. A rush of the new crop to market would give these fellows the chance they are looking for, and they will stop at nothing to gain their ends. We admit that the condition of the bean market has not been such for some time as to inspire confidence in its future, but we don't want to see the speculators take advantage of this fact to profiteer at the expense of the farmer. Keep your eyes on the signs and don't be too anxious to unload.

Weekly Review Crop and Market Conditions

ALL GRAINS have suffered marked declines the last week. This was partly due to natural causes and partly to artificial causes. The government is acting like a scared rabbit chased by the dogs and is doing all sorts of foolish things to meet the demands of organized labor that the cost of living must come down. With courts of investigations hot-foot upon the trails of dealers in foods and with the newspapers teeming with editorials generally favoring a downward revision of food prices, it is perfectly natural that there should be temporary paralysis of most of the important markets. How far this artificial depression may go, no one knows, but it has already cost the farmers of the nation millions of dollars and unless checked will work an irreparable damage to agriculture. It is clear that the government is largely responsible for the subnormal conditions now prevailing, and the farmers are taking action now thru their various organizations to protest against the injustice and bring it to an end.

As if the unnatural influences at work were not enough to discourage the producer and the dealers in food products, the foreign demand for grains, excepting wheat, has suddenly slumped. For a number of months sentiment has been shaping in foreign countries in favor of shutting out American products as far as possible, and everything is now being done to stimulate production in those countries. Not a dollar's worth of business is being placed with the United States by foreign nations that can be supplied by their own people. It is true that the foreign countries must buy large food supplies here, but in the face of such a policy of home-trade, the demand will be slow and the buying from hand to mouth. These two factors just mentioned are working in conjunction to deter the dealer in foods from buying more than needed to fill immediate requirements.

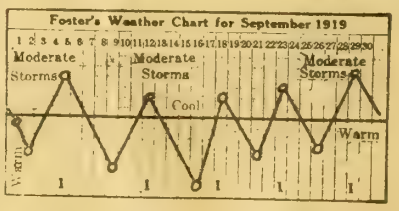
The present situation offers concrete examples of how the big middlemen—the storage fellows, the packers, the jobbing associations—dictate the prices on farm products. Receipts of grain and live stock on the big markets have been no larger the past two months than usual; excepting as above noted there has been no fundamental reason why the demand should have been any less or the dealers less anxious to buy. The middlemen, harkening to a public demand have been engaged in a concerted and more or less organized effort to reduce the prices on farm products. How well they have succeeded, the consumer may not know, but every farmer who has sold any products the past month is well aware of the powerful control held by these interests over his selling prices.

A leading grain paper indulging in a discussion of the government's campaign against the high cost of living, says: "How the farmer will view this proceeding remains to be seen, but it is hardly likely to be with favor. It is very likely that there will be something said in Congress on the efforts made to depress prices, especially as all the agitation will not add a bushel of grain to the total supply, that sooner or later the markets will reflect the actual condition of the supply. Extremely low prices for all grains seem impossible, in view of the guaranteed figure for wheat, as there is a relationship between the value of wheat and other grains, no matter how remote."

Weather and crop conditions are not the most encouraging just now. The entire state has suffered the past week from torrid weather and high, hot winds that have made the soil unusually dry and in poor condition for fall plowing. Practically every M. B. F. correspondent reports this condition, and it is feared that it may seriously affect the planting of fall crops. Corn is ripening all over the state and much of it has been cut. It is by far the best corn crop we have had for a decade. Beans are average and sugar beets a little better than a year ago. Another week of dry weather will cut the potato yield considerably. At the best, the yield will hardly come up to normal. Reports from other sections of the country indicate a condition of soil and crops very similar to this, and leads us to the conclusion that the 1919 harvest will be nothing to brag about.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



Foster's Weather Chart for September 1919
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30
Moderate Storms
Moderate Storms
Moderate Storms
Cool
Warm
Warm

WASHINGTON, D. C., Sept. 13, 1919—Last Bulletin gave forecasts of warm wave to cross continent Sept 16 to 20, reaching meridian 90 about 18; storm wave following about one day behind warm wave and cool wave about one day behind storm wave.

Next warm waves will reach Vancouver about Sept. 20 and 26 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 21 and 27, plains sections 22 and 28, meridian 90, great lakes, middle Gulf States and Ohio-Tennessee valleys 23 and 29, reaching vicinity of Newfoundland about Sept. 24 and 30. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will dominate the weather Sept. 10 to Oct. 1. Temperatures will reach the lowest near 16 and frosts will threaten middle Provinces and our middle northern states. No great storms are expected; most severe storms and most rain near 15 and 29. Most rain is expected in southeastern states, decreasing north and west to northwestward. Humidity, or damp atmosphere will continue to come with the winds from the southward.

Most rain will fall in southeast quarters of the highs and lows. Fogs will be dense on the Atlantic coast; less dense on the Pacific coast. Temperatures will average below normal. Atlantic fish will continue to move southward and catches will continue to be small east of Canada and the states. Fishermen should go south for Atlantic fish.

W. T. Foster

One of the best reviews of the bean situation and from a well-informed source, is the following submitted to Michigan Business Farming exclusively by the editor of the Bean-Bag:

"We do not believe legislative fiat or seizures of foodstuffs in stores will bring down prices. In fact we do not expect any reduction to the consumer. However, a very serious state of affairs will arise among the trade if the newspapers continue to carry large accounts of wonderful seizures of ten to fifty bags of beans at a time. The supply of beans in store is large, but it is in many hands and all of it is for sale. Most of the California crop is in the hands of the growers, and they will sell, at a decent price. It is to be regretted that the Michigan growers are not so well organized.

"The market today is almost a hand to mouth affair again. Wholesalers are averse to buying above their needs for the immediate present. A carload of beans in a wholesale house looks mighty big to an amateur investigating committee and many wholesalers are afraid to buy the quantity they will need to run them even six weeks ahead. The fear of being caught "hoarding" is not working the market, but rather the fear of being suspected of hoarding.

"Hand to mouth buying is bad and with strong prospects for a national rail strike, many communities are going to find themselves caught short on foodstuffs, altho, of course, we all hope the strike will be avoided.

"The trade can but hope for better times, conditions are bettering slowly, and with such an evidence of hand to mouth buying we are not sending out any "buy" reports. In value, by comparison with other foods, we do not see what can possibly keep beans at their present price, but knowing conditions as we do, and realizing the possibilities of the many things that may happen, we are not ready to predict a rising market, much as we would like to see it, and as much as it seems certain to come.

"Tausend & Maloney, of Grand Rapids have issued a very interesting bulletin under date of August 18th. To quote:

"Michigan acreage, 350,000. Will average yield 9 bushels per acre, with a total of 3,150,000 bushels as the probable yield for the state. Quality equal to that of 1918. Good bright color and moisture normal.

Year	Total U. S. Crop	Carry over Stocks	Total stocks
1917	14,967,000	3,000,000	17,967,000
1918	19,506,000	4,824,000	24,330,000
1919	10,980,000	6,000,000	16,980,000

"Note: The beans marketed last year are in excess of total stocks available this year.

"Market comparison: August 18, 1917, $12.75 cwt. 1918, $10.25 cwt. 1919, $8.30 cwt.

"To make a true study of market conditions we must consider Oriental conditions, and accurate reports from the Orient are very rare. However it is our personal opinion that the Orient will not break the market this year in the United States, we believe export to other countries will take care of a large part of the crop, and in fact we expect imports into the United States to drop off a little. Of course this is more a guess than anything else, in fact it is as much a guess as to say 'we are going to have rain on the 16th of December because we expect to go duck hunting on that date.

"The Japs are good business men and can be expected to follow the domestic market rather closely. One large order some weeks ago sent the Oriental market kiting, with domestic markets closely following, and for a time domestic demand very good. Had the H. C. L. noise been omitted or conducted on sensible lines and only food that was actually hoarded in sufficient quantities to affect the market been seized, we would be still running on the price of two months ago."

HAY

Markets are slowly recovering from the recent congestion and a better undertone prevails. Western markets show a better recovery than in the East where a new basis of values has not yet been established. Embargoes have played a prominent part in restricting the movement but a large amount of hay had been loaded before the embargoes were placed and this is keeping the supply above requirements at several eastern cities. Complaint is made from all ponts that arrivals are mostly low and undesirable grades and these sell at irregular prices. Consumers are hoping for further declines and are keeping out of the market as much as possible, but the fact that markets in general have a tendency to recover this week would indicate that the new crop has found an approximate level.—*Hay Trade Journal.*

POTATOES

The early potato season is progressing in a very encouraging fashion. Daily shipments are now averaging better than 600 cars but the demand is sufficient to take care of them all at prices ranging from $4.75 to $5.65 per 150 pounds. Growers of the early varieties are getting from $1.20 to $1.35 per bushel and there is reason to believe that these prices will prevail at least until the later varieties reach market. The prospects for high yields are not very encouraging and with a somewhat similar condition obtaining in other potato states, we may reasonably look forward to a season of fair demand and fair prices. If current reports of the condition of potatoes may be relied upon, we can confidently expect that the price will not go below $1 to the grower. It is a little early yet to count our chickens, however. October 15th will be a better time to survey the national situation and lay our marketing plans.

TOMATOES

Tomatoes have yielded exceptionally heavy this year and supplies on all markets have been liberal, with a good demand. Jobbing sales are mostly made upon the basis of $1.25 @1.35 per bushel.

FRUITS

It is noteworthy that Michigan peaches usually bring the top of the markets nowadays against such competitors as California, Maryland, Washington and other well known peach states. It's too bad that our yield wasn't larger. Michigan Elbertas have been selling as high as $4@4.25 on the Detroit market the last week.

Demand for apples continues good and the movement moderate. Michigan Alexanders, No. 1, fetch $2.2[illegible] quite readily, and No. 1 Wealthys bring the same price. The season is yet early for Michigan, and the movement will not be well under way until October 1st or later.

Michigan grapes are in good demand and jobbing prices average around eight cents a pound. The harvest in Michigan is in full swing and growers are realizing close to 40 cents a basket.

NEW YORK BUTTER LETTER

The butter market has been firm and fairly regular, except for an upward price tendency during the week. The main feature of the situation at present is the scarcity of high quality butter and the preponderance of undergrades. Always when such conditions as those at the present time exist there is no demand for undergrades; in consequence the price remains comparatively low. High quality butter has been clearing immediately upon arrival until yesterday when it lagged somewhat and the price declined ¼c. It is expected that the setback was temporary and that the price will again start going upward at once. The price of high quality butter has advanced 1c during the week and established quotations at the close on Friday were as follows: Extras, 58c; higher scoring than extras, 58½ to 59c; firsts, 53c to 57½c; and, seconds, 50 to 52½c.

LIVE STOCK

The live stock market is best summed up in a report recently issued by Clay, Robinson & Co., commission merchants. This report says

"The hog market at Chicago seems to have lost all semblance of stability of late. A week ago best hogs were selling up to $21.10, two days later the top was $19.50. On the week end session last week a $20.10 mark was set for top hogs while Tuesday of this week a scratch sale of $21.00 was established. Wednesday of this week the top receded to $20.10. A big drop in prices late Tuesday and Wednesday regardless of the fact that the runs have been of semi-famine proportion would indicate that buyers have the clamps on the market and do not intend to let it get away from them again. All buyers seem to be of bearish nature with Armour a leading factor. According to an interview of J. Ogden Armour at St. Paul he was of the opinion that all commodities would work to a still lower basis. While he did not make any particular reference to hogs it is taken that he also included this end of the trade in his interview. Receipts the first half of this week numbering 36,000 are less than half the number that arrived the corresponding period last week. An effort to get buyers to loosen their purse strings on the short run argument was met with the counter charge that an increased supply was due to arrive this week end at which time buyers could fill their needs. Dress meat trade has not shown much improvement of late as the public has not as yet benefitted much by the recent break in prices at the Stock Yards, and is balking at the excessive retail cost."

In other words, Mr. Armour, convinced that the cost of living has gone high enough will proceed to lower it thru the monopoly he and his brother packers have over the live stock industry. If Armour says the cost of meats must come down, Armour is in a position to bring them down.

EAST BUFFALO LETTER

East Buffalo, New York, Sept. 5.—Receipts of calves are estimated at 700 head. Choice calves, $23 to $23.50 which is $1 higher than yesterday; throwouts, 120 to 140 lbs., $16.50 to $18; heavy throwouts, 160 to 190 lbs., $10 to $11; heavy fat veal calves, $12.50 to $15, as to weight and quality.

The receipts of sheep and lambs are called 10 cars. Best lambs sold 25c higher than yesterday, selling from $16.25 to $16.50, culls, $11.50 to $12; yearlings, $11 to $11.50; a few yearling breeding ewes sold up to $12; wethers, $9.50 to $10; ewes, $8 to $9.

Receipts of hogs today totaled 2,830 and with the packers buying very sparingly, our market opened steady to 10c lower, and in some cases 25c lower. The heavy hogs were dull, selling at $19.50; light mixed and yorkers, $20.25 to $20.50; pigs, $18.25 roughs, $16.

The hog market broke $1 per cwt on all grades yesterday (Thursday.)

POULTRY

Receipts of poultry are on the increase and the supply has been somewhat in excess of the demand. Government raids on cold storage plants and the throwing of large quantities of the cold stored stock upon the market have had a bad effect upon the market. Prices quoted this week are: Live Poultry; spring chickens, large, 33@34c; leghorns, 28@30c; hens, 34@35c; small hens, 32@33c; roosters, 21@22c; geese, 28@30c; ducks, 30@32c; spring ducks, 32@34c per lb.

Studebaker

THE 60-H. P. BIG-SIX

IN providing complete motoring satisfaction the New Seven-Passenger Studebaker BIG-SIX offers the utmost in individuality and charming appearance. Its 126-inch wheelbase insures perfectly balanced riding qualities and maximum comfort for every passenger. THE BUSINESS FARMERS' EXCHANGE

CLASSIFIED ADVERTISING

5 CENTS A WORD PER ISSUE. To maintain this low rate, we are compelled to eliminate all book-keeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farming, Adv. Dep't, Mt. Clemens, Michigan.

NOTE:

An illustration helps greatly to sell farm property. By adding $10 extra for each insertion of your ad, you can have a photographic reproduction of your house or barns printed at the head of your ad. Be sure to send us a good clear photograph for this purpose

FARMS AND LAND

THIS CHANCE WON'T LAST LONG Page Farm, Clare Co—1120 acres, 500 under cultivation. 10 miles Page Wire Fence. Rich loam soil, suited to all crops. Two houses, several barns, new 14 x 30 silo. Machinery included. Pastures have wells and springs, will handle 150 cattle. Six miles to county seat, half gravel road. Timber acreage will produce 10,000 cords of wood. Big chance for hustler to handle stock on large scale. $10,000 cash will get possession; balance, easy terms. Prefer to sell whole but will divide. Owner desires to retire this fall. For information write Geo. C. Sheffield, Harrison, Mich.

FOR SALE—60 ACRES NO. 1 GARden soil, good location, 25 miles to Detroit city market, near district school and 2 of Michigan's greatest college cities. 1 1-2 miles from the Outter Belt Route, cement road near Michigan avenue, young orchard, 1 1-2 acres of fine strawberries, new house with basement and other outbuildings. This is one of the best farms in Canton Township and lays in fine shape to divide into little farms. A bargain. Write for terms. Owner, E. L. Forshee, Plymouth, Mich.

IDEAL SHEEP LAND IN HEART OF Lower Michigan's Clover Seed Belt—where settlers are paying for land with Clover Seed. Fertile soils that grow wheat, corn, oats, barley, peas, clover, alfalfa, vetch, fruits and vegetables. Where total crop failures are unknown. Price $10 to $15 per acre. One dollar an acre down—long time for balance at 6 per cent. John G. Krauth, Millersburg, Presque Isle County, Michigan.

FARM FOR SALE—290 ACRES SAND loam soil, in good potato and corn growing locality. 15 acres of wood timber. 200 acres cleared. 3 big barns and 2 good houses and out buildings. Excellent opportunity for stock raising. Will sell all or part of farm as desired. For full particulars write, George Cooper, R. 3, Tustin, Mich.

FOR SALE—100 ACRES IN GRATIOT County, 5½ miles from Merrill on intended trunk line, ½ mile to school. Good land, ½ tiled and fenced, with new 8 room house. Good barn, 36 x 50. New silo; granary; tool shed; garage; corncribs. Out-door cellar. Telephone, 140 fruit trees. Bargain if sold at once. Inquire of Jerry Fry, R No. 1, Merrill, Mich.

FARMS FOR SALE—BIG LIST OF farms for sale by the owners, giving his name, location of farm, description, price and terms. Strictly mutual and co-operative between the buyer and seller and conducted for our members. CLEARING HOUSE ASS'N, Land Dept., Palmer and Woodward Ave.

FOR SALE—EXCELLENT FARM, 160 acres, clay loam. Fine buildings, painted. Good water system in house and barn. Convenient to three churches, schools and towns. Good roads. Apple orchard. Price reasonable. Chas. Landon, Marlette, Mich.

FOR SALE—80 ACRE CLAY AND clay loam soil, 65 acres cleared, 4 acres timber, 11 pasture, running water, new 7-room house, wood shed, 20 x 20 cellar, hip roof barn, well, fruit. For full description write, F. O. Kurt, Marion, Mich.

FOR SALE—140 ACRE FARM, 3-4 mile from Ann Arbor. Good buildings; best of land; cattle; tools and machinery. Also hay and grain. James Miller, R 2, Ann Arbor, Mich.

FOR SALE—80 ACRES OF LAND IN Iosco Co., township of Reno, Mich. Number one farming land, 35 acres cleared, fenced and watered. For price write Patrick Corrigan, R 2, Prescott, Mich.

FOR SALE—DESIRABLE 60 ACRE farm. Good roads. 2 miles from South Lyon. Contract. Easy terms. Write Mrs. L. H. Bradley, South Lyon, Mich.

JAMES SLOCUM, Secretary
Cor. Woodward and Palmer Aves.
Detroit, Mich.

Crop Reports

IOSCO—The weather is hot and dry. Most too dry to plow for fall grain, but some are trying hard to get some fall grain in, others are cutting corn, threshing and pulling beans. Grain is turning out very poor, running about 15 to 20 bushels per acre. Corn is fairly good and most all ripe. Will be plenty of seed this year. Beans also look good in the fields. Probably will yield pretty good.—A. B. L.

LIVINGSTON, (W)—We are all busy plowing for wheat and rye and filling silos. Some are hearvesting beans. Nothing being taken to market from this vicinity just at present. The ground is very hard and dry. During a little shower on the night of August 29, lightning struck and killed seven head of registered Holstein heifers for Guy Wakefield, valued at $2,000.00.—G. A. W.

NEWAYGO (C)—Threshing, corn cuttings, apple picking is the busy day in this locality. Wheat only a fair crop, some fields goods, others not so good. Oats, light. Corn good. Early potatoes a light crop. Late potatoes look fine but only about half the acreage. Beans ripening fast, small acreage. Ground very dry Very little rain during summer. Ground too dry for good plowing for wheat.—R. F.

JACKSON (N. E.)—The weather the past week has been ideal, though dry for plowing and preparing the soil for winter grain. Corn cutting has started and the later palnted crop will be good. The early planted fields show the effect of the several weeks of drouth. What beans were planted are being harvester and the early potatoes are about all dug with a very poor yield. Threshing is still in vogue an dsilo filling will be on next week. Very little being sold. Prices too low for a profit.—A. F. W.

SAGINAW (S. W.)—The farmers are cutting corn, pulling beans and filling silos. It is so dry they have had to stop plowing for wheat unless it rains soon there won't be much wheat sowed in this section this fall. Not very much grain or stock going to market at present. The following prices were offered at St. Charles: wheat, $2.05; oats, 65c, No. 1 Timothy, $20.00; No. 1 light mixed, $18; beans (C. H. P. Pea) $7; hens, 24c; springers, 30c; butter, 55c; butterfat, 60c eggs, 40c; hogs, $18.50; veal calves, $18@22.—G. L.

GRAND TRAVERSE (C)—Are having nice weather only are badly in need of rain. Late potatoes will not amount to much unless we get rain. Some corn is about ripe and many farmers are cutting, silo filling will begin soon. Radishes are being cared for and contracts and sweet corn is being gathered. Not much fall plowing being done on account of dry weather. The following prices were offered at Traverse City: Wheat, $2.87, corn, $1.50, oats, 85c, rye, $1.25, beans, (C. H. P. Pea) $4.00; Poultry, hens, .22; springers, .24; butterfat, .58; eggs, .40 Fruits, apples, $1.00.—C. L. B.

MISSAUKEE (C)—Farmers are busy with rye and wheat ground, none sown yet. Ground is getting very dry for plowing. Corn is ripening fast but potatoes are bottoming slow. A live stock improvement meeting was held in Lake City on August 29th to do away with scrub sires and get more pure breds. The Shorthorn breeders organized by electing Elias Gray of Lake City, president and Ralph Hoover of Merritt, sercetary an dtreasurer. The Holstein breeders organized by electing Jacob Smithers of Lucas, president and Lldyo Hunsberger of Enterprise, secretary-treasurer.

MONTCALM (N)—Farmers are cutting corn, filling silos, digging potatoes. The weather is good. Soil is dry. Farmers are selling grain and potatoes. Silos are being built. The following prices were offered at Lake View on September 4: wheat, $2.10; corn, 60c; oats, 46c, rye, $1.30; hay, $20.00 ton; No. 1 light mixed, $22 ton; straw rye $8 ton wheat-oat $10 beans (C. H. P. Pea) $8 cwt.; red kidney $12 cwt.; potatoes $1.35bu.; hens, 18c springers, 22c, ducks, 18c, geese 30c; turkeys, 45c; butter, 41c; butterfat, 42c; eggs, 40c; hogs, 22c lb.; apples; 85c bu.; peaches, $4.00 bu.; plums, $2 bu.; pears, $2.50 bu.; grapes, $4 bu.—G. B. W.

GENESEE (S)—Farmers are threshing, filling silos, plowing, pulling beans and doing road work. We have not had much rain and the ground is too dry for working, especially the heavier soils. Corn has ripened very fast during the last week and everybody is either filling their silos or else getting ready to do so as soon as possible. Beans are ripening more evenly this year than last, but the average yield will not be very high. Late potatoes are looking good but we must have more rain to get a large yield. A few farmers have purchased tractors during the last week or two. Several farmers are attending the State Fair.—C. W. S.

TUSCOLA (C)—Farmers are plowing for wheat and rye, cutting corn, threshing and a few pulling beans. Oats, rye and wheat not turning out as good as we looked for. Weather cool and dry. Soil too hard and dry to work good. Farmers are selling cattle, hogs, potatoes and pears, holding nothing yet. Everybody around here are sick with hay fever. It is called summer flu by some. Some are very bad with it The following prices were offered at Caro on Sept. 4: Wheat, $2.05; oats, new, .65; old, .70; rye, $1.27; beans, (C. H. P. Pea) $7.00 cwt.; red kidney, $4.50 bu.; potatoes, $2@$1.90 bu.; onions, $2.25 @ $2.50 bu.; cucumbers, $1.25, $1.00, .50; Poultry, hens, .25@27c; springers,26@30c;ducks, .25; geese, .18; butter, 48@50c; butterfat, 50c; eggs, 42c Live stock, sheep, $5@8; lambs, 10@15½ hogs, 16@20c; beef steers, 10c; beef cows, 4@4½; veal calves, 15@18. Fruits, apples, $1.00@$1.50; peaches, $2.50; plums, $2.50; pears, $1.50@2.00.—R. B. C.

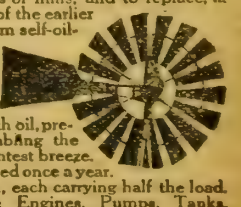
THE SELF-OILING WINDMILL

has become so popular in its first four years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil, preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load.



We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' everyday troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

Land Contract

I have purchased a farm on land contract same being mortgaged. Will you kindly state my rights in case the owner should die having failed to pay the mortgage. Could another mortgage be put upon the property before I have paid up my contract?—*X. Y., Cedar, Mich.*

Ans.—Your contract should call for a warranty deed or should provide that you should receive same upon paying down to the amount of the mortgage. You would be entitled to enforce your contract against the estate of the deceased and the heirs would take the property subject to the mortgage and your rights. The owner of the property can place as many mortgages upon the same as he wishes, but if he has contract to give a deed free and clear he would be liable in damages for failure to carry out same.—*Victor H. Hampton, associate legal editor.*

Mortgage Rights

I have purchased a farm not subject to a mortgage the same becoming due before my last payment. My contract calls for a warranty deed. What are my rights?—*A Reader.*

Ans.—Your rights are to be determined by your contract. You would be entitled to set off the amount of the mortgage against the amount due on your contract if same was not paid and you were forced to pay same to protect your interests. I do not think you have any reason to fear that you will be damaged. I presume the mortgagor is depending upon your payments to pay off the mortgage.—*Victor H. Hampton, associate legal editor.*

Share Rentor

I have rented a farm for one year upon shares. Can I leave before the lease expires by giving him his share of the crop?—*B. T., Hamilton, Mich.*

Ans.—It would be necessary to examine the lease to fully answer the above as the rights of the parties are to determined thereby. If the crops are the only rent provided there would be no reason why you cannot relieve yourself from the liability to pay rent for the term and would be liable therefor. If the lease does not state any time for payment it would not be payable until the end of the term and once a month would be more than could be legally asked for.—*Victor H. Hampton, associate legal editor.*

Lessee Wants Release

I leased a farm from March 1, 1915 to March 1, 1920. I wish to make a sale. If I pay a full year's rent can I be made to stay until the lease expires?—*R. H. R., Hesperia, Mich.*

Ans.—You cannot be compelled to remain upon the farm, but you are bound by the lease for the rent for the full term unless it is rented again in which case you would be liable for the difference if any. You might assign the lease or sub-let it if you wish to sell. If the landlord consented to an assignment you would be released.—*Victor H. Hampton, associate legal editor.*

Duties of School Director

Can the Director of a district school board buy anthing he sees fit? Can he buy paint and paint the school house himself?—*J. R., Leroy, Mich.*

Ans.—The duties of the Director and the District Board are outlined by statute which is too long to enable us to print. See sections 5671, C. L. 1915 and those following. The director does not have the authority to purchase anything he desires and all orders must be countersigned by the moderator of the board. It is the duty of the director to provide the necessary appendages for the school house and keep the same in good condition and repair and this includes looking glass, water pail, broom, etc, as set forth in the statute and upon the order of the district board other apparatus. The directors accounts must be audited by the moderator and treasurer and on their written order shall be paid out of any money provided for the purpose. I question the Director's authority to buy paint for the school house unless a majority of the board approve. The statute further provides that it shall be illegal for any member of the board to perform any labor except as provided in the statute, or to furnish any material or supplies for the district and that he shall not be interested in contract with district in which he holds office. Hence, in my opinion the director could not do the work himself and would be guilty of a misdemeanor if he did.—*Victor H. Hampton, associate legal editor.*

Mill Company Liable

I delivered lumber to a mill to be planed and matched. At the request of the mill people I left same as they were unable to do the work at once. The mill was burned. Are they liable to me for my lumer?—*R. H. B., St. Charles, Mich.*

Ans.—It was the duty of the mill to use ordinary care not to cause damage to your lumber. If they were negligent and thereby a fire started which burned your lumber they are liable. A more complete statement of the facts would be required to determine the question of their negligence.—*Victor H. Hampton, associate legal editor.*

Milk House

Can I be compelled to build a milk house when I send my milk to a cheese factory. 2. Can they stop me from sending my milk to a creamery?

Ans.—The law does not directly require you to build a milk house, but it might be that the Section (6417) defining insanitary milk is broad enough to make you guilty of selling insanitary milk or cream if you did not have a milk house. This law is too long to permit of printing in this column. 2. No, if you comply with the law as to unsanitary milk.—*Victor H. Hampton, associate legal editor.*

HOW PUBLIC STORAGE CAN HELP LIVING COST

(Continued from page 1)

became alarmed, they raised money to fight the submission of such a proposition to a vote of the people. The bill passed the senate by a trade. Our Supreme Court Judges wanted their salaries increased from $7500 to $10,000 a year. We don't blame them. To compel a man to wear a Mother Hubbard in public is worth $10,000 a year. The friends of both measures agreed to put them thru at once and they were passed and sent to the house the same day. The house at once passed the Supreme Court measure in time to have it submitted at the April election, when it was defeated by over 100,000 majority. The warehouse bill was buried in a committee presided over by Farmer Ivory of Lapeer county. Farmer Ivory refused to call a meeting of this committee to consider the warehouse bill. There the bill remained until the last day of the session at midnight when it was finally brought out and placed on its passage. Recollect it only provided for its submission to the people, but the house by a vote of 48 to 38 refused to let the people vote on it.

The following members voted to submit the proposition to the people, Braman, Byrum, Chapin, Chew, Coleman, Dehn, Drummond, Evans, Ewing, Farrier, Galloway, Haan, Hall, Holland, Jensen, Johnson, Kappler, Ladd, Leland, Lennon, Lewis, McKeon, Miles, Miller, Mol, Nagel, Sink, Frank A. Smith, Newman Smith, Town, Wallace, Weidenfeller, Weissert, Wiley, Young, Speaker.

The following members were afraid to trust the people and voted against letting the people vote on it, Dafoe, Deprato, Dunn, Fitzgerald, Glaspie, Gowdy, Blinn, Brower, Brown, Chase, Copley, Croll, Curtis, Griggs, Harris, Hartway, Hopkins, Ivory, Jackson, James, Jerome, Kooyers, Leighton, Martin, Merriman, Franklin Moore, McGillivray, O'Brien, Olmstead, Reutter, Robinson, Ross, John W. Smith, Toepel, Welsh, White, Woodruff, Warner, Ward, Wells and Edw. G. Read.

The following members were absent:

Case, Crawford, Howe, Hunter, Liddy. Macdonald. J. M. Moore, Mosier, Pasco, Rose, Sawyer, Stearns, Vine and Watson.

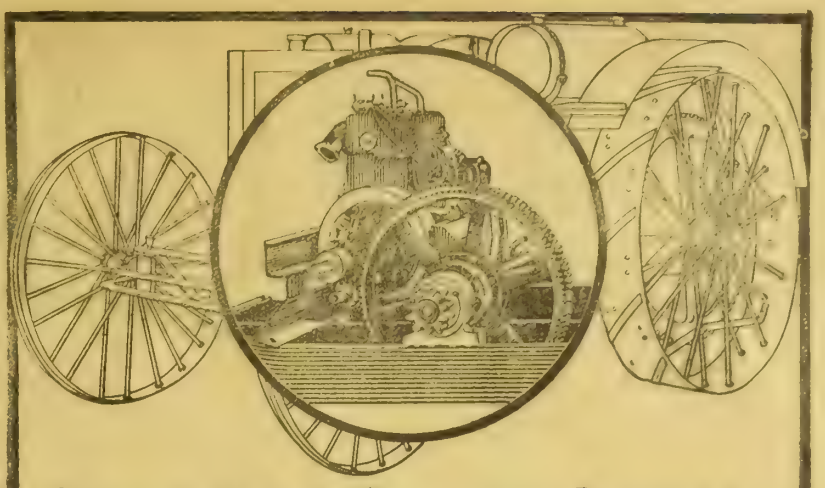
We have fought a great war to make the rule of the people supreme and in the face of this, members of the Michigan Legislature refused to let the people vote on the only proposition that proposed to give the farmer a fair profit and at the same time reduce the cost of living. Now why did they do this? Ask your member why he was afraid to trust the people. He may tell you it was "Socialistic" and a new fangled idea. It was not. Several thousand years ago Pharoah built government warehouses in Egypt and stored corn for seven years to reduce the high cost of living for the seven lean years and no one ever claimed that Pharoah was Socialist. And in modern times Canada has built government elevators for the wheat farmers and Louisiana has built cotton warehouses for cotton farmers, where they could store their cotton to avoid the glut on the market and they could borrow money on their warehouse receipts to tide over their necessities. The thing is as old as the pyramids and has never failed to work when given a fair trial. Perhaps your member will tell you the idea was "Bolshevik" and savored of the I. W. W. and non-Partisan League. You can perhaps understand this

But I will give you the real reason. Every distributor and elevator man in the state was fighting it. Now these distributors are powerful financially and politically. They can make or break any local candidate for office because they vote as they talk. Hundreds of petitions were sent in by farmers in favor of the bill. The farmer has ten votes to the distributor's one, but they don't use them.

They are too busy sometimes to go to the primaries or if they do vote they vote as they are told. they pass resolution but they don't vote as they resolute, that's why they don't get anywhere. We don't blame the members who voted against this measure. They were acting for their political self-preservation They feared the distributor and they knew they could get the farmer vote no matter if they voted against every measure he wanted.

All those who desire will be renominated and re-elected next year by the farmer vote. Why should they cater to it? The State Grange has voted to join the Gleaners to submit the warehouse bill to the people by initiative. Here the farmers will get a chance to vote ideas into action instead of partisans into office. Will they do it It costs time and money to get 30,000 names on a petition. Will farmers give their time to secure a vote on a measure that will go a long way toward solving the marketing question, or wil they pass a few resolutions and let it go at that?

The above is the second of a series of articles written exclusively for BUSINESS FARMING, *by Mr. J. W. Helme. The third will appear in an early issue.*



Direct Drive Conserves Power *in* THE HUBER Light Four

12 H. P. on Draw-Bar
25 H. P. on Belt Pulley
Draws three bottoms
Turns an acre an hour

TRACTOR economy and tractor power depend largely on the proportion of the power developed by the motor that is delivered to the draw-bar.

In simplicity and economy the direct spur gear drive of the Huber Light Four is unequalled. There are no bevel gears—simply a friction clutch and spur gear reduction to the driving wheels.

Other reasons why the Huber develops such large power in proportion to its weight are: the high wheels roll easier and afford a larger area of "traction grip"; center draft conserves power by avoiding "side pull"; high-grade extra strong materials reduce weight.

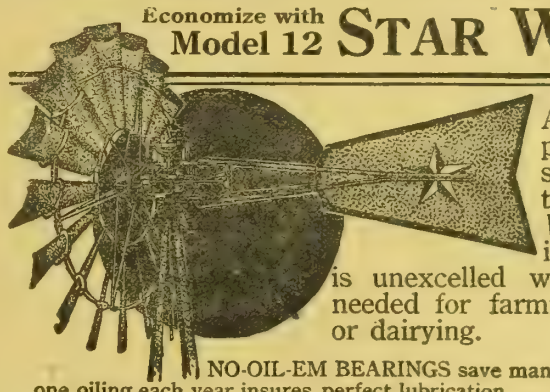
These features are the result of 20 years' development. They are behind the Huber reliability that has created thousands of satisfied Huber owners.

Weight 5,000 pounds; pulls three 14" bottom plows; 12 h. p. delivered to the draw-bar; 25 h. p. at the belt; Waukesha, four-cylinder motor; Perfex Radiator; Hyatt Roller Bearings; burns gasoline, kerosene or distillate; center draft; two speeds, 2½ and 4 miles per hour.

Write for "The Tractor in the Making". It tells the interesting history of tractor development.

THE HUBER MFG. CO. 225 Center St. Marion, Ohio
Canadian Branch, Brandon, Manitoba
Makers also of the famous Huber Junior Thresher.
Some good territory is still available for live dealers.

Economize with Model 12 STAR WINDMILL



An abundant supply of water is assured the user of the Model 12 *Star Windmill.* Pumps in light breezes and is unexcelled wherever water is needed for farming, stock raising or dairying.

NO-OIL-EM BEARINGS save many trips up the tower, as one oiling each year insures perfect lubrication.

Write today for catalog No. 95 or see the STAR dealer in your community.

HOOSIER WATER SUPPLY SYSTEMS

Provide an independent supply of water for farm homes. Use any kind of power, pump from well of any depth. Easily installed and economically maintained. Write for Bulletin F.

Is Your Farm for Sale?
Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or your farm, send in your ad today. Don't commissions. If you want to sell or trade just talk about it. Our Business Farming Farmers' Exchange gets results. Address Michigan Business Farming, Adv. Dep't., Mt. Clemens.

Send NO Money

Don't Send a Single Cent

Get 2 One Dollar Boxes

Here is your opportunity to buy the famous Laymore at half price. You don't need to send any money—simply fill out and mail the coupon below, and I will send you the two full-sized dollar packages. When the goods arrive, pay your postman only $1.00. I am sending Laymore out without money in advance because hundreds of folks have put off ordering Laymore because it was too much trouble to get a money order or make out a check. I want everybody who raises poultry to use

Laymore

"MAKES THE LAZY HENS LAY"

because it will double your poultry profits. Thousands of poultry raisers are making more money than they ever thought possible. The reason is Laymore. This scientific discovery tones up your hens and acts on the laying organs with such remarkable success that I sell Laymore under the absolute guarantee that it will double your egg production or your money back. Mail the coupon now and get double value. Remember you don't need to send any money with the coupon unless you want to.

EGGS COST 12 CENTS A DOZEN

Get your hens to lay eggs at a cost of only 12 cents a dozen by feeding Mayer's Laymore, the scientific egg producer. A half cent's worth of this remarkable laying tonic is sufficient for 12 hens. The two dollar-size boxes that I am offering here for $1.00 will last 100 hens for three months. Use the coupon. Better mail it right away.

448 EGGS From 20 Hens in One Month

May 9, 1919.

Mayer's Hatchery,
Minneapolis, Minnesota.

Enclosed find $3.00 and coupon for Special Offer. Wish to state that my supply of Laymore is gone and wish you to send more as soon as possible for I do not want to be without it. It sure did give results. In January when I sent for your Laymore Tonic my chickens were not laying. I received my supply and here is the result:

EGGS	MONTHS	HENS
1	Jan.	32
50	Feb.	32
423	March	26
448	April	20

123 eggs for the first 9 days of May. If this statement will help you, use my name.
(Signed)
Chas. Moore,
Clymer, Pa.

Send me $5.00 worth of Laymore. I used it before and it is good.
Ella Ritchart, Pomelta, Bend, Mo.

Enclosed find $1.00 bill for which send me two packages of Mayer's Poultry Tonic. I have used two packages with good results Send at once, don't delay, we need it. It sure is a help.
Pearl Ernst, Council Grove, Kas.

Please find enclosed check for four more packages of Laymore, as I find it to be just as represented. Adolf Swenson, Lancaster, Minn.

I use your Laymore Tonic and like it fine.
Mrs. Will F. Busch, Litchville, N. D.

I get a good deal more eggs than I did before I began feeding Laymore. Mrs. A. S. Halden, Mountain View, Mo.

MICHIGAN BUSINESS FARMING

The only Independent Farmer's Weekly owned and Edited in Michigan

Vol. VII, No. 8 2 MT. CLEMENS, SATURDAY, SEPTEMBER 20, 1919. $1 FOR ONE YEAR (3 yrs $2; 5 yrs. $3)

State Farm Bureau Launches Membership Drive

THE MICHIGAN State Farm Bureau has decided to launch a publicity campaign for the purpose of securing new members to the organization. This was unanimously agreed upon by delegates of county farm bureaus, officers of the State Farm Bureau, and other representatives of the agricultural interests of the state who assembled at the Fort Shelby Hotel, Detroit, last Friday afternoon to arrange the financial details and discuss the future of the Farm Bureau movement.

The county farm bureau idea has been very slow to take root in this state, and the present membership does not exceed one twenty-fifth of the farmers. One reason for this is that most of the farmers are members of some other farm organization performing at least some of the functions of the farm bureau. Another reason is that up to very recently the farm bureau has been unable to demonstrate its value in practical results. Still another reason has been the foolish suspicion that the farm bureau movement was started and that its policies are dictated by great interests who plan on using the farm bureau as a tool to prevent the farmers from bringing about actual reforms.

Farm Bureau Progress in Other States

We are sure, however, that the farm bureau has proven its right to be called a farmer's organization, and has succeeded in removing to the satisfaction of the great majority, any stigma that may have attached to its motives. Its program is conservative,—many believe, too conservative,—but it has a practical and constructive appeal which has drawn to its standard many of the best thinkers of the agricultural group, not only here in Michigan but other states as well. As a matter of fact the farm bureau has become a very large and important factor in determining the agricultural policies of certain other states. In Illinois, in particular, the State Agricultural Association made up of the county farm bureau units, has become a rather influential organization.

Deserves Support of Every Farmer

At the early inception of the farm bureau idea little attention was given to subjects outside of those taught in the agricultural colleges. The service it rendered was in fact, rather supplementary to the work of the colleges. For some reason which we do not presume to know, the bulk of the farmers did not take kindly to the work of the farm bureau along these lines. Consequently the membership was small, interest was lacking and the farm bureau movement lagged. But it did not require the heads of the farm bureaus and the county agents long to see that the farmer's most pressing problem was one of marketing instead of production; financial instead of social. And when they finally directed their best efforts to a solution of these problems, it did not take the farmers long to understand that these efforts were in their behalf and should have their support. At the same time there are scores of thousands of farmers who have had no personal contact with the work of the farm bureau and are too little acquainted with its objects to know whether it is a good, bad or indifferent organization. It is to reach the uninformed and the prejudiced that the publicity campaign is to be inaugurated and the purposes and plans of the farm bureau explained.

We cannot be unmindful of the fact that the farm bureau is one of the few organizations which offers to the farmer a membership without any sectarian, fraternal or social obligations. Many claim that the strength of older organizations is due to these obligations which hold the farmer's interest and loyalty. In other words, that farmers will not become members of organizations for the mere sake of belonging to them; that there must be a special tie to hold them. The one great advantage of the farm bureau is that its principles are broad enough to include every farmer, regardless of his affiliation to any other organization. It requires nothing from him aside from his membership fees, but loyalty.

The farm bureau can be made a most useful instrument in the hands of honest men. It has always been handicapped because of its reliance upon other interests aside from agriculture for financial support. Since the farm bureau and the county agent must to succeed, work primarily for the interests of farmers it should be wholly free from any entangling alliances with the government, the banking fraternity or the commercial world. Any taxpayer interested in a business which is trespassed upon by the farm bureau and county agent will have a right to complain because under the present arrangement of paying the county agent, he helps to foot the bill. The farm bureau was organized for the farmers. It should therefore, be of and by the farmers. If the farmers, themselves, are not able eventually to pay the expense of carrying on the work of the farm bureau, of increasing its membership and broadening its objectives, they should not avail themselves of the benefits of these efforts. The farm bureau will never be the strong, independent and organized exponent of agricultural aspiration that it ought to be until it has struck away all bonds that specify or imply obligations to anyone except the men of the farms.

Bureau Wants to be Self-Supporting

The farm bureau can and must be made absolutely self-supporting. This can only be done with a large membership, contributing ample funds for carrying on the work. A strong state farm bureau, representing the majority of farmers of Michigan, would be an invaluable instrument to fortify and protect the interests of the farmers during these critical times. All it lacks are members. In numbers there is strength. The State Farm Bureau is asking every farmer in Michigan to become a member, and Michigan Business Farming commends a membership in that organization to every reader. Be prepared to join when the drive is started and take part in the organized efforts to promote the business of farming.

Michigan State Farm Bureau Now Organized for Business

(Objects Michigan State Farm Bureau as set forth by C. A. Bingham, sec'y, are as follows:)

THE ONE GREAT OBJECT of the Michigan State Farm Bureau is the promotion of agriculture, to co-operate with the Department of Agriculture and the Extension Department of the Michigan Agricultural College, not alone for production, but for a more economical production and distribution of all farm crops.

To assist the farmer in getting better marketing and transportation facilities, and help solve the distributing problem.

To get into closer relation and understanding with the consumer and assist in the correction of a great many evils that now exist between the point of production and the ultimate consumption of the food products raised on the farm.

To assist in promoting better educational methods for our rural districts.

In a political way to deal with measures and policies rather than men; insist on a fair and just hearing on all bills relating to agriculture and its development, in fact, to obtain justice and a square deal through organized co-operative efforts.

In organization we will perfect the same by raising the standard of our present farm bureau system to the same level that other industrial organizations of this country enjoy. We must have the same supported by the farmers themselves, that we may be able to act wisely, and according to our convictions at all times.

Individual business corporations are spending millions annually in promoting their interests before the general public. The future demands an investment on the part of the farmer of the future in such an organization that will promote his interests. Such investments do not promise fabulous returns, or quick wealth, but they do pay interest on dividends sufficient to satisfy a wise investor.

Through such organization we hope to make the conditions of farm life more profitable, attractive and appealing, that our children will stay and take up our life work instead of continuing in the rush for the city and its varied attractions, as it now stands.

To assist the farmer in making the business to pay a wage that will enable him to get competent help and still retain a reasonable profit for himself.

We believe that the farmer has a right to the cost of the upkeep of the land, the cost of labor and other expenses. Not a pound of produce should leave an American farm that does not bring the cost of production and a reasonable profit.

We are meeting organized labor and organized capital. We must meet these across the council table with brains and the strongest organization the world has ever known, or the farmers of this country will be forced into peasantry.

These are some of the vital and fundamental objects, reasons and necessities for a business farm bureau organization in Michigan. We do not believe in class legislation or class hatred, nor drastic or radical measures, rather in good sound judgment as a result of clear thinking, honest investigation and good counsel. We believe in justice, in a square deal for the common good of all, that justice and right may prevail and Democracy made safe for the world.

CURRENT MICHIGAN AGRICULTURAL NEWS

Vegetable Growers Convene

Adoption by the farmers of the country, particularly the vegetable growers, of the same business principles that are the foundation of every successful industrial and commercial enterprise will be the most effective element in the solution of the food production and marketing problem, according to the arguments advanced last week by speakers at the second session of the convention of the Vegetable Growers' Association of America, at Detroit. Mr. Buell, manager of the Michigan Potato Growers' exchange, gave facts and figures showing what the association had done for its members in marketing all varieties of farm produce. "When farmers find themselves in need of money," he said, "they are inclined to sell at any price the buyer offers. Organization makes the farmer largely indtpendent.

Jackson Dairymen "Probed"

That M. L. Noon, president of the Jackson County Milk Producers Association made the statement that the elimination of some of the milk distributors would have a tendency to keep the cost of milk down, was the testimony given by Howard E. Youngs, of The Citizen Patriot editorial staff, at the profiteering investigation which is under way. Mr. Youngs was the first witness called by Prosecuting Attorney M. Grove Hatch, who is conducting the investigation before Circuit Judge James A. Parkinson.

Mr. Noon has discussed distribution problems and made the statement that there was a surplus of distributors in some instances as many as four wagons covering the same route. He stated that if some of the distributors were eliminated and the milk distributed by a fewer number that it would have a tendency to keep the price of milk down.

Law Bumps Beekeepers

L. C. Retan, deputy state inspector of apiaries, under the state department of agriculture has been in the southern and western part of the state investigating bee hives owned by various farmers and announces that he had caused several arrests to be made for violations of the state law requiring beekeepers to provide movable frames in their hives. The law requiring movable frames in the beehives was for the purpose of preventing the spread of disease in the hives should any of the bees become diseased in any way. He said that the crossed combs which often resulted in uncared for hives prevented an inspection of the hive and that the law requiring movable frames was made in order that all the bees might be easily inspected.

$811,000 for State Roads

Michigan's big good roads program is being pushed forward by the state highway department rapidly. Up to September 1, contracts awarded for work on the trunk lines amounted to $810,977.30. Bridge construction work is also keeping pace with the road improvement, $54,357 being the total of seven contracts let the last week in August.

75 Organize in Alpena

Approximately 75 farmers of Alpena county attended the organization meeting of the Co-operative Marketing Association which was held in Alpena. W. C. Cribbs, extension specialist of the Cadillac Potato Exchange was in the city for the express purpose of addressing the meeting and to assist in the organizing of the association.

Farmers from every section of Alpena county assembled early and manifested an interest in the new organization which foretells success.

Calhoun Wheat Docked

The wheat from many farms in Calhoun county is being docked heavily because of stinking smut. In some cases men are docked unjustly and the millers are profiting greatly by the dockage according to reports.

Missaukee Breeders Organize

The meeting of stock raisers at Lake City, called by County Farm Agent Barnum, was exceedingly well attended for a meeting of this kind. Every township in the county, with possibly one exception, was represented.

About a dozen attended the Guernsey meeting, where an agreement was made to organize, but an adjournment was taken for a few days to bring in some others who were not present. Thirty attended the Shorthorn breeders meeting, and showed much interest. A constitution and by-laws were adopted and a full organization completed.

This "Mortgage Lifter," as Thomas Lamoreaux, of Oak Grove, Mich., terms his wooly worker, cut seventeen pounds of fine Delaine wool, selling at 65 cents per pound.

At the Holstein breeders meeting, an organization was affected along the same lines, and eight members paid up then and more will follow.

Antrim Co-Op. Ass'n Buys Warehouse

Elk Rapids Co-Operative Association has what is called the largest warehouse of its kind in Northern Michigan. The building which is of cement, was formerly a hardwood novelty factory but had ceased operation about fifteen years ago. It is located along Elk river at Elk Rapids and is 60x200 feet with addition on one end 50x60 feet. It is being remodeled mostly by work donated by the members of the association. A wood floor was torn out of the main part and a three-foot fill was made which required 1,500 yards of sand which was put in by donated work. Teams are now at work hauling gravel for a cement floor. Half of the building will be fitted up for potato storage with a capacity of 30,000 to 40,0000 bushels. It will be equipped with the "Clinton" elevators and conveyors with two power sorters of a capacity of 450 bushels an hour. Also sacking bins and sack elevator and bulk car elevator. Balance of building will be used for cleaning and storing beans and grain with bean-picking room in connection. There will also be cream-

Michigan Buster, by Giant Buster, weighing 700 pounds as a yearling, stood forty inches high on an eleven inch bone, writes the owner, O. L. Wright, of Jonesville, Mich.

shipping station with separate room and offices. The building will be steam-heated throughout. The association is a branch of the Michigan Potato Growers' Exchange and plans to handle everything the farmer buys and sells.

Co-operation at Coopersville

Another page of history was added to the records of co-operative marketing and business farming in Michigan last week when a hundred farmers met at Coopersville and decided to do their own marketing of their produce in the future.

They organized a co-operative elevator under the state law with a capital stock of $20,000. The dividends of the company can never exceed six per cent, it was decided. The residue of the company's profits is to be pro-rated among the customers of the elevator, thus practically assuring it the support of the farmers of the community and reducing outside competition to a minimum. The farmers hope to have the new enterprise in operation early this fall.

The officers and directors of the company are as follows: President, George Wallis; vice president, Frank I. Stephens; secretary, Everett Collar; treasurer, Warren Jasper; directors, George Portvliet, Ellis Peck and Frank Hambleton.

300 Attend Lenawee Show

The tractor demonstration on the George Steger farm, Lenawee county, last Tuesday was a big success in that it attracted over 300 farmers and others interested in tractors to come and see what these machines can do on hilly ground.

Adrian Dealers Under Fire

Sixteen Lenawee retail milk dealers were subpoenaed to appear in the circuit court to answer questions by Prosecuting Attorney Leland F. Bean upon milk costs.

Farmers National Council Announces Policy on National Issnes

THE RAILROADS of the country are now capitalized for about $19,000,000,000 . The Farmers' National Council, thru its National Committee on Transportation has been working to secure a fair valuation of the railroads, which will cut down this capitalization by at least $5,000,000,000 to $7,000,000,000. It advocates also the use of the taxing power of the people to pay for public ownership of the railroads. A fair valuation thereof, we are confident, will show that the owners are not entitled to be paid over $12,000,000,000 to $12,500,000,000 at the outside. This amount is about equal to the total wealth of the two hundred and six richest people of America, whose aggregate wealth is about $12,000,000,000. At least $1,250,000,000,000 a year can be raised for government acquisition of the railroads through taxation of swollen incomes, estates and the monopolists of natural resources.

Government ownership of the railroads free of all indebtedness, as advocated by the Farmers' National Council, is feasible within ten years at the outside. It would permit an annual saving of close to $1,000,000,000 a year in dividends and interest on bonds. This would make possible and practical a reduction in freight rates for the same volume of business as today, of at least 20 per cent, and probably 25 per cent. In other words, government ownership and democratic operation of the railroads under the Council's plan would result in just about as big a reduction from the present freight rates as private ownership means an increase over the present freight rates. The farmers of America would get at least half of the benefit of such a reduction of freight rates since the farmers are the only business men of the country who are unable to add freight charges to the price which they ask for their products.

The plan of the Farmers' National Council will mean a reduction in freight rates of 5 to 10 per cent immediately and within a decade or so of close to 25 per cent. It will save the farmers of America fully $400,000,000 a year.

The Merchant Marine

The financial interests of America want to have the ships built by the government during the war turned over to private shipping corporations at a price of one-fourth to one-third less than the cost of construction. These financial interests oppose any regulation by the government and want to make ocean freight rates as high as the traffic will bear, so that they can make as enormous profits as they did before the war, when 15 to 25 per cent dividends were not unusual. Senator Duncan U. Fletcher, of Florida, said, "unless further cancellations (of government construction of ships) takes place, we would have under our flag next year (1920) nearly 16,732,000 deadweight tons of shipping, about 14,000,000 of which will be fit for overseas trade." In 1917 the value of agricultural exports was $1,969,849; this year it will be hundreds of millions more.

The Farmers' National Council advocates government ownership and democratic operation of these ships constructed with the tax payer's money at cost and for the benefit of the entire people. It opposes the turning of our ships over to private financial interests to exploit the farmers and other producers and consumers. Its plan for the merchant marine will save farmers easily $100,000,000 a year.

Nearly every great fortune in the United States is based upon private ownership and development of some natural resource. In five years after the dissolution of the Standard Oil Company, the companies included in that combination distributed in cash, stock at par value, and subscription rights a total of $650,000,000, while the capitalization of the companies included in that combination was in 1912 only about $227,000,000. The Standard Oil has just decided to double its stock, which will permit a deduction of nearly $53,000,000 in computing the excess profits. In 1916 the corporations developing the gas and salt wells had a net income of nearly $237,000,000. The total net income of the corporation extracting minerals was in that year nearly $800,000,000. Eleven mine owners or mine operators had in 1916 a net income of over $1,000,000, each; ten had a net income of over $1,500,000 each; and several nad a net income of over $5,000,000.

Private ownership of natural resources is one of the fundamental causes of the high cost of living, and compels the farmers to pay a high price for tractors, farm machinery, coal and nearly everything which they use and wear. The plan of the Farmers' National Council would save farmers hundreds of millions of dollars a year for natural resources and their products.

Concentration of Credit

We have no definite figures on concentration of credit in this country. J. P. Morgan & Co. is not subject to federal supervision despite the fact that it does not only a large national but an international business. The Pujo Investigating Committee showed, however, a few years ago that the resources of the banks directly connected with J. P. Morgan & Company are $1,600,000,000 "aside from individual resources of Messrs. Morgan, Baker and Stillman," and thru stock ownership, J. P. Morgan & Company control the resources of the Equitable Life Assurance Company, amounting then to $504,000,000, making a grand total of $2,104,000,000 or nearly the total of actual money in circulation in the United States and close to one-thirtieth of the total national income. The National City Bank recently had deposits of $681,000,000 and the Guarantee Trust Company of New York had $550,000,000. Both the National City Bank and the Guarantee Trust Company have increased their deposits largely in the last eighteen months.

The Farmers' National Council favors government supervision over the credit monopolists of America immediately, and favors legislation decentralizing this monopoly of credit and the making of credit available to far-

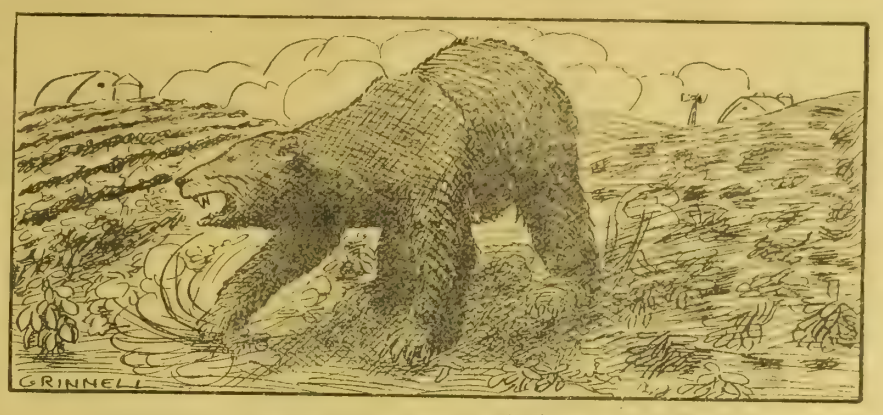
Bears Depress Bean Market Despite Short Crop

Speculators Want Lower Prices at Opening to Control Future With Cheap Beans

By GRANT SLOCUM

A SMALL OUTLINE MAP of the State and a horseshoe, will aid us in locating the border line, within which Michigan's greatest money-crop is produced. Let's place one heel-cork near Kalamazoo, the other on the western border of Wayne, and the toe-cork will rest on what we shall term the frost-line; up where late and early frosts make bean production hazardous. Within the limits of the circle formed by the horseshoe, will be found the lands upon which are grown sixty-eight per cent of the choice navy or pea beans produced in this country. And we might add that no single crop produced in the state brings more dollars back to the farmers than the returns from the little white beans produced within the borders of our horse-shoe.

During the past week I have made the circuit from heel-cork to toe-cork; toe-cork to heel cork; and the span from heel-cork to heel-cork—round and across our horse-shoe bean field and here record some of my observations:



The Bears are tearing up the beans in Michigan's farm lands.

Yield Will be Light

As a starting point, let's get somewhere near the actual acreage. Take your best bean-producing counties and the acreage is less than fifty per cent of normal. In many counties where the acreage was small last year, you are surprised to find a twenty per cent increase. I am not far out of the way in giving the actual acreage of beans grown in the state this year at 60 per cent of last year's acreage. Many growers furnish ample proof of a 50 per cent reduction—we will let it stand at 60 per cent.

The yield will be light. No doubt about it; in many instances far below last year's averages. The dry weather brought on blight in many counties and had the further effect of weakening the plants and preidence that the market gloom dispenser has been peddling his dope venting a normal yield. In central-southern districts, many fields are badly affected by anthacnose—in fact this disease, for some reason, is more general than a year ago. Outside of this disease the quality is first class, small, bright and hard.

So much for the acreage, crop and quality. We are at the end of the crop season, and while gloom is everywhere apparent, strange to say it is not caused by either acreage, yield or quality. There is everywhere evthroughout the length and breadth of our horse-shoe bean field. I talked with elevator men, and they shook their heads and either talked of "army supplies" or the "poverty of the nations across the seas." I talked with growers and they told me of published reports. No real reason for "gloom," just accepting the propaganda right from the market manipulators' atomizers, giving a "sneeze" and passing it on.

Bears Dangle Baited Hook

Mr. Bean Grower, right now you are on the way to market with your beans. What you do now will rattle over the patched-up price screen, or drop through its meshes. The opening market is a controlling factor during the whole market season. If you have watched the antics of the bean market during the past twenty days, you must have figured out that some one has thrown over a baited hook, and you can rest assured that these fellows expect you to run away with hook, line and sinker.

The bean market for the 1919 crop must necessarily open, but the fellows who have seen fit to open it before the crop is off the fields, should be caught at their own game. In the northern part of the state, the tracks of the "bean market bears" are to be found everywhere. In some instances, offers have been made, and considered seriousy by growers at three dollars per bushel. If the "bears" could get hold of enough beans on the opening market, they will control the market by dumping cheap beans, whenever they can make a "wad." The market was played in this way last season, and growers had to pocket the loss.

Through With Pintos

Here's a fact to keep in mind: Wholesale growers are through with "Pinto" beans. Canners will not put up beans from the Orient this year. Transportation charges are on a prewar basis; government regulations are off. The only protection you have, as a grower, is while the beans are on your own property. Speculation is rife. Buyers know world conditions, and they are going to play the game stronger than ever before. If there was ever a time when the farmer should study conditions as they affect the markets of the world, that time is now.

Growers should forget all about the "question of opening price" and figure a little on what would be considered a fair price—a price to cover the cost of production, and a reasonable profit. You can study conditions until you are weary; you can read reports and examine markets—you can go the whole round of bean production, distribution, demand and supply, and you can't find a single logical reason why the bean growers of Michigan should sell a pound of beans this fall at a price which does not cover the cost of production and a reasonable profit. Let the "bears" roar, tear and rend ;just keep your eye on the indicator and watch the game.

Sooner or later the question as to cost of production is going to be an important factor in determining the price of beans. And, too, it will aid you in your decision as to what the price should be, if you have a few figures to show the cost of producing beans on your own farm. In order to secure data, which will come in mighty handy a little later, we ask every reader who planted one acre or more of white beans this year, to fill out and send in the blank below. Please do not leave this for others—fill out the blank right now.

M. B. F. seeks to serve you, and in serving you as a producer, the consumer benefits through depriving the market manipulators of his working tools. The time is short, the bean market is in the making. Fill out and send in the coupon below this very day.

CENTERVILLE TRACTOR SHOW

Centerville, St. Joseph County, is going to have a tractor show. September 24 and 25, under the auspices of the St. Joseph County Farm Bureau. The demonstration on those two days will be managed by Professor Musselman of the M. A. C., assisted by C. L. Nash of Coldwater and P. C. Jameison of Marshall. This demonstration will be unique in at least two ways. That is, in the first place during the plowing and fitting demonstration fuel consumption will be determined. This will be determined by alloting each tractor a definite amount of fuel. Then all of the machines will start plowing at the same time and will plow until the supply of fuel is exhausted when an amount of ground will be measured and the cost of the fuel per acre will be determined. Also on the second day the belt power of the various machines will be determined by a brake test. This will be the first demonstration in the State where this feature has been carried out.

Introducing Mr. Houston's New Assistant

The new Assistant Secretary of Agriculture arrives in Washington.

THE SENATE has confirmed Secretary of Agriculture Houston's appointment of Mr. Jas. R. Riggs of Indiana, as assistant secretary of Agriculture to take the place of Mr. Carl Vrooman, who recently resigned from that office because of his distaste for the policies of Mr. Houston. Mr. Riggs is well-qualified for the job, so we are assured by a bulletin issued by the Department of Agriculture. But we are frank to say that his "qualifications" do not "listen good to us." Mr. Riggs. if we may judge from the character of his former occupations, is exactly the type of man we would expect Mr. Houston to name, and we have not been disappointed.

Mr. Riggs, we are told, is descended from a long line of successful farmers. His grandfather was born on a farm in Cirginia. His father owned and operated a large farm in Indiana. Our subject began his career as a farmer in 1885 when he was 20 years old and made his first purchase of land in 1888. "From that time until the present, he has continued in the active management of his farms."

Quoting the announcement further we learn: "While devoting his energies primarily to farming operations, Mr. Riggs has found time both for other business enterprises and for public affairs. He was elected county auditor in 1894. For a number of years he was active in the development of the coal, oil and gas industries of his section. For twelve years he was president of a trust company. He has been connected with the construction of more than 200 miles of improved highway. Since 1912, he has been engaged in the manufacture of drain tile."

Such are his qualifications for a job that should deal exclusively with agricultural projects. We never have been able to understand why it should be necessary or even advisable for men who aim to hold high agricultural positions to have had experience in other lines of trade. There is no business more intricate and difficult than farming. It takes an unusually capable man to handle a very large farm successfully, and we cannot understand how a man who "actively manages his own farms" can have time or inclination to become an "auditor, a trust company president, an oil, coal and gas promoter, a highway builder, or a manufacturer of drain tile." Certainly no man who is financially interested in such projects as these can devote his entire thought and activities to the betterment of agriculture.

Is the Little Red School House Doomed?

Successful Consolidated Instruction is an Argument Against Old-time System.

IS THE LITTLE red school house that nestled beneath the boughs of the maples soon to be a thing of the past? In the future must generations of farm boys and girls go thru the ordeal of learning their A. B. C.'s without knowing the joys that lurked in that intimate educational environment where their dads and fore-dads mastered the difficulties of "readin', 'riting and 'rithmetic;" where five-year-old chattered over his picture book next door to fifteen-year-old, deep in the complexities of his English grammar; where an austere "school-marm" or a pedagogic descendant of Ichabod Crane ruled with an iron hand and a hickory stick that reposed conveniently and conspicuously upon the teacher's desk? So it seems Modern efficiency demands that the present loose system of rural education give way to a centralized institution where the boys and the girls of the farms may have the same opportunity as those of the cities to master the sciences, the languages and secure practical courses in manual training and home management.

These farm girls are learning helpful things about housekeeping in the well equipped laboratory of the Otter Lake Agricultural School.

"The question is not whether we shall have consolidated schools but when we shall have them," says Dr. Henry S. Curtis of Olivet, who has recently returned from France where he spent a year studying the educational system of that country. Quoting Dr. Curtis further we learn:

"About six years ago the northern tier of states started a campaign for consolidated schools. A bonus was offered varying from $1,000 to $2,500 for districts that would consolidate. In Michigan a bonus of $600 is allowed, and $200 per year for each vehicle necessary to transport the children. If enough districts combine to necessitate the use of 10 vehicles, the state would then give $2.000 a year in addition to the $600 bonus.

"Michigan is thus far behind other states in the consolidation of rural schools. Twenty years ago Ohio, Indiana and Connecticut began to centralize and horse-drawn vehicles had to be used to carry the children. The roads were then in poor condition. Nevertheless, under these trying circumstances the consolidated rural schools as a whole were a success. From 50 to 70 per cent of the rural schools in the three states mentioned are now consolidated.

"At the present rate of progress all of the schools in the northern states will be consolidated within less than 20 years."

Upper Peninsula Organizes First Consolidated School

Conspicuous among the early school districts of the state to consolidate their school systems, is the Otter Lake district of Portage Township, Houghton county, which claims the distinction of being the first district in the state of Michigan to take advantage of the consolidated rural school law. As a rule rural districts have been slow to appreciate the advantages of the consolidated system, and there are several instances on record where the voters have defeated the project when given the opportunity to vote upon it. And in Shiawassee county where the farmers of certain school districts voted overwhelmingly in favor of consolidation after a committee had visited schools in Indiana and had reported favorably, only to later repudiate their decision by voting down an appropriation which was required to build a central building.

It is for the purpose of acquainting our readers with the many advantages of the consolidated school system that we present herewith the story of the Otter Lake Agricultural School as prepared by Mr. Leo M. Geismar, agricultural agent for Houghton county. The article follows:

Otter Lake Agricultural School

"The enactment of the consolidated rural school law in 1916 and the session of the State Legislature recall to mind that the most progressive steps in rural education and agricultural development originated in the Upper Peninsula.

"The Township school unit law of 1891 was in force in the Upper Peninsula for a number of years before it became the general law of the state. The county agricultural schools of Menominee and Chippewa counties are still the only schools of this kind in the state and the first pioneer work in agricultural development was taken up first by the Upper Peninsula Agricultural Society and later on by the Upper Peninsula Development Bureau.

"The plan for consolidated rural schools likewise originated in the upper peninsula and the first of these schools was established 6 years ago in the Otter Lake district of Portage township sixteen miles out of Houghton. How the plan originated recalls to mind a visit paid to me nearly fourteen years ago by John A. Doelle, at that time superintendent of the Houghton and Portage Township schools, who came as he stated, partly because of his deep interest in the experiments with several hundred varieties of crops which I then carried on at the Upper Peninsula Experiment Station, and partly to discuss a plan for a rural agricultural school in a then isolated part of his township.

"He stated that he had been asked to introduce Nature study in all the schools and he looked upon it as a fad which would mean a waste of time in city schools, and be of little if any benefit in rural schools. He considered teaching agriculture in city high schools instead of in rural schools as an attempt to try to make farmers out of city boys and business or professional men out of country boys. He also said that if agricultural education is intended to train boys and girls for rural life, must be taught in rural schools and within the atmosphere and influence of the rural home, for whether taught in cities or colleges, it tends to educate boys and girls away from the farm. With the farmer at any rate it is an economic question, he said, for less than one in a hundred can afford to send boys or girls to city high schools and less than one in two thousand can afford to send them to an agricultural college.

"He then outlined his plan of consolidating three schools in the farming settlement around Otter Lake, carrying the children to and from a modern school building centrally located upon a tract of forty or more acres and equipped for teaching the elementary principles of agriculture and animal husbandry, manual training with relation to farm work and farm buildings, domestic science and rural hygiene, and developing a cooperative spirit through club work. He intended that the principal of the school be engaged for twelve months for the purpose of extending aid and advice to the patrons, and supervising the club work of the boys and girls, for this he said, would tend to develop a closer union between the school and home of the rural community center for the surrounding community.

"'This may be only a dream,' he said in conclusion, 'and I shall abandon it if you consider it impracticable.'

"'It is rather strange,' I answered, 'that I had this very kind of a rural school in mind when I helped to draft the township unit school law of 1891, for I believed then as I do now, that it will help to solve the problem of training boys and girls for country and that ultimately the state will assist in maintaining this type of rural school.

"Doelle left, a much happier man, feeling confident, that he could mould a favorable public opinion toward his plan, and that it took him nearly seven years to do it, bears testimony to his indefatigable energy and his tenacity of purpose. The school was built and with it a twelve mile highway leading to it from Houghton. It is located in the center of a community of Finnish people, most of whom at that time could scarcely make themselves understood in the English language. There were disappointments during the first two years, for there was opposition among many of the patrons; the principals lacked

(Continued on page 13)

Busy fathers on the farm don't always have time to give complete instructions on carpenter work and other handy trades with tools, but the agricultural school provides this training for the farmers' children.

Here is a splendid example of what rural school can be—large, well-equipped, well-lighted and with good instructors. Children like to go to this sort of a building and better still, they learn much more.

All aboard kids, the bus is starting for the school. This is one of the transportation busses which brings children from miles around to the consolidated rural school at Otter Lake.

Fruit and vegetable growers showed great interest in this exhibit, which is one of thousands which are held at the Michigan Agricultural college at East Lansing.

Farmers turned out by the thousands last summer at just such meetings as the one shown above, to talk over how to make the farming business pay better.

Farm College Offers Big Service to Agriculture

By J. B. HASSELMAN

THE UNPRECEDENTED DEMAND of the present for technically trained men is felt nowhere more strongly than in the field of Agriculture, and the readers of Michigan Business Farming will be interested to know how our State Agricultural College is prepared to meet this demand.

The great emphasis being placed on food problems during the period of reconstruction following the war has brought forcibly to the minds of the American people the need for thorough, scientific training along agricultural lines, and city people, as well as those of the farm, are turning their attention to the problem of increased production of foodstuffs.

This realization of the importance of farm pursuits is not a temporary thing. As the population of the country increases and the demands upon the producers are greater from year to year, the agriculturist will assume an increasingly important position. The future will see the business of farming ranked at the front of industry, and the successful farmer will be the man who is trained for his work.

Michigan was the first state in the United States to offer college training in scientific and practical agriculture, the Michigan Agricultural College, founded in 1857, being the pioneer institution among the numerous agricultural schools of today.

The year which opens this fall will be the sixty-second in which the college has trained young men for active work on the farms of the state.

There are now more than 1,000 acres in the agricultural college grounds, and sixty buildings. The equipment for practical presentation of agricultural work is complete, including fine herds of cattle, sheep and swine, a poultry department, greenhouses, gardens, orchards, etc. For this reason the scientific teachings can be coupled with actual field conditions, adding greatly to the value of the work.

25 Live Stock Breeds

Twenty-five different breeds of live stock, numbering more than six hundred individuals, are included in the herds and flocks of the animal husbandry department. The call for animals to replenish the badly decreasing herds of European countries has created a great demand for all classes of stock, and farmers are asking for men who are trained along animal husbandry lines. In the instruction at the college students are trained to know the conformation and individuality required to give maximum efficiency, as well as the adaptability of the various breeds. Ability to judge stock correctly is one of the qualifications of the successful breeder, and this work is emphasized while the herds are studied.

Girls from the farm at the summer session are shown herewith at the first hand study of the dairy business. Here they happen to be studying the various types.

Those who specialize in dairy work at M. A. C. not only study the herds of Holstein-Freisians, Guernseys, Jersey and Brown Swiss, but also work in the modern dairy plant at the college. Here they learn up-to-date methods in the milk business, in buttermaking, in ice cream manufacture, and in cheese making, thus qualifying as expert dairymen when they go back onto Michigan farms.

Increased interest in power machinery has made the farm mechanics work at the college of particular importance. The latest developments in the tractor world are placed before students, and they get a practical working knowledge of all types of gas engines, as well as of farm drainage and building problems. Farm crops, soils, poultry, forestry and horticultural subjects are all handled through completely equipped departments and in a practical way, so that young men who follow the agricultural course may have a thor-

Texas Farmers Pay High Prices for Livingston County Pure-Bred Holstein Cattle

ONE HUNDRED and fifty thousand dollars is the amount it is estimated the farmers of Dallas county, Texas have left in Livingston county, Michigan, in exchange for some of the pure-bred Holsteins for which that section of the state is justly famous. The most recent purchase just culminated was of three carloads of fifty-four head, consisting of calves and yearlings and having a total estimated value of $22,000. For one cow the Texas buyers paid $1,700.

The Holsteins were purchased by Mr. C. O. Mosher of Dallas, Texas, said to be the highest paid county agent in the United States, and by Mr. J. T. Orr, chairman of the dairy committee of the Dallas county farm organization, representing members of that body. This is the sixth visit these gentlemen have made to Livingston county. Their aggregate purchases are said to exceed $150,000.

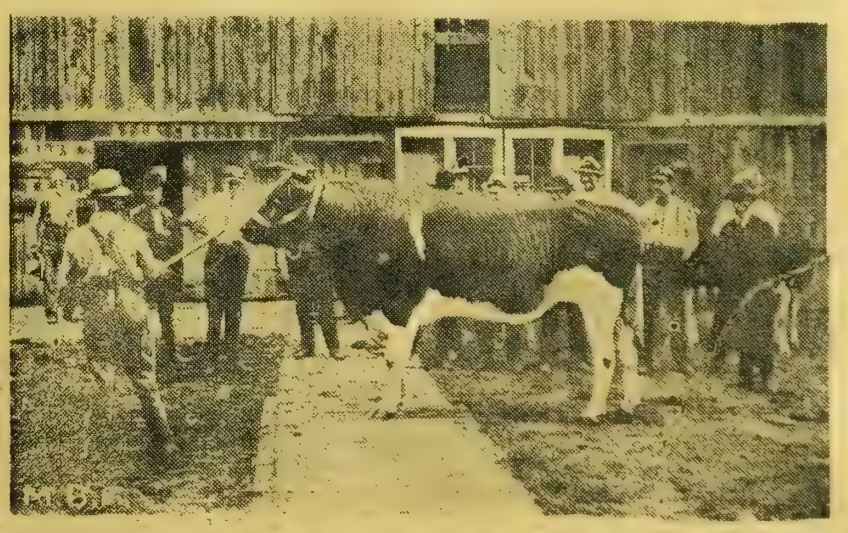
No preliminary arrangements are entered into for the purchase of these Holsteins. The Texas men quietly arrive and in company with one or more prominent farmers of Livingston county make the rounds of the farms where the best Holsteins are owned. Whenever they take a fancy to a calf, a milch cow, or a bull they immediately enter into negotiations with the owner. There is little haggling over the price. Both parties know pretty well the value of the animal bartered and the deal is quickly closed and a check in full issued therefor.

"Our farmers are entirely satisfied with the stock we have bought for them in Livingston county," said Mr. Mosher. "We have visited many other Holstein states, but in none of them were we able to find cattle of the type, quality and dependability that we have bought here in Michigan. When we buy Livingston cattle we know we are taking no chances. We have yet to find a single trace of disease among the several hundred animals we have shipped from here."

One might naturally conclude that the farmers of Dallas county were very affluent to be able to pay the expenses of so many trips to Livingston county and pay such high prices for cattle. But we are told that these farmers are just average farmers; that were it not for the assistance of the banks of their county which put up the most of the funds against the cattle as security that the farmers would not be able to buy such high-grade animals. Here is an example which many of the bankers of Michigan may well emulate and in so doing they can perform an inestimable service in expanding the live stock and dairy industry in Michigan.

Livingston county has played no small part in the reputation Michigan has gained as a producer of high grade dairy cattle. Some have called Livingston the "heart of the Holstein center." While there may be one or two other counties in the United States which have a larger population of pure-bred Holsteins than Livingston county, we are informed by Mr. Silas Munsell, of Howell, that more Holstein breeders receive mail thru the Howell postoffice than from any postoffice in the country. In other words, that section of Livingston county, contains probably the largest number of Holstein cattle of any similar geographical section. In this sense then, Livingston county stands foremost among the Holstein counties of the United States. That the reputation of Livingston county in this respect is well known and accepted, is best evidenced by the fact that buyers come from almost every state in the union to get foundation stock. Scarcely a week passes by during the summer months that shipments aggregating from $20,000 to $50,000 are not made to some section of the country. The purchases of the present year, it is believed, reach close to the half million dollar mark.

It is a rare treat to travel the country roads of Livingston county and see the prosperous looking, well-kept farms. You know without being told that much of the fertility and value of these farms is due to the herds of handsome Holsteins that may be seen grazing on almost every hand. Scarcely ever does one see a scrub, and the grades are so completely camouflaged by pure-bred characteristics that it frequently takes an expert eye to detect them from the pure breds. Many of the grades of Livingston county we are told, are seven eighths or more pure-bred, and since the demand has become so great for the one hundred per cent strain the tendency is to eliminate even the profitable milk-producing grade for the more profitable milk-producing and calf-producing pure-bred.



Kh. Korndyke-Kolmuck, a bull of quality and high record. This sire is a "community" bull, and has added thousands of dollars to the wealth of his owners and Livingston county. He is owned by and serves the herds of the following Livingston county farmers: Mark Curdy, J. Lorley, Carl Cornell, Thurber Cornell, Merle Crandall, Tracy Crandall, all of Howell, Mich.

—for all the farmers of Michigan

The Consolidated Rural School

MUCH INTEREST is being shown in the consolidated rural school. Michigan has been slow to adopt this system, but in many other states it is rapidly taking the place of the old "deestrict skule." Such few townships in this state as have combined its school districts into the single unit are satisfied that they have taken a long step in the better interests of rural education.

It is becoming more difficult to farm by "guess and b'gosh." The successful farmer of the future must farm by rule and rote. He must be educated. He must have had in early youth that study and school discipline which stimulates and regulates the mental habits. In the average eighth grade district school nothing but the mere rudiments of essential things is or can be taught. Boys and girls leave these schools at an age when, if they are not dullards they are just beginning to take a real heart interest in the subjects taught. The parents of most of them are too poor to send them to high school in the adjoining towns, and they are forced to settle down to farm work at a time when their youthful desires and imaginations are at their fullest swing. It is no wonder that boys and girls grow tired of the farm. Neither is it any wonder that the majority of the boys and girls of the town, who through choice or necessity leave school at the end of the eighth grade, are drift-wood by the time they reach their majorities. It is impossible to bring out the best there is in boys or girls or develop their reasoning powers in eight years of school training. The boy or girl who has graduated from high school can see opportunities and happiness in the business of farming that the eighth grade graduate of fourteen cannot possibly comprehend. There ought to be no argument as to the advantages of at least a high school education. But these advatnages the country boy or girl cannot have in the environment of the country where they should be taught. To attend town school requires money and there is moreover the danger that the attractions of the town may wean the boys and girls from the country.

But few school districts are prosperous enough to construct and maintain a school building of such size, or purchase supplies of such character, or engage instructors of such calibre,—as are necessary for a complete high school course. But by combining the school districts this is easily accomplished. Instead of a half dozen or more widely scattered schools of a single room where all classes, of all sizes must recite before the rest of the pupils, there is a central high school of many rooms, each having its particular use. There are separate rooms for the little folks where they may play unrestrained at their games or sing at their A. B. C.'s without disturbing their grown-up brothers and sisters who are concentrating upon the hard knots of the algebra lesson. There is a room where the girls are taught domestic science and a room where the boys are taught manual training. There is a wonderful room indoors and a big plat of ground out-doors where the essentials of agriculture are taught, and the interest of the maturing boys is secured and held by the fascination of the wonders of crop reproduction, etc., before he has a chance to be tempted by the distant green fields.

We are sure, that if our farmer friends would give this subject of education a little more thought they would be quick to see the advantage to themselves and family of a complete high school education for their children. And this is best secured through the consolidated rural school. May it rapidly spread into every township in Michigan and mark a new era in a more prosperous and contented agriculture.

* * * * *

Denby and the League of Nations

EDWIN DENBY of Detroit is a candidate for Governor of Michigan. Mr. Denby is a manufacturer. At the first bugle call he relinquished his private enterprises and entered the service where he served to such good purpose that when he returned to his native city he wore the insignia of a major.

The Major has begun his campaign. The chief plank in his platform, if one may judge from the tenor of his speeches, is opposition to the League of Nations. "America stands best alone," says Mr. Denby. "Our soldiers didn't fight for a League of Nations. In fact, nothing was said to them about a League of Nations." Mr. Denby is a gentleman and a scholar and a very smart man, but he speaks like a child.

We do not remember that anything was said to the soldiers about a League of Nations. But jogging our memory a bit we seem to recall other phrases which were in the mouths of all at the time we entered the war and during the period we were giving the Kaiser the same thing he will get below some day. "Making the world safe for democracy," "a war to end war," "to establish an international brotherhood,"—these were the inspiring slogans we preached to our soldiers as they took up arms. These were the ideals the press and the pulpit talked about. These were the ideals, we told our Allies, for which we were entering the struggle. And these are the ideals which nations have sought to embody in the League of Nations covenant. They are merely trying to carry out their pledges made to the people during a solemn moment.

No, nothing was said about the League of Nations. And we didn't tell our boys about Chateau Thierry. For some reason or other we overlooked that bloody battle of the Meuse. Mebbe we should have told them about the exact details of the treaty of peace. But we didn't because we couldn't. All the battles of the war were mere incidents of the war. They came as a matter of course. Everyone expected they would come. The treaty of peace was an outcome of the war. One week before the armistice no one would have dared to predict what the most important provisions of the treaty of peace would be. But we knew and our soldiers knew that the end of the war would bring a treaty of peace. We knew and our soldiers knew that the end of the war would bring about some plan for the affiliation of nations if for no other purpose than that there should never again be a war. We didn't tell our soldiers that this plan would find expression in an agreement along the lines of the League of Nations covenant. We didn't because we couldn't. The facts were not known to us then. But we venture this assertion: That had all the signatories to this covenant anticipated the end of the struggle as it actually occurred and signed such a concrete proposal for minimizing the chances of warfare, before we entered the struggle, we should have had greater enthusiasm for the conflict.

The League of Nations covenant is mired now in the sea of politics. It is the only issue for the coming elections, and it must be seized upon. To the aspiring candidate for public office, from constable to president, the League of Nations issue will be paramount. All others can go a-begging.

Returning the Railroads

WE KNOW a man,—yes, we know several of them,—who is opposed to government ownership of the railroads. His train was late the other day, and he missed an appointment. "That's government ownership for you," he hissed.

The freight and passenger tariffs were increased to pay the increase in cost of construction materials and operation. "Government ownership," muttered our friend.

The newspapers announced that the railroad administration was piling up a deficit of thirty to fifty millions a month. And that fact our friend likewise blames to government "ownership."

Now in the first place the government does not OWN the railroads. It OPERATES them with the help or perhaps we should say despite the help of former managers and operators. Government operation on a plan approved by congress which guarantees to the railroad a large net income on watered stock, and with the assistance (!) of men who are actively working for the return of the roads to private owners is an altogether different thing than government ownership and operation on a plan which proposes to pay a fair net income on actual investment, and with the assistance of men who have no interest in anything but the efficient operation of the business. Is that plain?

We feel free to predict that if the Plumb plan for the nationalization of the railroads fails, they will be returned to their owners. No other plan has been advanced or probably will be advanced at this time for public ownership. Now upon that happy day we expect to see our friend wear a happy smile. "No more late trains, no more strikes, no more high fares, no more deficits." But he will be due for a severe jolt.

The most common causes of late trains are physical over which even the versatile private owner has no control. There always have been late trains, and there always will be. Strikes will be more frequent and serious. Indeed, we cannot see how the private owners hope to handle the railroad employes whose plan for public ownership has just been rejected. Fares will be higher; freight rates will be higher. Even the private owners and their newspapers admit this, and the paying public must accept it. The war and high wages increased the cost of railroad operation. There are some who would like to lay the war to the railroad administration. But it can't be done. The war was to blame for the railroad administration, and the war was to blame for the big jump in operating costs. The effects of the war on cost of manufacturing and operating are no less than they were at the time the government took over the roads. So no matter who operates the roads from now on, the cost is going to be as great if not greater than ever before.

* * * * *

Municipal Warehouses for Detroit

IT IS WITH something of a shock that we read of Mayor Couzens' proposal to construct municipal warehouses in the city of Detroit. Doesn't the Mayor know that's unadulterated Bolshevism? Is it possible the Mayor is oblivious of the fact that our wise old owl of a legislature not so very long ago said the people of Michigan musn't vote on state-owned warehouses because the Non-Partisan League and the Socialists and the Bolsheviks believed in them? Surely, good Mayor, you cannot question the wisdom of the legislature and advocate any such Bolshevist theories for the city of Detroit. There's something wrong; there's something wrong.

Let us read a little farther. "The merchants of Detroit have not adequate storage facilities for taking care of the goods that should be stored in quantities at certain seasons of the year. The city should provide these facilities, etc." Well, wouldn't that flabbergast you? But mark our words, there are men in the city of Detroit who raised their hands in horror at the thought of the state building warehouses for the benefit of the farmers and the consumers, who'll fall head-long for the Mayor's proposal. It's just according to the old natural law of self-interest.

WHAT THE NEIGHBORS SAY

UNTIL WE GET TOGETHER

"How much longer will farmers be content to work from daylight till dark, and do chores by lantern light, producing food without any power to regulate the price thereof?" asks neighbor Apollos Long in your issue a while ago. My answer is until they organize and collaborate with all other workers.

I agree with neighbor Long that the farmer is an economic slave However he has overlooked one phase of the situation. The factory owners, mill and elevator owners and merchants who comprise only about nine per cent. of all the people get eighty-three per cent. of all the wealth produced. The workers comprise ninety-one per cent. of the population and receive in wages only seventeen per cent. of all the wealth they produce. Therefore they can buy back only seventeen per cent. of all the goods made in America, and as the factory owners (capitalists) are so comparatively few in number, they can not possibly use anywhere near all of the balance, no matter how lavishly they spend, they must find a foreign market for same and the workers on the farm and in the city go without the very things that they themselves made.

What the union workers in the city gets is insignificant compared to what the contractors, merchant and factory owner gets.

This is proven by the kinds of houses they live in and automobiles, etc., they use and what they eat and wear and the amount of time each class has for recreation.

The worker works without living, and the capitalist lives without working.

In this modern day and age when we have so much machinery that does things so much faster than they were formerly done by hand, we all should have shorter, very much shorter, hours of laber. If we do not shorten our working hours we merely produce more than our own nation can use and then the capitalists will sell it in foreign lands and with the gold they receive in exchange they buy up more and more property in the U. S.

At the present time statistics compiled from the records of the probate courts of the U. S. reveal that only three per cent. of the people that die leave estates of 10.000 or more, fifteen per cent. leave from $2.000 to $10.000 and eighty-three per cent. leave no negotiable assets.

Just stop and consider deeply the fact. that in this land, so rich in natural wealth, having so much mineral of all kinds in the earth, and so many acres of fertile soil, in this land where nine per cent. of the inhabitants live from hand to mouth.

To-day a very small part of England's people are wallowing in wealth and luxury, and the workers are one seething discontented mass, demanding that "London slums shall tumble down" and that all the mines, railroads and boat lines shall be nationalized. They want the government to run them for the purpose of all the people and not for the profit of a few.

Peoples all over the world are beginning to understand more and more the "Nationalistic conception of history" and co-operation is the order of the day.

I am very glad that your paper helps the business end of farming, because that is the end we farmers have neglected until recently.

We must all train ourselves and our sons and daughters in the business branch of farming and devote more time thereto. In a factory the highest paid men are the sales men and they travel in Pullman trains and stop at $5.00 to $10.00 per day hotels and never sweat or toil. Why should it be any different in the basic business of farming upon which all other business dedation of all other industries." If only we farmers could get ourselves to fully realize that fact, nothing under the sun could keep us apart, and we would have our share of production, comforts and luxury.—*W. F. V., Kalamazoo Co.*

KEEP UP THE WORK

Keep up the good work in behalf of the farmers. The heavy movement cityward means heavier, harder work for those who stay in the land. Then, too, the farmer mind is very slow and conservative. The city man thinks and acts quickly. He worships no methods or machinery that can be improved. Not with the average farmer. Money with him is no so free and easy, and besides he is suspicious of anything new or outside the regular routine.

The one year tenant system is a shame and a disgrace to the state and the nation. It is productive of the greater part of farm unrest. Will the American people, who claim the highest intelligence in the whole world, go heedlessly on until great riots in the cities force a change? Now is the time to plan constructively for a change, before extreme need forces superficial plans. Go after these things hard. You will be doing a world of good for the boys and girls of the future. You are in a position to agitate a great deal through the press. People are too well satisfied and do not think ahead enough.

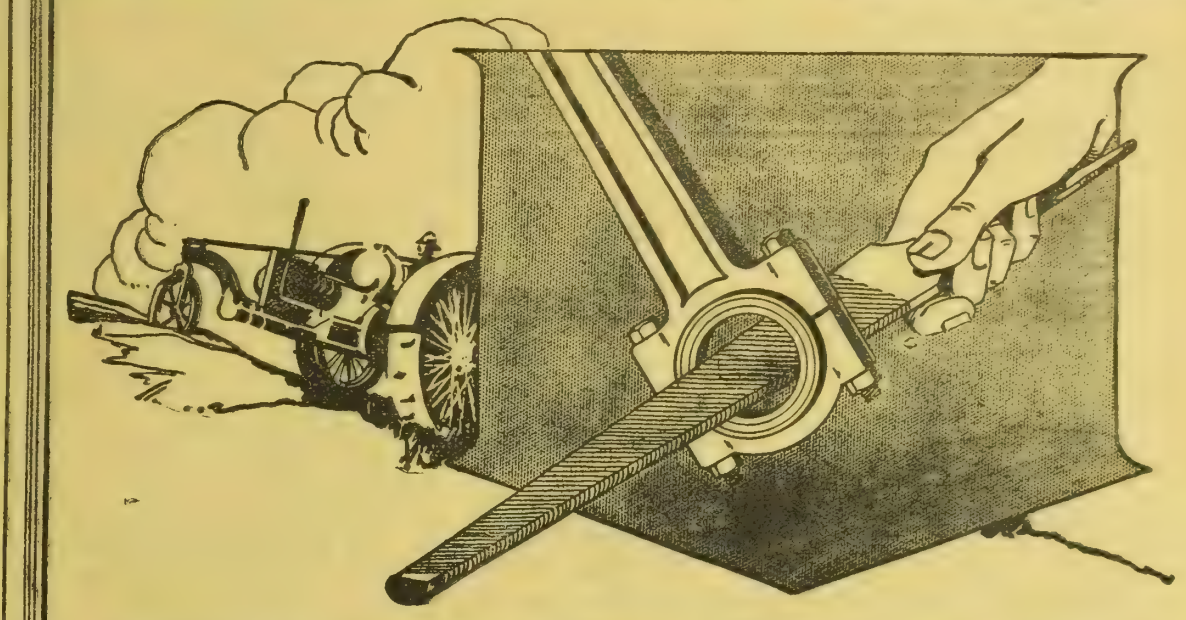
The present age of profiteering is simply the fulfillment of the testament prophecy (11-Tim.) that "in the last days perilous times shall come," when men shall be covetous and lovers of pleasure more than lovers of God, although holding to a form of godliness. Paul exhorts "from such to turn away."

The present times are sure to test our civilization to the utmost. The truth as set forth by Jesus Christ is the safe and sure remedy for all sin in the world.—*R. F. L., Hillsdale Co.*

A CORRECTION

Presque Isle County and adjacent territory, comprising Michigan's Clover Seed Belt, merits the widest publicity, but it's hell to get its proper place in the sun.

I wrote you recently that our settlers are realizing from $70.00 to $100.00 an acre out of alsike clover seed and sweet clover seed, and selling readily to local stock men, the chaff for $15.00 a ton, and also stating that the settler in the vicinity of Millersburg that has not $300.00 to $1,000.00 for clover seed to show from his few acres, is the exception, but you very promptly chucked my letter as if I were trying to put something over on you, and in your issue of Sept. 6th I am reported as saying that the returns for clover seed in Presque Isle county this year averaged $7.00 an acre and $5.00 an acre additional for the chaff. For the love of Mike, and the fair name of Presque Isle county set us right.—*John G. Krauth, Presque Isle Co.*



TEXACO

TRACTOR OIL

Texwax

THE sure seal for all preserves. One of the family of quality petroleum products. Some others are:

Texaco Motor Oil
Texaco Axle Grease
Texaco Crater Compound
Texaco Cup Grease
Texaco Gas Engine Oil
Texaco Harvester Oil
Texaco Separator Oil
Texaco Home Lubricant
Texaco Thuban Compound

TEXACO

The Lack of Proper Lubrication

Has the same effect on bearings as filing them

IN the rapid action of moving surfaces in the running tractor motor, wear and absolute destruction must be carefully guarded against. Metal must not touch metal, lest the microscopic "teeth" practically file away the bearing surfaces, producing over-heating, knocking, and other motor ills. It is this work of keeping the surfaces protected with a tough oil film that Texaco Tractor Oil does so well. With Texaco Tractor Oil, the bearings slide on a perfect Texaco oil film. It keeps the motor working. Lengthens the tractor's life.

Because of its good body and high lubricating quality, farmers find it pays in another way. It lubricates longer. Saves oil expense. Try Texaco Tractor Oil. Sold in wooden barrels and half barrels; 15, 33, and 55 gallon steel drums, and one and five gallon cans.

CREPE HANGERS

Yes, that is just what they are—Crepe Hangers—the fellows who are always trying to find something to worry about—to scare timid folks with—bridges to cross before we come to them. And the latest is the much-copied article supposed to radiate from the pen of a very learned physician who warns us that again we may have influenza with us this winter.

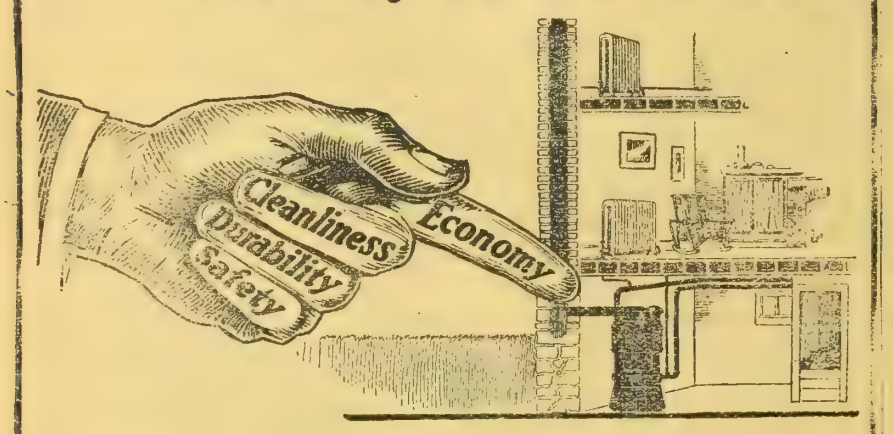
Just remember this—there is no more danger of our having an epidemic of influenza than there is of our having an epidemic of smallpox or dyptheria and goodness knows if we worried about every disease known which we might have, we wouldn't have time to think about anything else. The very best preventative known to medical science for disease is absolute cleanliness and fresh air. And people in the country suffered less from this epidemic last year than those living in closely populated cities and villages, where, no matter how fresh and clean they kept their persons and their dwellings, they were obliged to come into contact with the thousands who hibernate when winter closes in.

Now that the fall days are here—don't shut up your house air tight—at least give it a thorough airing every morning down stairs and up, and keep your windows in your sleeping room open all night. Then remembering that fear is a producer of disease, just banish the thought of disease; take good care of your body and keep the house fresh and clean, and then go about your daily work and sneak in a little pleasure now and then to balance the measure.

This summer while on a vacation I chanced to pick up a Canadian paper which contained the following very good little thought about worry:

"Our worries fit our characters. There are those who can get as much trouble out of some slight disappointment that blocks their plans as others would out of an earthquake that ruined their homes. Joys and sorrows are a matter of proportions, and each life carries its own measuring stick."

The Best Investment for any Farm House



No other heating method can show as high values in these four vital requirements of a good substantial heating plant.

Ask your dealer today to give you an estimate for equipping your farm house with this great modern comfort. Burns any fuel, does not need cellar, and water pressure is not required. Every farm home should have one of these modern IDEAL Heating Outfits to make the family more contented and to keep the young men on the farm who return from demobilized armies.

AMERICAN RADIATORS & IDEAL BOILERS

Thousands of farm homes will enjoy the winter in comfort with IDEAL HEATING

An IDEAL Boiler and AMERICAN Radiators can be easily and quickly installed in your farm house without disturbing your present heating arrangements. You will then have a heating outfit that will last longer than the house will stand and give daily, economical, and cleanly service.

IDEAL Boilers will supply ample heat on *one charging of coal* for 8 to 24 hours depending on severity of weather. Every ounce of fuel is made to yield utmost results.

Have this great comfort in your farm house

You will say that IDEAL heating is the greatest improvement and necessity that you can put on your farm, for it gives you the needed comfort and enjoyment during the long season of zero, chilly, and damp weather.

It is not absolutely necessary to have a cellar or running water in order to operate an IDEAL heating outfit. There is no need to burn high-priced fuel because IDEAL Boilers burn any local fuel with great economy and development of heat.

IDEAL-Arcola Radiator-Boilers for small houses without cellars. Hot-water heating as simple and easy as running a stove—one fire heats all rooms. Write for separate booklet "IDEAL-Arcola."

Send for our Free Heating Book

We want you to have a copy of "Ideal Heating." It goes into the subject very completely and tells you things you ought to know about heating your home. Puts you under no obligation to buy.

Sold by all dealers. No exclusive agents.

HOME-MADE CHRISTMAS GIFTS

If you are going to make your Christmas gifts, it's time to start, for the days will fly by very quickly now. Prices are high for ready-made gifts and you can put better materials in garments you make for the same amount of money. The woman who is handy with the needle can make many beautiful things for her relatives and friends. We will give a decription of articles easily made of ribbons this week. Later on we will try and give you some wonderful bags, both hand and shopping, made of the wider ribbons, and then follow with articles which can be made before Christmas.

A very ordinary little frock can be made dressy by the addition of a beautiful girdle or belt, and nothing lends itself so readily to this form of adornment as ribbons. The Poppy Girdle shown in the picture is made of black velvet ribbon using 1 5-8 yards. This is edged as shown with a rich satin ribbon in black, requiring one-quarter of a yard, as it is pieced in the center in order to be shaped. Then the center is made of the wonderful metallic ribbons which are beautifully patterned and which are so effectively used for bags. This makes a very beautiful gift for mother.

Then sister will be delighted with the ribbon girdle which is rose trimmed, using silver ribbon combined with the satin ribbon of the chosen color. This girdle requires 3 3-4 yards of the wide satin ribbon and 1 1-2 yards of the silver ribbon. This girdle will make a party gown of the simplest little white wash dress.

And what girl doesn't simply adore lovely, dainty underwear to wear under the very best blouse. The foundation of both camisoles shown is of net. The first one on the left requires 7 1-8 yards of the narrow ribbon, while the one on the right requires 7 yards of the widest ribbon and 1 1-4 yards of the narrow ribbon for lacing are required for both patterns. This last camisole is known as the Rose Bud Camisole.

The breakfast cap on the left requires 2 3-8 yards of ribbon. This is combined with net as shown. The Breakfast Cap at the right requires 1 5-8 yards of the wide satin ribbon. Lace is used for the edge.

The price of ribbons varies of course with the quality. If you want prices from the shops here, give our Personal Shopper description of color and about what you want to pay and she will be glad to send you more complete price list and if you want her to, she will buy your ribbon for you.

KRAUT FROM SURPLUS CABBAGE

Sauerkraut, lately called Liberty Salad, may be made at any time when there is a small quantity of surplus cabbage available. Very often some of the heads of the early crop burst open, so that they are not salable and soon spoil. These should always be turned into kraut. Small and unsalable heads should also be used. There is no winter vegetable more easily or cheaply prepared, and if just a little care is given to the details of preparation it will keep for months. It can also be canned and so kept indefinitely.

T. J. Rosa, Jr., of Missouri, describes a simple method for making kraut. The cabbage head is stripped of the outer green leaves, and sliced thinly into a clean stone crock or wooden keg that has been scalded out. There are cheap hand slicers available for this, or the cabbage may be shaved into thin slices with a knife. The finer the slices the better the quality. The container must be absolutely water tight. The rest of the recipe is well-known, and it is hoped that many will take advantage of it.

The Children's Hour

DEAR CHILDREN: They say you don't get the "Christmas Spirit" until you begin to see the gifts displayed in the shop windows, but all of our subscribers it seems to us, have already found this spirit, for they are sending in for the list of Christmas gifts, and are working like busy bees to gain the gifts awarded. If you haven't already enlisted with the workers—get busy at once—send in to Laddie for the list of gifts and terms.

Remember there's a prize offered each week for the best original drawing. We haven't received many of these, and we know that a large number of the members of the Children's Hour can draw very nicely. Do not use colors when you draw for the paper as we cannot reproduce them—use pen and ink or a heavy pencil. There will be a very special prize offered for the best Hallowe'en drawing, which should reach us as early as possible as the printer has to have all his copy long before the paper reaches your homes, you know. Affectionately yours, Laddie.

FLORAL DELETIONS

1. Take a letter from stupid and find a flower.
2. Take a letter from to put away for future use and find a flower.
3. Take a letter from a continuous flow and find a flower.
4. Take a letter from forcible, and find a flower.
5. Take a letter from "helps" and find a flower.
6. Take a letter from a city in China and find a flower.

ACROSTIC

Place the words guessed in a column and the first letter will form a word.

Between two mountains my first lies low
And from my second great oaks will grow;
Beside the sea my third is found.
My fourth will never be around.
My fifth goes swift from place to place,
To be my sixth is a disgrace.
My seventh helps to form a pair
Close by my eighth is everywhere.
My whole is made of happy days
Filled in with frolics, romps and plays.

ANSWERS

Floral Deletions—1. Silly-Lily. 2. Store-Rose. 3. Stream-Aster. 4. Violent-Violet. 5. Succors-Crocus 6. Pekin-Pink.

OUR BOYS AND GIRLS

Dear Laddie—I have never written to you before so I thought I would. I am a girl 13 years old and in the 8th grade. I am sending you a story and I hope to win a prize. Yours truly, Mabel Clark, Gaines, Mich.

How the Potato Race Was Won
By Mabel Clark

Once upon a time there was a man who had three sons whose names were Jeremiah, Joe and Mark. It was a very busy year and they wanted to help Uncle Sam.

One day their father called his boys to him and told them of a plan, he said "I have three pieces of land which is good potato land, would you boys like to raise some potatoes? They all said, "yes."

He told them that whoever raised the most potatoes would get a years schooling in the academy.

The next day the boys were very busy planting potatoes and when it was time to gather them they found that Jeremiah had the most but that night after dark Jeremiah went down in the field and they went down there and saw him putting them over in the other boys' field, so they would have the most potatoes. His father saw how kind he was and said: "you are all going to school."

Dear Laddie—The Thrift Stamp and letter came as a surprise to me, and I thank you for the gift, also the good wishes you sent me. It will stimulate me to work harder to gain what I am striving for, a useful and practical education. We are always glad to see the M. B. F. come each week, and papa is especially interested in the editorial page, as Mr. Grant Slocum was raised not far from our home and is well known. Mama enjoys every department of the paper also and of course the Doo Dads are for us younger ones. We trust you will pardon my long delay to thank you, as I have had it in mind a long time, but have been very busy. Thanking you again, sincerely, Grace Davidson, Fenton, Mich., R. 2.

Dear Laddie—As I have never written before I thought I would write now. My father takes the M. B. F. and I can hardly wait till it comes. I like to look at the Doo Dads and to read the letters of the other children. Won't someone please write to me? I am 11 years old and in the 6th grade in school. We live on a farm of 123 acres. We have four cats, 4 horses and 17 head of cattle. I will close, hoping to see my letter in print. Lorna Burke, Lansing, Mich., R. F. D. 5.

Dear Laddie—I have written to you before but I have not seen my letter in print. I am a girl eleven years old and will be in the seventh grade when school starts. I have one dog named Teddy and one cat named Tommy. I have five brothers and two sisters. Two of my brothers work in Detroit, and one at a neighbors that lives close to us. We have six cows and nine calves, we also have three horses two gees, four goslings and about a hundred chickens. Well I will close, hoping to see my letter in print. Onelta Peach, Brighton, Mich.

Dear Laddie—I wrote to you once before but failed to see my letter in the M. B. F., so I thought I would try again. I am a girl, twelve years old, and live on a farm of 80 acres. We have 17 cattle, 3 horses and 5 pigs. Papa takes the M. B. F. and likes it very much. I like to read the "Children's Hour" and I also like the "Doo Dads." I have one sister and six brothers, three of them were in the army and all three were in France, but they are all back. I have nearly two miles to go to school, I am in the 6th grade. I will close for this time. Hoping to see my letter in print. Edla Hedlund, Cadillac, Mich., R. F. D. No. 1.

Dear Laddie—I have never written to you before. I am a little girl ten years old and in the fifth grade. I live on an eighty acre farm. I have three brothers, one of them is in Drayton Plains and two of them are at home. I have no sisters. We have nine cows, seven head of young cattle and nine calves, also seven horses. Papa's cattle are all Durham but I have a little Holstein heifer for my very own. We have five little kittens and two big ones. I will close for now. I hope my letter escapes the waste paper basket. Your friend, Alice Wellington, Mayville, Mich., R. 2.

Dear Laddie—I have never written to you before so thought I would write. I am a girl of twelve and in the eighth grade. I live on a 80 acre farm. We have nine pigs, thirty-five chickens, two horses one cow, one calf, and I have three kittens. I have three sisters and five brothers. My two oldest sisters are married. I will close, hoping to see my letter in print. My father takes the M. B. F. We like to read the letters from the girls and boys. Thelma Loose, Harrison, Mich.

If you are bent
To spend every cent,
Why just throw your money away
But if never rash
Then put your spare cash
In a Savings Stamp where it will pay.

The Doo Dad Boy Scouts

Everybody knows who the boy scouts are. They are young fellows who band themselves together and learn woodcraft. But who ever thought that the Doo Dads would become boy scouts. Yet here they are and they seen to have learned their woodcraft well. Some of them have built a bridge. [illegible] the Doo Dad on top of it is directing operations. Two more are signaling with flags and one of them has poked the little fellow in the eye. Roly and Poly are cooking dinner and Sleepy Sam, quite wide awake this time, is stealing the sausages. Flannelfeet, the Cop, is lending a hand poking the fire. He has also poked poor Percy Haw Haw on the nose. See the little fellow who is cutting wood, he and the signaller will get a tumble if he saws that limb off. Here are some Doo Dads practicing vaulting over the stream. One has broken his stick and is getting a ducking. Poor old Smiles, the Clown, thought he was hooking a big fish; just see how the fish is smiling. Some of the Doo Dads might get drowned but here comes old Doc Sawbones, on the run as usual, to give them first aid. The Doo Dads make fire [illegible]

MARKET FLASHES

Weekly Review Crop and Market Conditions

THE MARKETS are firming up again. The violent agitation of the H. C. of L. question, which shook the props under almost every necessity of life, is gradually subsiding, and people are again beginning to think sanely and in constructive terms. The export demand which slumped badly a month or so ago is looking up again, and rumors that Germany will soon be in the market for large quantities of foodstuffs has had a strong and favorable effect upon the markets. Crop reports, too, are responsible in a measure for the stronger feeling. As the threshing returns come in, and the harvest for corn, beans and potatoes approaches the nation begins to realize that the abundance which was in prospect several months ago is shrinking rapidly, and that instead of a large surplus of many crops, there will be scarcely enough to meet the actual demands. The one disturbing element remaining in an otherwise calm marketing field is the threatening attitude of organized labor, which fills all industry with apprehension and half fear of what the future holds. If the labor difficulties can be ironed out, and everybody gets down to capacity work again, we should see a reviving of the markets all along the line, and higher prices on all farm products. To the city consumer who looks upon this hope of the farmer as a very selfish one, we can only point out that the farm is not producing the profit it should and that higher prices must prevail on the comparatively small yields of the season if men are to be encouraged to continue in the work of raising food for the nation to eat.

BUSINESS AND TRADE

More optimism seems to prevail in the general business conditions at present, with the opening of the fall buying season. Jobbers throughout the country have been buying heavily from wholesalers and this has helped to brighten up the outlook.

One of the outstanding features at the opening of this week is the fact brought forcibly to the public attention that retail prices of food and other commodities have been soaring, in spite of the lowering of prices paid to farmers and other producers. It has roused the ire of farmers to see the price they get for live stock, corn and other produce toboggan because of the price investigations, but in the meantime the retailers in the towns admit that they are making as high or higher than fifty per cent profits on numerous lines and are actually raising prices as fast as they dare.

Markets in the East report a feeling of quiet and uncertainty as for the present and future. The continued labor unrest, notably the severe disorders in Boston where the police started a strike resulting in wild outbursts of lawlessness followed by the calling in of regiments of state militia and the shooting of numerous citizens. Other vast strikes, such as that of the rail workers, continue to hold a club of fear over the markets.

There has been a shading of crop prospects excepting corn. Corn, by the way, has reached the low record of the season and manipulators in a few cases even talk of dollar corn, although it is rarely taken seriously.

WHEAT

Wheat is quoted easy in the Detroit markets at the opening this week. Some of the western markets, however, notably Minneapolis, reports a firm market for wheat and its products. It quotes dark No. 1 Northern at $2.80, which is 57 1-2 over the base price. Detroit's No. 1 red is quoted at $2.25. Only ten cars of wheat were received in the Detroit market last Saturday, against 16 cars for the same day a year ago, but there is a pretty fair amount on hand, the stocks being 84,000 bushels against 24,000 last year at this time.

The winter wheat crop in Michigan is about the same as it was for last month hovering around 17,247,000 bushels. The threshing yields have been good, much better than was at first expected in some sections. Michigan has in its largest crop of spring wheat, 66,000 acres being planted, with an average yield of 12.2 bushels estimated for an acre. In numerous states the reports of conditions of wheat have lowered somewhat. Farmers who went heavier on wheat than corn this year seem to have been fortunate, according the conditions at the present moment, although the outlook is uncertain.

Many farmers are busy putting in their winter wheat now, as it can not well be delayed much longer. The ground is pretty dry and lumpy in many parts of the state, but the farmers are making the best of it. Although the guaranteed price will undoubtedly be lifted next spring, many farmers consider it a wise thing to devote considerable space to winter wheat, believing that the lifting of the fixed price will only make for a higher price of wheat next year.

CORN

Grade	Det'o't	Ch'go	Toledo
No. 2 Yellow	1.58	1.42	1.54
No. 3 Yellow	1.58	1.42	
No. 4 Yellow	1.56		

At the opening this week in the Chicago markets, corn had reached the lowest level of the summer. September corn showed a decline of 62 cents a bushel from the high price of last July 10. Upward fluctuations may occur but the outlook for the present has been gloomy.

The new government crop reports and the peace conditions were factors in Chicago last week end, resulting in the new low record. The fact that prices are still far above the pre-war basis was used as an argument by the bears in the market.

Numerous holdings in the Detroit market became alarmed last Saturday and dumped so much upon the market as to cause almost a demoralization. The only hope of the bulls is a clearing up in the strike situation, which in general is thought to be a little better than it had been. Moreover it is thought that the slump in the corn deal is approaching rock bottom and that it is now on a more healthy basis, ready for a long upward march. Argentina decided last week to give a $100,000,000 credit to Europe for the purchase of Argentine corn, thereby curbing the American prospects abroad somewhat. This is thought to have been one of the main factors in many market slumps. Farmers in general have been willing to sell holdings of old corn. The coming crop seems to be getting safely out of the way of the coming frosts. New corn is already pressing on the market from the South. In general the news from the farms further depresses the prices of corn.

OATS

Standard	.72	.69	.71
No. 3 White	.70	.69	
No. 4 White	.70		

Oats, sometimes called the wife of corn, unwillingly followed her mate, Mr. Corn, to the low levels of prices in the markets in the past several days. Despite improved demand at the seaboard for oats, the grain slumped due to the downward tendency of corn in the Chicago market to the lowest point of the season.

Not only the Chicago market fell, but Detroit and other markets followed suit. A variety of world conditions as well as local factors seemed sufficient to keep oats from declining much, but the demoralization of the corn market was the deciding factor. The small oat crop is one big hope of the bulls in the oat market. Michigan's out output this year is only half of last year's, the estimates totaling 36,169,000 bushels for this year, with an average yield figured at 23.2 bushels per acre.

BEANS

The bean situation is so well covered elsewhere in this issue by Mr. Grant Slocum that it is necessary to touch only briefly upon it here. In spite of the present condition of the market, and in spite of what the speculators have to say about lower prices, the crop estimates place the total bean production for the year far below that of last year. Moreover, if the Senate ever gets tired of playing politics and signs the Treaty of Peace so that normal business relations may be resumed with foreign nations, there is sure to be a greater demand than ever for this greatest of American food products. We warn our readers against accepting the stories of the speculators, and urge them to do a little thinking for themselves.

POTATOES

From present indications the potato crop is going to be way short of last year's and prices are bound to be considerably higher. The entire potato region suffered from drought. The yield in the west, except in a few isolated sections, is unusually light and reports have it that Maine and New York spuds have been struck with blight and dry rot is appearing in the potatoes already harvested. In fact, the early Maine crop which usually brings the top of the market is in very poor condition and much has spoiled on the hands of the purchasers. The situation in Wisconsin is improved slightly, yet we understand that the yield will be below normal. The condition in Michigan is not encouraging. The extreme northern section of the lower peninsula is reported to have a good crop, but the yield in the central potato belt and in the occasional potato counties of the southern sections will be very poor.

APPLES

There is no telling where the price of apples may go before spring. Just as no one would have dared to predict a year ago that prices would reach as high as $12 a barrel which they did last winter, no one now ventures to set a limit on the price. The crop is short; the demand is good; and right now the prices are the highest ever known at the opening of the season. Michigan Jonathans are selling readily to the jobbing trade at $3 per bushel, and Wealthys, orchard run, at $3.50. "Oh, why didn't I take care of my apple orchard," is the wail of the farmer on every side.

PEACHES

Daily shipments of peaches are above 200 cars, with a fairly good demand.

RYE AND BARLEY

Although the slump in other grains affected rye and barley in the disasters of last week on the markets, rye declined less than some of its cousins. The rye and barley crops are small this year, and later on a good price is hoped for, if conditions get settled and more optimistic.

The estimated yield of rye in Michigan is 16 bushels per acre and a total of 9,136,000 bushels is looked for which is over 2,000,000 bushels better than last year. Cash No. 2 is quoted Detroit as quiet with the price around $1.40.

Barley has suffered much from the hot dry summer in this state, and its production has dropped off over 3,000,000 bushels from last year. The estimated output of barley in Michigan this year is 5,124,000 bushels, or an average acreage output of 18.3. In the Detroit market it is quoted at $2.40@$2.50 per cwt. for cash No. 3.

The tame hay yield is estimated at 1.2 tons per acre making a total crop of about 3,000,000 tons as compared with 300,000 tons less next year. Wild hay approximates 1.25 tons per acre and a total crop estimate of 51,00. (Michigan report.)

LIVESTOCK

DETROIT—Receipts last week. 2,108; dull; best heavy steers $12@13; best handy weight butcher steers $9@10.50; mixed steers and heifers, $8@9; handy light butchers, $7@8; light butchers, $6.50@7.50; best cows, $8.50@9; butcher cows, $7.50@8; cutters, $6@6.25; canners $5.50@5.75; best heavy bulls, $8.25@8.35; bologna bulls, $7.50@8; stock bulls, $6.50@7; feeders, $8.50@10.50; stockers, $7.50@8; milkers and springers, $75@125. Veal calves: receipts last week, 1,010; steady; sheep and lambs: receipts last week, 4,916; dull; 25c to 50c lower on lambs; sheep steady; best to common lambs, $10@11.50; fair to good sheep, $8@8.50; culls and commons, $4@6. Hogs, receipts last week 5,547; very dull; a few holdover bunches hold at $17@17.25; for good mixed, heavy, $16@17.

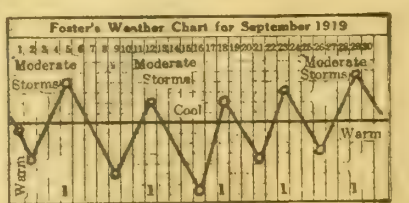
THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Sept. 20, 1919.—Last bulletin gave forecasts of warm waves to cross continent Sept. 21 to 25 and 27 to 31, reaching meridian 90 near Sept. 23 and 29. Storm waves about one day later and cool waves about two days later.

Next warm wave will reach Vancouver about Oct. 2 and temperature will rise on all the Pacific slope. It will cross crest of Rockies by close of Oct. 3, plains sections 4, meridian 90, great lakes, middle Gulf States and Ohio-Tennessee valley 5,, eastern sections 6, reaching vicinity of Newfoundland about October 7. Storm wave will follow about one day behind warm wave and cool wave about one day behind storm wave.

These disturbers of our atmosphere will control weather of this continent from Sept. 27 to Oct. 7. Temperature trend will be upward till near Sept. 29 and then downward. Storms will be feeble and rainfall as a general whole of the continent below normal.

October will come in as a playful kitten and go out as a hideous beast. Weather from first of August to Oct. 10 will have averaged unusually quiet. The seventy days, beginning with Oct. 11, will contain a variety of weather extremes. Precipitation and intensity of the storms will increase largely.

W. T. Foster

EAST BUFFALO LIVE STOCK

With about 20 cars of fresh cattle and 18 cars of holdovers on sale today, the market was 25 to 40c lower on all classes. Trade was very dull. Receipts of hogs today totaled 5,600 and our market opened 50 to 75c lower on the light hogs and 25 to 50c lower on heavies, and as the day advanced the market strengthened and a late arrival of light hogs sold but 50c lower than Thursday's best time. Heavy hogs sold at $17.75; mixed and yorkers sold at $18.00 with a few decks selling at the close at $18.10 and a few at $18.25; pigs, $18.00. Receipts of sheep and lambs today are about 23 cars. Choice lambs sold 50c to $1 per cwt. lower than yesterday, selling from $16.25 to $16.50 with a few very choice ewe and wether lambs up to $17.00; cull lambs were also from 50c to $1 per cwt. lower, selling from $11.00 to $13.00; yearlings, $11.00@12.00; wethers, $9.00@10.00; ewes, $8.00@8.50. Receipts of calves today totaled 750 head. Choice calves, $25.00@25.50 which is 50c to $1.00 higher than Thursday; throwouts, 120 to 140 lbs. $18.00 to $20.00; heavy throwouts, 160 to 190 pounds, $11.50@12.50; heavy fat veal calves, $15.50@16.50 as to weight and quality.

East Buffalo—Choice to prime weighty steers, $17.00@17.50; medium to good weighty steers, $15.50@16.00; plain and coarse weighty steers, $13.00@13.50; choice to prime handy weight and medium wt. steers, $14.50@15.00; fair to good handy weight and medium weight steers, $13.00@13.50; choice to prime yearlings, $15.50@16.00; fair to good yearlings, $14.00@14.50; medium to good butcher steers, $13@13.50; fair to medium butcher steers, $11.50@12.00; good butcher heifers, $12.00@12.50; fair to medium butcher heifers, $10.50@11; good to choice fat cows, $10@10.50; medium to good fat cows, $9@9.50; gair to good medium fat cows, $8@8.50; cutters and common butcher cows, $6.50@7.00; canners, $5.00@5.50; good to choice fat bulls, $9.50 to 10.00; medium to good fat bulls, $9@9.50; good weight sausage bulls, 7.50@8; lightand thin bulls, $7@7.50; good to best stock and feeding steers, $9.50@10; medium grades of stock and feeding steers, $8@8.50; common to fair stock and feeding steers, $7@7.50; good to choice fresh cows and springers,$90@120; medium to good fresh cows and springers, $75@90.00.

DAIRY MARKETS

New York—Butter, Firm; creamery, higher than extras 58@58 1-2c; extras (92 score.) 57 1-2 cents; first, 52@57 cents; packing stock, current make No. 2, 44 1-2@45 cents. Eggs, irregular, extras, 55@56 cents; do extra first, 52@54 cents; do, first, 47@51 cents. GOVERNMENT POTATO REPORT

The Bureau of Crop Estimates issues the following quantitative report and comments on the late or winter commercial potato crop of the United States based on conditions September 1. This report deals with that portion of the crop shipped in carloads and represents the surplus or highly commercial movement.

In the heavy producing states of Michigan, Wisconsin and Minnesota, the production promises to be 55,075 cars as compared to 63,510 cars last year, or 86.7 per cent of last year. The Rocky Mountain states have a comparatively light crop, and Colorado, one of the very important states in the country in late potato production, promises but 68 per cent of last year's crop.

The northwestern states of Oregon, Idaho and Washington promise to ship about 11,500 cars as compared to 13,205 last year, or 87 per cent of last year.

CROP PROSPECTS IMPROVE

The prospects for corn, alfalfa, millet, buckwheat, pastures, sugar beets and some of the fruits have improved during the past month, according to the joint crop report issued by Coleman C. Vaughan, Secretary of State and Verne H. Church, Field Agent, U. S. Bureau of Crop Estimates. Moderately cool weather prevailed, with only light, local frosts over very small areas. The rainfall was generally deficient, but the local showers were of great benefit to pastures, clover seedings, corn and root crops. The ground is exceedingly dry over much of the state and is hindering the plowing for and seeding of fall grains. Threshing is progressing rapidly, with comparatively light yields of oats, barley and spring wheat, good yields of winter wheat, and fair yields of rye. The acreage of clover seed is small.

BOSTON WOOL MARKET

Business has been exceedingly quiet during the past week, although one or two houses report a slightly improved demand. Prices, however, have shown no further easing. The auction at Philadelphia was unsatisfactory, withdrawals amounting to 84 per cent. The English markets are swamped with orders and prices are holding very firm. The manufacturing situation is unchanged. Quotations are: Michigan and New York fleeces: Fine unwashed, 63@64c; delaine, unwashed, 78@82c; 1-2 blood, unwashed, 75c@78c; 3-8 blood, unwashed, @6869c.

VEGETABLE GROWERS COMPLETE CONVENTION

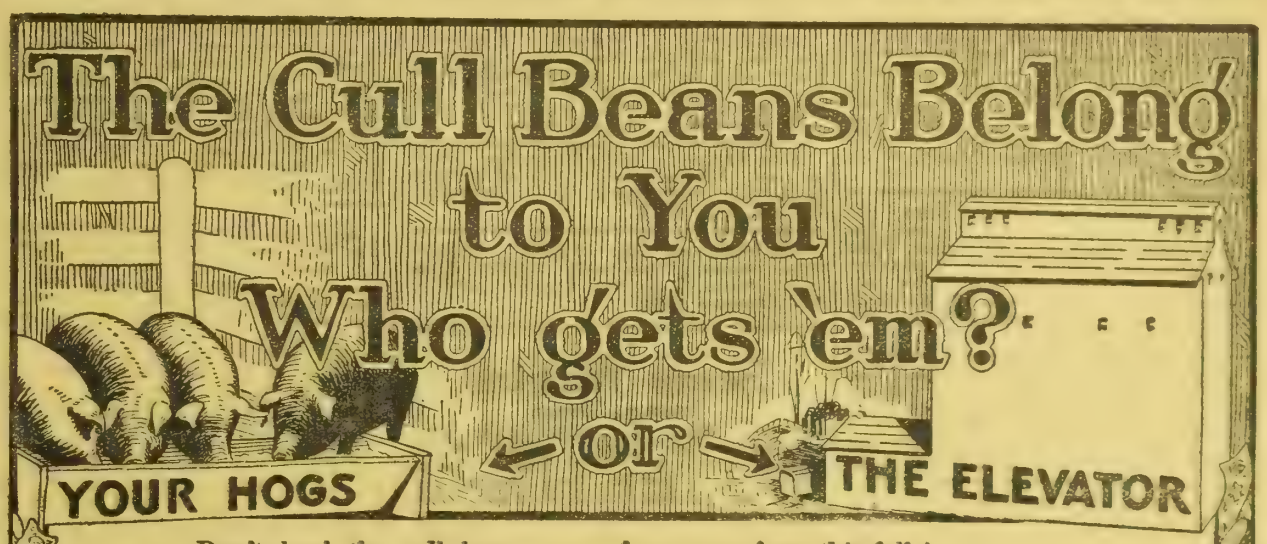
The second annual convention of the Vegetable Growers' Ass'n of America came to a close last Friday at the Hotel Statler, Detroit. It was in many respects one of the most representative and helpful gatherings of vegetable growers ever held in this country, and marked a new era in the history of organized and co-operative efforts among this class of farmers. Delegates were present from all sections of the country and many excellent addresses were given upon a wide variety of subjects, dealing with production, standardization and marketing of the product. The total registration was well above four hundred, representing about twenty-five states and Canada.

In addition to the splendid business program, the members of the convention enjoyed many unique social experiences. Among these was a boat ride on Thursday. Souvenirs in the shape of minature "bushel" baskets, filled with fruit, were passed out to the delegates by the Package Sales Corporation. The D. M. Ferry Seed Farm, always an interesting place to the vegetable grower and seedsman, was visited Thursday afternoon. A demonstration of a power or "tractor" cultivator was the feature of this trip. On Saturday a large number made the trip to the Jerome B. Rice farm at Grove Lake where dinner was served by Mr. and Mrs. George E. Starr. The guests seemed very well pleased with the reception and felt well repaid fo rthe trip. This farm furnishes a splendid opportunity to study varieties of vegetables as well as diseases of vegetables and means of control.

The banquet on Thursday evening was one of the crowning achievements of the convention. Prof C. W. Waid of the M. A. C. acted as toastmaster in the absence of Pres. Howard W. Selby, and the following responded to toasts: J. Locke Wilson, Toronto, Canada; Mrs. Dora Stockman, Lansing; W. P. Hartman, Grand Rapids; Thos. F. Gunson and Dr. Eben Mumford, East Lansing

The following officers were elected at the business session Friday: Pres. E. A. Dunbar, Ashtabula, Ohio; vice pres., Louis E. Miller, Toledo, Ohio; sec'y, Sam W. Severance, Louisville, Ky.; Treas., H. J. Cheney, Grand Rapids, Mich. A new office, called "Organization Secretary," was created and C. W. Waid of East Lansing was selected for the position.

An invitation having been received from Buffalo to hold the next convention at that place, it is probable that that city will be the choice.



Don't haul the cull beans away from your farm this fall!
Better hog feed than cull navy beans was never procurable.

LET'S KEEP THE CULLS AT HOME!

Manson Campbell offers to the bean growers of America, his special Bean Mill, which is guaranteed to remove most of the culls, splits and dirt in beans just as they come from the thresher and will also separate oats, cockle from wheat, grade all small grains and grass seed.

It is built by the same makers who over 40 years ago have built the famous Manson Campbell graders, cleaners and separators.

It is strong, light and inexpensive enough so that every bean grower can have one on his own farm ready for the harvest.

Regularly furnished with a crank, which can be easily turned by a fourteen year old boy, but when even one horsepower or more is available, a special pulley attachment is furnished.

Manson Campbell Bean Mill

SPECIAL INTRODUCTORY PRICE, $36, SOLD ON 30 DAYS TRIAL GUARANTEE

We have a number of these machines ready for distribution in Michigan this fall and as long as they last we will ship them direct from Detroit, for $36.00, cash to accompany order, but with the positive guarantee of satisfaction or your money back—the same basis on which we have sold over $100,000.00 worth of Manson Campbell products.

Bagging Attachment, $12.50 extra. Power Pulley attachment, $4.00 extra.

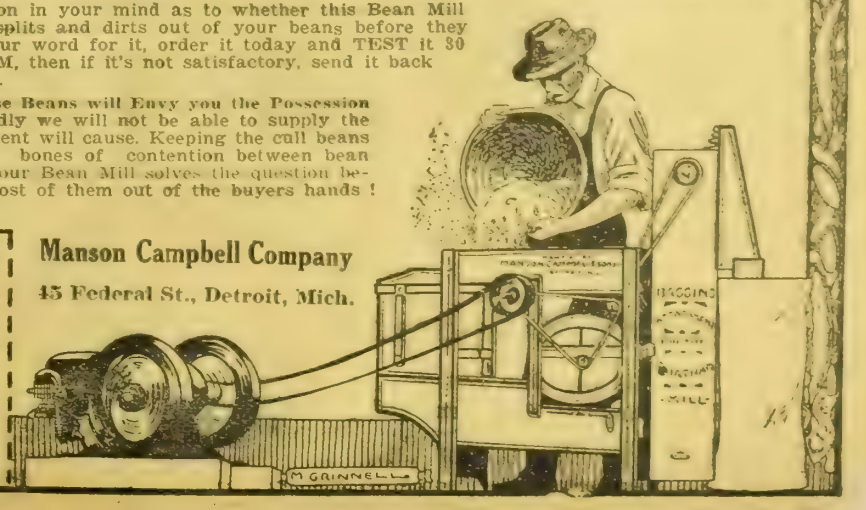
ORDER DIRECT FROM THIS ANNOUNCEMENT

Bean selling time is almost here, you need this Bean Mill right away, order direct from this announcement and be sure of getting yours.

If there is the slightest question as to our financial responsibility ask your local banker or write or wire the publishers of this paper.

If there is any question in your mind as to whether this Bean Mill will get MOST of the culls, splits and dirts out of your beans before they leave your farm, don't take our word for it, order it today and TEST it 30 DAYS ON YOUR OWN FARM, then if it's not satisfactory, send it back and we'll refund every dollar.

Your Neighbors Who Raise Beans will Envy you the Possession of this Mill because undoubtedly we will not be able to supply the demand which this announcement will cause. Keeping the cull beans at home has been one of the bones of contention between bean grower and buyer for years—our Bean Mill solves the question because it keep the Culls, or most of them out of the buyers hands!



Publishers Guarantee—We have known the Manson Campbell Company for years, they are thoroughly reliable, and we will guarantee to any reader ordering a bean mill from this announcement full satisfaction or their money back if they are not fully satisfied.

Crop Reports

GRAND TRAVERSE, (E)—Still very dry. No frost yet. Farmers are cutting corn, pulling beans and filling silos. Some fall rye being sowed. Not much marketing being done, as prices in cattle and chickens have dropped. Some apples being sold.—C. L. B.

LIVINGSTON, (N. W.)—Farmers are busy working on their wheat, cutting corn and so forth. The ground is very dry and lumpy. No rain worth mentioning for a long time. R. G. Brown has just threshed a field of Perfection wheat with a yield of 33 bushels to the acre.—G. A. W.

ANTRIM, (W)—Farmers picking apples, pulling beans, cutting corn and sowing wheat and rye. Weather mostly hot and dry. Little or no rain. Considerable damage being done late crops such as buckwheat and potatoes. Corn drying right up. Some wheat and rye is being sold. Not much building being done.—N. T. V.

OGEMAW, (C)—No rain for a long time. Too dry to plow and sow fall grain. Some rye sowed on early plowing. Corn is about all ripe. Has been good weather for harvesting beans. Late potato crop will be light. Farmers have taken over the only elevator in West Branch. All produce handled through them will be on a commission basis, so there is no price quoted on grain.—W. H.

MASON (W)—Wheat will be about all sown by the last of this week. Corn is being cut as fast as possible as it is drying badly. Apples and peaches are being marketed. Soil too dry to plow well. But weather the past few days has been threatening with a light sprinkle or two. Farmers can't get any market quotations, as our daily has ceased to print them and have not been able to find out what they are.—B. M.

LAPEER (E.)—Silo filling in full swing and some of the best corn going in I have ever seen. Wheat sowing at a standstill. It is too dry; haven't had any rain for three weeks that would do any good. Some hay going to market with the price down. The following prices were offered at Imlay City on Sept. 11: Wheat, $2.10; oats, 56c; rye, $1.35; hay, No. 1 Timothy, $20; No. 1 light mixed, $18.00; butter, 50c; butterfat, 54c; eggs, 45c.—C. A. B.

BAY, (N. W.)—Farmers are busy cutting corn and harvesting beans. The hot dry weather ripened and dried the bean crop fast. Some of the new crop has been threshed and marketed. Too dry for plowing and sowing winter wheat. No pasture cattle and other stock has to be fed now, which will perhaps mean a shortage of feed this winter. Late sugar beets will be a short crop on account of the dry weather. Apples and other fruit are scarce. A few hogs sold.—A. G.

MONTACLM (S. E.)—A light rain was received in this vicinity Wednesday and will be of much advantage to the sowing of wheat and rye as a medium acreage is going to be sowed. The cutting of corn continues this week which is getting very ripe, the majority of the corn being cut. Corn which was planted early is getting very dry for the filling of silos and most of the silos are being filled now. A large amount of the beans has been pulled and more are being pulled at the present time. The rain which was received Wednesday is interfering with the drawing of the beans.—W. L.

ISABELLA (S)—Farmers are mostly cutting corn. Some have finished. The weather is very dry and warm. Late potatoes will be a short crop unless it rains soon. They will not be a very large crop anyway, there is a small green fly working on the vines; they kill the leaves so they dry up and resemble blight. We are having so much dry warm winds that corn fodder is drying right up. Looks like it had been frosted. Potatoes took a drop in price on account of green stock being put on the market, but they are picking up again, but they sort them so heavy. They are selling at $2.30 a hundred at present—not much.—E. B.

CLARE (C)—Farmers are cutting corn which is practically all ripe and filling silos. Beans are suffering to be pulled. Help very scarce. Have had no rain for some time, and it is very dry, but is fine weather for harvesting crops. The Co-Op. threshing outfit is doing fine work and the livestock shipping association is spoiling the game for stock dealers, but is certainly helping the farmers. Farmers would like to sell their early potatoes but there is no market. Several new silos being erected. The following prices were offered at Harrison on Sept. 8: Wheat, $2. Oats 74c; rye, $1.54; No. 1 Timothy, $28; Straw, rye, $10; beans (C. H. P. Pea) $6.75; hens, 25c; springers, 28c; butter, 50c; butterfat, 53c; eggs, 38c, hogs, dressed, 22c; apples, $1; plums, $2; pears $3.—V. W.

BARRY (C)—The Barry county fair was held in Hastings last week, Thursday was the big day; there were very man cars, buggies and wagons, and people accordingly. The largest crowd ever in this city. There was some fine stock shown. Mostly Holstein, Durham(red and gray) and a few Jerseys. The weather in this part of the county is very favorable. It has not yet frozen and some days it is as warm as in July. We hope that it may so continue because the late potatoes need it. Most every one has their corn cut, and some are pulling beans. Most farmers have had their wheat sowed for a week. The following prices were offered at Hastings recently: No. I wheat, white, $2.05; No. 2, red, $2.10; oats, 65c; rye, $1.25 No. 1 Timothy, $30; Straw, rye, $20; butter, 45c; butterfat, 53c; eggs, 42c; hogs 16@20c; veal calves $8@18.

W.F. YOUNG Inc. 179 Temple St., Springfield, Mass.

Book learning isn't at all the big stunt at the modern type of consolidated rural school. The children learn how to use their hands at useful, practical things, which will make them a real asset in the profession of farming.

IS THE LITTLE RED SCHOOL HOUSE DOOMED?

(Continued from page 1)

the necessary qualifications and Red Socialism had started to infest the community. I recall the first meeting which I attended there, or rather tried to attend nearly six years ago, when about thirty had assembled in the school yard. Six came inside while the others refused to enter because they had been informed that a Socialist speaker would address the meeting, and although I offered to speak upon Socialism exclusively, they persisted in remaining outside and finally went to a neighboring farm house.

"Those were gloom days for Doelle for, aside from this, he received but scanty encouragement from the school board and many are the hours when we counseled together, he ready to quit and I urging him to go on, for I had learned to know his fearlessness, appreciate his aggressiveness, and admire his untiring efforts in wresting success from what he looked upon as his life work.

"We then planned monthly parent's meetings at which the programs included demonstrations of the practical work which is carried on by the pupils, and a noticeable change soon followed. The attendance which was small at first rapidly increased and during the past three years has ranged from 125 to upwards of 400. The wholesome influence of the school upon the whole community has been plainly visible since then. Trained in practical work of the farm and home, the boys and girls have gained in self-reliance. They are wide awake and well behaved, clean and bright-eyed, as well dressed and facing an audience as composedly as any equal number of city children.

"The material progress in the community is no less conspicuous. Nearly every crop has been standardized, better houses and barns have been erected. Automobiles and motor trucks are owned by several, and more land has been cleared and brought under cultivation during the past four years than during the preceding fifteen. And, best of all, the community is becoming thoroughly Americanized for, stanza after stanza of our National anthems is now sung by young and old and every line has been learned by heart. While the war lasted, not one family in the community failed to bring to the principal of the school its monthly voluntary contribution towards Red Cross and other war relief work, and on one of the walls of the room used for monthly meetings there hung a large service flag with sixteen blue and one gold stars, thus bearing testimony to the allegiance of those foreign born people who chose America as their home and are ready to defend it with all they possess. For most of these results, a large share of the credit is due to Mile J. Slagg, the principal of the school, whose efficiency and untiring work won for him the confidence and co-operation of the entire community.

"The law governing consolidated rural agricultural schools is now in full force and what has been done in a remote settlement of Houghton county can be accomplished with even better results in the more developed communities of the state. The law provides for the consolidation of three or more rural schools after the question has been submitted to the qualified voters of the school districts. It describes the qualifications of the teachers and the specifications for the building and equipment and it provides for the transportation of pupils, each school being entitled to receive from the state two hundred dollars a year for each vehicle used. These schools are divided into two grades and are entitled to an additional state reward which amounts to $600 a year for Class A school, and $900 a year for class B schools.

"Those who are interested in the establishment of rural agricultural schools may freely consult with or write to John A. Doelle at Marquette (Michigan), for while he is now engaged in educational work of a different character he is just as intensely interested in the progressive development of rural education. Raised on a farm where the eight hour law applied from sunrise until dark, he knows the hardships of the average country boy and girl and the short-comings of the common rural school. He has applied the best years of his life, in constructive efforts towards raising the standard of rural education and of rural life, hoping that the state as well as his community may profit by it. His work finds expression in the lives of the people of the Otter Lake district, for his dream of fourteen years ago has taken shape in their homes and is ever increasing its influence through the school."

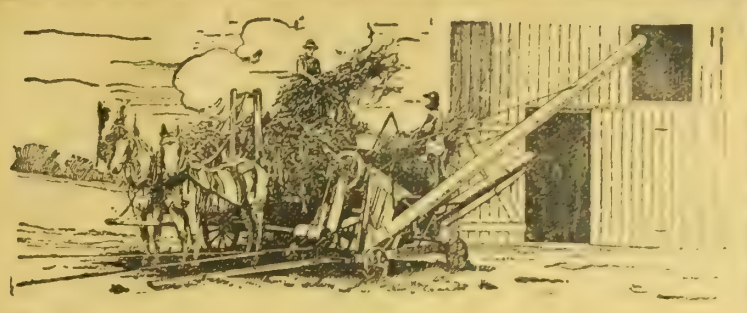
Early Fall Wheat Planting is Very Important

That the proper planting time of wheat is a factor which is not given the attention it deserves is the opinion of Prof. J. F. Cox, head of the crops department at the Michigan Agricultural College. The tendency in many sections of Michigan is to plant at such a late date that the wheat does not develop sufficient top growth for best wintering. Tests have shown that earlier plantings give better results, early October being usually too late to plant for profitable crops.

The following dates are given by Professor Cox as safe planting times for Michigan: Southern Michigan counties, two tiers, September 20 to October 1st; Central Michigan, as far north as Saginaw Bay, September 15 to September 25; Northern lower peninsula, north of Saginaw Bay to the Straits, September 10 to September 20 Upper Peninsula, August 25 to September 10.

It is also important that rye be planted at the right time. Rye can generally be planted from 15 to 20 days later than wheat with assurance of good returns, but maximum results will be obtained if it is planted during the periods given for wheat. Late October and November plantings do not compare favorably with those planted at an earlier date.

"Preparation of the seed bed, treatment of seed, and proper fertilization are all important factors in wheat production," says Professor Cox, "but I believe that the planting time is vital. If we fail to observe it, our other efforts will be wasted."



Feed the Whole Crop

DEERING and McCormick huskers and shredders insure the farmer all the feeding value his cornfield contains. This value is largely represented in the stalks, husks and leaves. Shredded by a Deering or McCormick these make prime roughage with high feeding value.

Deering and McCormick huskers and shredders do effective work under a wide range of conditions. The husking rolls have ample capacity for both large and small ears, handling them without shelling the corn. The shredder head is so constructed that the fodder is left in good condition, palatable and nutritious.

Deering and McCormick huskers and shredders are built in 2, 4, 6, 8 and 10-roll sizes. Whatever your necessities, there is a machine exactly suited to take care of them swiftly, economically and efficiently.

There are many unusually fine features about these machines that impress you with their practical value. A nearby International dealer will go over the machine with you, point by point, and the more you see of it, the stronger will be its appeal. Or, by writing the address below full information will be supplied.

COLLEGE OFFERS SERVICE TO AGRICULTURE

(Continued from page 5)

ough and usable understanding of the latest farm methods.

Breeders, feeders, farmers and practical veterinarians in Michigan are calling for more and better qualified veterinarians, and the four year course at M. A. C. is endeavoring to meet the call. The men who follow the veterinary course graduate as qualified practitioners and are doing splendid work with Michigan live stock.

Farm Women Aided

The young women of the state are not behind their brothers in the matter of training to take part in the business of the farm. They are enrolling in the home economics courses at the college in constantly increasing numbers and preparing to be efficient home makers. Many of them take up teaching; others become dietitians in hospitals, but far the majority use the training in scientific management of Michigan homes. They become expert buyers of foodstuffs, good judges of textiles, and generally qualified exponents of the art of keeping house.

While a large percentage of the young men entering M. A. C. come from farms, not all of these men elect agriculture. Some desire an engineering course, hence the necessity of providing for such training at our state college. Courses are offered in civil, electrical and mechanical engineering and those who complete one of these courses are well prepared for responsible technical positions.

Not the least important service in connection with M. A. C. is that rendered by the Extension Division. By means of this division the benefits of the college are carried direct to thousands of farms and farm homes thru county agents, extension specialists, extension schools, etc. It is almost impossible for this division to answer the numerous calls which come from all parts of the state.

During the coming year military training will be given added interest and effectiveness by special work in field artillery, cavalry, or signal corp drill for those who elect the special to equip a full company, representative field pieces, and other material will be sent to the college by the war department. Athletic activities are, of course, a definite part of the life of every student.

"What sort of training will best prepare me for the future, and in what fields are there the best opportunities?" is the question Michigan young men and women as asking, and many of them are finding that the opportunities in the agricultural field are unusually attractive. The Michigan Agricultural College finds that it cannot meet the demands for men who are trained along agricultural lines, and the demand will undoubtedly keep up for years to come.

FARMERS WORK TO CUT U. S. RAIL VALUATION

(Continued from page 2)

mers through regional agencies wherein co-operative guarantees are secured for repayment in due season. It holds that "credit must be made as available and as cheap to farmers as to any other legitimate and responsible industry." The present monopolization of credit causes many farmers to pay 35 to 50 per cent more interest than they should pay, involving unjust interest charges to them of millions a year.

The total indebtedness against farm values was in 1910 about $6,000,000,000; the average annual cost thereof to the farmers was at least 7.9 per cent exclusive of payment on principle. The indebtedness is much larger today and the cost of this is well over $500,000,000. It is feasible to reduce the average cost to almost 5 per cent to save the farmers over $200,000,000 a year.

The immediate adoption of the economic reconstruction program of the Farmers' National Council would save the farmers of America easily $2,500,000,000 to $3,000,000,000 a year. It is not surprising that the predatory and monopolistic interests of the country, all of which know our program, are all opposed to the Farmers' National Council, and are exerting every effort to put it out of business. They are afraid of it and do not show any such fear of any other national union of farm organizations.

Tractor Lubrication Is a Science

THE difference between correct and incorrect lubrication is the difference between under production and efficient farm management.

The Standard Oil Company (Indiana) gives you the benefit of its many years' experience—in—

Heavy Polarine Oil
Stanolind Tractor Oil
Extra Heavy Polarine Oil

One of these three oils is the correct oil for your tractor. The official chart prepared by our Engineering Staff will tell you which one. The nearest Standard Oil representative has this chart, and will be glad to show it to you.

TRACTOR LUBRICATION

A TEXT BOOK ON
THE LUBRICATION OF
INTERNAL COMBUSTION ENGINES
AND TRACTORS

WHETHER the reader be a tractor owner—an experienced operator—a prospective purchaser—or a student in an agricultural college or technical school, he will find this book a valuable addition to his reference library.

In simple, direct language and by the aid of many illustrations, the writer has explained in a clear and interesting manner the construction, the function, and the operation of the various parts of the tractor and the tractor engine, and how the highest efficiency can be obtained at the least expense in fuel, lubrication, and wear and tear on the parts.

Even though the reader may have no knowledge whatever about tractors or internal combustion engines, he can read this book from cover to cover, understand every word of it, and gain for himself a most comprehensive knowledge of the subject.

Yet the more experience he has had in the operation of a tractor the more valuable and interesting will the book become.

When the Great Lakes Become a Mediterranean

A Picture of Agricultural Michigan When Ocean-Going Vessels Ply the Great Lakes

THE GREATEST commercial waterway of ancient and medieval times was the Mediterranean Sea. Upon its bosom countless vessels, from the primitive barge of early ages to the modern steamer of today, have carried untold wealth. The value of the goods transported over the Mediterranean sea at the present time between ports of Europe, Asia, Africa and the minor countries having access to the great water-way, reaches a staggering total. The Mediterranean sea is, in fact, the source of the commercial life of a vast part of the eastern hemisphere. A score or more of countries, producing almost every conceivable kind of product used in modern life, are wholly dependent upon that sea for an outlet to the centers of consumption. Because of the variety and value of goods carried on the Mediterranean, and the part it plays in the commercial scheme of Europe and Asia, the great body of water furnishes a striking example of the incalculable possibilities of navigable streams and lakes as media of transport.

* * * * *

SECRETARY of the Interior Franklin Lane has referred to the Great Lakes as a potential American Mediterranean. What greater promise could be made than this? What greater vision could be painted before the people of Michigan and other states bordering upon the Great Lakes than the vision of the Titans of the oceans anchoring at our Lake ports and taking into their enormous holds the products of our farms and factories for transportation to the foreign markets? We can conceive of no greater development more important to the material wealth of agricultural Michigan than the development of the several water-ways connecting the Great Lakes with the Atlantic ocean that ocean-going vessels may penetraate them.

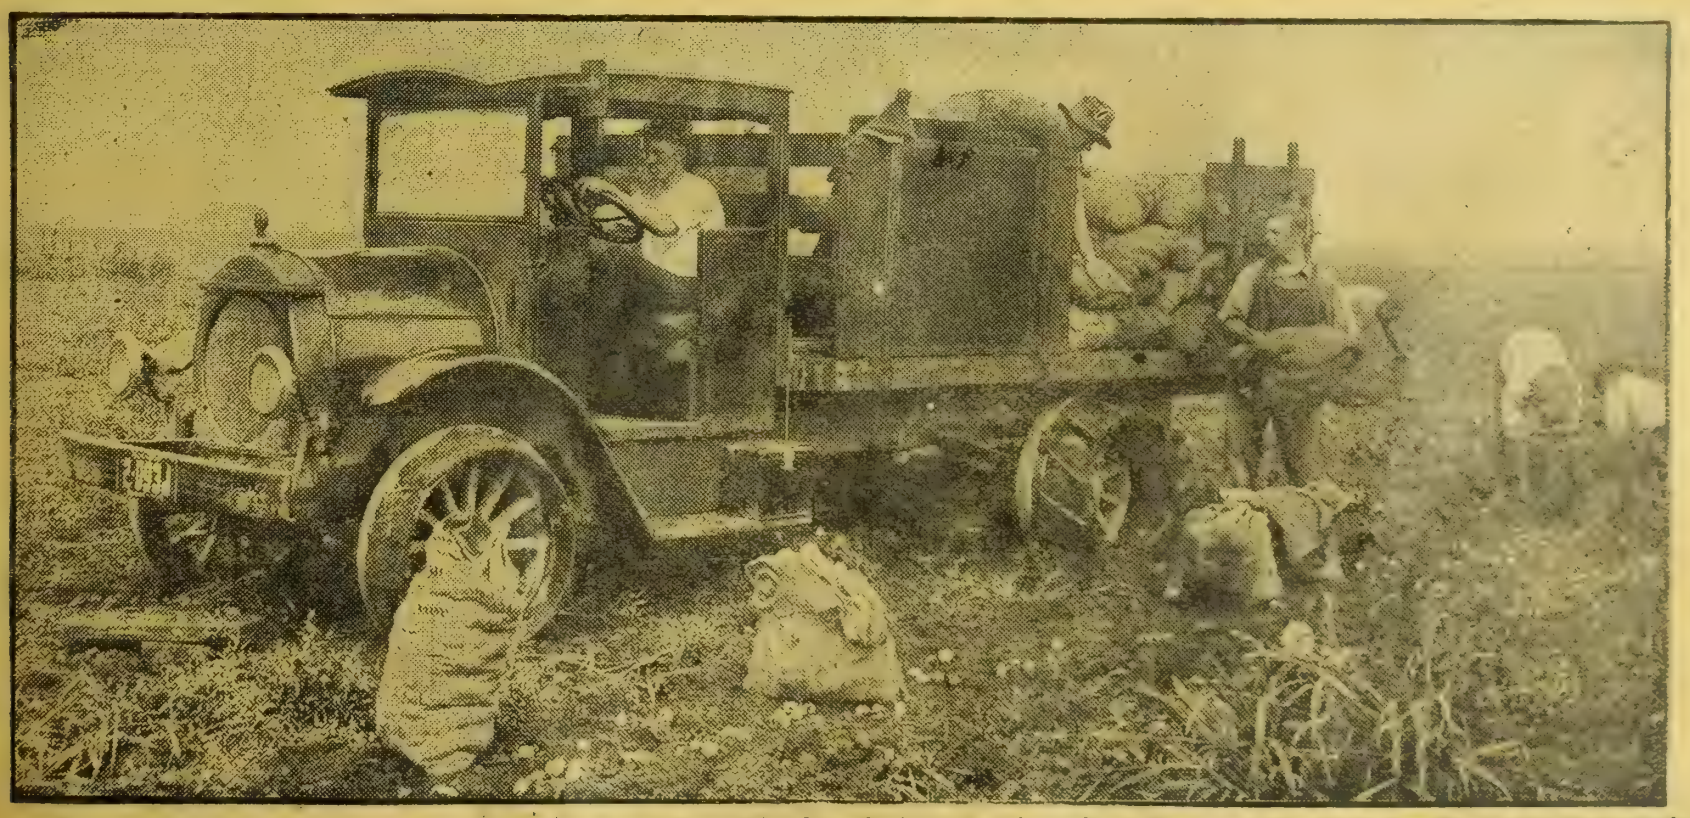
* * * * *

NEW YORK CITY is now the greatest export city on the American continent. But a large part of the products that leave that port are now transported thousands of miles across the continent over congested railway systems. Right now we are confronted with the problem of inadequate transportation facilities. The railroads are breaking down under a load they were never intended to carry. This load is growing more burdensome every year, and the cost of carrying it is also increasing. Something must be done soon to supplement the present rail and water-ways for they have not been keeping pace with the expanding industry of the conutry. The cost of carrying freight by water is only a small fraction of the cost by rail, so it is logical that our captains of industry and our government should give its first attention to the devolpment of connecting links between navigable lakes and rivers.

The only obstacle to navigation between the Great Lakes and the Atlantic ocean is the river from Montreal to Lake Ontario, and possibly the St. Clair river, according to Sec'y Lane. The entire project of deepening these waterways would cost in the neighborhood of $100,000,000 a part of which would be borne by Canada. Nevertehless Secretary of Interior Lane believed this is a very trivial cost compared to the vast benefits that the entire middle west would secure when the project is once completed. Mr. Lane urges in a letter to the President, that the government undertake at the earliest feasible moment the development of these waterways.

* * * * *

WE DARE not paint the pictures that our imagination conjures up before us when we contemplate the material benefits that would accrue to the state of Michigan were this thing to be done. We are sure that it would usher in a period of unprecedented activity and prosperity, both industrial and agricultural. We would expect that Michigan would, in fact, become the industrial and agricultural center of the Middle West. Opportunities of all kinds would exist here in abundance. Raw products that are now shipped into other states to be made over into the finished product could with great profit to the producers be made ready for market near the place of production and placed upon vessels bound for London, Liverpool and other great European markets. Consider, if you please, the enormous quantities of agricultural products that are now shipped outside of the borders of our state. Imagine, if you please, the value of meat products that are produced in Michigan and should and could be packed in Michigan for foreign trade. Imagine also the opportunity that would then exist for canning factories, elevators, de-hydrating plants, sugar refining factories, flour mills, tanning factories, shoe factories and innumerable other industries that are intimately related to agriculture. Surely, we are safe in painting this picture.



Potato harvesting being one of the big things in the farm world today, the invention shown herewith is of special interest. The farmer photographed above is using the new ground grippers on a popular truck, and is thereby accomplishing in one trip what used to require a team of horses making five trips. Passing from the field to the road, the grippers are left in position as flanges and are so placed that they clear the roadbed and cause no injury to it. Details of the device are given in this issue.

CURRENT MICHIGAN AGRICULTURAL NEWS

BERRIEN MILK BUSINESS EXPLAINED TO PROSECUTOR

Milk came under the spotlight of the prosecutor's investigation of the high cost of living at the opening of the official inquiry at Benton Harbor according to papers in Berrien county. Chris Anderson, manager of the local Milk Producers' association and plant, located on West Main st., was witness.

Mr. D. Thornburn, a dealer, told the prosecutor that he was forced to raise the price of milk or the producers in the association would not furnish him with milk. He said he raised the price one cent because Earl Hemingway, president of the association asked him to and because he had to pay more for the product.

The witness said he paid the milk producers 35 cents a gallon for pasteurized milk and non-association members 28 cents.. a difference of 7 cents.

Chris Anderson, manager of the milk plant, said that the association was paying 25 cents a gallon, the same price that prevailed before the retail prices were boosted on August 1st. Increase in operating expenses, per month, he said amounted to $169. There was no increase in the general overhead, he said. During last month he said the local distribution of milk amounted to 1,400 gallons per day and that now it is running between 1,290 and 1,300 gallons daily. Paying 25 cents a gallon, it was brought out the association is getting 56 cents a gallon. The witness said that about 700 gallons are sold daily at the retail price of 56 cents, making a profit of 31 cents a gallon. The wholesale price to hotels, restaurants, etc., is 48 cents a gallon, or a profit of 23 cents.

St. Clair Gets Feed Cheaply

The Farmers' Co-operative Associations of St. Clair county are attacking winter in a manner that will mean much to the dairy industry, writes Editor Roberts, of the St. Clair Press. They are buying feeds in carload lots at very attractive prices, and with the assistance of the Farm Bureau are compounding their own rations in a way that will bring about the largest and most economical production. Some of the men will feed a mixture of 400 pounds of oats, 20 pounds of wheat bran, and 100 pounds of cottonseed meal. At the prices at which the feeds are being bought, this ration is being secured, ready to feed at a price of $55.00 per ton.

Fruit Law Being Enforced

"No grapes which are not ripe or which are the fruit of unhealthy vines, or are for any reason unhealthy or in a state of decay, shall be packed for shipment by any grower, packer or shipper in any package or basket of less than 16 pounds capacity. That is one of the Michigan fruit laws which must be followed to avoid difficulties with the state food and drug department. That the state is on the lookout for violators of the fruit regulations, is very evident from the fact that Robert F. Brown, state food inspector, visited the shipping points at Grand Haven and Spring Lake, and as a result of his inspection, a number of growers hauled their fruit back home, with a warning that it was to be packed and shipped according to regulations or the state would begin prosecution.

3,000 Attend Romeo Celebration

Three thousand people attended Romeo's home coming and farmers field day for the former service men. Veterans of three wars were the guests. There were 125 soldiers of the world war present, including 60 of the 125 men of Ambulance Co. 335 which was organized two years ago. The celebration was marked by a parade a mile long and a picnic on the high school grounds. Governor Sleeper spoke at 1 o'clock. In the afternoon Romeo defeated Richmond in a baseball game, 10 to 2. At 6 o'clock soldiers, sailors and marines were guests at a banquet in the Congregational church, and in the evening there was a display of fireworks followed by community dancing.

Labor Chiefs Advocate Combine With Farmer

Solution of the high cost of living problem, so far as basic foodstuffs are concerned, through a political and economic combination of organized labor and the farmers of Michigan to compel the legislature to establish a chain of state-owned warehouses was advocated by Rep. Carl Young, of Muskegon, president of the Michigan Federation of Labor, at the annual convention which was held in Lansing recently.

These warehouses, Rep. Young said, would furnish the necessary machinery for direct sale of foodstuffs, such as potatoes and beans, by the farmers who produce them to the workers and inhabitants of cities generally. The farmers are ready to go ahead with the program, the president said, and organized labor in Michigan should pledge itself to assist them.

Co-operation between the unions and the organizations of farmers in the political field is the first step to be taken, Rep. Young said. Candidates for membership in the next legislature should be pledged to favor the warehouse scheme. The farmers should be assisted in initiating and passing the amendment to the constitution required before state money can be used for this purpose.

Refers to Radicalism

Rep. Young complimented the Michigan Federation on the fact that it has had practically no important strikes during the last year. "Labor generally is to be commended for its ability to maintain industrial peace," he said, "in the face of present costs of living.

"This critical period has given rise to extreme radicalism in some directions. The high cost of living and industrial conditions in some localities, coupled with refusal of some of the big captains of industry to confer with their employes have added fuel to the fires of the I. W. W. and the one big union idea."

Chippewa Farmers Plan Mill

Prospects for securing the necessary financial support among Chippewa farmers for the erection of the Soo's new flour mill are bright, according to E. L. Kunze, county agent, who attended a farmers' meeting at Pine Grove, at which time the proposition was discussed. The farmers endorsed the proposed plans and several, who were financialy able, signed papers to subscribe certain amounts to launch the new enterprise. "Jack" Taylor, who will manage the new mill, explained to the farmers that they had nothing to lose and everything to gain. A personal bond of $5,000 has been put up by Messrs. Taylor and Forgrave, who will be actively engaged in handling the new mill.

Owosso Bean Elevator Prospers

Tht Isbell Bean Co., which about a year ago bought the elevator business owned by Fred Welch in Owosso, is spending about $10,000 in the installation of new machinery. When the work is completed, the elevator will be excellent in equipment and capacity to handle grains. L. C. Sly, the local manager has made many friends among the farmers.

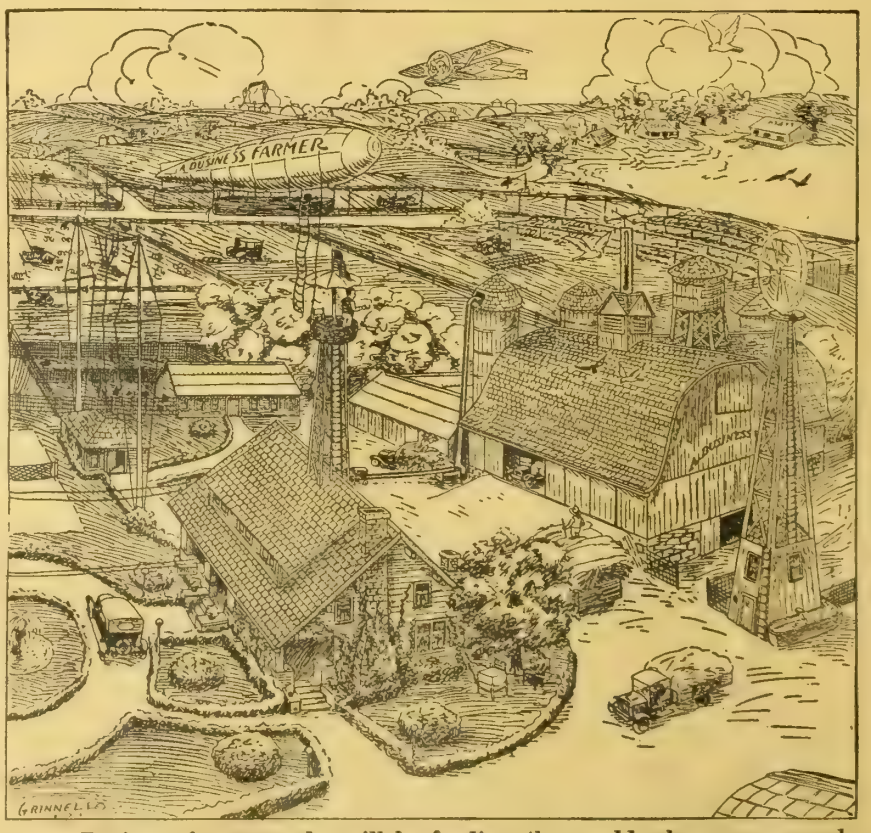
Adrian Mill Organized

A new concern, the Maple City Milling company, will soon be added to the business interests of Adrian. This company, being organized by Fred A. Schultz, will be incorporated with a capital stock of $50,000 and will construct and operate a flour and feed mill on the site of the former Gibson House. The company will deal in grain, seeds and farm supplies. Stock in the company is practically all sold, according to Mr. Schultz. Two buildings of cement and brick will be erected.

Profitable Pigs at Sturgis

Elmer Mathewson, who lives near Sturgis, not long ago started in the hog industry. He began in a modest way and although he has not been very long in specializing in porkers, he has a fairly good start in raising standard bred stock. This is shown when Mr. Mathewson and his helper brought to Sturgis 25 pigs, and these porkers weighed 5,655 pounds, an average weight of 222 2-10 pounds. These hogs would bring at the prevailing market price in the neighborhood of $1,400.

Mr. Business Farmer Dreams of the Future



Business farmers, who will be feeding the world when your grandson's son is a landowner, will be SOME farmers, it is prophesied. Folks today have made improvements that would have amazed an old Civil War-time farmer. Likewise we expect big things of the young'uns growing up. Maybe they won't have dirigibles and wireless, but they'll have something just as surprising.

TUBERCULOSIS FOUND IN POULTRY FLOCKS

"Tuberculosis has increased so rapidly among the farm poultry flocks of Michigan that the disease has become a serious trouble to the farmers of the state," says M. E. Dickson, of the Poultry Department at the Agricultural College. Reports from various parts of the state indicate that the disease is very general and that it is apparently on the increase.

It is difficult to diagnose a case of tuberculosis in poultry until the disease is in an advanced stage so that the symptoms are prominent. A rheumatic condition or "dumpish" actions on the part of the bird are among the signs of disease. The liver spleen, intestines, and rarely the lungs and kidneys are covered with masses of tubercular lesions, varying in size from a mere speck to the size of large peas.

"While cooking kills the disease germs in an infected fowl, the housewife is, nevertheless, exposed to contamination when she draws and dresses the bird," declares Mr. Dickson. "The personal danger is so great that one should not attempt to keep any fowls that have even been exposed to contamination. All birds that have been killed or have died from tuberculosis, together with sweepings from the infected poultry house, should all be completely destroyed by burning, as a step in controlling the spread of the disease."

Hessian Fly in St. Joseph

A number of farmers in St. Joseph County are not taking the Hessian Fly very seriously this fall and are putting in their wheat before what is known as the "fly free date," says County Agent. J. M. Wendt. By doing that one is liable to not only increase his own damage but he endangers the prospects of an entire community for getting a good crop of wheat as well, says Mr. Wendt. "No one can say positively, that whole crops will be destroyed by the Hessian Fly next year, but we do know that the fly is on the increase."

Beets Aid Northeastern Farmers

The part played by the beet sugar business in the development of Northeastern Michigan has been a big one and while the farmers of those counties nearest Bay City and Saginaw have benefited the most through the growing of this big cash crop, those of the northern counties have also come in for a share of those benefits, the territory in which the sugar factories have sought contracts having gradually expanded until it now reaches as far as Cheboygan county.

$2,000 for Alpena Premiums

With the issuance of the premium lists for the fortieth annual Alpena County Fair, offering $2,000 in premiums, interest in the coming event is reaching a high point. The dates of the Fair are September 30, October 1 and 2. Officers and directors of the Alpena County Agricultural Society hope that the approaching fair will be the biggest and best in history for the people of Alpena county

Farmers Buy Ogemaw Elevator

The George J. Diebold elevator was purchased by the Farmers' Co-operative Elevator Co. who have taken possession of the new business, and will handle the entire products of the farm, such as potatoes, hay, grain, wool, cream, eggs, apples and produce. They will handle all of the elevator business in town, other than the seed business operated by E. E. Evans. Luther Jones, has been employed as manager and will take charge at the start.

Van Buren Guernseys Sold

The fine herd of Guernseys belonging to N. C. Dahl of Geneva township, Van Buren County, were offered for sale following the death of Mr. Dahl, and in two days were sold at private sale. The herd numbered 20 head and sold for more than $5,000.

Past, Present and Future of Navy Bean Market

IN FOLLOWING the trend of the bean market during the past two years one encounters many strange situations which in some manner or other have affected the market either favorably or adversely. Prior to the world war which turned everything topsy turvy, these situations had not prevailed to influence the market, and it is unlikely that such a combination of circumstances shall ever again prevail.

Before the war, domestic supply and demand were practically the only factors to govern market prices on not only beans but most of the other farm crops as well. But since the war has made half the world dependent upon the United States, upset long-established customs of crop production, and encouraged speculators to manipulate the market irrespective of the forces of supply and demand, we find that the market is at the mercy of a large number of new and artificial conditions.

To speculate with a fair degree of certainty upon the future prices of farm products before the war, one needed only to know the estimated supply of the product. The demand was practically a constant figure, varying only as the population increased o rthe supply fluctuated in quantity. But all this has been changed, and now to understand the influences that have made the market price the past two years, one needs to know a great many things which at best can only be guessed at. Tracing these influences one is led to the war-stricken countries of Europe where farm lands lie idle and barren of crops. Thence he must traverse the Orient where the cheapest human labor in the world is feverishly at work, planting, tilling, harvesting vast tracts of beans to be thrown upon the market at the highest prices the oriental farm owner has ever received. He must needs also visit the pinto sections of New Mexico, Colorado and other states where hundreds of thousands of acres of land that have never before grown beans are bearing a huge crop of a cheap variety that will help to fill the world demand, and enter into ruinous competition with the navy variety. If one is curious over the elaborate preparations that have been made to embark in this venture on so stupendous a scale, he may travel to Washington where, if he be a persistent investigator he may discover correspondence and documents to show that men in authority had entered into collusion with those financially interested in pinto beans, to advertise and popularize that variety at the expense of all other varieties. But even then he shall not be possessed of the full secret of the undermining of the navy bean market. For there are other reasons, more cogent than any of those stated above, why the movement of navy beans has been restricted and millions of dollars lost to the producers of those beans.

Manipulators Injure Market

The key to this secret now lies in the hands of the department of justice at Washington, D. C. Enough of the cat has been let out of the bag, however, that we may perceive its color. This secret guards the full story of the efforts of men holding official positions with the Grain Corporation and having financial interests in the bean industry, to withhold export licenses, circulate false statements and otherwise depress the market that they might secretly purchase large quantities of cheap beans and hold them against a demand which, in their positions of trust they knew would develop.

Our artist has well, if humorously, portrayed the various influences that have kept the bean market in a continual state of uncertainty for more than two years. Considering these facts, we are sure that our readers will understand the difficulties that have surrounded the marketing of navy beans, and have baffled even those long expert in forecasting the approximate trend of the market. Michigan Business Farming has followed this market scrupulously, and believes that it has been in possession of the vital facts pertaining to the market. We have recognized the impropriety and the hazard of advising our readers of the action of this market. For it has frequently happened that the market has dropped or jumped as high as 50 cents to $1 per bushel over-night, and that rumors of a bullish nature were followed by rumors of a bearish nature within less than twenty-four hours after having been spread about. Farmers, jobbers, market editors, and others interested in this market have admitted the futility of trying to follow the market with any degree of accuracy. In the light of all these facts, it is surprising that the market is in so good a shape and that prices remain so high.

We have endeavored below to chart the trend of the bean market since Oct. 1st, 1918, and to give the reasons for the wide fluctuations. As will be noted on the chart, Detroit jobbers were paying $9.75 per cwt. the first of last October. This price was higher than conditions seemed to warrant, for the largest crop of beans on record was in prospect. It was our opinion at that time that beans would be lower.

M. B. F. Suggests Government Buy Michigan Beans

In our Oct. 19th issue we said: "Whether the buying agencies of the government will consider it their duty to purchase Michigan beans at a price to be suggested when other beans may perhaps be bought cheaper is a matter for serious speculation. No assurances have been received that they will, yet it is the firm conviction of this publication and all others interested in Michigan's great navy bean industry that there is no other course by which the federal government can make amends for its discriminations of the past year against the navy bean than by an outright purchase of Michigan beans that will stabilize the commercial markets at profitable prices to the

(Continued on page 19)

Bean Growers Should Take Quick Action

THE TARIFF schedule is being rearranged and readjusted at Washington. Manufacturers are asking for protection; commercial lines are seeking aid to prevent after-war competition, but so far no steps have been taken to protect the Farmer from the produce grown by the cheap labor of the Orient.

When Kimball, of the Bean Division, of the Food Administration, advertised the use of Pintos and Kotenashis at government expense, the doors were thrown open, and these substitutes for real beans have been entering this country by the ship load, tariff free.

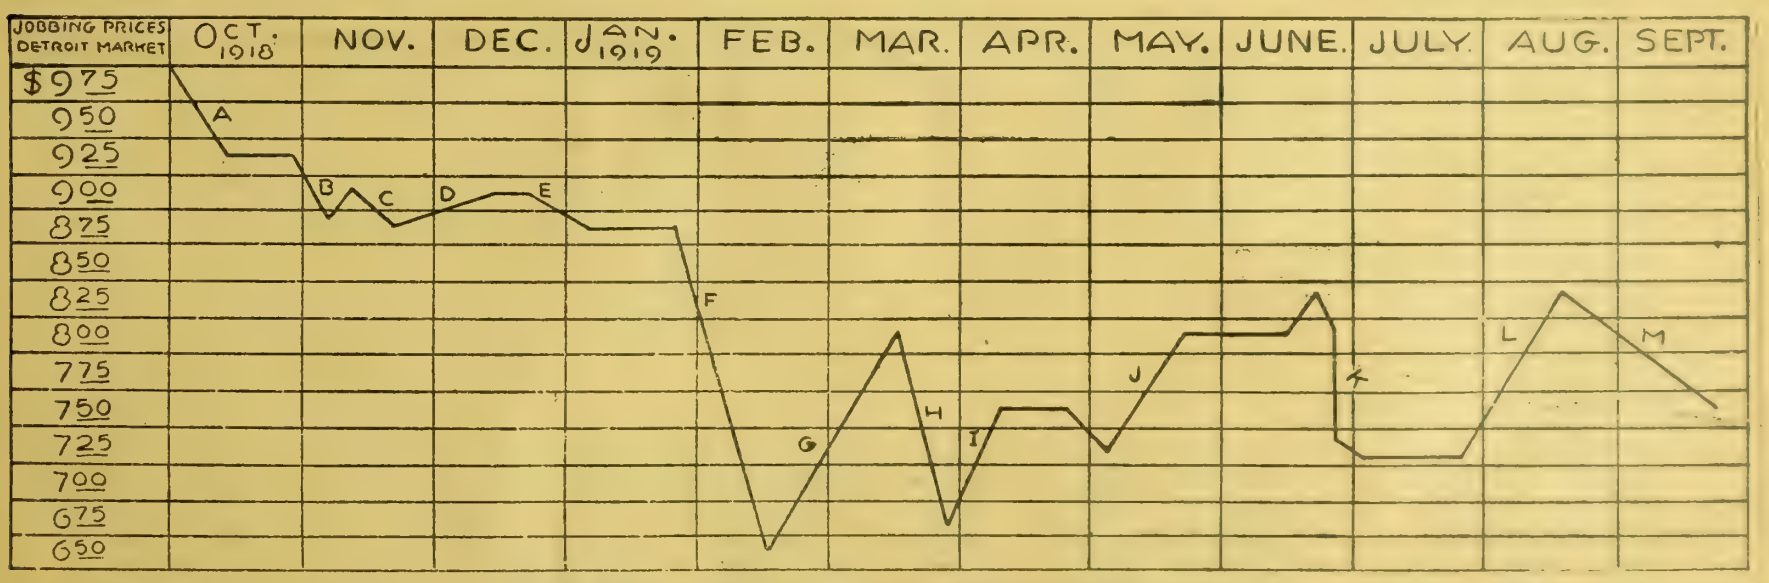
Five million pounds of kotenashis reach San Francisco last week, and have been thrown upon the market in direct competition with beans grown in this country. The bean crop here is light, and the quality excellent, therefore there will be a demand sufficient to care for every Michigan bean at profitable prices.

However these constant importations from the Orient, give the "bears" their opportunity and they use this additional weapon to lower the opening market. It will take years to undo the work of the Kimball administration. You well remember how these beans were advertised as not only cheaper; but superior to our beans.

A substantial protective tariff, enacted at once will stabilize the market and give Michigan growers a reasonable profit on the crop. The California Beans Growers ask Michigan Growers, through M. B. F., to aid in getting a tariff law enacted at once—our Farmers can not compete with the cheap labor of the Orient.

Will YOU write Congressman Fordney today, asking him to get busy on a special tariff bill for the protection of the Bean Growers of the United States. We must not wait for a special tariff bill, covering the whole list of protected industries—we want a tariff on beans, and to be of any use that bill should be rushed through Congress within thirty days.

The Bean Market Sure Has Its Troubles



KEY TO CHART: (A) Market on old crop reached its crest the first part of October, and slowly declined as marketing of the immense new crop began. (B) Government released tin for canning purposes, and canners began to buy Michigan stock in quantity. (C) Armistice signed, weakening all markets. (D) Reaction from uncertainty following end of war, and rumors that government would protect domestic growers against Oriental imports strengthened market temporarily. Michigan bean jobbers in executive session pledge to pay growers $8 per cwt. (E) Large offerings of California beans at lower prices upset market first of January. (F) Rumors that eastern brokers and wholesale grocers were in a conspiracy to buy no more Michigan beans in attempt to break market and force down prices, and immediately subsequent action of the conspirators in the bean division of the Grain Corporation in refusing export licenses put market in a panic. Disclosures of the manipulation of the market by trusted government agents that were made during the month of February accounted for the utter demoralization of the market which reached its low point about Feb. 22nd. (G) Government purchased 350 cars of Michigan beans at $9.25. (H) Government requirements filled and private trading fails to take care of enormous stocks offered. (I) Rumored Kimball's contracts for foreign beans cancelled. (J) California disposed nearly one-half crop to Sweden. (K) Demobilization of troops at high tide; government resells canned beans; unseasonably hot weather. (L) Rumors of poor crop conditions and prospects for smaller production gave firmness to market. (M) Agitation against high cost of living weakens all markets.

Future Problems of Michigan Milk Producers

Some Suggestions for Strengthening Organization and Giving it Better Control of Selling Price

By FORREST LORD

NO ONE has discovered an entirely satisfactory method of marketing farm products. There are many theories, many suggestions, many plans—but all of them sooner or later develop serious defects. Those who are beneficiaries of the old system, or rather the system now in vogue, claim this is the best system that man can devise for a cheap and equitable distribution of food. But the facts and the farmers are all against them. Over-production, glutting of the markets, food rotting, fluctuations in prices, hoarding, profiteering, are evils now believed to be directly traceable to the selfishness and inefficiency of those who deal in farm products.

So we are looking about for a better system of distributing these foods. For one thing we want the farmer to have some control over the supply. And then we want him to have some control over the selling price. We don't want to encourage him to hoard and speculate upon these necessaries of life to the detriment of the consumer, so we are willing that the consumer shall have something to say concerning the uniformity and cost of distribution. We are willing, even, that the consumer shall be given the means to protect himself against the possible greed of organized agriculture, of the necessity for which, however, we hold no fears. But in a word, we want to see such a system established as will eliminate so far as practical and possible, every individual who stands between producer and consumer. For the interests of these two are paramount.

* * *

All of the co-operative marketing ventures of the day worthy of the name eliminate the local buyer and endeavor to do business with individuals near the centers of consumption. The arrangement is not ideal for these associations are still at the mercies of the jobbers, the commission men and the wholesalers who by their purchases or lack of purchases control the market. But this arrangement is a step and gives to the co-operator a little larger share of the consumer's dollar. This plan should be encouraged and developed that still greater economies may be effected.

The co-operative plan has been tried successfully with almost every farm product, with the exception of milk. In the distribution of nearly all other foods, many operations and many individuals are involved. But traders in other food products have not cared to dabble in milk because of its extreme perishability and consequent financial risk. Could whole milk be kept sweet and pure for a number of days we might expect that it would be bartered about and passed along by the same intricate process that handles other products But the very nature of this food demands that it be transported from producer to consumer in the very quickest if not the cheapest fashion possible. Producers of milk are therefore confronted with a single intermedium, and because of this, their problem looks simple as compared with the problem of the producer of wheat, corn, beans and potatoes who are separated from the consumer by many agents. But is it? Experience has demonstrated that it is comparatively easy to eliminate the local buyer, and in a few cases the wholesale dealers. Efforts to sell direct to retail grocers have not been conspicuously successful, and we know of no instance on record where large numbers of farmers have been able to dispose of any considerable quantity of their annual crops direct to consumers or consumers' leagues. We would not for a moment discourage the hopes of those who believe that ventually farm organizations will deal direct with consumers' organizations, but it has not yet been done with any degree of success to our knowledge and there are many difficulties yet to be surmounted. The producer of milk is only one day's distance from the consumer, because of which proximity it would not seem difficult for the two to get together.

The organized producers of milk in Michigan have not gone as far as many would like to have them go toward securing a firmer hold upon the marketing of their product. Nevertheless, they have accomplished something which no other producers' association in this state at least has been able to do. They have determined upon an approximate cost of production and through a board of arbitration, the Detroit Milk Commission, have been able to secure from the distributors of milk a price that comes close to what the producers think they should have. So long as this arrangement endures, it is a very satisfactory one to the majority of the producers. But it has many weaknesses which must be evident even to its most enthusiastic supporters. It is kept intact only by tacit agreement, and may come to an end at any moment without a word of warning to the producers. At nearly every meeting of the Commission, there has been considerable friction between the representatives of the producers and the representatives of the distributors over the question of wholesale and retail prices. It is perfectly natural that the producers should want the Commission to authorize a wholesale price that will pay them at all times cost of production plus a reasonable profit, and based upon the average herd of the entire area supplying Detroit with its milk. The Commission has not at all times been able to authorize such a price. It is also perfectly natural that the distributor would wish a wholesale price fixed low enough and a retail price fixed high enough to pay him cost of distribution plus a reasonable return. If we are to believe the statements of the distributors the Commission has not at all times authorized such a remunerative price. Nevertheless, the distributing companies are, according to other reports, always "highly satisfied" with their financial returns; their stockholders continue to carry the stock, and there are other evidences that the distributing of milk in the city of Detroit is a very profitable business. Were not the distribution of this product a profitable thing to those engaging in it, they would without hesitation withdraw their capital and invest in other enterprises which they can do much more readily and with less sacrifice than the farmer. But the point we desired to make is that because there is dissension and disagreement between those who appear before the Commission in behalf of the several parties interested, good logic permits us to conclude that there may possibly and quite probably come a time not so very far distant when one or more of these parties will refuse to accept the wise decisions of the Commission and withdraw from the agreement which is merely verbal and not legally binding.

This danger, we feel, is more imminent from the side of the distributor and the consumer than it is the farmer. The distributor appears to figure that the consumer must have milk and that the farmer must have a market for his milk. And his logic is good. Possessing as he does a monopoly of transporting this milk from producer to consumer, he feels the power that he holds over both. Again, his logic is good. If the spread between the price he pays the farmer and the price he charges the consumer is not to his liking he holds that he is in a position to make it so. And once more his logic is good. And now, merely because he has agreed to accept the decisions of an impartial committee to avoid all the nasty and costly strife of the past, it should not be thought that he is surrendering any of his rights or power to protect the interest of his stockholders and keep their dividends at a satisfactory level. If the distributors are not now in a position to break their agreement with the producers' association at any time they choose, and if they cannot be very easily put in the mood for so doing by some imagined impartiality on the part of the Commission, or some temporary reduction in the size of their profits, we are very badly mistaken and would be pleased to be set right.

There is not entire satisfaction on the part of all farmers in the Detroit area with the present arrangement between the producers and dis-

(*Continued on page* 21)

Michigan Stands Ace High in the Dairy Business

Herds of splendid cattle like the above have made Michigan justly famous in the dairy world. With the proper marketing arrangements the future success is assured.

A Comparison of Prices of Milk From Many Parts of the United States.

Boston, Mass.
Retail: Whole milk, 15 1-2c. Buttermilk, 10 1-2c.
Producer gets 9c per quart f. o. b. for whole milk or at the rate of $4.19 per hundredweight.

Newport, R. I.
Prices for August.
Retail: Whole milk pasteurized, 15c; certified, 23c. Buttermilk, 8c. Skim milk, 3c.
Producer gets $4.47 per hundredweight for whole milk.

New Haven, Conn.
Prices for August.
Retail: Whole milk, 16c to 18c. Buttermilk, 6c and 7c. Skim milk, 5c and 6c.
Producer gets 9 1-2c per quart at the farm or at the rate of $4.42 per hundredweight.

Atlantic City, N. J.
Prices for August.
Retail: Whole milk, AA, 20c; A, 18c; B 16c; certified, 28c. Buttermilk, plain, 12c. Creamed buttermilk, 15c. Skim milk, 12c.
Producer gets 12c per quart or at the rate of $5.58 per hundredweight.

Trenton, N. J.
Prices for August.
Retail: Whole milk, grade A, 10c; grade B, 14c; Butermilk, 12c. Skim milk, 10c.
Producer gets for whole milk, grade A, $4.39, for four per cent and for grade B, $4.14, per hundredweight. These prices are delivered to dealers.

Philadelphia, Pa.
Prices for August.
Retail: Whole milk, 14c. Buttermilk, 10c. Skim milk, 10c per quart.
The producer gets 9c per quart f. o. b. Philadelphia or at the rate of $4.19 per hundredweight.

Richmond, Va.
Prices for August.
Retail: Whole milk, grade B, 15c. Buttermilk, 8c.
Producer gets $4.71.

Lexington, Ky.
Prices for July.
Retail: Whole milk, 18c. Certified, milk 20c. Buttermilk, 25c to 35c per gallon.
Producer gets 40c per gallon in bulk or 60c in bottles or at the rate of $4.65 and $6.98 per hundredweight. Butterfat, 55c per pound.

Asheville, N. C.
Prices for August.
Retail: Whole milk, 17c. Buttermilk, 6c. Skim milk, 5c.
Producer gets $4.20 up to $4.80 per hundredweight. Butterfat, 90c to $1 per pound.

Atlanta, Ga.
Retail: Whole milk, 16c. Buttermilk and skim milk, 6c.
Producer gets 40c per gallon or at the rate of $4.55 per hundredweight for whole milk. The wholesale dealers agreed to pay 45c per gallon August 1st, or at the rate of $5.23 per hundredweight and on August 11th, 50c per gallon, or at the rate of $5.82 per hundredweight.

Miami, Fla.
Prices for August.
Retail: Whole milk, 18c to 25c. Buttermilk, 15c.
Producer gets 45c to 60c per gallon or at the rate of $5.23 to $6.98 per hundredweight.

Memphis, Tenn.
Prices effective for August and September.
Retail: Whole milk 18c. Buttermilk and skim milk 10c.
Producer gets $4.08 per hundredweight for 3.5 per cent milk.

Mobile, Ala.
Prices for August.
Retail: Whole milk, 20c per quart; buttermilk that is retailed for $1 per gallon is made from whole milk.

Baton Rouge, La.
Retail: Whole milk, 16c. Buttermilk, 15c.
Producer gets $4.49 for four per cent milk.

Chicago, Ill.
Prices for August.
Retail: Whole milk, 15c. Buttermilk 10c.
Producer gets $3.52 for 3.5 per cent milk.

Minneapolis, Minn.
Prices for July.
Retail: Whole milk 13c. Buttermilk and skim milk, 6c.
Producer gets $3.22 at the farm or $3.52 delivered at Minneapolis for whole milk, and 70c per hundredweight for skim milk.

Cedar Rapids, Iowa
Prices for August.
Retail: Whole milk, 10c to 15c: Buttermilk, 8c.
Producer gets $3.60 for four per cent milk.

Lincoln, Neb.
Prices for August.
Retail: Whole milk, pasteurized, 13c and 14c. Raw milk, 15c. Jersey 16, and baby 20c. Buttermilk and skim milk, 9c.
Producer gets $3.35 for four per cent milk, 72c for butterfat in sweet cream.

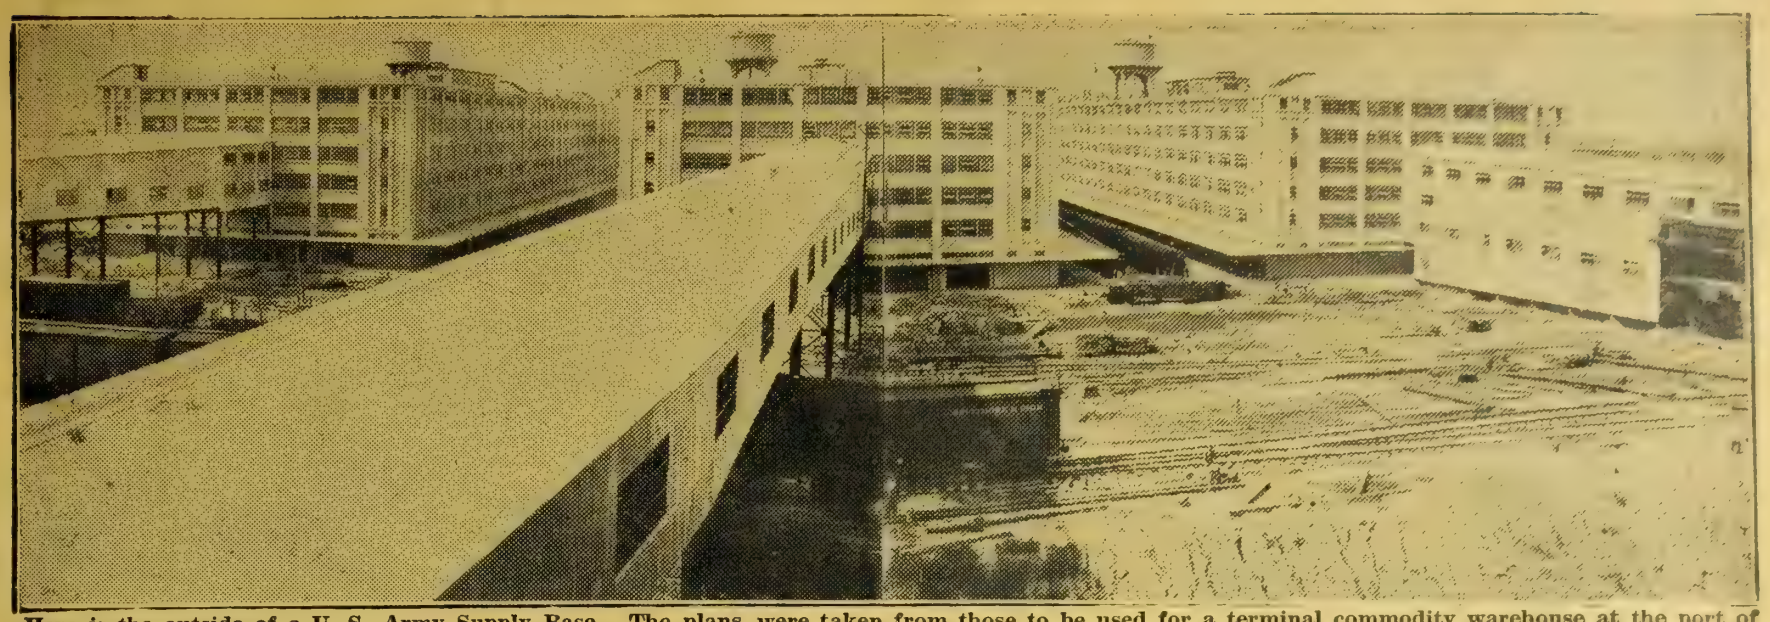
Wichita, Kan.
Prices for August.
Retail: Whole milk, 13c to 20c. The bulk is sold at 14c and 15c.
Producer gets $3 per hundredweight for whole milk.

Waco, Texas
Prices for July.
Retail: Whole milk, 20c. Buttermilk, 10c. Skim milk, 5c.
Producer gets 50c per gallon for whole milk or at the rate of $5.82 per hundredweight, 20c per gallon for skim milk or at the rate of $2.33 per hundredweight. Sixty-five cents per pound for butterfat.

Butte, Mont.
Prices for August.
Retail: Whole milk, 15c. Buttermilk 10c.
Producer gets 28c to 30c per gallon for whole milk or at the rate of $3.92 to $4.39 per hundredweight.

Tacoma, Wash.
Prices for August.
Retail: Whole milk 15c per quart. Skim milk, 15c per gallon.
Producer gets $3.50 per hundredweight for whole milk and 90c to $1.10 for skim milk.

San Francisco, Cal.
Prices for August.
Retail: Whole milk, 14c. Buttermilk, 10c.
Producer gets $3.60 per hundredweight for whole milk or $1 per pound for butterfat.



Here is the outside of a U. S. Army Supply Base. The plans were taken from those to be used for a terminal commodity warehouse at the port of New Orleans. The ground and plans were given by Louisiana to the government during the war.

Commodity Warehouse as Public Utility Pays

By MARTHA CANDLER and WILL BRANAN

(Last of a series of articles on Louisiana's state terminal facilities)

LOUISIANA has for several years felt the necessity of state-owned warehouses for the storage of miscellaneous products. The project was discussed during the administration of Mr. Ernest Loeb as President of the Board of Commissioners of the Port of New Orleans in 1916, but owing to the construction of other facilities under way it was impossible to put the plans of the warehouse into execution at that time.

The Board of Commissioners had just begun to see its way clear to build the commodity warehouses, and the building plans were under consideration and a site had been chosen when the United States declared war, thereby causing all private construction to be indefinitely postponed. At the same time the federal government was contemplating the erection of an Army Supply Base at New Orleans; so the Board of Commissioners turned over the land and also the plans of its commodity warehouse to the government, and with a few changes they were used for the Supply Base which was completed on June 15 of this year, just a year after it was started. The Board of Commissioners did this in the hope that after the war this Supply Base could be utilized as a commodity warehouse plant either under federal or state control.

The present indications are, however, that the plant will be filled to capacity with government stores for a long time to come; so the Board is making investigations with a view to constructing other commodity warehouses of similar size and equipment and is now building one of reinforced concrete two stories high and with a capacity of 40,000 tons of merchandise. This is expected to take care of any produce that the private commodity warehouses cannot accommodate, and thus to facilitate storage until such time as the Board is able to carry out its plans for the large plant which will eventually be built after the general plans of the Army Supply Base.

Considering the fact that the plans of this Supply Base were intended for state-owned commodity warehouses, a description of the plant will be interesting to a state which may be contemplating the erection of such a facility. It is situated on the state-owned Industrial Canal and Ship Basin, known as the New Orleans Inner Harbor that is now in course of construction and has already cost $12,000,000. It consists of three reinforced concrete warehouses, each of which is six stories high and it is connected with the wharves by covered bridges four stories high and built of steel, and the various units are connected to one another by means of electric tractors with trailers.

This huge plant has a capacity of 178,500 tons and a total floor space of 48 acres, which means that if the entire plant, including the wharfhouse were filled to capacity with coffee it would hold 3,400,000 bags; if used for cotton, it would hold 600,000 bales; if used for tobacco it would hold 100,000 hogsheads containing 1,100 pounds each.

It is also equipped with fifteen freight elevators, each with a lifting capacity of 10,000 pounds and a speed of 100 feet per minute.

Serving this plant is a system of steel wharves 2,000 feet in length built on pile and lumber foundations covered with corrugated iron. The plant is absolutely fireproof, and is equipped with all necessary fire-fighting apparatus, such as sprinkles and automatic extinguishers.

Big Variety of Storage

This plant has already cost $13,500,000 and it is estimated to cost $15,000,000 when all installations are completed. It is easy to see why this is the case when it is figured that 130,000 cubic yards of concrete, 7,500 tons of reinforcing steel, 9,000,000 pounds of structural steel, and 5,000,000 board feet of creosoted lumber were used, with all other materials in proportion; besides a pay roll which went as high as $190,267.00 per week.

At present the materials stored there are what might be expected in an army supply base—that is to say, all kinds of canned goods, coffee, sugar, flour, forage of all kinds—and a million and a half pounds of prunes! In going over the plan one may get a rather good idea of what the doughboy has to eat—must eat, in fact. While it was built originally for the purpose of shipping supplies over seas to Europe, it will now be used as a base for our soldiers in Panama and elsewhere in case of need.

And now comes the question: "What has this to do with Michigan?" Well, in the first place, Michigan produces potatoes, dry beans, wool, et cetera. These must be stored in community warehouses. The farmer wishes to get all that is coming to him from these products and he can do this only when he is able to store them under the most advantageous conditions and at the lowest general rates; the best storage conditions can be obtained in such plants as the one above—hence these plants are a business necessity to him. But one of this capacity and efficiency costs approximately fifteen million dollars, and the corporation that built it would have to charge very high rates in order to earn its interest and dividends, so that what the farmer saved through improved conditions he would pay out in general rates. The only way in which he can get the best conditions at the lowest rates is for the state to build a series of such warehouses and manage them through a board of commissioners who are responsible to the people for its policies, and then operate these plants at the lowest rates practicable. They need not cost the general public a cent; nor would they mean any additional taxes. They can be financed by bond issues and not only will pay the interest on the bonds but will provide a sinking fund to meet the bonds when due.

State Socialism Not Involved

Nor does it involve in the least the question of state socialism any more than state or county control of roads and bridges. There was a time in the history of our country when in order to get his crop to market, the farmer had to pay "toll" to the owners of roads and bridges. But now the roads and bridges are owned and kept up by the state as a public utility, not to further any theories of state socialism, but as a business necessity, and the state which failed to do this nowadays would indeed be behind the times. Why, then, should the farmer pay a private corporation high rates of storage and insurance to leave his produce in its warehouse until he has found a market for it when the state could furnish him with better storage at lower rates? The state-owned warehouse and the state-owned road are the same in theory and in practice, except that the people must be taxed to keep up the road, whereas the warehouse pays its own way. "But the private warehouse is traditional." So was the "toll" bridge fifty years ago.

A few things are necessary in order to make the system of state ownership a success. In the first place, there must be a clear distinction between the adminsistration of the facility and the politics of the state, and the members of the board of commissioners must be successful business men or farmers experienced in the management of warehouses rather than politicians. While the members of the Board of Comissioners of the Port of Orleans receive no salaries or other renumeration, there is some doubt as to whether this is a wise policy to follow in all cases, as the position demands administrative ability of a high order and comparatively few men of this character can afford to devote the required time to the work without recompense.

In the second place, there must be complete co-operation between the management of the facilities and the public; for the warehouse being a public enterprise operated for the benefit of the people must have the whole-hearted support of the people if it is to serve them to the best advantage.

In the third place, it is absolutely essential that these state-owned warehouses be on a sound financial basis—that is, financed by interest bearing bonds of the State. Strict accounts of all receipts and expenditures are necessary and such accounts should be submitted to the state treasury department at regular intervals.

Another essential for the success of the plan is that the responsibility be placed on some one man or small group of men. In this way the public can keep in touch with the policies of those intrusted with the management of their facilities. If the warehouse is mismanaged, if the rates are too high, if favoritism seems to be shown to certain railroad or private interests, someone must be held accountable to the people through the governor. It will therefore be to the best interests of those in authority to operate the plant with the maximum efficiency at the minimum cost.

Some of the obvious advantages to be derived from the system are:

(1) Better storage at lower rates.

(2) The possibility of assembling miscellaneous commodities in interior storage, thus making it possible to buy during periods of normally low value and to sell during periods of normally high value.

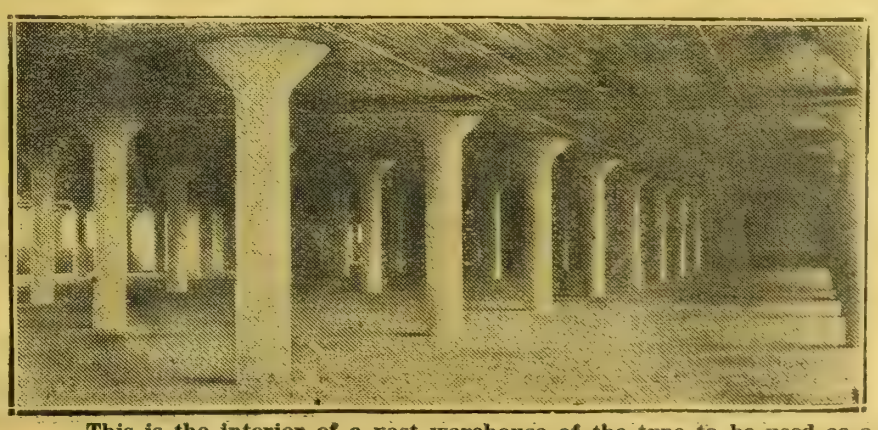
(3) The ability to use standard warehouse receipts and certificates of inspection which would facilitate banking.

(4) The ability to hold surplus commodities in large plants rather than in secondary distributing centers, in this way balancing and concentrating the market.

(5) The plant being public would not have to earn dividends on the cost of promotion or "watered" stock.

(6) It would be able to save a great deal by combination with other departments of the public service.

(Continued o page 21)



This is the interior of a vast warehouse of the type to be used as a state terminal facility. It is warehouse No. 1, New Orleans Army Supply Base. A similar warehouse is being built by the state.

JUST BETWEEN OURSELVES

THESE ARE INDEED troublesome times. For more than four years the nations of the earth have been crying for peace. Since the armisitice was signed, bleak winter has come and gone and now the earth is once more now being slowly but surely clothed in its fall garb, for winter again approaches—and yet there is no peace.

There is discontent and unrest throughout the civilized world. Social conditions abroad are a hodge-podge of contention; labor conditions both at home and abroad were never in a worse tangle. The winning of a strike for higher wages results only in clearing the decks for another walk-out for still higher wages, while business and commerce is struggling on, unable to anticipate what is going to happen next. Truly "Kaiser Bill" mixed things up generally when he set his armies in motion that event August day back in the year 1914.

Meanwhile the contest at Washington seems to have resolved itself into a fight between a Democratic president and a Republican senate. The other day a learned senator stated that the question of whether the League of Nations would be adopted or not could not be settled before Christmas. And therefore it is quite evident that the present unrest will continue right along during the coming winter; to be aggravated, perhaps, by the troubles which always accompany deprivation and suffering from lack of food and fuel. It is quite evident that we can't get back to normal conditions so long as normal conditions do not exist—this nation cannot get back to pre-war efficiency in the distribution of supplies for the human family until all agencies can be extricated from the entanglements of war.

* * *

One would be foolish, indeed, to say that the League of Nations' covenant, as presented for ratification, is perfect; in fact it would be strange if it were. It is but the product of human brains, working amidst the wreck and ruin of a four years' war; which numbered its dead by the millions; its maimed by the hundreds of thousands and impoverished the nations of the old world. However this covenant was framed by the representatives of twenty-three nations; every line or section was discussed; amended, and finally adopted at the peace conference; and it will be adopted at the peace other nation represented at the peace conference. It is to be regretted that this League of Nations' Covenant could not be presented for ratification to the three million brave boys who fought on the battle fields of France, and trained for service here; rather than by senators and congressmen who talked through the war and balked at its close.

Enemies of the League have said that it endangers the Monroe Doctrine, which prohibits foreign nations from acquiring territory on the western hemisphere. The covenant expressly states that this policy is not to be disturbed, for those gathered about the peace table knew that the desire for territory was the cause for nearly all wars, and they were unanimous in expressly stating that "no nation shall conquest the territory of other nations." Certain wise senators have said that in adopting the covenant the United States will get entangled in the quarrels of other nations. We have had no League of Nations, and yet this nation did not get entangled in the quarrels of other nations—this statement can be verified by counting the little white crosses over in France; by interviewing thousands of crippled young men, or by glancing at the National debt, and taking into account the additional burdens now being carried by the common people.

We entered into the war to "make the world safe for Democracy." Who will suggest that we quit where we are, with the task but half begun? Would the results obtained compensate for the sacrifices made? To bring this world-wide question into the realm of party politics is unwise, unpatriotic and smacks very strongly of disloyalty. The one purpose of the League is to prevent wars. If wars cannot be prevented by a League of the nations which are strong enough to enforce laws and if the occasion demands; then all nations must prepare and be ready to enforce single handed and alone, that which the nations represented in the League cannot be depended to do jointly. The best way to prevent war is to prohibit preparations for war—and the League can certainly do this.

* * *

The League of Nations' Covenant is a very long document; it covers in its scope nation-wide questions and problems. We should first seek to find the underlying principle of the agreement, and build our understanding upon that foundation. Then it is our duty as American citizens to talk over the question from every possible angle. We now have troops in France, Belgium, Germany, Russia, Siberia, Manchuria, Mexico and the Philippines, besides more than twelve billion dollars of our good money hopelessly entangled in foreign pockets—and all this without a League of Nations or any other kind of an agreement. This being true it is quite evident that "entangling alliances" are very liable to come in our way whether we use a grappling hook or not.

Perhaps it is wise that this grave question be left for Congress to settle—but it must be settled right. The farmers of the nation, their sons, wives and daughters, are sort of a League formed, which will aid in preventing future wars. Mothers freely gave their sons; wives gave their husbands; little childrein gave their fathers; the poor gave of their scant store—all to make the world safe for democracy. And the world cannot be made safe for democracy so long as nations are permitted to make preparations for war, and stand ready to strike when the time is opportune.

Those who voted for the ratification of the Declaration of the United States, did not agree upon all of its provisions. But the statesmen of that day did agree upon the essentials; and liberty and freedom since the adoption of that document has been our portion. Benjamin Franklin, voting for its ratification, said:

"Mr. President: I confess that there are several parts of this constitution which I do not at present approve, but I am not sure I shall never approve of them. For, having lived long, I have experienced many instances of being obliged, by better information or fuller consideration, to change opinions, even on important subjects, which I once thought right, but found to be otherwise..... I doubt, too, whether any other convention we can obtain may be able to make a better constitution. For, when you assemble a number of men to have the advantage of their joint wisdom, you inevitably assemble with those men all their prejudices, their passions, their errors of opinion, their local interests, and their selfish views. From such an assemblage can a perfect production be expected? It therefore astonishes me, sir, to find this system approaching so near to perfection as it does; and I think it will astonish our enemies, who are waiting with confidence to hear that our councils are confounded, like those of the builders of Babel; and that our states are on the point of separation, only to meet hereafter for the purpose of cutting one another's throats. Thus, I consent, sir, to this constitution, because I expect no better, and because I am not sure that it is not the best. The opinions I have had of its errors I sacrifice to the public good. I have never whispered a syllable of them abroad. Within these walls they were born, and here they shall die. If every one of us, in returning to our constituents were to report the objections he has had to it, and endeavor to gain partisans in support of them, we might prevent its being generally received, and thereby lose all the salutary effects and great advantages resulting naturally in our favor among foreign nations, as well as among ourselves, from our real or apparent unanimity."

President Wilson was right on the job at the Peace Conference from its opening until its close. No one will doubt his sincerity. He returned with the covenant as agreed upon after weary months of discussion. In presenting the document to Congress, he went carefully over its provisions, and eloquently closed his address with the following prophetic words which are worth remembering:

"The stage is set; the destiny disclosed. It has come about by no plan of ou rconceiving, but by the hand of God, who led us to this way. We cannot turn back. We can only go forward, with lifted eyes and freshened spirit, to follow the vision. It was of this that we dreamed at our birth. America shall in truth show the way. The light streams upon the path ahead, and nowhere else."

* * *

Reconstruction should and must be non-partisan. In the consideration of questions which enter into the very life of our nation, politics should have no part. No organized agency should be favored because of its political influence. Right now every person is more or less affected by the changed conditions. Workingmen are all employed and at higher wages and shorter hours than ever before. The wage-earner says his daily stipend must not be reduced—it naturally follows that the manufacturer must add this extra labor cost to the price of the article manufactured.

If the cost of all manufactured articles and all commodities that enter into building operations be increased, rentals must be higher—and on you go, 'round and 'round like squirrels in a cage. Two classes are caught in the present mix-up and extrication seems quite impossible. The consumer with a fixed income, and the producer who has no opportunity to fix the price on the commodity produced.

When the spasm is over and the fever abated, it will be found that the cost of farm products is high; and the future will move on to even higher levels. When the consuming public awakens to the realization that it costs real money to produce farm products, and then takes into consideration that the farmers are in the farming business for profit; not because they want to "witness the rising of the sun and the setting thereof;" then and not until then, will they think of bread, wheat, potatoes, pork and beef as real manufactured products; grown on lands which cost money and all owned by men who pay taxes, operating expenses, and take chances on rain, storm and droughts.

If, perchance the reader is a city dweller a consumer, if you please; who knows that the farmers are getting rich, you can buy that gold mine of a farm, and at a reasonable price. Are you desirous of obtaining a farm, Mr. Consumer?

A Page of State Fair Champions

1.—Grey Tower Prince Hengerveld, second prize Holstein yearling bull. Owned by C. J. Spencer, Jackson, Mich.

2.—Edgar of Dalmeny, Aberdeen Angus Senior champion. Bred by Wm. E. Scripps, Orion, Mich.

3.—Principal Fourth Joan, Duroc Jersey Boar. Bred by Inwood Bros., Romeo, Mich.

4.—Senior Champion Ram. S. Blaner & Son, Johnston, Ohio, owners.

5.—Two-year-old Hereford [illegible], "Keep on," owned by Tony B. Fox, Pewamo.

7.—One of the prize winners from Hickory Grove Farm, Owosso, Mich.

8.—Senior champion Large Yorkshire boar, bred by A. J. Townsend, Metamora, Mich.

9.—Senior Champion Shorthorn, Lair Acre Goods, owned by C. H. Prescott & Sons, Tawas City, Mich.

10.—A pen of prize winning Durocs.

11.—Wm. Newton of St. Clair, the oldest exhibitor at the State Fair, with his flock of prize winners.

6.—Prize winning pen, Shropshire Yearling Ewes—H. E. Powell,, Ionia.

More Live-Stock

WE CANNOT get enthusiastic when it is argued that the farmers of Michigan should grow more wheat, more beans and more potatoes. We have seen the disastrous effects of almost every campaign to stimulate the production of these crops, in over-production, glutted markets, low prices, impoverished soil and the disarrangement of crop rotation. And while we confess the necessity of slight annual increases in the acreage of these crops, we want to be very sure of our ground and put some limitations upon our speech when we advocate their greater production. But when the greater production exponent says, "we need more live-stock," we at once sit up and take notice of the wisdom of his remarks. More live-stock never means impoverished soil; it means enriched soil. More live-stock has not for many years meant glutted markets or over-production of dairy and meat products, and we cannot see how it can mean this for a number of years to come. More live-stock does not disturb the rotation of crops; it encourages it.

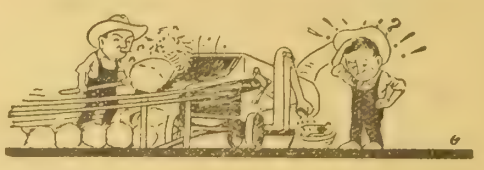
We do not have to go outside of the state of Michigan to see the baneful effects of the single-crop system, nor the effects of grain farming conducted separately from live-stock farming. There are a few farmers, it is true, who have become sufficiently intelligent in the use of commercial fertilizers that they can safely and profitably farm without live-stock, but these are few and far between. The most prosperous agricultural counties of Michigan, without any exception to our knowledge, are the counties that have a large live-stock population. In fact, we believe it possible to trace out and prove that the agricultural prosperity of the several counties of the state is in direct proportion to the number and the quality of the live-stock they produce. The well-known facts, however, that the number of beef and dairy cattle are constantly on the decrease, and the constant upward trend of prices, should prove a powerful incentive for the farmers of Michigan to engage more extensively in this branch of agriculture.

It is mere repetition to say that Michigan is well adapted to the raising of pure-bred cattle. If we had not the grazing lands for beef cattle, or markets close at hand for the disposal of their products, it would be useless to talk about the subject. But we have all these, so our problem is very simple. If there is anything standing in the way at the present time for owners of farms and grazing lands to engage in a larger scale in the production of beef and dairy cattle, we would like to know what it is.

"More live-stock for Michigan," is a slogan we want to see adopted, and Michigan Business Farming pledges its efforts to make that slogan a reality.

* * *

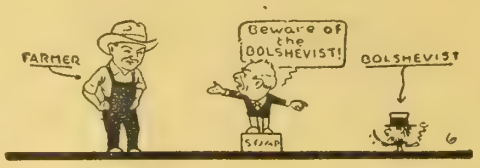
Not the Best Year, but a Good One.



THRESHING is over here, in progress there, and on the morrow the threshers move to the farms down the road where the grain still stands in shocks. Threshing is an anxious time for the farmer. He has stood more than once and looked upon the growing grain and examined closely the maturing heads to see if they were filling out well. Of small ambition and imagination is he who looking upon the grain speculates not upon what it may yield. Yes, and unusual judgment, too, is he who reckons less than the actual frult that is yielded at threshing time. To be sure, the farmer is disappointed in the threshing returns this year. He usually is. He expects to be. But is the farmer alone in his optimistic habit of counting his chickens before they are hatched? The threshing returns were disappointing this year. Wheat that promised to go thirty bushels to the acre, yielded twenty perhaps under the merciless beatings of the threshing machine. Rye that anyone might estimate would yield fifty bushels to the acre, lost its fatness somewhere between the feed table and the sack and emerged a thin, emaciated crop of thirty-five bushels or thereabouts. And oats,—well, they got lost altogether in the bowels of the machine! Yes, the grain yield is disappointing, but as I overheard one farmer remark to another, "it isn't the best or isn't the poorest; it's just fair and average and I haven't got any kick coming."

* * *

Needless Cautionings



AT A MEETING of farmers in Detroit, the Rev. Dwight Hillis, formerly pastor of one of the wealthiest churches in New York City, but now engaged in the more profitable profession of itinerant propagandist, harangued his hearers for more than an hour upon the menace of Bolshevism to American agriculture. In a most dramatic manner he told of the scenes of riot, rebellion and bloodshed that he had personally looked upon in different sections of the United States, and would have had his audience believe that these scenes were the outward manifestations of a spirit that is typical of the times and that they must help to quell. He acknowledged the debt that all the world and all the sciences and arts of the world owe to agriculture, and deplored the spread of soviet doctrines that he thought endangered this basic industry. Altho enthralled by the former divine's oratory, the farmers did not appear to be greatly moved by his arguments, and several of them attempted to defend agriculture against the imputations that it was susceptible to the fanciful theories of the Russian fanatics, or the bull-dozing doctrines of the radical element of organized labor.

Farmers are little concerned with the clashes between organized capital and organized labor. They find it difficult to sympathize with either one. They know that capital has been selfish, arbitrary, greedy; that as long as labor was plentiful and passive it received little consideration at the hands of the employers of capital, that as a usual thing the great industrial concerns had no greater respect for the rights of their workmen than the workmen now have for the rights of employers. On the other hand, farmers find it very difficult to detect any justice in the closed shop, violence, and other weapons now employed by organized labor to enforce their demands against their employers. They are more or less disgusted with the arbitrary attitude of organized labor since the war, and the strike of the Boston police which was the signal for an outbreak of hoodlumism and outlawry seldom seen in recent times, has, it is natural to conclude, alienated whatever remaining sympathy the agricultural class might have had for the industrial labor-unionist.

The farmers should not permit themselves to be drawn into this contest, and should resent any attempt on the part of either labor or capital to enlist their support. Comprising so considerable a part of the population, the farmers would hold the balance of power in a three cornered contest between the commercial classes, the laboring classes and the agricultural classes. Being so well acquainted with the temper and records of the two former classes, we deem it eztremely fortunate for the good of the commonwealth that the farmer is in the majority and would wield the ruling influence in case of a crisis. Being both a capitalist and a laborer, a producer and a trader, the farmer embodies all the functions of the other great classes of the nation and is not very likely to do anything as a laborer that will injure his investment of capital, or abuse his power as a producer to the detriment of his market.

If there is any need of preaching against the dangers of the social and political squalls that occasionally disturb the economic scheme, it should we think be directed to those who are responsible for them, who are affected by them and who are in a position if they so desire to build up barriers against them. The farmer is not in the path of these disturbances; nor is he in any way accountable for them. Cautionings and admonitions addressed to him generally fall on barren soil.

* * *

Carl Young, president of the Michigan Federation of Labor, is reported as saying that the farmers and laborering men of the state should organize politically to put across the state warehouse project which the last legislature refused to let the people vote upon. Is this necessary? Are not the farmers of Michigan strong enough numerically and regardful enough of their rights and duties as citizens to force this issue to a vote of the people without calling upon organized labor for assistance? After the farmers have secured the submission of this amendment and administered the fatal quietus to the further political ambitions of the men who couldn't trust the people, they will expect to have the support of every consumer at the polls, not that they want the consumer to do something for the farmer but because it will be doing something for the consumer. If state-owned warehouses are to benefit no one but the farmer, it is not just to expect the state to underwrite them. But if state-owned warehouses are to benefit both producer and consumer, it is the state's duty to provide them, and it will be to the selfish interest of every producer and consumer to vote for them.

* * *

The farm bureau is at the threshold of an inevitable expansion. It has things to do, big things to do, for the improvement of agriculture. But it needs support. Money and members are two things that will give it standing and power. The farmers of Michigan are asked to supply this ammunition. Let them not underestimate the potential possibilities of the farm bureau movement, but stand ready and glad to help in its upbuilding.

* * *

After the strike of the Boston police need we argue farther why organized farmers anr organized laborers cannot lie in the same bed together?

* * *

The cross roads oracle says: Some oil on the metal parts an' some paint on the wooden parts of farm machinery this fall will save lots of money.

* * *

The cross roads oracle says: Money in bank is a safe investment; but green crops turned under make a safer investment.

WHAT THE NEIGHBORS SAY

Let the People Read and Write

SOME TIME ago a subscriber complained because he thought we were cutting down the department, "What the Neighbors Say." We explained to him that we could publish no more letters than we received; that during the summer months our readers did not have the time to read as carefully or thoughtfully or to sit down to the more or less tedious task of letter-writing as during the winter months. We are pleased that our subscriber likes this department. We like it ourselves. In fact, we think it is the best department in our paper, for it is contributed by the folks we aim to please and must please if we are to retain their confidence and good will. A long and hard summer is now waning. If you look carefully you may see the tell-tale signs that fall is fast approaching on the never-ceasing whirligig of time. Gradually the harvests are gathered in, and as the nights lengthen and grow cooler, the indoors invite the farmer and his family to spend more time about the reading table. The season approaches when the farmer may relinquish to some small extent the physical ardors and give more attention to the weighty affairs which are now engaging the nation and the world.

As many have truly said, we are living thru one of the most remarkable periods of all history. Dangers are on every side. Opportunity speaks at every hand. Class consciousness is pitched almost to the breaking point. Men of small minds and small matters feel competent to pass upon great issues which formerly only schooled minds were thought capable of judging. Unfortunately, schooled minds are frequently so introspective that they lose their perspective and do not comprehend the full purport of the great social changes that are taking place all over the world. In this day when problems are presented which seem to baffle all rules of ethics and precedent, it is necessary that the utmost freedom of discussion should prevail, and we are happy to see the growing propensity of both town and country folk who think for themselves and transcribe their thoughts to writing. We have been truly astonished at the insight of many of our readers into the great problems of the day, to say nothing of their aptitude in discussing them logically and understandably. We, therefore, invite the freest use of these columns by our readers in presenting their opinions on current affairs, no matter whether they be state, national or universal. We hope as the fall and winter months advance our readers will take more time to study the discussions in their farm papers and magazines, and write us their own opinions. If we know "What the Neighobrs Say" we will know better what to say ourselves.

REST ROOM FOR SMALL TOWNS

I am a reader of your valuable paper, and do not know how we would get along without it. You are sending two papers each week, perhaps by mistake, but you may be sure that I do not let that extra copy get away but give it to someone each week, where I think it will do the most good. I am a farmer's wife, living 3 miles from the village of Chesaning, it is a pretty little village and prides itself on its pretty residences and schools, etc., but it has no "public conveniences." Is there not a law of Michigan that compels every city or village to have one? I would be very grateful for any information along this line. This subject has been on my mind for some time and several years ago the "Gleaner" published a very interesting article, also showing picture of "public convenience" and rest room, and I was very much taken up with it. I presented the subject at the W. C. T. U. and different societies, but they were busy trying to get the state dry and did not give it very much attention. Now we have organized a Community Welfare Association, and I would like to present this matter to them. I have lost the article I clipped from the "Gleaner" and kept so long, and if it will not be asking too much I will be very glad for any help you may render and get the ball rolling. I think it would be a boon to our little village and a wonderful help to the farmer people to have a place to go and get the dust brushed off before entering the stores. Perhaps the merchants and clerks would not think we were quite so "hay-seedy" looking. Now if this does not find its way to the waste basket I would like to write an article for the Department for Women for I have many good suggestions that may help someone else. I have read the good articles that have been written by different women and have been helped so much along all different lines of home keeping and thought I would like to write something too.—*Mrs. S. B., Chesaning, Mich.*

The law does not specify that incorporated villages and cities shall provide rest rooms. It merely authorizes municipalities to use the public money or bond for that purpose, if they so desire. We have long favored the rest room idea, and as a result of articles that have been published in Business Farming a number of Michigan towns have been led to install these places of convenience. In all cases, they have found it good business, too. Surely, we will be glad to assist in any way possible to "start the ball rolling," for you or any other subscriber who wishes to take up this matter with the authorities of your trading town. By all means ,write to the woman's department Miss Ladd will be very glad to hear from you, I am sure.—Editor.

RAM LAMB FARMERS

The farmers who let the big fat city fellows come out and kill the game that was raised by those farmers, as much as the chickens and pigs on the same farms were raised there, remind us of a bunch of sheep in a clover lot.

You will see the wise old lawyer sheep, as busy as bees at the clover, while here and there a couple of ram lambs are trying to butt their fool heads off in a corner, for all the world like a Democrat and Republican "votin' just as Pa did," which suits the lawyer-politicians right down to the ground, for you can't butt heads and see straight at the same time.

Party bigotry and hide-bound ignorance are at the bottom of the Republican farmers idea that "no Democrat can enter the Kingdom of Heaven" and of the Democrats idea that "no Republican could be painted as black as he really is," both relics of the dark ages, but both ideas worth all kinds of money to the political schemers who make capital out of the head-butting voters.

"Keep the fool farmers divided up in two big parties and we'll do the rest," is the slogan of profiteers everywhere, and as long as farmers have a five cent representation at Lansing and Washington with a fifty per cent vote, or one-tenth representation where the laws are made (but full taxation) just so long will the schemer laugh in his sleeve at every farmers son "soaked" good and plenty in court for killing an absolutely useless squirrel, fattened on his father's corn for the city killer and at every other injustice rubbed into the men who grow the grub for all the world, in the name of what we call law and which has about as much common sense in some of it as God gives good grey geese.

"But," bleats Mr. Ram Lamb farmer, "how can we help ourselves? We can't form a new party or the old parties will laugh us out of it and we can't stand it to have city fellows make fun of us, so we'd never be elected Constables."

No party formations are necessary if farmers will use that boon to all free Americans, given extra power by the Australian secret ballot, the split ticket.

Get up petitions in the farm lodge rooms this fall and winter and print all the signers' full addresses in your county papers, saying in those petitions that you will support none but straight farmer candidates not afraid to publish their views in the same papers on fall game laws, etc., in all counties where farmers are the greatest number of voters and tax payers, thus serving notice on all party managers in advance that tickets will be split on either side that don't get in line.—*Chester H. Merrifield, Gobleville, Mich.*

That's the talk, Brother Merrifield, even if you do put it a little strong. When we farmers begin to think of candidates for office as Men instead of Democrats or Republicans, and put Principles ahead of Politics, we'll be able to elect men who'll remember and respect the wishes of the folks who put them in office. If we can't do this, I'm afraid we'll have to jog along in the same old rut.—Editor.

WHIMS OF THE DAY

I was raised on a farm and am proud of it. Moreover I like to keep in touch with the farmer. The large profits derived from manufacturers, make it possible for them to pay high wages, as they can increase price of articles produced, accordingly.

Farmers are not so fortunate. They have to accept the price offered regardless of cost of production. Farmers are leaving their farms or selling for just the above reasons. Very little government land is available, and many farmers do not want their sons and daughters to follow in their footsteps. They are educated and live the easier life. Immigration does not help matters, as very few go to the farm. City life, with its 8 hours, suits them. How many millionaire farmers are there in the State of Michigan who have made that amount in farming? Yes, or in speculating on farms, if you please? Why not? Just for this reason: the profits are too small. Nothing more. Laws are continually being made to hamper the farmer as game laws. Skunks can destroy eggs and kill chickens. Squirrels destroy corn. Wood chucks cannot be molested under ground. There are restrictions in building and housing, etc. Mail boxes are put on right side of road. There is no end of salaries paid to look after the many other such whims.—*G. E. W., Ann Arbor, Mich.*

You have a queer logic. Raised on a farm, proud of it, but do not want your sons and daughters to follow in your footsteps. Can I blame you? No, not if farming is to be the despised business the next fifty years that it has been the past fifty. But will it? We cannot belive so. Few people have made a million from farming. But, thank God, few people who farm want to make a million. If money were the ruling passion of the farmer as it is with many of the city people, the world would starve. It must be a kind dispensation of Providence that men find other enjoyment in the business of farming aside from money making.—Editor.

"CO-OPERATION"

"Help one another", the snow flake said, as they huddled down in their fleecy bed, "one of us here would not be felt, one of us here would quickly melt. But I'll help you, and you help me, and then what a big white drift we'll see."

"Help one another," the maple spray said to his fellow leaves one day, "the sun would wither me here alone long enough 'ere the day is gone; but I'll help you and you help me, and then what a splendid shade there'll be."

"Help on another," the dew drop cried seeing another drop close to its side; the warm south breeze would dry me'way and I should be gone ere noon to day; but I'll help you, and you help me, and we'll make a brook run to the sea."

And so the snow flakes grew to drifts, the grains of sand to mountains; the leaves became a pleasant shade, the dew drops fed the fountains.

What is co-operation? This poem answers the question. The co-operation and combined efforts of home, school, church, and all community organizations in the fight against capitalization, is the only sure way to win that would be socialism. Socialism would abolish capitalism, and make it easy for every man, woman and child to live better, get better results, get paid for what they produce instead of all poverty.—*S. H. Slagle, Wexford county.*

You have a clever way of explaining your definition of co-operation. As to whether or not co-operation should be used as a weapon to destroy what you call "capitalism" will be seriously questioned by the majority of farmers. Is not the farmer a "capitalist?" Is not, in fact, any man who earns money from money or the sweat of his labor, and invests that money a "capitalist?"—Editor.

THE LABORER'S DOLLAR

There is so much being said about the high cost of living and city people appear to think that the farmer is to blame for all the trouble. The workers in the city are never satisfied and are always asking for more wages and less work or shorter hours. If you will stop to analyze conditions you will find there never has been a time when the laborer could buy so much farm produce off of the farm with eight hours common labor as he can today. Of course by the time it gets to the consumer it may be a different proposition. Something that is entirely out of the farmer's control. We need only go back five or six years to demonstrate the fact common wages at that time were about $2.00 a day, usually for ten hours work. Then flour was worth about $5.00 a barrel and a day's wage would buy about 80 pounds. For ten hours work now—wages in the cities are $66.00—and an hour day will buy 100 pounds of flour at $12.00 per barrel Pork was worth 8 or 10 cents a pound and the ten hours work would buy 25 to 20 pounds. Today eight hours work will pay for 30 pounds at 20c, about the price paid by our local butchers. We could usually count on 40c for potatoes, although thousands of bushels have been sold for less. This would give him five bushels for ten hours work while his $6.00 for eight hours today will give him an extra bushel. Butter was sold at 20c; he could buy ten pounds for $2.00 that he earned in ten hours, while the $6.00 he earns now will buy twelve pounds. Beef was 8c and he could buy 25 pounds, while at 15c his $6 will buy forty. Eggs brought about 20c and his $2.00 would pay for ten dozen; at 40c his $6.00 buys 15 dozen. His wages are three times more than they were for eight hours, while the farmer's products that he buys brings a little over twice as much as they did, while he works from 12 to 16 hours. I think where much of the trouble is, ever thing the farmer grows in a commermercial way pays freight twice now. The buyer always subtracts the freight to the market, when he buys farm produce he sells to the jobber and he to the retailer who in turn adds the freight when he sells to the consumer. About the only effect the present agitation can have is to curtail production, thus reacting on the consumer and compelling him to pay still higher prices in the future, or consent to a lowering of his own wages, thus bringing him nearer on a par with what farmers can earn by continuing production, in fact help on the farm is becoming so scarce regardless of the wages paid that it will be a physical impossibility to continue production on a normal basis.—*Subscriber, Fife Lake, Mich.*

You have hit upon some vital truths and have discussed your [illegible] well that comment seems unnecessary. Now, if you will suggest a remedy for this situation [illegible] we will refer you on a [illegible]

MARKET FLASHES

BUSINESS AND TRADE

The outlook in the realm of business and trade in our nation and the rest of the world is indeed uncharted and befogged. There is little that one can count upon definitely for the next several months, although the present conditions fortify some pretty sound optimistic conjectures.

In general, it is believed that we are entering upon a golden age of business and trade, to be accompanied by the growing pains of readjustments of wages and marketing. America must forge ahead from the force of her own momentum, now that we already lead the world. Great industrial barons from England, formerly our biggest rival in world trade, have just made inspections of American industry from one end of the nation to the other, and they report that the average production of the American worker is three times that of the British worker at the present time. And certainly Great Britain is no more demoralized than Germany, France and Italy in its reconstruction. All Europe is obliged to import the products of the American farm and factory, whereas, a few years ago this was by no means the case. There is too great a demand for American goods, American brains, American skill and untapped resources, both natural and human, for anything but a bright future for America.

But though the general outlook is rosy, there are many clouds for at least the next several months. At the base of all these lies the peace treaty and the League of Nations unsettled problem. Even the labor troubles to a considerable extent are aggravated by the undecided world issues hanging on the treaty. President Wilson is stumping the country to create sufficient public force to settle once and for all the fundamentals of the world relationships. Senators Johnson and Borah are hot on the President's trail, and they appear to be offsetting somewhat the favorable feeling created by the Chief Executive in his tour of the West. Farmers generally seem to be overwhelmingly eager to get the whole world mix-up settled quickly so that the market outlook may become more clarified and staid—so that there will be some definite legal check on war, and that promptly. Farmers, more than any other class, seem to have little use for partisan politics in the face of mighty issues. When the treaty and the league question are set aside, the administration's attention can be given more thorough attention to other affairs.

Much is hoped for in the coming economic congress called by the President for October 6. It is expected that workers and capitalists will throw down their cards on the council table and work out more complete rules of the game, so that continuous strikes need not continue to upset the nation's business. The great strike of the steel workers which started at the opening of this week is an offshoot of the condition of failure to get together by capital and labor. Wall Street has hinted that it is going to punish labor for its boldness, and labor was never more stoutly championing its own demands. Even the efforts of the President of the Nation and those of Samuel Gompers, the labor chief, appeared to be unsuccessful at th opening of the week, to get some agreement between Judge Gary, the most prominent figure in the steel industry. Gary states that only 1[illegible] per cent of the steel workers will be out of their jobs when the strike reaches its full swing, whereas John Fitzpatrick, the labor leader, states that a majority of the workers, or part of 1,000,000 men will be out Interests using steel supplies will be affected also, including the Detroit automobile factories.

Corn has continued to sag along with oats, as the bears seem to have gotten control of many sections of the markets, although the bulls are fighting hard with occasional success. In the long run the markets are bound to rise, but few dare attempt to tell the immediate future.

Michigan Bean Crop Secured in Fine Shape

BEANS IN Michigan have been turning out well, according to various reports on the acreage and quality. There is no reason why farmers can't market the crop at a good round profit. Numerous tips on the bean deal are given earlier in this issue, and readers may be sure that the "dope" is good. Here is a sample of a letter received in regard to the bean situation in Michigan:

"A thorough survey of the following counties—Jackson, Berry, Ingham, Eaton and part of Livingston, shows that the crop is nearly all secured in fine condition. Dry weather has made heavy screenings on some fields. The quality will be above the average. The acreage is small, but when these beans are delivered to the elevators, Michigan bean dealers will get the greatest surprise they have had in years. Fifty per cent of the average output is all they will get in the above mentioned counties."

There wasn't much doing in the Detroit bean market before the opening this week. The quotation reads, immediate and prompt shipment, $7.50 with varied fluctuations around that point.

Numerous states which raise considerable crops of beans are reporting greatly reduced acreages, which will offset the flood of oriental beans coming upon the market through San Francisco. Colorado reports that its output of beans will be only one-fourth of what it was last year.

WHEAT

It is somewhat surprising to some that the prices of wheat in many markets are actually higher now than before the rush of the grain to market. The heavy demand from foreign countries is one of the chief factors in this increase, 1,000,000 bushels being exported each day. The amount of ocean room available seems to be the deciding factor in how high the price of wheat can climb, inasmuch as the foreign demand is so great. The United States Grain Corporation has issued a tip that it may be unwise for farmers to go too strong on wheat for next year, because foreign farm lands will probably be productive of much larger crops than during the war.

The International Institute of Agriculture has just sent to Michigan Business Farming some valuable material on the foreign wheat situation. Although Canada and the United States produced more this year than last, Italy produced only 84 per cent of last year's crop. Japan produced only 96 per cent of last year's crop. Northern Africa produced only two per cent of what it did last year, and British India, only 78 per cent. Figures on other countries were not given, but other sources provide the information that Russia and the Balkans have failed in their crops. Trade was resumed with Hungary September 2, and it is not long before the other foreign markets closed by the war, will reopen. Detroit quotes Red No. 1, $2.25.

CORN

Grade	Det'oit	Ch'go	N. Y.
No. 2 Yellow	1.53	1.50	1.66
No. 3 Yellow	1.53	1.50	
No. 4 Yellow	1.51	1.49	

Grains, provisions and hogs are commencing to sell ex-war inflation. Readjustment from a war to a peace basis is well under way. Cash corn has dropped more than 75c, over 30 per cent from the top, and other grains are off in proportion. When the war broke out in Europe grains and provisions started upward, and continued to advance for some years. Other commodities were slow in getting started upward and continued to advance for some years. Other commodities were slow in getting started, and it is only natural that they should be the last in turning downward, but grains are a barometer of general business at the present time, and sooner or later there must be a readjustment in manufactured goods and in labor. All must liquidate and seek proper levels.

The corn crop is practically made. Frost now would do little or no damage. While some sections have been hard hit by the continued dry, hot weather it has forced the crop along at a very rapid rate in others that had sufficient rain, and much cutting has been done, even in the central portions of the big belt. The largest crop was secured in the parts of Illinois and Iowa that ship the bulk of the commercial grain to terminal markets.

How far corn will decline before all the bearish conditions are discounted cannot be forecasted, as the chaos abroad must be taken into consideration. However, there is now more disposition shown in Europe to get to work and less to strike.

EUROPE WANTS BARLEY

Europe would undoubtedly take a large quantity of barley, were conditions right, but of late there have been no sales reported. A liberal quantity, however, was sold some time ago, and the clearing up on the situation might result in heavy exports for a time. Movement from the interior is very small for this season. Detroit, Cash No. 3, $2.45.

RYE DECLINES

Rye declined in Detroit recently, but has been more hopeful since its fall. The foreign demand remains good. Quote $1.41 for Cash No. 2

SMALL OAT CROP

Grade	Det'oit	Ch'go	N. Y.
Standard	.72	.72	.76
No. 3 White	.71	.69	

Five states raise the bulk of the commercial oats of the country, and the total this year is the smallest since 1914, and when everything is considered the yield is probably smaller than at that time due to the light weight of this year's crop, which has been averaging around 29 pounds per bushel. The prolonged drought in the mountain states with an extreme shortage of supplies there for this winter may turn a considerable quantity of oats from the Northwest into the less favored sections, which will cut down the amount available for the East. The latter suffered from the same causes as curtailed the yield in other sections, and there is still a strong feeling that oats are destined to ultimately sell comparatively high. Cash No. 2 white sells at 72 cents in Detroit.

HAY TRADE CONDITIONS

There is little change in hay market conditions from that reported a week ago. Values have not strengthened much, but are holding firm at about the same range. Supplies are not moving forward from country points in any volume but indications are that there will be some increase from now on as producers are changing their views as to values. Embargoes have had a tendency to sustain prices, but supplies at distributing points are working down and restrictions will be removed in a short time.

The large hay crop this season will create an easier feeling throughout the year and this with lack of government buying will keep hay at a lower range than during the war period regadless of the general high cost of feedstuffs. Shippers should keep this in mind, that the market values this year will be governed largely by railroad deliveries and that the demand will be apathetic at all times.

In Detroit receipts increased a little and the market is quoted as steady. No. 1 timothy, $29.50@30; standard and light mixed, $28.50@29; No. 2 timothy, $27.50@28; No. 3 timothy, $23@25; No. 1 mixed, $24@25; No. 1 clover, $24@25 per ton.

NEW YORK BUTTER LETTER

One or two years ago, people in moderate circumstances were satisfied to get butter for home consumption that would score no higher than a firt. As a result, the demand for firsts, and often even for seconds, was equal to that for extras. By going back through price records for

(Continued on page 20)

TRUCK GROUND GRIPPERS

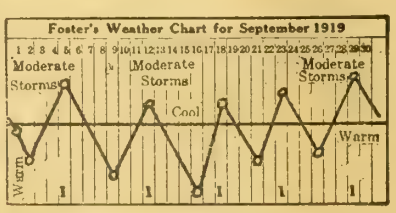
Problems having to do with the use of the motor truck in soft going, on the farm and on the road, have apparently been solved by the Fulton Motor Truck Company, Farmingdale, Long Island. This progressive company has just announced the Fulton Ground Grippers, designed to promote the wider use of the motor truck in direct transportation from the fields to the market. Nothing of late years has excited quite as much interest as this investion which requires little loss of time for application to the wheels and which need not be removed when the truck passes from soft to hard ground. The grippers are so placed upon the wheels that they do not come in contact with hard going and do not injure the roads.

NOTICE OF MEETING

There will be a special meeting held of the Farmers Co-operative Union of Beaver Township at the Township Hall on Saturday, September 27, at 8 o'clock p. m.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



Foster's Weather Chart for September 1919
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30
Moderate Storms
Moderate Storms
Moderate Storms
Cool
Warm
Warm
1 1 1 1 1

WASHINGTON, D. C., Sept. 27, 1919—Warm waves are expected to reach Vancouver about Sept. 29 and Oct. 4 and temperature will rise on all the Pacific slope. They will cross crest of Rockies by close of Sept. 30 and Oct. 5, plains sections Oct. 1 and 6, meridian 90, great lakes, middle Gulf States and Ohio-Tennessee valleys 2 and 7, eastern sections 3 and 8, reaching vicinity of Newfoundland about October 4 and 9. Storm waves will follow about one day behind warm waves and cool waves one day behind storm waves.

These disturbances will dominate the North American crop-weather from Sept. 3 0to October 9, during which period a great fall in temperature is expected between longitudes 80 and 100 and light frosts are expected during the week following Oct. 8 in northern parts of that section. This will be a cool wave not far from October 8. To constitute a cool wave or a cold wave temperatures must fall twenty degrees and the cold wave must go to freezing point. I expect a northern cool wave near October 8 and a cold wave near Oct. 23.

These storms will start an increase of rainfall that will be heavy near Oct. 24. Large sections of country during August and September were short on moisture because the storms north of latitude 30, had but little force. August and September storms were expected to be mild and rainfall deficient in large sections. But from this date onward through the Winter the storms will be of much greater force and precipitation will increase, except in about one-third of the best agricultural sections that will be affected by drouth beginning about first of November and continuing about s months.

Every Dot represents Ten Satisfied Delco-Light Users

More Than 75,000 Satisfied Users

DELCO-LIGHT was designed and built by men who were raised in farm homes—who experienced the discomforts and inconveniences of farm life—and who set out deliberately years ago to develop an electric plant that would provide city advantages for rural communities.

They were the same men whose engineering talent had made DELCO Starting, Lighting and Ignition Equipment for automobiles the standard of the world—

They knew electricity—and they knew the needs and limitations of farm life—

They knew that an electric plant to give service in a farm home must be simple, so that it would not get out of order and require complicated repairs—

It must be easily operated and require little attention—

It must be very economical in operation—

It must be built to stand hard usage and it must last indefinitely—

It required five years to develop a plant that would measure up to these specifications.

There were five years of hard engineering effort back of DELCO-LIGHT before the first plant was put on the market three and a half years ago.

Today DELCO-LIGHT is furnishing the conveniences and comforts of electricity to more than Seventy-five Thousand farm homes.

It is providing an abundance of clean, bright, economical electric light for these homes. It is furnishing power to pump water, operate washing machine, churn, separator, vacuum cleaner, electric iron, milking machine, and other small machinery.

And everywhere it is demonstrating its wonderful efficiency—and actually paying for itself in time and labor saved.

No Matter Where You Live There Is A Delco Light Field Representative Near You

A Critical M
of

In years to come, 5 o'clock on afternoon, August 6th, will be poin the critical point in the history of M Agriculture.

All day long the Executive Com the Michigan State Farm Bureau in session, considering the import tion of putting the Michigan Sta Bureau on the same strong, finar organization basis which it occupi in other states.

All day long the discussion had They had listened to a great addre Saylor, head of this organization Illinois.

They had heard him tell of the dous strides taken in Illinois durin few months—How over 75% of all ers in the counties worked had j organization at minimum yearly d each—How the Legislative Commi last session secured the passage measure which they backed and t of every measure which they obje How the Marketing Committee ha results never before approached. F ple, getting 65c a pound for the aver of Illinois wool as against 45c bid b —How the Educational work th the state was progressing as it h done before.

This was the question as it finall for decision:

> *Should the Michigan State Farm tinue as it has in the past, without a membership, to accomplish the gre doing in other places or should squarely in line and put over this org big way by changing the yearly dues of $5. a year in the State Organiza mending similar yearly dues to the C izations—and beginning an intensi advertising and soliciting campaign t organization every farmer in the stat*

The question was put and carrie a dissenting vote.

The die was cast.

Michigan is now lined up squ this greatest movement in the agriculture.

JOIN THE MICHIGAN STATE FARM B

ent in the History Michigan Agriculture

Every practical Michigan farmer knows that today we are facing conditions which no farmer can meet successfully single-handed.

It is the day of organization.

Labor is organized. Manufacturers are organized in every line of business.

The farmer alone is still working single-handed.

But he will no longer be compelled to do this.

With the majority of Michigan farmers enrolled in this great organization, we will have the means of correcting every condition which now makes profitable farming so extremely difficult instead of being, as it should be, the most profitable and pleasant occupation in the world.

This is actually being done in Illinois and other states. It will be done in Michigan.

The work of the "greater" Michigan Farm Bureau will divide itself into three very definite classifications—educational, legislative and marketing.

This question may be asked—exactly what will be done along these lines?

A fairer question would be—"What can't be done when the farmers of Michigan are organized into one strong, compact working unit?"

We know of the great things which have been accomplished by Michigan organizations working along certain restricted lines.

Imagine the results that will come from all Michigan farmers working together. Imagine the force behind the voice of 200,000 Michigan farmers, speaking as a unit on matters of legislation. Imagine the power of this great body in changing marketing conditions so that every farmer makes a legitimate profit not only on his investment, but on every day's work.

Imagine the improvements and the educational work which can be done on crops and production.

The State Farm Bureau, however, has no intention of supplanting the work of any present organization. It will help all of them and make their work more effective. It will take up tasks that no one organization or one group has ever successfully accomplished. Its scope is not state-wide, but national.

These are not intangible things. They are definite returns and large returns, which every farmer will share in from his investment of a few dollars in the State Farm Bureau membership.

An efficient organization has been completed and the plan of publicity and soliciting laid out which will cover the entire state.

This is the first announcement of the series which will carry the message to every Michigan farmer.

The active campaign of solicitation will be carried on county by county, beginning with Oakland County on the morning of October 15th.

Other counties will follow rapidly, as fast as the organization can be expanded. Every farmer in Michigan will be called on and asked to join.

The Michigan organization will be but one unit of a great national organization composed of similar units, presenting a united front on all matters pertaining to the well being of the farmer.

We suggest that every progressive Michigan farmer begin immediately to discuss this among his friends. Arouse their enthusiasm over this great work. Get your county and township organizations completed well in advance of the work of the State solicitors. Communicate with the State Secretary, Mr. C. A. Bingham, Birmingham, Michigan. He will be glad to supply you with further details and plans for the work.

Edited by MABEL CLARE LADD

WOMEN IN POLITICS

YES, "WOMEN in politics" for now that we have the right to vote, we are responsible for the right of it and we can't use the ballot intelligently unless we study the questions before our nation and our community as they come up for decision. And the best way to study them is to get the opinions of both sides of the question and then let your own common sense be the deciding factor, and not, as some of the men have accused us of, vote as our men folks do.

In order that this paper may serve women in every sense of the word, we have adopted the policy of giving a varied page, and so shall have with our fancy work and our recipes, a series of articles dealing with the subject of women in politics and endeavoring in this way to come to some sort of an understanding of our duties as well as our privileges.

One of the returned heroes and also a Captain said at a meeting last week that what we needed was "Americanization," and to have our country thoroughly "Americanized," we must first know our own laws, and he suggests securing a copy of the constitution and thoughtfully sitting down and reading it. Also the Monroe Doctrine which is so much discussed of late. Do you know why they say that the League of Nations will interfere with the Monroe Doctrine if adopted? The only way to find out is to read the Monroe Doctrine and then read that part of the League of Nations treaty as affects our own government.

Each week we will have a short article on this page. This week we are showing the picture of Mrs. Harriet Taylor Upton, the President of the Ohio State Suffrage Association, who states that we women are all "dressed up and no place to go," and goes on to explain her statement by stating that women are not partisan and now that they are ready to vote, asking "where will they go?" We as women have no political inheritance. True our husbands and fathers may have been Republicans or Democrats, but where are we to go? And then she goes on to state a very vital fact which is so good that we quote it:

The new women voters are shocked at the high cost of living; they know what the trouble is. They know that the men at the head of the great trusts are grinding the people. Everybody knows that, even the children know it. The Sherman anti-trust law was enacted to prevent combination, but it was only enforced on local milk dealers and other helpless groups. Why is this? Because men who are ordinarily brave are not POLITICALLY brave. The powerful corporations contribute vast sums to the treasuries of the political parties. No politician has the courage to jeopardize his political party and so he votes to "investigate" and "investigate" and that is the end of it.

Women care for their families. They know that it is not right for the father to toil unceasingly while the family barely subsists. Women are saying: "if the political parties as now constituted can not be divorced from beef and steel without dying, then let them die." Let us get a new party, one that is not afraid.

When men open their state campaigns they have bands and fireworks and sometimes a little lady falling from a ballon with a parachute—to enthuse the voters. The new voters demand, not bands and fireworks but lower prices, and the political party which realizes this will be the successful party of the near future.

Again, women are unalterably opposed to war. They said little about it in 1917 because they were powerless and because, in this great land of liberty, not only was the press censored and the lips of men sealed, but people were chloroformed lest they should think. Women were silent observers. They could not help

Mrs. Harriet Taylor Upton
President-Ohio State
Suffrage Association

themselves; they sent their sons and prayed and hoped.

The new woman voter is all-dressed up and nowhere to go. The question is: "Is anyone wise enough to prepare a place for her?"

HOME-MADE CHRISTMAS GIFTS

AS PER our promise, we are continuing our Christmas suggestions. So many beautiful things can be made from ribbons that we were unable to tell you of one-half of them last week, so have secured some more illustrations this week; this time of bags. What woman doesn't love bags! There are bags for shopping, bags for sewing and then the small purse bag, made of the expensive velvets and gold or silver embroidered ribbons which defy any store made bag to come up to them in beauty.

The upper girth hand bag is a Rose Matinee bag and requires 1 1-2 yards of the wide deep rose ribbon and three yards of the next shade lighter rose ribbon in a narrower width for the bottom and the petals and 6 1-4 yards for the neckband and handles.

No. 2 is a sewing bag, requiring 4 1-4 yards of the wide ribbon and one-half yards of the narrow ribbon. Oblong cardboards are used at the ends, covered with the ribbon and the bag is lined with a sateen to make it firm.

No. 3 is a Tucked Hand Bag and requires only 1 1-4 yards of ribbon. The top and chain should be purchased at the store. This is beautiful made of a ribbon to match your suit, or dress.

No. 4 is made of 1-2 yard of metallic ribbon and 1 yard of black velvet ribbon, using a metal top and chain.

No. 5 is made of a fancy ribbon combined with a plain satin ribbon and is very effective. It requires 5-8 of a yard of the fancy ribbon and one yard of the plain wide satin ribbon, finishing at the top with the metal clasp and chain.

THE PANAMA CANAL AND OUR OWN SOO CANALS

IT WAS just six years ago this month—to be exact, Sept. 26, in the year 1913, that the first water entered the Panama Canal locks at Gatun. It is interesting to note just what this canal has meant to us since that date, not only in a financial way, but in its value as a factor in protecting this country in the recent war. We can with profit take time to read the following very comprehensive write-up, from the pen of one who has made a study of the subject:

Unusual attention is focused just now, on the Panama canal because it has been threaded by that half of the United States navy which is en route to the Pecific. So long was taken in discussion and then so long in construction that it is hard now to realize what an actuality the isthmian waterway really is. The warships have demonstrated its protective value to the country which built it; but the commercial value, great though it is, suffers by comparison with that of the fresh water canals at Sault Ste. Marie which make possible uninterrupted traffic between Lakes Superior and Huron.

During May, this year, the total number of vessel passages through the Panama canal was 188, including seven United States government ships on which no toll was levied, one other naval ship and four launches.

The remainder, 176, were vessels of commerce and their net registered tonnage was 468.030 tons. During the same month of May there passed through the United States canal at the Soo, 1,957 ships, aggregating a net registered tonnage of 6,356,185, through the Canadian Canal 787 ships of 1,292,217 tons, or a total for the month of 2,644 ships, of 7,648,402 net registered tons. The cargo tonnage through the Panama canal was 720,000 short tons, and through the Soo 10,566,326 short tons. The average registered tonnage per ship through the Panama was 2,650 and through the Soo, 2,930. The average cargo through the Panama was 4,070 tons per ship and through the Soo, 4,000 tons.

Some idea of the saving in distance made possible by the isthmian route is to be had by the comparative distances via Magellan strait and via Panama canal from Guayaquil to New York—10,215 versus 2,810 miles; from Callao to New York—9,613 versus 3 363 miles; and from Valparaiso—8,380 versus 4,623 miles. The latent foreign trade opportunities in South America are not to be overlooked, nor the Atlantic-Pacific possibilities, generally, and in the coming years there may be great increase of ocean commerce through the Panama canal, but the infinitely greater commerce of the inland lakes stands out in its immensity by comparison with the grand total of all the world commerce which passed during the month of May, through the $400,000,000 Panama canal.

Back Yard Strategy

Mother—What a dirty face! Go right in the house and wash it this minute!

Little Jack—I don't want to wash my face, I'm attacking an army in the next block and this is camouflage.

One of our readers wrote me the other day; said she had no children, but had been reading the Children's Hour; noticed the offer to the kiddies of free Christmas gifts for just a little work, and wondered why I didn't make an offer to the women, similar to the one for the youngsters. So agreeable to our policy to give our readers what they want, I have procured a few choice articles which every woman wants, and if interested, will be glad to send you a list and tell you more about the plan. Simply write direct to the editor of this page, care of M. B. F., and the Christmas prize list will come forward promptly.

Tuition Not Returnable

I would like to have the opinion of the legal department of the Michigan Business Farming on the two following questions: First, can a rural school district recover the tuition paid to, in advance, a high school for an eighth grader who for some reason did not attend said high school; second, can a owner of pure bred tame rabbits recover damages done same by dogs. Would they be considered live stock under the law, if not, why not. Damages to be paid out of the dog tax fund.—*S. U., Midland Co.*

Ans.—(1) It is my opinion that the school district could not recover tuition paid for the tuition of the pupil if the graded school stood ready to carry out the tuition contract, and the pupil was not prevented from attending the graded school by any reason or regulation of the graded school. That is, if the graded school held itself ready to take a pupil and comply with the arrangements. I think there is no obligation upon the part of the graded schools to return the fee. (2) Your tame rabbits are personal property, and any unlawful damage to them may be recovered in an action against the owner of the dog. As I recall it in the statute, however, it does not provide for the payments of such damages out of the dog tax fund.

Trees on Highway

I have trees planted about four feet from road line. The township has straightened the road but they went around the trees and left them, but when the county survey was made this spring they claimed the trees are in the road. Will you give me advice what I can do. Can I collect any money for the trees if they taken them.—*V. C., Saginaw Co.*

Ans.—Trees planted on the side of the highway, and growing there belong to the adjacent owner, and are his property. They may however, in the straightening of the road become an obstruction to the highway, and the highway authorities may order them removed. They would be obliged first to notify the adjacent owner to remove the obstruction and to that extent the trees belong to him. If he does remove them within the time specified, if such time be reasonable, then the township authorities may remove them, themselves. Should the township authorities remove them without giving the adjacent owner an opportunity to remove them, and take them himself, they would be liable in damages to the adjacent owner.

Division of Crops

A contracted a farm of B for a term of three years and for seven years thereafter A worked under the old contract and such other verbal contracts as were made from time to time. In the fall after A had sowed fall crops B sold farm to C. Can A hold one half the straw? There was nothing mentioned in written or verbal contracts pertaining to straw. A moved several loads of rough feed and straw on place with him. If possible answer this in your next issue. —*E. R., Cass Co.*

Ans.—A has a right to such proportion of the straw as he was to receive of the farm products according to the lease. Straw is a product of the farm, and unless agreed that it should remain on the farm, it is to be divided the same as other products.

Threshing Charges

If a man agrees to thresh oats, etc., for a certain sum can he charge more and can he charge one person more than another?—*A. C. M., Byron, Mich.*

Ans.—He can charge more, but if there was an agreement to do it for a certain sum he would be liable for breach of contract if he refused to perform. Every man is entitled to charge as much for his services as he desires. No one is bound to pay him unless the services are worth it to them.—*Victor H. Hampton, associate legal editor.*

Don't Sow Smutty Wheat

"We would like your advice in regard to sowing smutty wheat. Our wheat is the Red Rock variety and it is infected with smut. I would like this wheat for [illegible] it were treated

FARMERS SERVICE BUREAU

(A clearing house for farmers' every-day troubles. Prompt, careful attention will be given. Correspondence should be addressed to "Farmer's Service Bureau," Michigan Business Farming, Mt. Clemens, Michigan.

What kind of formula would we use to treat it? After it is treated is it safe to feed a little of it in place of oats to horses? Is the land on which this wheat was grown were again sowed back to wheat would there be any danger of it becoming infested with the smut, than if otherwise sown on a different field for instance under the same climatic conditions?"—*Subscriber, McBain.*

"It is not advisable to plant wheat which is badly infected with smut. If the wheat shows numerous smut balls and if the smutty smell is very marked, it would be best to secure clean wheat from another source.

If only a few smut balls are present, we would advise the following treatment recommended by the Department of Botany, Michigan Agricultural College:

"Fan thoroughly to remove all light shrivelled grains and smut balls. Disinfect the drill with the Formaldehyde solution. Avoid infection from old sacks. Do not treat more than you can plant in any one day.

Dilute Formaldehyde Method.

Sprinkle the grain until thoroughly wet with solution if 1 pint of Formaldehyde to 40 gallons of water. Cover with blankets or sacks for 2 hours. Spread out thinly to dry and sow within 12 hours. Formaldehyde treatments are necessary for crop protection but they must be given carefully and with scrupulous attention to directions. Allow for swollen condition of the grain."

It is safe to feed treated wheat to horses. It is not advisable to replant land on which smutty wheat was grown last year for there is a likelihood of the smut being carried over. —*J. F. Cox, Professor of Farm Crops. M. A. C.*

"FILLING THE SILO"

We can briefly sum up the subject as follows

Plan early for the details in filling your silo.

Inspect the cutter thoroughly before starting.

Cut ripest corn first.

Cut in small bundles.

Be sure to do a clean job and cut fine.

Oil all running parts frequently and keep rollers adjusted to hold silage tightly.

See that cutter is given proper speed. This should be figured out before starting and proper pulley secured.

Tramp ensilage thoroughly.

Keep the knives sharp—the cutter bar sharp and keep the knives adjusted close up to the cutter bar.

Feed evenly—don't over-crowd the machine, but keep it full.

When filling a silo partly filled the day previous, run the blower a few minutes before allowing anyone to go inside. This blows out the gas accumulated over night.

Concerning Nut Trees

Kindly inform me whether any person has a right to gather nuts along a roadway when the trees are on my property. These trees all stand inside the fence so we consider we have a right to all nuts on said trees. —*C. H., Byron*

The adjacent proprietor owns the trees in the highway in front of his premises and along the highway on his premises. No one has a right to pick the nuts therefrom and any one who does so is liable therefor.—*W. E. Brown, legal editor.*

Sterile Land Spreads

I have a spot on my farm that is bare, and nothing will grow on it. and it is getting larger. It will not even grow weeds and I would like to have a little advice on what is in there, if you could along that line.—*F. K., Elkton.*

We suggest that you might send a sample of this soil, with a careful description of conditions to the Michigan Agricultural College, East Lansing, Michigan, where soil experts will investigate the matter.

If the land was formerly fertile, it is quite possible that the soil needs considerable fertilizer. Sometimes, by plowing very deeply, worn out land is temporarily freshened.—*The Editor.*

Trees Along Highway

A state road is being built by a piece of timber which I own. Some trees are near enough so as to be cut. If the road builders cut the trees, to whom do the trees belong?—*Subscriber, Munith.*

Trees in the highway belong to the adjacent owner, and if they have to be removed they belong to the adjacent owner. They, however, have no right to remove them without giving notice to the owner.—*W. E. Brown, legal editor.*

Everbearing Strawberries

Could you inform me where I could purchase ever-bearing strawberries and what is the best kind?—*A. M. F.*

Two of the most reliable dealers in ever-bearing varieties of strawberries are R. M. Kellogg, Three Rivers, Mich., and the Baldwin Nurseries, Bridgeman, Mich. The "Superb" is one of the best of the older varieties, although there are two or three newer varieties which promise well but are yet to prove their value. The horticultural department at the college does not recommend ever-bearing varieties for commercial growing.—*J. B. Hasselman, Director Publicity, M. A. C.*

(Editor's note: Advertisements of reliable every-bearing strawberry producers may be found in the ad columns of Business Farming.)

Lily White

"The Flour the Best Cooks Use"

The method of blending the choicest varieties of wheat gives it a most delicious flavor which is imparted to everything baked from it.

The wheat is all cleaned three times, scoured three times and actually washed once before going onto the rolls for the first break.

The result is perfectly pure, clean flour. And it is perfectly ground with the utmost uniformity.

Those are the reasons why we guarantee LILY WHITE.

Your money back if you do not find it as good or better than any flour you have ever used.

VALLEY CITY MILLING CO.,

Grand Rapids, Mich.

The Children's Hour

DEAR CHILDREN—This week I want to tell you about the State Fair which was recently held in Detroit. Perhaps you know that out of each county, the boy who passes the eighth grade examination with the highest marks is taken to the State Fair for a week, and while there he is fed and housed in beautiful clean white tents right on the grounds. And he is allowed under directors who man each squad, to go through all the exhibits, is taught how to judge cattle, how to prune trees, how to build a camp fire, is taken on the grand stand for the afternoon one day and allowed to see the races and in the evening to see the wonderful fire works, and then also has a free motor ride around the city and besides all this sees the best side shows down the midway, and during his stay hears the very best speakers in the state. It was my privilege to hear one of these speakers address the boys one day and I guess I got as much good out of what he told them as any one of the boys did.

He told them how they had won this great treat by just doing the right things in the right way; by doing everything they did just the best they knew how; by shirking nothing and then he went on to tell them that they could win all the big battles of life and win a good position in life for themselves by just doing everything in a manly way, and in closing he gave them such a good little thought to remember that I want to pass it on to you and if you are one of my little girls instead of a boy, remember what is good for boys in this way is good for girls too. He stated that there were four cans every boy should know all about, and that they weren't glass cans, tin cans or any can which any one made except yourself, and here they are. Let's memorize them and adopt these four little cans for our own:

"Do all the good you can, to all the people you can, in every way you can, every time you can.—Affectionately yours, Laddie.

FROM OUR BOYS AND GIRLS

Dear Laddie—I have never written to you before. I am a boy 10 years old. I am in the fifth grade. I have two brothers in the third grade. I have two sisters to home. We have a mile to go to school. My teacher's name is Miss Grete LeValley. I like her very much. We take the M. B. F. We live on a farm of 80 acres. We have three horses. One horse is twenty-three years old. We hitch him in the cutter in the winter and drive him to school and he comes back alone. We have seven milk cows and one calf.—Earl Lamb, Stanton, Mich.

Dear Laddie—This is the fourth time I have written to you. The first two times I wrote I got my letters in print, the third time I didn't and hope to see this one in print. I am in the 5th grade at school and hope to pass into the 6th grade. My teachers name is Miss Verna Campbell and I like her quite well. I will write a story. Love to all the boys and girls.—Ruth McShea, Rosebush, Mich.

A Bad Boy

Once upon a time there was a little boy and his name was Jake. He was never a good boy.

One day his father had gone away and his mother and he were there alone. His mother had some nice plates in a box that she wanted to save. He got mad and broke all of the plates. When his father came home he got a hard whipping and was sent to bed without any supper and after that he was always a good boy.

Dear Laddie—I am a girl 12 years old and in the fourth grade. I live on a farm of 80 acres. We have three horses, five cows and four calves, also five pigs. I go after the cows at night. I feed and water the chickens for pets. I have two cats and five kittens. I like the Doo D very much, they are funny little fellows indeed. My papa takes the M. B. F. likes it very much. Hoping to see letter in print.—Gladys Griffin, Marlette, Mich., R 1.

The Junior Cook

MILK SHAKE

This is a fine and very nourishing drink that you will enjoy after hard work or play.

Separate the yellow and white of one egg.

Measure out one cup milk, two teaspoonful sugar.

Put the yellow with the sugar into a small bowl.

Add one-eighth teaspoon salt, one-quarter teaspoon vanilla, one-eighth teaspoon grater nutmeg.

Beat with a dover egg beater till pale yellow and very creamy.

Put the white of the egg on a big plate and beat till stiff and white.

Pour the milk gradually onto the yellow mixture and beat it in well.

When all the milk is mixed add three-quarters of the egg white and beat that in.

Pour this mixture into a glass.

Put the one-quarter of the egg white on top. Garnish with a bit of grated nutmeg or cinnamon and serve at once with a cookie and two straws to drink through.

It is just as easy to make several at a time for there is no more work—just increase the recipe by as many times as you wish to serve glasses.

EGGLESS MUFFINS

Measure out:
- 1 cup flour.
- 1 cup bran.
- 2 tablespoons of sugar.
- 1 teaspoon salt.
- 2 tablespoons butter substitute.
- 4 teaspoons baking powder.
- 1 cup milk.

Put the sugar, salt and butter substitute in a bowl and mix well.

Sift the flour and baking powder and add to mixture.

Grease a muffin tin of twelve rings.

Add the bran and milk and beat till the dough is smooth.

Turn at once into the muffin rings and bake 20 minutes in a moderate oven.

Turn out onto a napkin covered plate and serve at once.

If any are left over they are fine when split open, spread with jam and made warm in the oven.

The Doo Dads Find an Ice Cream Cone

WHOEVER could have lost an ice cream cone in the Wonderland of Doo? It must have been someone who was out with a picnic party. But whoever it was the Doo Dads were not long in finding it. They were hiding in the bushes and noticed that it had been left behind, for, just as soon as it was seen, out they rushed and here they are having a wonderful time of it! Flannel Feet, the Cop, is on top of the cone. He has some of the ice cream on a leaf and was just ready to begin his feast when the wasps and mosquitoes began swarming around. See how he is trying to beat them off with his stick. However, they do not seem to be any more afraid of him than the Doo Dads usually are. Poor Roly has tumbled in head first, and Poly thinks it is the last of his little brother. One greedy little Doo Dad waded right into the ice cream. He wishes he were out of it for see how he is shivering with the cold. Here is the old lady Doo Dad with three of the Doo Dolls. Percy Haw Haw, the dude, like the gallant little gentleman he is, is seeing that they are served first. Old Doc Sawbones is coming on the run. He is sure the Doo Dads will all get a dreadful cold after eating so much ice cream. Do you see that little Doo Dad who is feeling the ice cream with his finger? He doesn't know whether it is cold or hot. That other young fellow is sure that it is hot for see how he is blowing on it to cool it. All are greatly excited except Sleepy Sam, the Hobo. The little lazybones is actually having a snooze when he could be having a great feast. His nap will be cut pretty short, however, for see how the ice cream is running over his head. If the Doo Dads would not get so excited they could have all the ice cream they wanted.

A Maxwell Truck you buy this Month will make you a present of its Total Cost in One Year.

More miles per gallon
More miles on tires

FIVE-thousand-dollar truck construction. Five-thousand-dollar truck guarantee. Worm Drive. 10-foot loading space. Electric lights and generator. 2400 pounds—we built it right to get it light—to save tires—to reduce gas consumption—to climb hills—to take bad roads—*and to keep repair bills down.*

For long hauls and short calls. Self-supporting. Amateur proof. Chassis $1185 f. o. b. Detroit.

If you like, take your time with the payments and let the Maxwell buy itself on the run.

Pays its way from day to day.

COUNTY CROP REPORTS

MONROE, (W. C.)—We are having fine weather here and the farmers are very busy these days getting the wheat ground ready to drill, a few have their wheat drilled. There have been several new silos built in this part and they are waiting for their turn to fill. There have been a number of farms changed hands this fall in this part, the price ranged from $140 to $180 per acre. A few sales have started and they are selling well, excepting horses which go at a small figure.—W. H. L.

EMMET, (C)—Emmet County is still on the map, though badly dried up and somewhat grasshoppered. We will pull through with an average crop all told. Corn is fine, potatoes and beans fair. Small grain was short. Hay was good and is selling now around $30 per ton. We are having the first real rain today we have had in many weeks. It is needed for the pastures. Butter 55c; eggs, 45c at local store.—W. H. C.

MONCALM—The farmers are cutting corn, marketing lima beans and putting in grain. We are having some much needed rain now. The soil has been very dry. We have had very little frost, so far, very few places on low grounds. The farmers are marketing early potatoes and some grain. There are a few silos being built, some repairing done. Some tractors have been purchased. Many from this district are attending the West Michigan fair at Grand Rapids last week.—G. B. W.

MASON—Everybody is busy cutting corn or filling silos. Corn is drying up but will be best it has been for a number of years. Dry weather is hurting potatoes. West Amber Community Club met at the J. Clausen home Friday evening, Sept. 5. County Agent W. J. Cook was present. Mr. Cook has been organizing the Mason Co. Farm Bureau and getting it in working order. A meeting of the chairman of the various units of the Farm Bureau are to hold a meeting in the near future, for the purpose of mapping out a program and unifying the work. Three business men will also meet with the chairman. We are wondering if they'll have some farmer representatives in their business men's or bankers' associations. The following prices were offered at Scottville on Sept. 1: Wheat, $2.13; butterfat, 55c; eggs, 40c.—B. M.

ISABELLA—Very dry in this locality not much fall plowig done on that account. Corn a very good crop best in a number of years. Potatoes damaged by dry weather. They are of a good smooth quality, no knobs as of last year. Price of potatoes dropped on account of green stock coming in. No frosts yet although one would do lots of good now. Very much sickness around here. Some call it the summer flu.—W. D.

OCEANA—The farmers are pulling beans putting in grain, threshing nearly all done. Corn nearly all cut. Weather still dry with a little promise of rain. Soil is still very dry for plowing. Not much grain sowed yet. Farmers not selling anything at present. Farmers are holding rye for better prices . Rye did not do very well this summer, only about 10 to 15 bushels per acre. The following prices were offered at Hesperia on Sept. 10: Wheat $2.10; rye, $1.15; No. 1 timothy, $28; No. 1 light mixed, $28; rye, $8; beans (C. H. P. Pea) $6; potatoes, $2.10; onions, $2.00; cabbage, 5c lb.; butter, 40c; butterfat, 58c; eggs, 40c; apples, $1; peaches, $1.50@2.50; pears $2.00.—H. B.

MONTCALM—The farmers have their soil prepared for the drilling of wheat and rye but are waiting for a heavy rain as the soil is very dry and a very few are drilling now on this account. The beans are mostly drawn which was harvested in a fine condition as no rains have been received for some time and it is expected they will be a fine quality although there is a small acreage. The digging of early potatoes is now being done and are averaging poor but most of the potatoes are being taken to Grand Rapids by trucks, the local market is now quoted at $1.50 per bushel.—W. L.

ARENAC (E)—Weather has been very warm and dry, but one little shower in several weeks and those who have been planning on sowing rye and wheat find it a hard matter to plow at all on heavy ground. Threshing is on and yields are small according to reports. Many farms changing hands, moving to the city and quitting farming as they claim they cannot make a go of it owing to the high cost of labor and products going down. Beans took another drop; oats are lower, but, oh my, ask the price of middlings or any kind of feed—the answer is going higher. Cattle and hog prices are very low while the market on sheep and lambs are off entirely this week. Pastures are very dry and stock is thin. Auction sales are thick and if all have them that are planning, most everyone expects to quit.—M. B. R.

JACKSON—The following prices were offered at Jackson on Sept. 13: wheat, $2.10; oats, 85c; rye, $1.25; No. 1 timothy, $26; No. 1 light mixed, $25; rye straw, $10; wheat-oat, $10; potatoes, $2.40; onions, $2.25; cucumbers, $2; hens, 28c; springers, 32c; butter, 56c; butterfat, 58c; sheep, 9c; lambs, 13c; hogs, 19c; beef steers, 10 1-2c; beef cows, 7c; veal calves, 18c; apples, $2.25.—B. T.

GRAND TRAVERSE—Are having a fine rain. Nearly all the farmers have their corn out and are now filling silos. Had a light frost here a few nights ago but did not do much damage. The following prices were offered at Williamsburg on Sept. 19: Oats, $1.00; potatoes, $3.00; onions, 6c per lb.; butterfat, 58c; eggs, 40c; apples, $1.25 per cwt.; peaches, $3; grapes, $1.50.—C. L. B.

JACKSON(N. E.)—The weather has been clear and fine until yesterday when we had a good rain with high winds. Corn cutting is better than half done, nearly all silos filled and the work nearly caught up except for the winter grains but farmers will be able to get this work done as the rain has helped a lot. Potatoes look good and bid fair to produce well. Corn is good, except lots of smut. Price still falling, but on buying they are raising. Who can explain?—A. F. W.

ST. JOSEPH—Farmers are about done cutting corn around here. Some are finished. Weather is cooler. Had a lovely rain yesterday, very much needed. Some are selling potatoes and wheat. Very little building being done but repairing kept up. A very bad fire at Nottawa burning all buildings but a house for a farmer and poultry buyer, set by trains.—W. W.

JACKSON (N. E.)—The past week has been ideal for work except one day's rain which was badly needed. Farmers are cutting corn, filling silos and hoping for more damp weather to complete the program of getting in winter grain. Prices on farmers' silos coming down. Old H. C. of L. investigations still going on. No progress being made unless to give the profiteers a chance to further entrench themselves. Legislation is needed to limit the profit and the number of hands a commodity passes through, all the way from the farmer to consumer. Instances are known of a number of commodities passing through six different indepedent dealers to reach the consumer, each getting a profit at the expense of the city buyer and the farmer, besides the usual freight and cartage and war taxes.—A. F. W.

CALHOUN (S. W.)—On the 9th we had a much looked for rain the first since May that did any good. It came too late to do any good, only to late potatoes, if no frost comes. Some corn to cut yet. Most of it is very poor. It has been too dry and hard to work the wheat and rye ground and will cut the acreage down the coming year. The following prices were offered at Athens on Sept. 1: Wheat, $2.10; rye, $1.20; No. 1 timothy, $30; potatoes, $3.50; butterfat, 54c; eggs, 42c.—E. B. H.

CALHOUN (N. C.)—The farmers are busy filling silos, sowing wheat and cutting corn. Weather ideal except a little dry for seeding. The hay and grain is nearly all marketed and gone out of the county. Never saw the county stripped so early before. Not much building or buying being done except several silos. There was a bad accident at the farm of Chas. Rundle, Tuesday, Sept. 9, when Chas. Rundle got his left hand under the belt and twisting it off, being amputated just below the elbow. The Farmers Elevator Co. at Olivet is doing a very large and satisfactory business. They began operating July 21 and the first five weeks they brought more wheat than the Long, Cobb & Co., did in the whole year last season, besides selling two cars of cement, about 7 or 8 cars of coal and a quantity of lime, plaster, salt, fertilizer, mill feed and sold about 100 barrels Lily White flour in two days, but just now they can't take in grain on account of being full and cannot get permits to load out, however, the two men there seem to be very busy taking care of the hay and coal and other commodities. The following prices were offered at the Olivet Elevator Co., on Sept. 15; Wheat, $2.13; oats, 62 to 67c; rye, $1.25@1.28; No. 1 light mixed, $24.—G. R.

CLINTON (N)—Sept. 20, and no frost, something unusual. Corn is nearly all cut. silos filled and beans harvested. Not much wheat sown as yet, ground extremely dry. A light shower today, the first for many weeks. Beans are of a splendid quality, but light in yield. Potatoes nearly a total failure for want of moisture. The following prices were offered at St. Johns on Sept. 18: Wheat $2.12; oats, 66c; rye, $1.35; beans (C. H. P. Pea) $6.50; hens, 20c; springers, 20@23; butter, 57c; butterfat, 55c; eggs, 44c; sheep, 4@6c; lambs, 10@12c; hogs, 15 1-2c beef steers, 5c@10; veal calves, 20c.—A. E. J.

CLARE—Farmers are sowing wheat and rye, cutting corn and filling silos. The ground is dry and needs rain bad. The following prices were offered at Harrison on Sept. 17: Wheat, $2.00; No. 1 timothy, $28; rye, $10; wheat-oat, $7; potatoes, $1.25@1.50, cwt.; hens, 22c; springers, 24c; butter, 45c; butterfat, 53c; eggs, 37c; apples, $1.00 bu.; peaches, $3.00 bushel.—S. J. M.

CALHOUN—Farmers are cutting corn and getting ready to sow grain. There will not be as much sown this fall as last. The weather is warm. Soil is dry. Pastures are all dried up. Corn is fairly good. Potatoes are not looking very good in this section. The prices offered in Battle Creek are: Wheat, white, $2.00; red $2.15; oats, 75c; rye, $1.25; No. 1 timothy, $28; potatoes, $2.70; butter, 40c; eggs, 45c; lambs, 10@14c; beegs steers, $8@10; beef cows, $5@7; veal calves, $10@13.—C. E. B

GENESEE—Farmers are plowing harvesting beans, cutting corn and filling silos. Weather has been cooler lately and we have had a few good rains this week, leaving the ground in better shape for plowing.—C. S.

PAST, PRESENT AND FUTURE NAVY BEAN MARKET

(*Continued from page 3*)

growers." It is worthy of note here that four months later the Grain Corporation did the very thing we suggested in our Oct. 19th issue.

In our October 26th issue when beans were still quoted at $9.25 on the Detroit market, we stated, "Judging from present indications there are more chances that beans will go lower than higher." Shortly thereafter the price dropped to $8.85. Again in our Nov. 2nd issue we warned against still lower prices. "Beans undoubtedly will go some lower," we said. Just about this time the government released a quantity of tin for canning purposes and a number of big canning companies placed orders for Michigan beans. This stimulated the market to such an extent that the Michigan jobbing prices advanced to around $9. This we felt was a good price, all things considering, and in our Nov. 9th issue we advised our readers as follows: "We believe that farmers will find it good business to dispose of a part of their holdings now rather than carry all of them over."

War's End Brings Lower Prices

The signing of the armistice in November changed the complexion of the bean market very materially, for it practically destroyed the future demand for beans to feed fighting armies. Immediately the price began to drop, and western and Japanese beans produced at small cost, began to flood the market. This glutting and consequent depression lasted for a few weeks, but early in December the government recognizing the seriousness of the situation voluntarily advanced the price on its own purchases so that the Detroit market was soon again quoted at $9. A further stabilizing influence was the decision of some of the bean jobbers to maintain the $9 price if possible. During the latter part of December the market ruled around $9, and the tenor of our advice to growers that time was: "keep beans moving to market."

But about the middle of January California growers began to tire of holding their beans and large quantities were harvested. We must here remind our readers that the market was in such a sensitive condition, the supply so large and the demand so uncertain and spasmodic that the offering of a few carloads of beans raised havoc with the price. So with California growers in a mood to sell a large part of their holdings, it is natural that the price began to decline. Then followed the alleged conspiracy on the part of the brokers and wholesale grocers to refuse to buy Michigan beans in an effort to force down the price. Shortly thereafter, about the last of January, the effect of the manipulations of the speculators in the Grain Corporation began to be felt and in less than a month prices dropped almost $2 a hundred, and for a brief time the market was characterized by extreme dullness, and practically no movement.

Government Announces Purchases

But in our Feb. 22nd issue, we announced that the government would buy a large quantity of Michigan beans at $9.25 to the jobbers, enabling them to pay the growers $8 per cwt. The mere announcement caused a furor among the bean buyers of the state, and for a time there was active bidding for business, and the price advanced from $1.25 to $1.50 per cwt. in a single week. The government's requirements were soon filled, however, and a slump set in in earnest. By March 22nd, the jobbing price in this state had declined to $6.75 per cwt.; in many sections elevators refused to buy at all, while in other parts farmers who had to have money sold at ruinously low figures.

Realizing that farmers could not afford to sell their beans at the prices that prevailed the last of March, we sought the advice of many different persons who make a business of studying the market and possessed full knowledge of the influences that were keeping the market down. It was the unanimous opinion of all that the market was on the bottom and that prices must surely advance before the new crop. In our March 22nd issue, we discussed the matter quite thoroughly and commented as follows: "Nothwithstanding the present condition we honestly believe there is going to be a change for the better in the bean market and we cannot advise our readers to sell a single bushel at the prices now being offered by the elevators." And that advice was good, for in less than two weeks the price again advanced and continued upward until the middle of June when the Detroit market was again quoted at $8.25. During all this period we urged our readers to "keep beans moving," and in issue after issue reminded them of the enormous stocks yet to be harvested.

Present and Future of the Market

The market since June has been up and down from varying causes. It has never reached the high mark which, we frankly admit, we thought it would reach. But we were not the only ones to err in our estimate of this market. Men who had grown old in the bean game, officers of bean jobbers' associations, and thousands of farmers were equally convinced that the shortage of food stocks was so great and the value of beans as a food so high that the foreign countries would rapidly absorb our surplus at high prices. The condition in foreign countries was probably not over-estimated, but we now realize that had people actually starved for want of our foods, we could not have transported all our surplus because of lack of ships. Examination of our columns will show, however, that our predictions as to the future upward or downward trend of the market were invariably correct.

At the present time, the bean market is in a very unsettled condition. The crop is going to be the shortest in three years and prices should logically be good. But the outcry against the high cost of living and the disposition of many bean jobbers to force down the price is having a bad effect. Moreover, the carry-over from last year, 6,000,000 bushels, is the largest on record and naturally exerts a bearish influence. On the other hand, reports show that 1,700,000 more bushels of beans were marketed last year than will be available this year, including the carry-over, so there's really no fundamental reason for lower prices.

As we stated in a recent issue efforts will be made to open the buying season on a low basis, but if the bean growers are wise they will refuse to sell until the market has become more settled and the actual demand for the new crop sets in. Nor are we alone in this opinion. A Grand Rapids firm of jobbers recently sent out a bulletin containing the following statements which we think are as fair statements concerning the relations that should exist between producer and elevator owner as we have seen:

1919 Crop Year as We See It

A few weeks more of favorable weather will put across the entire Michigan Bean crop. Four weeks should see harvesting completed. New crop is now moving to the trade in a limited way. We estimate the Michigan crop as follows: acreage, 350,000; yield, 8 bushels to the acre. Total Michigan crop, 2,800,000 bu.

Note: On August 18th, we estimated the crop at nine bushels per acre; decrease is due to quality.

Quality: Will not be equal to that of last year. It is showing both Anthracnose and blight. This is the case for decrease in our original estimate.

Year	Total U. S. Crop	Hold-over-Stk's	Total St'ks Available
1917	14,967,000	3,000,000	17,967,000
1918	19,506,000	4,824,000	24,330,000
1919	10,630,000	6,000,000	16,630,000

Note: Subtract this year's holdover from last year's total stock available and you find that last year 18,330,000 bushels were marketed or 1,700,000 bushels more than we have available this year.

Market about Sept. 1st for three years: 1917, $12.75 per cwt.; 1918, $10.25 per cwt.; 1919; $8.15 per cwt.

Growers prices: In our telephone conversations about the state with elevators we find they are paying from $7 to $7.50 CHP basis and most of them seem to think that $7.50 is a fair price to the grower. We do not believe this figure out of the way, the grower should have this amount to show him a profit. Profit is the only thing that will induce him to plant beans. You wouldn't expect your butcher to keep furnishing you meat below cost, if he did bankruptcy would be his end. Likewise with your grower. In addition we find the trade willing to pay around 8 1- 2to 8 3-4 cents f. o. b. Michigan.

The History of Unicorn

ELEVEN years ago I became convinced there was an urgent need for a high grade dairy ration, made out of the purest materials, combined according to the practical common-sense methods of successful breeders.

This was the origin of Unicorn Dairy Ration.

It was a success from the start.

With no special effort, the owner of Lunde Korndyke (a New York cow), in 1910, made over 26,000 lbs. in one year—126 lbs. in one day.

Since that time, Unicorn has fed over seven "1000-lb.-fat" official test cows, and hundreds of high test cows of all breeds.

Why is it the best breeders feed Unicorn, and why has it always made good? Simply because it is made to fit the cow and to produce results.

Our knowledge is the result of thirty years of practical handling of feeds, and careful observation of feeding.

We use the best materials that are made — no inferior substitutes—and above all, "try it on cows" before we sell it. This is how we keep on making it better.

"Unicorn" cows make the biggest yields and the biggest profits. They keep well and in fine condition.

You should learn all about Unicorn. Why not write us for information and books — free?

THE BUSINESS FARMERS' EXCHANGE

CLASSIFIED ADVERTISING

5 CENTS A WORD PER ISSUE. To maintain this low rate, we are compelled to eliminate all book-keeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farming, Adv. Dep't, Mt. Clemens, Michigan.

NOTE:

An illustration helps greatly to sell farm property. By adding $10 extra for each insertion of your ad, you can have a photographic reproduction of your house or barns printed at the head of your ad. Be sure to send us a good clear photograph for this purpose

FARMS AND LAND

FOR SALE—140 ACRE FARM. RICH soil, mostly under cultivation. Plenty of good buildings. $100 per acre. Come, see or write, G. P. Andrews, Dansville, Mich.

FOR SALE OR TRADE—A SMALL farm house and lot between St. Louis and Alma. Address, J. B. Moening, R 2, Alma, Mich.

FOR SALE—90 ACRE IMPROVED farm, good land. For description write owner. Albin Beckstrom, Tustin, Mich.

FOR SALE—80 ACRE GRAIN AND fruit farm. Gravelly loam. All cultivated. Good buildings. Clyde Robinson, Hartford, Mich.

IDEAL SHEEP LAND IN HEART OF Lower Michigan's Clover Seed Belt—where settlers are paying for land with Clover Seed. Fertile soils that grow wheat, corn, oats, barley, peas, clover, alfalfa, vetch, fruits and vegetables. Where total crop failures are unknown. Price $10 to $15 per acre. One dollar an acre down—long time for balance at 6 per cent. John G. Krauth, Millersburg, Presque Isle County, Michigan.

FARMS FOR SALE—BIG LIST OF farms for sale by the owners, giving his name, location of farm, description, price and terms. Strictly mutual and co-operative between the buyer and seller and conducted for our members. CLEARING HOUSE ASS'N, Land Dept., Palmer and Woodward Ave.

FOR SALE—ACCOUNT OF OLD AGE, good 80 acre farm in Cloverland located in Western Mackinac county, Mich. Good soil, 35 acres cleared, balance pasture with some timber. Good six room frame house, good orchard, fairly good barn, henhouse, hoghouse and tool shed. In good farming community, 1-4 mile to schoolhouse, on star mail route. 7 miles to R. R station. Price $2,200, half down. Write for particulars. Address owner, John Carlson, Gould City, Mich.

151-ACRE MICHIGAN FARM, $9500, with 8 horses, several cows, all kinds of farm machinery, crops, etc., near big town with all advantages. 111 acres fertile tillage, last year's hay crop 150 tons 3 big cuttings alfalfa each year, river-watered 40-cow pasture, wire-fenced; wood, timber, orchards. Farm income last year $5,270. 11-room house, overlooking lake 80 rods away, large cow, horse and hay barns. Owner retiring. $9,500 gets all, only $2,500 down cash required. Details page 80 big 100 page Fall Catalog, just out, farm bargains Maine to Florida and west to Nebraska; copy free. STROUT FARM AGENCY, 814 B E, Ford Bldg., Detroit.

FARM FOR SALE—97 ACRES, 90 cleared, balance No. 1 second growth. Also some saw timber. 7 acres No. 1 orchard. Good frame basement barn with 30 ft. silo New garage and shop, 14x28. Well with wind pump and 80 barrel supply tank. 6 room house with good cellar and all necessary outbuildings. Soil, sandy clay loam. Land in good state of cultivation and practically level. Price $85.00 per acre. Reason for selling; Am going to quit farming. A. G. Berg, Bellaire, Mich.

MISCELLANEOUS

FOR SALE—AUTOMOBILE, REGAL light four, fully equipped. Spot light, new tires. A bargain, $400.00. Must sell. A. T. Harris, Riverdale, Mich.

FOR BARGAINS IN NEW AND USED watches write the Clare Jewelry Co., for special bargain sheet. We also do watch repairing. Lock Box 535, Clare, Mich.

FOR SALE—MOLINE TRACTOR IN perfect condition; our farm is too rough for it. Will demonstrate what it will do on level ground. Fred K. Dibble, Frankfort, Mich.

Got 177 Eggs Instead of 3

Says One Subscriber

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Afew cents worth of "More Eggs" brings amazing results.

During Moulting

your hens will need "More Eggs" to hasten the moult, revitalize their organs and put them in fine laying condition. If you wish to try this great profit maker, write E. J. Reefer, poultry expert, 4206 Reefer Bldg., Kansas City, Mo., who will send you prepaid, a season's supply of "More Eggs" Tonic for $1. A million dollar bank guarantees absolute satisfaction or your dollar returned on request and the tonic costs you nothing. Send a dollar today. Profit by the experience of a man who has made a fortune out of poultry.

MARKET FLASHES

(*Continued from page* 10)

previous years we find that demand for the various grades of butter was so nearly equal that the range of values between the different grades, as for instance between an extra and a first, was very narrow up until recently. However, of late, that condition has changed to a very marked degree. Seemingly, people in all walks of life want nothing but the very best in the line of food products. If one will stand but a few minutes in one of the grocery stores in a large city and take note of the purchases of the patrons of that store he will be surprised to see that with products such as butter, eggs, vegetables, etc., the medium priced articles are not selected but rather those which are of the very best quality and for which top prices must be paid. Possibly that state of affairs may change with the readjustment of conditions brought on by the great war, which eventually must come, but it is very doubtful that there ever will be the demand for products of medium quality that there was in former years. That statement pertains in particular to butter.

The general condition of the butter market has not materially changed during the past few weeks. The price of extras and higher scoring butter has gradually worked upward while there has been a downward tendency to prices of undergrades. Since last Saturday, the total increase in the quotation of high quality butter has been 1c, while the decline in price of undergrades has been an equal amount. There are, doubtless, 50 cars of butter which will score 88-89 in this city at present for which no buyer can be found. That goes to show the attitude of the consumer toward anything but the very best in butter. Quotations at the close on Friday were: extras, 58@58 1-2c; higher scoring than extras, 59@59 1-2c; firsts, 51 1-2@57 1-2c; and seconds, 49@51 1-2c.

MORE INTEREST IN APPLES

NEW YORK, Sept. 20.—More interest is being taken in apples this week, particularly in red fruit, which is meeting with an excellent demand at somewhat better prices. Green fruit, however, is not doing as well, with the exception of a few fancy Fall Pippins and Greenings, which of the other barrel apples are moving bring as high as $6.50@7. The bulk slowly at somewhat lower figures. The general range on No. 1 fruit is $5@7, according to variety and quality. Some exceedingly fine Wealthies are bringing as high at $10, but there are not many of these. Basket apples are working out slowly at about the same prices as last week. Some fruit from Deleware is arriving and selling mainly $1.25@1.50 basket, with off grades and windfalls 50@1.25.

CHICAGO—Market shows a firm tone, which still prevails. Buyers want clean and sound eating apples. Arrivals are fairly large and the quality much better than for some time. Barreled offerings are far in excess of busheled and these clean nicely when of desirable quality. Maiden Blush, Alexanders, Wolf Rivers, 20 ounce and Grimes Goldens command $7@7.50 bbl; Jonathans up to $8; Wealthies, $6.50@7; Green Pippins, $6@6.50.

LIVE STOCK

CHICAGO—Hogs, market mostly steady; heavy, $16.50@18; medium, $16.75@18.25; light, $17.25@18.25; light lights, $16@17.75; heavy packing sows, smooth, $16@16.50; packing sows, rough, $15.25@15.75; pigs, $15@16.50. Cattle.—beef steers, stockers and feeders steady to 25c lower, compared with a week ago; she stock, steady to 25c higher; bulls, 50c to 75c lower; calves 50c to $1 higher. Sheep—, killing grades irregularly $1 to $2 lower, choice western lambs declining least; breeding and feeding sheep and lambs, $1.50@2.50.

EAST BUFFALO, N. Y., Sept. 20—With forty-eight cars of cattle on sale today, only eight of which were fresh arrivals, the balance being hold overs. Good cattle sold 25c lower than Monday while common kinds were about steady.

Receipts of hogs today totaled 2,720, and the market was 25 to 35c higher on the light hogs which sold from $18.75 to $18.85. Heavy hogs were slow. The local packers refused to pay the advanced prices for hogs, and eastern demand was the cause of the advance. Heavy hogs were slow and hard to get a bid on. One load, averaging around 300 lbs. was offered to our packers at $18.25 but was not bought. Pigs sold at $17.50; roughs, $15@15.50; stags, $10@13.00.

Receipts of sheep and lambs today were eight cars fresh and 12 cars holdovers. Choice lambs sold from $14.75 to $15, which is 25c higher than yesterday; cull lambs, $10.50@11.50; yearling and sheep are quoted about steady with yesterday; yearlings, $9@10; wethers, $8.50@9; ewes, $7@7.50.

Receipts of calves are 500. Choice calves sold from $24.50 to $25, with a few extra choice up to $25.25. These prices are $1.25 to $1.50 above Thursday. Throwouts, 120 to 140 lbs., $18@20; heavy throwouts, 160 to 190 lbs., $11.50@12.50; heavy fat veal calves, $14.50 to $16.50, as to weight and quality.

DETROIT MARKETS

Hens are quoted higher in Detroit owing to an increase in buying. The market will absorb a large number of hens this week. Chickens are steady and not in special demand, but there is a firm market for geese, and an advance is quoted. Offerings of poultry are not any larger than the market needs. All fruits are firm and in small supply, especially the finer grades. Some cheap peaches have been sold, but the best are scarce and firm. It is the same with apples, the finer grades being scarce and firm. Potatoes are steady and in good demand. All vegetables are active. Dairy products are steady and not specially active. Fresh eggs are scarce and firm, but the supply is ample in other lines.

Apples—Michigan small, $1.75@2; best $1.75@3 per bushel.

Butter—Fresh creamery firsts, 53 3-4c lb.; fresh creamery in 1-lb. bricks, 55@55 1-2c per lb.

Crabapples—$3.50@4 per bu.

Cabbage—Hame grown, 90c@$1 per bushel.

Celery—Michigan, 22@25c per dozen.

Cheese—New York flats, June, 34c; Michigan flats, June, 34c, brick, 34 1-2c; long horn, 30 1-2c; Michigan single daisies, 30c. Wisconsin double daisies, 29c; limburger, 33 1-2c@34 1-2c; domestic block Swiss 40@42c; domestic wheel Swiss, 45@56c.

Cranberries—Cape Cod, $10 per bbl.; $5 per 1-2 bbl. lot.

Dressed calves—Fancy country dressed, 28@29c; choice, 26@27c per lb.

Eggs—Fresh eggs, 47@50c per doz, to quality.

Fresh vegetables—Carrots, $1.75@2 per bu.; cucumbers, home grown $2.25@2.50 per bu.; beets, $1.25@1.50 per bu.; green peppers, $1.75@2 per bu.; rhubarb, 30@40c per doz. radishes, $2.25@2.50 per bu.; green beans, $2@2.25 per bu.; wax beans, $2@2.25 per bu.; parsley, 50@60c per doz.; egg plant, $1.75@2 per doz.

Grapes—Concord, 30@35c; Niagara, 30@35c per 6-lb. basket.

Lettuce—Leaf, $1.25 per bu.; head $1.75@2.25 per crate.

Pears—Bartletts, $4@4.50 per bushel.

Plums—$4@5 per bu.; 85@90c per 1-5 bu. basket.

Peaches—Elbertas, $3.50@4 per bushel.

Tomatoes—Home grown, $1.25@1.50 per bushel.

EATON COUNTY TRACTOR SHOW

The Eaton County Farm Bureau will have a tractor demonstration on the farm of Bertrand Young(2 1-2 miles west of Charlotte on Friday, October 3, writes County Agent, R. C. Decker. Ten tractors will plow on 25 acre of sod land, each tractor having the same sized plot to plow. A large crowd is expected to witness the first exhibit of its kind held in the County. The field managers will be Co. Agents R. V. Tanner, of Barry County, and Paul C. Jamieson of Calhoun County.

FUTURE PROBLEMS OF MILK PRODUCERS

(*Continued from page* 4)

ributors. And the reason for this s the disparity between the cost of production as figured in the various counties, and for which we can perceive no remedy. Production figures will vary according to cost of and, cost of labor, productivity of cows, methods employed, etc. Patently, the figures of neither the majority or the minority can be used to determine the selling price of milk. All that can be done is to strike an average of all production cost figures and use that as a basis. It is the claim of many farmers living in the vicinity of Detroit that the cost of production figures upon which the price to the producer has been determined are not equitable to the entire Detroit area. It is the claim that they are based upon higher producing cows than the average farmer in the area possesses, and that full consideration has not been given to the much greater costs of counties adjoining Wayne. We do not positively know that these claims are just but we have heard them on every side and have not been advised of any contradiction to them. But we must here impress upon the minds of these complaining farmers that this difference in cost must always exist no matter what the plan may be for marketing the product. The causes for them are fundamental and cannot be changed by the farmers themselves. What the farmers in the counties where the cost of production is unavoidably high should aim to do is to increase the quality of their herds and use extreme measures to eliminate waste and inefficiency. In fact, they must do this to compete profitably with the producers of milk in counties farther removed from the big cities which boost the valuation of land and the cost of labor. But until such time as these farmers, upon whom a considerable proportion of the people of Detroit depend for their milk, can effect the necessary economies suggested above, the milk producers association and the agricultural college should, we feel, hasten their efforts to make the cost of production figures upon which the Milk Commission bases its rulings, more representative of the entire area. This done, we believe the complaints of the producers would be largely satisfied and closer harmony would prevail.

We have talked with farmers who are satisfied with the cost of production figures now being used in the Detroit area. We have talked with others who are not satisfied. Examination of the figures compiled in other states shows a wide discrepancy, and leads us to the belief that the methods employed in determining production costs and the judgment of the investigators as to what should fairly enter the legitimate cost are a long ways from perfect.

Ohio Costs Higher

The cost of producing 100 pounds of milk in Ohio, for instance, for the month of July was $4.33. This is in accordance with the figures represented by Prof. Erf of the dairy department of the Ohio State University, and presented in the Sept. 1st issue of the Dairy Farmer by C. W. Holdson of that institution. We are unable to give here the very extensive and detailed figures showing the items which Prof Erf included among his costs, but examination of them convinces us that they are all legitimate. But we must take this fact into consideration, that the Ohio producers are not receiving as high a price for their product as is the Michigan producer, although according to the above figures their costs are much higher.

Selling Prices in Other States

It is the proud claim of the Michigan Milk Producers' Ass'n that the price fixed by the Milk Commission in this state is higher than in any other section. While this is not strictly true, the price is so much higher than that prevailing in the majority of the states, that it gives the producers of Michigan good reason for congratulation. With possibly one or two exceptions the price in the Detroit area is greater than the price in any other section where dairy products are produced in abundance. But there are some sections where the price to the producer is much higher. These are usually cases, however, where the demand is for the highest quality or the production of milk is limited and the demand sets a high price. With this story we are showing both the wholesale and retail prices of milk in various districts throughout the United States.

Michigan Producers Have Little Cause to Complain

We have shown what we believe are very material weaknesses in the present plan of determining the selling price of milk in Detroit. We have acknowledged the worth of this plan so long as it endures; we have given to the executives of the Michigan Milk Producers' Ass'n considerable credit for what it has accomplished during its comparatively brief existence, and we reiterate the hope we have many times expressed that the producers of milk will stick loyally to this association, and do nothing or say nothing that will lose it the confidence of its members. Whatever criticisms Business Farming has indulged in have been directed to certain fundamental inequalities which we still feel exist. What is wrong is wrong. Compromise cannot make it right. The plan we have here discussed cannot endure forever. A substitute, based upon the now generally accepted truism that farmers must and will control the selling price of their products, should be planned. A large surplus of money for this purpose should be had and no further time should be lost in preparing for the crisis that we believe is sure to come sooner or later.

So far as the Detroit Milk Commission is concerned we have heard nothing but praise for the work it is doing. Its decisions have not always been satisfactory to the producers, neither have they to the consumers or the distributors; but these decisions must have been remarkably just to all concerned else they could not have weathered the criticism that has been directed at them from all sides. We believe the producers appreciate what the commission has done to give them a price nearer commensurate with the cost of production than they have ever had before, and are of the same opinion as a large producer who recently said, "This plan is the best we have ever had, and until we can secure something better, the farmers ought to stand behind the commission and give it their fullest support and co-operation."

COMMODITY WAREHOUSE PAYS

(*Continued from page* 5)

which would result in a decrease of rates.

(7) Public ownership means absolute publicity, an established system of accounting, and the right of investigation by every citizen, prohibiting the probability of graft.

Public ownership is no longer a philospohy; nor it is any longer an experiment; it is a proven business method, a successful expedient for meeting the certain vital needs which exist in the industrial world at the present time. The problems of storage are closely interlocked with our agricultural and commercial future as a nation.

New Orleans, where the system has been most thoroughly worked out, feels that such commodity warewarehouses would "not only facilitate the exchange of commodities but would serve as a vehicle of exploitation for the port of New Orleans throughout the Americas, just as our cotton warehouse plant has advertised us throughout the Cotton Belt and our public grain elevator in the grain producing states." The foregoing quotation gives an idea of the confidence which Louisiana has in the specific application of the theories of state ownership. It is hardly possible that Michigan would regret the adoption of such a system, which is no longer an experiment but a demonstrated practical success of benefit to all interests—consumer as well as producer.

We all know that the city is dependent on the country for its industrial welfare. It is the prosperity of the hinterland that makes the city great. If such a system of public ownership of warehouse facilities will contribute to the prosperity of the producer, the farmer it naturally will benefit everyone.

30-Day Trial.

THE SELF-OILING WINDMILL

has become so popular in its first four years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil, preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load.

We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.

Sale will be held on the farm, 2 miles east of Gaines

WARD W. BRONSON, Administrator

DOES QUALITY IN BUTTER PAY?

Does Quality Pay?—In a recent issue of one of the leading trade journals, a statement was made by a correspondent, who is a creamery operator and was formerly a member of the dairy and food force of one of our leading dairy states, that considering the difference in price paid for high quality butter and under-grades it was not profitable for the management of the creamery to exert itself in an endeavor to improve the quality of cream being received. It is the humble opinion of many of us that that individual must have had a moment of hallucination, else did not give the matter sufficient consideration before expressing himself. There is no question but that acertain part of the year that is, when cows are on fresh pasture and the days are fairly cool, or during the storage season for butter, the creamery which almost habitually gets poor cream will turn out a fairly good quality of butter. Even though the butter made at the creamery at that time may grade no higher than a first it sells quite readily because of the strong demand and the price received for it is very little below that paid for an extra because quotations on firsts and extras differ but little and the margin between low and high first is narrow. However, one has to glance at the quotations on butter at present to see that it pays to produce butter of high quality. Is four or five cents pound an item worthy of consideration? If it is not one should make no effort to improve the quality of the cream being received at the creamery. However, if a creamery is making only 75 tubs of butter per week, the difference in value represented in that butter if it were a medium first or an extra would be about $200. That seems to be an item worthy of consideration.

It is profitable for the creamery manager to work for a better quality of product. Not only does he secure a better price for the butter and consequently a better return to the patron but he also causes the patron to take a greater interest in his creamery. As a consequence the creamery community is alive from a dairy standpoint and is progressive in every way. One has only to point to representative creamery communities in the states of Wisconsin and Minnesota to see the proof of the above statement. No creamery can be an entire success unless striving at all times to improve conditions not only within the plant itself but also in the community about it. It is indeed unfortunate that all who are dependent on the dairy cow for income can realize the value from an economic standpoint of high quality production.—*W. B. Lawrence, New York.*

CO-OPERATION

From the Community Miller

"Help one another," the snowflakes said,
As they huddled down in their fleecy bed;
"One of us here would not be felt,
One of us here would quickly melt;
But I'll help you and you help me,
And then, what a big white drift we'll see."

"Help one another," the maple spray
Said to his fellow leaves one day;
"The sun would wither me here alone,
Long enough ere the day is gone,
But I'll help you and you help me,
And then, what a splendid shade ther'll be."

"Help one another," the dewdrop cried,
Sending another drop close to its side;
"The warm south breeze would dry me away,
And I should be done ere noon today;
But I'll help you and you help me,
And we'll make a brook run to the sea."

"Help one another," a grain of sand
Said to another grain just at hand;
"The wind may carry me over the sea
And then O! what will become of me?
But come my brother, give me your hand,
We'll build a mountain and there we'll stand."

So the snowflakes grew to drifts,
The grains of sands to mountains,
The leaves became a pleasant shade
The dewdrops fed the fountains.

A Horse in Harness

is worth a dozen on the sick list. Keep your horses, cattle, sheep and hogs in the pink of condition by feeding them.

BUCKEYE FEEDING MOLASSES

Scientific analysis of molasses proves it to contain the greatest amount of food for the cost, of any known stock food. Make your stock healthier and stronger and at the same time save money.

Mix with the regular stock food.

One man says: "It has surpassed all my expectations. Am feeding a three year old filly and her twenty year old mother and when I hitch them up together it is hard to tell which one is the colt."

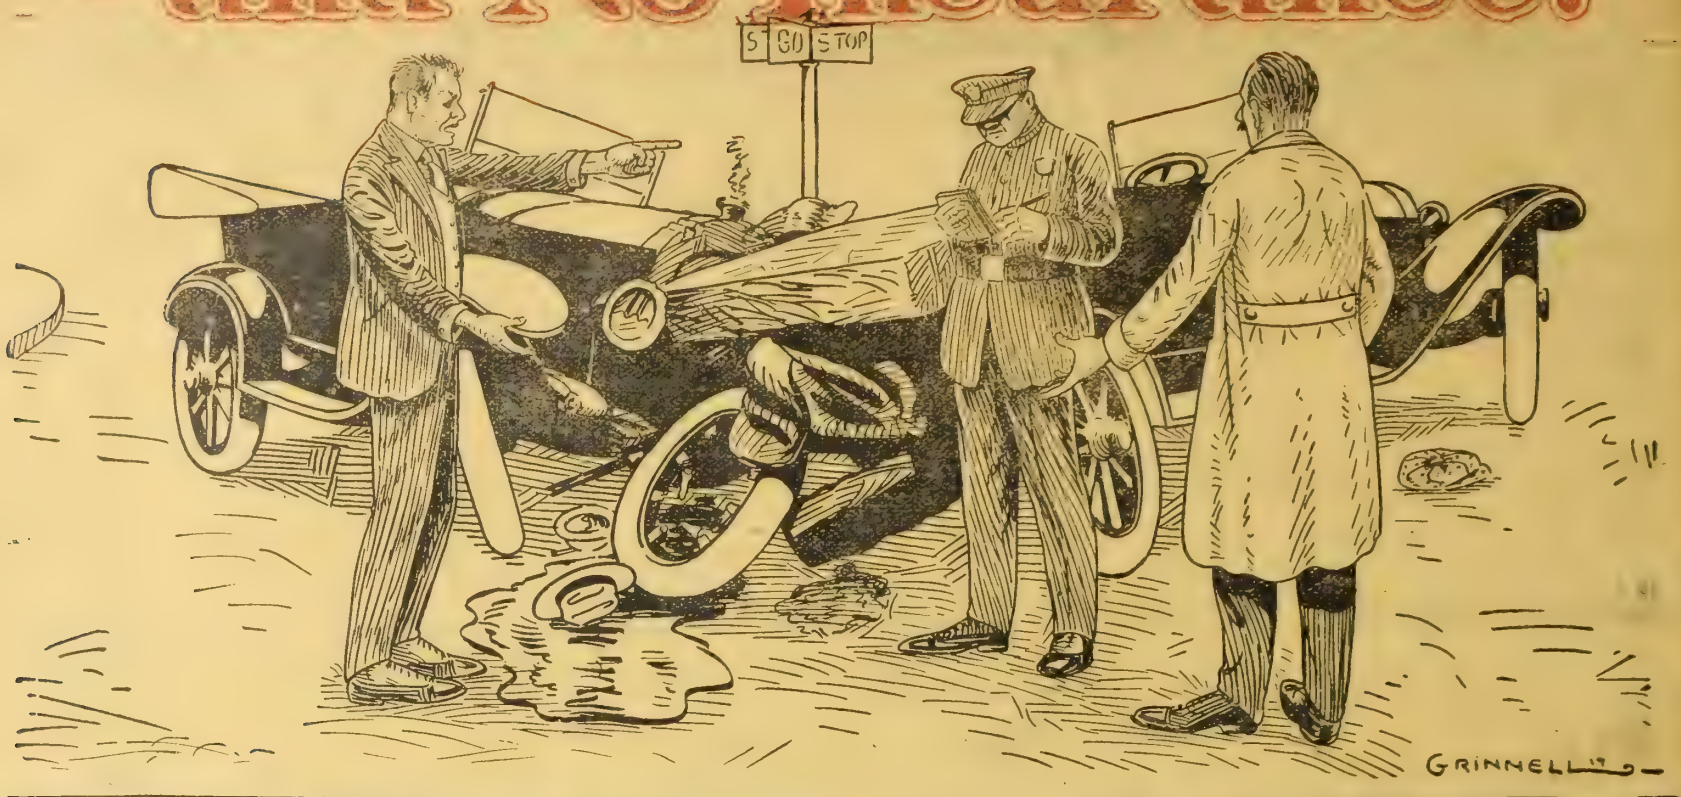
"—and No Insurance!"



CITIZENS MUTUAL AUTOMOBILE INSURANCE CO.

COLLISION INSURANCE is now issued regularly by this mutual company and covers any possible accident which damages your own car. Thus in a collision with another automobile, our members are protected not only for the liability or property damage to the other person's car but when covered by Collision insurance are reimbursed for the damage to their own car.

Collision Insurance covers practically every form of automobile accident, whether you strike a moving vehicle or come up with a telephone pole or bridge.

It is sold only to members of this mutual, who are already protected by our standard policy against Fire, Theft and Liability.

Cost Low

At the small additional charge which we make for Collision Insurance it behooves every member to take advantage of this feature, which allows you to drive with perfect freedom and peace of mind, knowing that every possible catastrophe to which your automobile is kin is insured against.

Once one is a member of this automobile mutual, he wonders how he could ever have driven an automobile knowing that any minute an accident might happen which might cost him many times the value of the car itself.

Rates Unchanged

Altho everything else in this country seems to be vieing for altitude records, there has been no change in the rates of this company since it was organized.

One Dollar for Policy and 25c Per Horse Power

Has been the rate of Michigan's pioneer automobile mutual and it is today the largest of its kind in the world.

Our four hundred agents are scattered over every county in Michigan not only to take your application, but to render you service when trouble comes, when you will find them your best automobile friends.

Just write us a card giving the name and model of your car. We will give you the cost of insuring, by return mail or have one of our courteous agents call on you and care for all the details.

WM. E. ROBB, Secretary,

Citizens' Mutual Auto Insurance Co.,

Michigan's Pioneer and Largest Mutual Auto Insurance Company in the World

Michigan Bean Men Ask Duty on Jap Product

By VERNE E. BURNETT

MICHIGAN BEAN JOBBERS assembled for their 27th annual convention in Detroit, last Wednesday and Thursday, expressed general sentiments which are at last just about in accord with what the bean growers of Michigan have wanted for many years. Representatives of the bean growers were given full opportunity to present their side of the case and they did present it. As Nathan Simpson, general manager of the Gleaner Clearing House, and also representative of the bean growers, expressed it, both bean jobbers and bean growers want the following:

1. Michigan beans should be developed to a quality which will always make them demanded in preference to other kinds.

2. Steps should be taken to produce the largest quantity possible per acreage planted.

3. Cost of production figures should be carefully kept so that both growers and jobbers can figure on a fair profit. Otherwise underpaid growers would raise other, better paying crops and the jobbers would have to handle something else or go out of business.

4. And educational campaign should be begun at once to carry out the above aims among both growers and jobbers, and the public all over the world should be taught to admire the Michigan brand as the best.

Other aims were set forth, but those just mentioned were among the most important. Although little action was taken at the convention, sentiment seemed to be well crystallized along these lines.

Solution for High Costs

Every farmer and every jobber was urged to boost Michigan beans until the public realizes the fact that beans are the best and cheapest food which can be obtained. By stimulating the demand the price is likely to insure a more nearly fair profit. Frank Gerber, president of the National Canners Association, sent a long telegram from his home at Freemont, Mich., to give the message from the National Canners Association to the effect that he and the association are eager to carry on the educational campaign for better beans in Michigan. He advocates for the bean jobbers an educational department to stimulate meetings, co-operative work, study of soils and soil development—all of which would benefit the bean industry of Michigan.

Representatives of the growers pointed out that Michigan formerly was in the lead of all states in the quantity of beans produced. But California has pushed ahead so rapidly that it has twice as many beans for the market this year as Michigan, when the western state's carry over stocks are included. The survey being conducted by Michigan Business Farming through the Michigan bean belt has already revealed the fact that acreages are almost everywhere reduced. The first twenty-five farmers who sent in the questionnaires filled out reported that all but six of the twenty-five had reduced their acreage between twenty-five and fifty per cent. Each mail brings in heaps more of the questionaires showing striking results which will be tabulated in later issues of M. B. F.

The convention was opened by President Christian Breisch, of Lansing, who showed the accomplishments of the past year and the acrobatics of the bean market. He recommended more accurate inspection of beans to make for a higher quality, better price and better reputation for Michigan beans, which are now facing some troublesome competition. Another recommendation of the president was that of crop reports, so that those concerned in the bean business in Michigan could be kept informed to the fullest possible extent. G. A. Brown, of the Isbell Bean Company, of Detroit, gave a talk emphasizing that the public should learn more thoroughly the fact of the cheapness of beans as a factor in stopping the hue and cry about high cost of living.

Business Must be Rebuilt

"We must rebuild business on a more honest, efficient basis," was a high light in the speech by Guy W. Rouse, of Grand Rapids, representing the National Wholesale Grocers Association. He pointed out the uncertainty of market conditions during the war and reconstruction periods we are passing through and the difficulties met both by growers and jobbers, some of whom seem to have had plenty of troubles.

Nathan Simpson, specially called upon to speak by the president and secretary Frank B. Drees, of Lansing, defended the unrest manifested among the farmers. The Non-Partisans of North Dakota, he said, were mostly good men forced into their action because of unscrupulous bankers and elevator men who charged more than traffic could bear. The Non-Partisans are being purged of the bad element within itself and it will probably work out excellently, but the same condition will never exist in Michigan, where the farmers are already supplied with organization which can eventually win the farmer's battle politically.

Bean Growers and Jobbers to Attend Tariff Hearing

CONGRESSMAN Joseph Fordney, as chairman of the Ways and Means Committee has wired the Michigan Bean Jobbers' Association as follows:

"Hearings before the Ways and Means Committee relative to import duties on beans will be held on Monday, October 13, at 10 a. m., Room 321 House Office Bldg., Washington, D. C."

An invitation has been extended to the Bean Growers' Association to appoint a committee to act in conjunction with the Jobbers' committee in presenting the claims of the Michigan bean interests for an import duty on Japanese beans. Representatives of the New York, Rocky Mountain and California Bean Growers' and Jobbers' Association are also expected to be in attendance at the meeting.

Bean Jobbers Fight Shy of Plan to Fix Opening Price of Beans

THE BEAN jobbers discussed almost every angle of the bean situation except that in which the producers of beans at this time are mostly interested, namely, the opening price. Such talk as even remotely hinted at the subject was guarded and leaned a little toward the bearish nature. In justice to the great majority of bean jobbers we must announce our faith in the sincerity of their motives in leaving the subject strictly alone. At the same time we are not blind to the fact that there are certain large jobbers in this state who, if they had the power, would force beans down to a pre-war level, and use every bearish argument at their command to excuse their action. What makes the situation ticklish at this time is that these gentlemen have access to a number of perfectly good reasons for bearing the bean market. There is a saving element to the situation in that the jobers who perceive that the development of the bean industry depends upon a profitable price to the producer are using their best efforts to keep the market at a safe high level. Were the profits of the bean jobbers determined by the selling price of beans, they would doubtless be willing to take a chance on the future of the market and stand for a definite price. Since, however, this is the farmer's funeral and the jobbers' net profits are about the same regardless of the selling price of beans, they are not so interested in a high opening price.

It will be difficult for the grower to differentiate between the actual effect of bearish conditions on the bean market and the artificial effect created by certain of the big jobbers. A rushing of beans to the opening market will be a play directly into the hands of the big bears who are deliberately planning on a "killing" this year. Moreover, it will aggravate the bearishness of the market. But a gradual movement of the crop will go a long ways toward stabilizing the market and keeping it out of the hands of the bears. As we go to press the market is sagging, and it appears that the bears have the upper hand. But as "Nate" Simpson told the bean jobbers, "Go as far as you like in bearing this market, gentlemen. Remember, the farmers are the men who have the beans and they are in a position to withhold them from the market and keep you guessing as to where you are going to get the beans to fill your orders."

Within another week Business Farming will have its survey of bean production costs completed, and will be able to announce the price that farmers must have to break even. When this price is known, it would be folly for the farmers to sell for less, and it is our opinion that Michigan beans still hold a high enough position to eventually secure that price in competition with the beans of other states. There is a coupon published elsewhere in this issue, and it is important that every bean grower fill it out at once and return it to us.

CURRENT MICHIGAN AGRICULTURAL NEWS

200,000 FARMERS AIM OF MEMBERSHIP DRIVE

"Dissatisfaction and unrest over high costs is as prevalent among the farmers of Michigan as among the workingmen in great industrial centers of the country," according to a despatch in a Detroit newspaper, "but the condition in the rural districts is of perhaps greater seriousness, because if it brings about decreased farm production, as agriculturists fear, efforts in the cities to reduce costs of living are bound to [illegible]

[illegible]is grave situation has been [illegible]ized by the executive council of the Michigan State Farm Bureau, an organization subsidized during the war by the government to increase food production, and a campaign has been started to weld the farmers of the state into a great union with ample funds to fight the farmers' battles, procure for them better marketing facilities and endeavor to put farming in Michigan on a basis where it will be a profitable business instead of merely a vocation.

"In this campaign it is planned to canvass the 200,000 farmers of the state and affiliate them with county organizations that will be federated as a state body. As planned by the executive board of the state farm bureau, consisting of Roland Morrell, of Benton Harbor; C. A. Bingham, of Birmingham; R. G. Potts, of Washington; Frank Vanderbloom, of Marquette; Fred Van Norsdall, of Three Rivers; A. J. Rogers, Jr., of Beulah; Fred Cornair, of Chesaning; J. P. Munson, of Grand Rapids; A. E. Illenden, of Adrian; Alfred Hendrickson, of Shelby; James Nicol, of South Haven; Robert Montieth, of Martin; Mrs. John Ketcham, of Hastings; Miss Flora Buell, of Ann Arbor; Arlie Hopkins, of Bear Lake, and J. A. Hasselman, of East Lansing, the work of organization will be done by counties, Oakland being the first visited. Activities here were started last week.

"The Michigan Farm Bureau, as it exists now, has neither the membership nor funds to promote the farmers' interests in a comprehensive and profitable way. The membership campaign is expected to line up a majority of the agriculturists behind the movement and if this success is attained the treasury will contain money enough to get a 'square deal' for the farmer economically and politically.

"According to C. A. Bingham, state secretary, the idea of a union of the farmers is being eagerly received in every part of the state it has reached, particularly when the explanation is made that the new organization will work in harmony with all other farm organizations, such as the Grangers and the Gleaners.

"In many ways the contemplated organization resembles the Non-Partisan League of the Dakotas, but instead of being primarily a political organization like the Non-Partisan league, it is designed primarily for the economic betterment of farmers. Its political activities will be limited. No candidates for public offices will be put in the field, but the sessions of the legislature will be closely watched for measures inimical to the farmers' interests and measures favorable to them will be promoted.

"It will have absolutely no affiliation with the Non-Partisan league, but will be united with a national organization of the various state farm bureau federations that will be formed at a congress in Chicago in November."

BEAN COMPANY SELLS OUT

The Michigan Bean Company located at Port Huron, has recently been sold to a new company, consisting of several well-known county grain men, all of whom have had years of experience in a local and in a jobbing way. The new company will be known as the Chamberlain-Holmes-Jeffords Co., and will handle wholesale beans, grain, hay and potatoes.

Michigan Man Solves Ditch Problem With Dynamite

By GUY G. MEANS

DITCH CONTRACTORS and farmers in the southern peninsula of Michigan tell me that of all ditching and drainage problems that confront land owners of the low lying sections of the state, that of ditching muck is the most difficult. In connection with Mr. H. L. Ostrander, of Legrand, Michigan, I made a study of this problem. We decided to try out ditching with dynamite.

Mr. Ostrander was advised by the explosive manufacturers to purchase 50 per cent straight dynamite for the job, since in using this more sensitive dynamite, it is not necessary to use more than one cap in a considerable yardage of ditch. This method is called the propagated method and will work only in very moist, wet or wawater covered soil. Since muck is always in this condition the method is always the best.

The ditch which Mr. Ostrander desired dug was about thirty rods in length and ran through the worst strip of log and stump infested piece of wet land that I ever saw. The neighbors of Mr. Ostrander were not at all reluctant about questioning his sanity when he talked of blasting a ditch.

The picture here shows the character of the right of way for the ditch as it was when the dynamite was planted for the blast. The soft muck under the stumps and logs was about three feet deep and under that was a hard layer of gravel.

The line of the ditch was laid out so as to straighten the old crooked creek bed which overflowed at every rain and at no time thoroughly drained the several acres of fertile bottom and the adjoining hillsides.

The farmers and laborers present who had done that type of ditching by hand agreed that no man could dig even one rod per day and that a man could not be secured to work at that type of work less than $5.00 per day. In other words, there was not a laborer present who would agree to do the work except for big pay.

We sunk bore holes 2 1-2 feet deep along the center line every 18 inches with an ordinary 1 1-2 inch crow bar. Into each of these was placed one cartridge (1-2 pound) of the straight dynamite. We shot three sections of about 10 rods. The propagated method was used on all and there was no trouble in firing each section with one cap in the center.

The resulting ditch was about 10 feet wide at top; 4 feet at bottom and from 3 to 4 feet deep. This was somewhat larger than was actually needed. The picture showing the ditch was taken the next morning after the shot and the curve at bunch of small snags, or upper end of the blasted portion where the new ditch tapped the bend of the old creek. Numerous stumps at the side of the ditch were white cedar and on the right of way. Practically no heavier loading was required to move them over to the side.

The cost of the ditch was as follows: Labor, planting dynamite only, no other required, $5.00; 125 pounds of 50 per cent straight dynamite at $23.50 per cwt., $31.87; total cost of thirty rods of ditch, $36.87.

In other words, the right of way was cleared and the ditch blown at one operation and required only about five hours time for three men By hand, one man could not have dug it in a month.

The importance of this experiment can be estimated when it is stated by the college authorities and county agents that there are thousands of acres of this fertile muck land in nearly all parts of Michigan. This land drained is better for agricultural purposes than cut over lands.

CONTEST DRAWS CROWDS

The milking contest at the Northern District Fair, according to the Cadillac News, attracted possibly as much interest among the farmers as any other exhibit. Owing to the fact that the event was not arranged until a few days before the fair there are only three entries this year, but the wide comment that is being aroused is evidence that there will be many more another year, now that the conditions are thoroughly understood.

JACKSON MARKET OPENS

Jackson opened recently its municipal vegetable market on the property donated by Mrs. Leila Y. Post-Montgomery, and which is located on Jackson street, directly opposite from Fire State No. 1. According to Mayor Ryan all producers of vegetables or fruits may drive to the market and without cost or license sell their commodities to the public. Hucksters or persons who buy products from producers will not be allowed to sell at the market, the mayor declared.

NEW WORKER IN "THUMB"

Bert Trumble, former editor of the Review at Elkton, who recently sold that paper on account of ill health, not being able to stand the indoor work has accepted the position of field worker for the Gleaners. He will have charge of the field work in Sanilac, Tuscola and Huron counties and it will be his duty to assist the various arbors in their many problems, and to put new life into the meetings. His experience well fits him for this position and the Gleaners of the local arbors may call upon him at any time.

BIG TRACTOR TRY-OUT BILLED FOR OCTOBER

Farmers near Allegan who are at all interested in tractors and tractor shows are urged by County Agent Alfred Bental to reserve the afternoon of Tuesday, October 7, for what he believes will be a very interesting event. A tractor demonstration on the H. G. Weeks farm in Allegan township will be given.

The following machines are promised: Heider, Titan, I. H. C. 8-16 Samon, Fordson and Cletrac; other machines are being arranged for. In view of the continued labor scarcity it seems as if machinery must come more and more into play in farming operations, and the tractors are sure going to help solve at least a part of the labor problems.

The Farm Bureau is of course not interested in any particular make of machine but this demonstration is being arranged by the Farm Bureau with the co-operation of the manufactures so that the farmers may have an opportunity of seeing the different machines actually at work in the field.

BEAN MEN HOLD MEETING

An all day meeting of the Central Michigan Bean Dealers and Jobbers Association was held in the parlors of the Wright House in Alma, which was one of the best attended meetings that the association has held in the past few years. The meeting was a special one called for the purpose of arriving at some definite conclusion of securing a bureau of final inspection for Michigan beans.

Plans were advanced and thoroughly discussed by the members of the association, but nothing was agreed upon by the time for the adjournment and the president was instructed to appoint a committee to work out some method of taking care of the troublesome proposition.

MACOMB COUNTY GREETS NEW AGRICULTURAL AGENT

Macomb County farmers were glad to learn of the arrival of the new county agricultural agent, Erwin O. Anderson, succeeding H. V. Kittle, who accomplished such excellent work in Macomb. Mr. Anderson arrived in Mt. Clemens September 23 and rolled up his shirt sleeves for the big job confronting him. Through various representatives of the farming industry of Macomb, he has been eagerly greeted in his new work.

Mr. Anderson is a native of a Michigan farm and worked on one for about a score or so of years. He was graduated from the Michigan Agricultural College, specializing in dairy husbandry. He continued his education at the University of Wisconsin, where he specialized in agricultural economics. After further farm work, he accepted a chair in the faculty of Pennsylvania State College, to teach farm management, co-operation and marketing and cost accounting.

During this period Mr. Anderson farmed it during the summers and never got out of touch with the practical end of the business. Two years ago he answered the call of county agent work and made and ace high score of accomplishments in Carolina County, Maryland. He was glad, however, to get an opportunity to return to his native state, and responded to the request from Macomb County.

ARMY WORMS IN MICHIGAN

Reports of a dangerous outbreak of army worms in the Thumb district of Michigan, chiefly in Sanilac, Huron and Tuscola counties, have been received by the Michigan Agricultural College. The army worms, which derive their name from a habit of marching like an army from one field to another, destroy all crops they come in contact with, eating or cutting down practically everything. Reports indicate slight outbreaks in other parts of the State, but the chief danger seems to be in the so-called Thumb counties. The worms are later than usual this year, according to Prof. R. J. Pettit, M. A. C. Entomologist.

That the worms be checked in their efforts to spread or march to new fields is extremely important. Prof. Pettit advises this recipe:

"Sift together one pound of paris green or 3-4 pound of white arsenic (not arsenate of lead) and 20 pounds of bran; add half a gallon of molasses or syrup and a little water, and stir in three oranges or lemons, ground fine in a food chopper, skins and all. This may be broadcasted over from 2 to 5 acres of land. It is very attractive to both cut-worms and to grasshoppers. Do not try to substitute any other poison for the paris-green or white arsenic. Neither arsenate of lead nor arsenate of calcium will do the work unless very large quantities of the poison are used. Neither should one use this bait where poultry are likely to pick up much of it, although the bait should be distributed in a finely broken up condition rather than in lumps."

A man might travel the straight and narrow path in a big place for weeks and meet nobody he knows; but let him once step aside and start to do something foolish and everybody he ever met seems to be aware of it.—Detroit Free Press.

Detroit Commission Keeps Same Milk Prices

Members Admit Higher Price Would Be Fair, But They Feared Wrath of Public

PRODUCERS OF MILK in the area extending through several counties near Detroit will get no increase in the price of milk for the time being, according to the ruling of the Detroit Milk Commission at its session last Saturday morning in Detroit. Likewise the price will remain the same to the consumers in Detroit, or 16 cents per quart and 10 per pint. The $4.05 per hundredweight will continue to be the producers figure for the time being, namely, October and November.

As usual both the producers and the distributors gave strong pleas, the producers to advance the producers price to $4.80 so that he could get cost of production and a profit sufficient to keep him in the milk producing business. But the distributors gave forceful arguments to show that the public would not at this time endure any increase in price. The public has been set on edge by months of the impassioned talk about the high cost of food, in the city newspapers, and seldom has the farmer's side of the question been presented. The distributors asserted that the public's impatience had been strained close to the breaking point and that the earnest efforts of the commission to obtain fairness for all parties concerned might be set at naught.

Admits Price Insufficient

Prof. A. C. Anderson, of the Michigan Agricultural College, member of the Milk Commission and famous as an authority on production costs, gave the statement which appeared in the press in Detroit as follows:

"The Commission realizes the producer is not getting enough for his milk to cover the cost of production, and that the distributor is working on too close a margin. But it is also clear that the public will not pay for dearer milk at this time."

This was in line with the argument presented by the spokesman of the Detroit distributors, W. J. Kennedy, of the Towar Creamery Company. Mr. Kennedy said, "Don't kill the goose that layed the golden egg. The public will stand for just so much and I think the limit of its patience has been reached."

He went on to show how other big cities were not charging more than Detroit, some of them even less. To be sure, he made little or no reference to dozens of big centers in various parts of the nation which are paying much more than Detroiters are. Those figures may be found in the last issue of MICHIGAN BUSINESS FARMING.

Mr. Kennedy stated that condensers were able to buy milk from Michigan producers for around $3.30 a hundred pounds. He said that condensed milk prices had gone up in Detroit 15 per cent in the past 60 days. Picking out the cities paying lower prices than Detroit, he enumerated:

Cleveland, $3.69 a hundred pounds to producer, 15 cents a quart and 9 cents a pint to consumer; St. Louis, $3.40 to producer, 16 and 9 cents to consumer; New York, $3.31 and 16 and 9 cents; Cincinnati, $3.45 and 14 and 8 cents; Chicago, $3.63 and 15 and 8 cents.

The question of changing the existing rate of 4 cents a pound in crease or decrease in price to the producer, as the milk varies above or below the standard or 3.5 per cent. butter fat, was laid over to the December meeting of the commission.

Nathan Hull Defends Producers

Nathan Hull, president of the Michigan Producers' Association, spoke well in behalf of the producers. In the rich dairy county of Livingstone, he showed how it cost only about $4.03 to produce a hundred pounds of milk. But other places in the Detroit area he showed conclusively that the cost of production is around $4.37 per hundredweight. He added 10 per cent to this figure for profit which the farmer as an investor should earn. That would make a total of $4.30 which the Farmer should get for his milk in order to keep in the business and make it pay.

Mr. Hull said that prices for the producer must go up if the farmer can compete with the employers of labor in the cities. Producers and distributors may be driven out of business by the low prices paid. But can the consumers go out of business?

Are these dairy herds to be sacrificed for want of profit?

Professor Anderson also showed that the farmer should get an increase in order to get at least cost of production. He is in charge of investigations which show that even in Livingstone County farmers have been losing on each and every cow since 1916. Last year they last $18 per cow.

What of the Future?

Farmer representatives went away from the meeting satified that they were going to get at least part of the raise they had asked for at the meeting by the failure to get a better price. The consuming public should not be hurt, but it is really cutting its own throat in forcing the farmers out of business—out of producing the things vital to the consuming public.

Farm leaders urge farmers to go into the branch of the farming business which pays them fairly. They used to urge the farmers to plant every available foot of ground during the war as a patriotic duty. To urge the farmers to continue this at a loss would be encouraging a business suicide.

Go into the branch of the business that pays a fair profit is the slogan of various farm leaders to the business farmers of today. The public is bound to realize this fact sooner or later and must give the farmer a fair price in order to have anything to eat. Encouragement is seen in the fair attitude of the Detroit Milk Commission. Such organizations nearly everywhere are realizing that the farmer is selling at a dead loss and it is hoped that they soon will have the courage of their convictions and that the public will be fair enough to do the square thing.

The next meeting of the Commission is about two months away. In some ways it will be a crisis for many dairy farmers in Michigan—and much the same problem applies to all parts of the state as to the Southeastern section. Buyers from Texas and elsewhere are paying premium prices for Michigan cattle and many have been selling off their stock in this state ever since milk producing ceased to pay. Unless the fair price is granted soon, this movement is bound to continue.

What Does it Cost to Grow Beans in Michigan

MICHIGAN bean men are going to ask for an import duty on Japanese beans. Do you know why this is? Because Japanese beans are produced by the cheapest labor in the world, on cheap land, and can be sold at a great deal lower price than beans grown in the United States. Moreover, having free access to the markets of this country they are being sold and have been sold for some time in ruinous competition with the home-grown article. It is plain to be seen that the Japanese article will eventually destroy the bean industry in this country if the government continues longer to admit it free of duty to our markets. No one except those interested in Japanese beans wants this to happen, and the only way to prevent its happening is to put a high enough duty on Japanese beans so that Japanese growers can not sell at less than the domestic produce.

Congressman Jos. Fordney, chairman of the Ways and Means committee, has arranged a hearing for Monday, Oct. 13th, before which the bean men, both jobbers and growers, of Michigan and other bean states, may appear and present their claims for an import duty on Japanese beans. Naturally this committee will not take the mere word of these bean men that such a duty is necessary. They must have FACTS. They must have facts to prove that the bean growers of this country CANNOT produce beans in competition with Japan growers. They must have facts to prove that the cost of production in this country is as high if not higher than the wholesale price of Japanese beans. They will want to know what it costs the individual farmer to grow this product, and MICHIGAN BUSINESS FARMING wants to be prepared to submit this data direct from the farmers themselves. This publication will have a representative at the hearing, but nothing that we might say or any member of the various committees who are to attend might say, can have greater effect than the statements of the farmers themselves. So it is of the utmost necessity that our readers who grow beans advise us at once what their costs are. Do not think that this is a matter of no importance. On the contrary, we can think of nothing that is of greater importance to the average bean grower. For two years we have grown beans in the face of fluctuating and uncertain markets and most farmers have lost money at the prevailing prices. We have cited what the past influences have been to undermine the market, and we now know that the future holds no greater menace than the uninterupted flow of Japanese beans into this country. Perhaps the future of this entire industry, so far as Michigan is concerned, hinges upon the action of congress in adopting an import duty. Let it not be said that a single producer of beans neglected to do his part in helping to build a protection against this industry by failing to give us at this time the simple information desired. The Michigan Legislative Boxing Club Joke

By JAMES W. HELME

(Third of a series of articles by Mr. Helme.)

FROM TIME to time when our legislatures are in session appear various sporting gentlemen with bills to provide "for the regulation, control and supervision of boxing, sparring and wrestling exhibitions." These gentlemen are very smooth persons and they are greatly concerned that the state should supervise these contests. They are against prize fighting—perish the thought that they should condone such a brutal sport, which is, and always has been against the law. Oh, no, they want boxing matches so controlled that there shall be no rough work. Boxers must wear gloves that weigh at least three ounces each. Rounds shall not be more than three minutes with one minute rests between, which strange to say, are the rules of the prize ring. Now, our members of the legislature are innocent gentlemen, many of them just out of the brush who are easily gullible to the fine words and splendid sentiments of the aforesaid sporting gentlemen. I recollect that when I was in the Senate of 1899 some sporting gentlemen picked out one of the Senators, who by the way was a minister of the Gospel and got him to introduce a measure to supervise "athletic contests." He was somewhat surprised the next day to read a screaming headline in a Detroit paper which read: "Minister introduces a bill to legalize prize fighting." It gave him a great shock and he dropped it with a dull thud. Every session since these gentlemen have been pushing a similar bill without avail, but this year owing to the fact that there were an unusual number of innocent and unsuspicious members in our law making body, we now have a law to legalize prize fighting. No, I should not make the statement so offensive—"athletic contests." This law provides that we shall have a State Athletic Commissioner at $3,500 per year, a board of four members who shall receive a per diem of $10 per day and traveling expenses and $5.00 per day for hotel bills when away from home. The bill provides for a tax of 10 per cent on admission fees to said contests to take care of these salaries and if over $10,000 is collected, the balance goes into the school fund to teach athletics in the public schools.

All bills under our constitution take effect ninety days after the last day of session, except appropriation bills and "bills necessary for the public health, peace and safety." These sporting gentlemen persuaded the legislature that the public health, peace and safety demanded that "athletic contests" be supervised at once and so the bill was given immediate effect and is now a law and we are having "athletic contests" properly supervised under this law by our Athletic commissioner. An athletic contest was recently held under this law at Kalamazoo. The Associated Press gives the following account of it:

> "Kalamazoo, August 20.—Frankie Brennan of Detroit and Jack Herrick of Kewanee, Ill., middleweights, fought 10 of the fastest rounds ever seen in Kalamazoo to a draw here tonight at the New Kalamazoo Athletic Club. Herrick led in the fifth, sxith and seventh rounds, Brennan in the first second and ninth, with honors slightly in Herrick's favor up to the ninth, when he ran into a left uppercut to the jaw and went down for the count of nine, again for a full count, and barely weathered the storm. Brennan tried hard for a knockout in the tenth, but Herrick came back strong and the decision of a draw met with unanimous approval."

Recently at Detroit an "athletic contest" was held between one Sharkey and one Herman who in other states are known as prize fighters. These gentlemen boxed each other around considerably but didn't hurt each other whereupon the crowd in attendance set up a howl that they wanted their money back because the principals didn't fight. The misguided crowd didn't know that our sapient solons had passed this law to prevent any rough work.

However, the crowd was appeased by the result of a preliminary contest between Ernie Berriean and K. O. Brown of Toledo. ADetroit sporting editor after recounting that Brown was knocked down several times during the six rounds the contest lasted, makes this statement:

> "Brown collapsed from physical exhaustion in the last round. He was carried to his corner where he crumpled in a dead faint. He was stretched out on the floor of the ring and two physicians called. They worked over his prostrate body for quite a while before he became semi-conscious. Brown was carried to his corner and placed on a chair only to become utterly unconscious again in a few seconds and collapsed to the floor. The physicians worked over him several minutes more before he became semi-conscious a second time and could be carried out of the hall. Brown was taken to the Receiving Hospital and spent the night there."

We are not criticising the legislature for passing this law legalizing prize fights . . . Far from it, but our condemnation can not be severe enough on those sporting men who pushed the bill and took undue advantage of some perfectly innocent and guileless members of our legislature. The only thing we can't understand is why these members gulped down all the hot air the sportsmen handed out to them but when Slocum and Ketcham urged them to submit the warehouse bill to a vote they were afraid to trust the people. The legislative joke in this prize fighting bill is on Brothers Slocum and Ketcham who failed to make as good an impression on the legislature as the prize fighters lobby.

Here is the farm home of E. N. Slough, Gagetown, Mich., a typical residence of the 200,000 business farmers in Michigan.

Consumers Begin to Learn Truth About Farmers

Business of Farming is the Basic Industry Upon Which All Others Depend

MR CONSUMER is beginning to get at least half truths about the farmer's situation, thru the columns of certain big magazines and newspapers. Throughout the summer and early fall in the clamor against profiteering, the farmer was blamed by city people as being one of the chief trouble makers. This blame was largely a result of propaganda of the city profiteers who "passed the buck" onto the farmers. But many investigations are getting somewhere near the truth and the city manipulators who overcharge and gamble are uncovered in their lair. Thus editors who have been learning the truth are beginning to show the farmer's side of it more than formerly.

It is pointed out by one great magazine, Collier's, that the word "farmer" does not really apply to the person who works five or ten acres of truck on the outskirts of a city and who perhaps charges excessive rates to the city buyers. But, it points out, the real farmer is the man who sows the wide fields with wheat and corn, rye, barley, oats, beans, potatoes and other vital necessities. The business of farming is the vital business, the basic industry without without which no other industry could operate.

Farming, however, is facing a critical time. In spite of some prosperous sections here and there, a vast number of farmers are almost pushed against the wall. There are counties where the windows of the farm homes are being boarded up and the families moving to the cities. The dragging of prices this season down below the cost of production is a staggering blow. There is even serious talk of a general strike by the farmers.

The full page editorial in the "National Weekly" this week, does not take up the farmer's side so heartily as Michigan Business Farming would do, but the article has many good ideas worth everyone's reading. Moreover the article is typical of an encouraging tendency which has begun to show itself in the press circulating among the public at large. The article follows:

A letter which the editor of a farm paper sent recently to a new editorial correspondent in the South has fallen by chance into our hands. Here is the concluding paragraph:

Remember that folks on farms are very much like folks in the city. They have the same hopes and wishes, the same likes and dislikes. If you still entertain the "hayseed" idea, get it out of your head. There are no hayseeds any more. Generally speaking, people on the farm are nowadays just as well educated, as progressive, and as fine-grained as people anywhere, and usually a lot better off physically and otherwise than the majority of men and women in the cities.

We are living in a time of trends and of changing conditions. Some are alarming. Others are reassuring. One thing we would like to believe—and have much reason to believe—is that city people and country people are beginning at last to know each other better; and, as a result, are taking a keen and intelligent interest in one another's affairs.

Around town, certainly, there is much talk of "the farmers." Every now and then the hard word, profiteer is used in this connection. But the tenor of the talk matters little; the main thing is that the city man, after all these years, is now becoming interested in the farmer and the farmer's business.

The farmer beyond doubt has always been interested in the city man. For generations he has been envious of the comforts of city life, with its labor-saving devices and its short hours of work. Within the last few years he has ecquired many of these.

There is a real farmer, a Kansas business man of the soil, who took a degree with distinction from an Eastern college. He comes to New York occasionally. He does not resemble the old-fashioned farmer. He has the look and the attitude of the successful executive in any large manufacturing business. There follows a quotation from a letter he wrote the other day:

The barrier between the city man and the farmer has always been a mechanical one. The moment we gained the labor-saving machinery and the quick means of transportation and communication that city people have had, we took full advantage of them.

But they have not changed our natures. They have simply allowed us to make farming the really organized, efficient manufacturing business it deserves to be—the greatest basic manufacturing industry in the world. From our raw materials, seed, unfattened stock, and the soil, we turn out our finished products.

In the old days it was different. The struggle then was a pioneer's struggle. The farmer was concerned with getting land, which was cheap and plentiful, and with building a home. He could produce cheaply because land and labor were cheap.

That day has gone. Land and labor are cheap no longer. To succeed, a farmer should have many acres of ground and a working capital of $10,000. If some other business offers a better return on a $10,000 labor investment, the prospective farmer should go into that business, and not into farming.

Above all, the farming man of today should know his costs of production. This is knowledge the old-time farmer never dreamed of, because he was running his place, not as a business, but as a home.

If we could only induce every city business man who now rails at the farmer to come out in the country, buy a farm, and apply to it the methods he uses in running his store or factory, how soon the misunderstanding between the city man and farming man would disappear. . . . . .

So much for this farmer's point of view. It leaves us still facing the present dispute between consumer and producer over the cost of living. Who is to fix the final responsibility? Nobody knows for the time being. Our own guess is that both sides, together with the distributing agencies that lie between them, are all somewhat to blame. Apart from the human desire of the producer to make more money, and the equally human propensity of the consumer to spend money unwisely, you have also a combination of circumstances due to the fact that readjustment following a war of the first magnitude invariably disturbs the normal balance of demand and supply.

Not for a while yet will talk of the rich farmer and the profiteering farmer die down. Not for a while will the suspicion that the city man believes him to be culpable remove itself from the farmer's mind. By farmer, of course, we mean only the man who is in farming as a business. The real farmer has nothing in common with the back-yard farmer, or with the dabbler on five or ten acres —no more than the electrical engineer has to do with the amateur experimenter, or than the president of a high-grade watch factory with the man who takes an alarm clock to pieces for the fun of putting it together again. The home gardener, and the five-acre farmer are splendid in their own way; this kind of soil-working serves the purpose of health and of individual economy. The home garden is an excellent thing when properly managed; every good farm has one. But the real farmer is the man who produces our great supplies of wheat, oats, hay and corn; our beef and pork and mutton and veal. He is the man who runs our basic industry. He is a business man. Of real farmers there are about six million in the United States.

Are these six million men making enormous and unjustifiable profits out of farming?

The facts do not show that they are. They are making more money than ever before—but they never made any money before.

Profit by Making Improvements in the Soil

Study of Fundamentals of the Problem Means Dollars and Cents in Farming Business

By PROF. M. M. McCOOL

NEARLY EVERYONE realizes that we are at the beginning of a new epoch or era. This is a scientific age and successful farming of the immediate future is no exception, and in order to emphasize this we need merely to mention the necessity of making more efficient man power, whfch, of course, involves several phases of farming activities, the desirabilfty of ample working capital, the intelligent use of lime and fertilizers, the marketing of products, and others.

Great interest in the improvement of soils and the maintenance of their productivity is being manifested thru out the country. This is as it should be as no other natural resources compare with the maintenance of soil productivity in its bearing upon the future of the race. This is largely an individual matter, therefore, only as each farmer intelligently tills his land and carefully and conscientiously husbands its resources can the future generations as well as the present population be assured of their food.

Now in order to accomplish this, we as farmers must learn as much about our business as possible. In order to provide opportunities for those who read Michigan Business Farming, there are to appear in its columns during the year discussions of all phases of soils. Many of these will be fundamental and educational in nature, such as are given to farmers in the short courses at the Michigan Agricultural College during the winter months.

The origin and classification of soils will receive considerable attention so that possibly a better understanding of the discussions that follow as well as one's own problems may be had. Next will follow a rather complete discussion of the physical properties of different kinds of soil and their bearing upon their management. By physical properties is meant the chemical analysis of soils and their bearing upon crop production, porosity or soils, affecting ventilation, drainage and retention of plant food as well as soil structure or tilth. Soil moisture and modern views and practices in connection with its conservation and use will receive a great deal of attention.

In addition soil aeration and soil temperature as affecting crop production will be discussed. The modern views regarding the feeding of plants and in addition the composition, value and use of commercial fertilizers are to be fully discussed. The composition and value and reinforcement of stable manure as well as the value of organic matter and methods of maintaining it in the soil will be next considered. Other subjects such as the rotation of crops and soil surveying are to be taken up. Finally, the management of light, medium and heavy, as well as peat and muck soils, in the light of recent experience, will be considered.

Chapter I.

THERE ARE cetain considerations with respect to crop production that should be discussed before we take up the properties and management of soils. In this chapter we are to consider the plant's requirements relative to the climate and the soil during its various periods of growth.

Germination

When good seeds are placed in warm, moist, aerated soil they germinate. During this period they do not require food from outside sources inasmuch as the germs are supplied with that which is stored within the seed. Thus, the proper water content of the soil and warmth are of chief concern. Nearly every one has observed that seed increases greatly in volume, or swollen when brought into contact with water and the swelling is especially rapid if the water is warm. Very often seeds do not germinate because there is not enough water in the soil, and in some cases because they are not in close enough contact with the soil particles, especially is this frequently the case with smaller seeds that are placed in sandy soils. The desirable results that are frequently obtained by firming the soil when clover or alfalfa are seeded on sandy soils are thus accounted for.

The seeds of various crops differ appreciably with respect to the best temperature of the soil for germination. The lowest and best and the highest temperatures found for several crops are given in Table 1.

The relation of temperature to the germination of certain seeds (in degrees Fahrenheit:)

	Lowest	Best	Highest
Corn	49	93	115
Beans	49	93	115
Pumpkin	52	93	115
Wheat	41	84	108
Barley	41	84	99
Rye	much lower	..	...

Thus according to the above, seeds differ markedly in their temperature requirements for germination. Melons require high temperatures, corn medium, and small grains lower temperatures. These conditions are too often overlooked by the farmer. If the moisture content is too great, or the soil too compact, the seed may not germinate on account of lack of air or oxygen. These requirements account in part for the desirability of a well prepared seed bed for most crops.

Upon germination roots are sent downward into the soil before the stem appears above the surface. In some cases the roots penetrate two or more inches before the stem emerges from the soil. This may serve as a protective measure against drouth, as well as a support for the plant, later on in its development. It has been abundantly demonstrated that it is desirable for the seeding to grow vigorously from the start, the future development of the plant being appreciably influenced thereby. Thus, it is essential for maximum crop production to place the seed in favorable environment with respect to the temperature and moisture of the soil.

The Seed

It is now fully recognized that the seed itself is a factor of tremendous importance. The seed of some varieties of crops not only germinate poorly but produce weak seedlings, and hence are called low yielders. Some varieties do much better on some soils and under some climatic conditions than others. Almost every progressive community has certain kinds of varieties of the various crops that are known to be more successful than others, due either to disease resistance or to better adaptation to the soil and climatic conditions. Several of the Agricultural Experiment Stations in this country, as well as many farmers, have done much to increase crop production by improving varieties by means of careful breeding and selection, and subsequently distributing these. The rosen rye, Duncon and other varieties of corn are notable examples. It is unquestionably true that we are rapidly coming to the point where we will have varieties of wheat and other crops to be grown on light and others on heavy soils.

Requirements for Growth

We usually speak of the development of the plant after it appears above the ground, until seed formation, as the vegetative growth. To be sure, it is influenced during this period by many soil and climatic conditions. It is through this period that the plant is obliged to utilize raw materials that are obtained from the soil and the atmosphere, and manufacture food therefrom for its growth and for storage to perpetuate itself.

The soil must furnish to the crop in proper amounts for maximum production the elements nitrogen, phosphorus, potassium, sulphur, calcium, magnesium and iron. With the exception of nitrogen these are derived from minerals in the soil. They must first go into solution before the plant can remove and make use of them. We shall see later on that bringing about conditions in the soil, such that sufficient mineral matter goes into solution during the growing period, is really one of the big problems in soils management. We shall also see that there are many things that affect or govern the amount of minerals in the soil moisture. It will also be shown that the amounts of the above elements removed from the soil varies with different crops, with different stages in their development, with different parts of the crop and the supply of the minerals at their disposal. Moreover, each of the above elements will be shown to affect the development of the crop differently.

The plant must also be supplied with water by the soil. It is made use of by the plant in various ways aiding, of course, in the transportation of the minerals, spoken of above, to various portions of the plant and some of it serves as plant food, forming part of the plant tissues.

He's From Missouri and Has Something to Show

M. M. McCOOL was born and reared on a large general farm in northwestern Missouri. Later 1904 to 1908, he attended the agricultural college. He was employed four seasons, from June to October, by the Missouri State Soil Survey while a student in the University, he being the leader of the first soil survey party sent out by the University. Upon graduation from the University of Missouri he was appointed instructor in Cornell University. While engaged in teaching he was able to carry on graduate studies and complete the doctorate. Beginning 1912 was appointed Assistant Professor of Soils at the Oregon Agricultural College, Corvallis, Oregon, in which capacity he served until 1914. While employey by this institution much time was devoted to the investigation of irrigation and dry farming operations as well as reconnaissance soil survey in the foothills of the Cascade Mountains. In 1914 he was employed as professor and placed in charge of the education and experimental work in Soils at the Michigan Agricultural College in which capacity he has served since that time.

Be Sure to Innoculate Alfalfa Seeding

THERE IS no longer doubt of the value of alfalfa as a forage crop. Farmers are producing it rather extensively, and their results have shown that its successful production is only a matter of clearly understanding its requirements. These requirements are not so unusually different from those of other crops, save in one or two cases which cannot be neglected.

Like other crops, alfalfa does best on a good loam soil which is deep, sweet, well drained, free from weeds and contains a good supply of organic matter and mineral plant foods, especially lime and phosphorus. Quite different from the cereal crops, alfalfa has at least one special requirement which must be understood. This is its need for inoculation, or bacteria which live on its roots. Without giving some attention to this requirement, the beginner in alfalfa may find himself sorely disappointed by a failure in his first venture to produce this great forage crop.

Alfalfa, like soybeans, cowpeas, sweet clover and other legumes, requires special bacteria on its roots for best growth. By means of these bacteria the plant can feed on the nitrogen of the air as well as that in the soil and make better growth on certain soils than crops like corn. Nitrogen so gathered from the air is built into the plant which when fed on the farm or plowed under makes the soil rich. Thru the bacteria the farmer is not only getting a bigger and better crop, but is also taking a big step in maintaining his soil fertility. Without bacteria alfalfa is a "soil robber" the same as non-legume crops and not a "soil builder."

These bacteria are not always naturally present in the soil. For this reason they must be introduced by the practice known as "inoculation" when the crop is seeded for the first time. This can be done in either of two ways. First, by the "soil method" and, second, by "artificial cultures." The surest and most practical way to inoculate is to secure some soil from an old well-inoculated alfalfa field or from a place where sweet clover is growing. Care should be taken to see that such soil is not infested with weed seeds. This soil may then be scattered broadcast at the rate of three hundred to five hundred pounds per acre and harrowed into the ground to be seeded. Try these control methods.

Take some of the soil (with a gallon of water) and thoroly mix this soil with the seed so that every seed grain has a thin coating of dirt. Inoculation may also be effected by mixing a gallon of soil with every bushel of seed to be sown, tho there may be some objection to this method because of injury to the drill by the sand in the soil.

Artificial cultures will also serve for inoculation. These are special bacteria grown for the specific purpose by many commercial firms and most experiment stations. They may lose their power in shipping and careless handling, but as a general rule are reliable. Directions for their use are very simple, and can be used profitably when no well-infected soil can be had.

Regardless of which method is most desirable or most convenient, the important fact is that in the majority of cases where alfalfa is sown for the first time it will need to be inoculated by some artificial means. Innoculation may be new practice to some farmers but that in no way lessens the advisability of seeing that the soil to be seeded to alfalfa has the proper bacteria in it. Inoculation is a simple practice and of such importance in establishing alfalfa that the novice alfalfa grower can't afford to neglect it.

—for all the farmers of Michigan

Why a State Farm Bureau

SPEAKING recently upon a matter of federal legislation in which the farmers had shown some interest, a man of national prominence remarked: "Judging from the influence that is brought to bear by representatives of farm organizations on most important legislation, I take it that the farmers want to have a say in shaping national affairs. But I hardly know who voices the real sentiment of the farmers now-a-days. There are so many different farm organizations, the leaders at least of which seem to have such vastly different opinions on important matters, that it is extremely difficult to tell what the mass of farmers really desire. In a situation of this kind congress should not always be blamed for acting contrary to the wishes of the rural folk, for they are naturally guided by the farm representatives who are most active in presenting their claims before committees.

We have observed many times that this is true. National representatives of farm organizations differ and argue and almost come to verbal blows over great national issues upon which they should unite with the utmost solidarity. Not only does this difference of opinion keep the mind of congress in a continual state of uncertainty as to how the man back on the farm feels about it, but it shows how loose and inharmonious are the various organizations of farmers and greatly lowers the influence of the farmers in the estimate of the law-makers.

As long as this condition exists the farmers will continue to walk around in a circle. Progress in national agricultural reform will be slow and difficult. The farmers do not lack numbers. They lack the machinery to bring those numbers together and weld the sentiment of the majority of those numbers into a powerful instrument that will prod the congressional conscience and move it to action along the line the farmers would have it go. The opportunity has been great in recent years for the score or more of leading farm organizations to smother their silly jealousies and unite for the common good of all farmers, but this they have failed to do.

They have demonstrated their inability to cope with the situation, and have opened wide the gates for a new and perhaps greater farm organization to enter the field of service and lead the farmers in a triumphal march to the heart of national affairs.

We are not yet prepared to say that the State Farm Bureau is the organization that is destined to perform this mighty work. Its form of organization and its principles seem fundamental and worthy of support. If it gives to the farmers a truly representative voice in its affairs, adheres strictly to the purposes it has proclaimed, and puts men at the head of its affairs who hold unswervingly to their ideals and have the energy and ability to cope with the increasing problems of the time, it must succeed. We are willing, yes, we are glad, to give the Michigan State Farm bureau the support of this publication. We believe it comes the nearest to the ideal form of organization for exerting influence in national affairs of any existing organization. It should not and cannot take the place of any other farm organization. On the contrary it should encourage their existence and development. There are vital functions which the farm bureau cannot perform that must be left to the organizations whose members are held together by close social, fraternal or economic bonds. But in matters of state and national policy the various state farm bureaus should be the ideal media thru which farmers may voice their united demands.

To Strike or Not to Strike

THE ATTITUDE of the public upon the steel workers' strike is decidedly one of caution. Even those individuals who in quieter times openly espouse the cause of employers in labor disputes are now taking a safe middle ground and admitting the generally accepted truths that the aituation is "grave," and that "there are probably grievances on both sides." This disposition on the part of those usuallyopposed to all labor movements may be taken as indicating a belief in the justice of the steel strikers' demands.

The strike is a most effective weapon in enforcing the right of collective bargaining. Employers of labor claim that labor should not have this right of collective bargaining, let alone the right to strike. They argue that it tends to make labor inefficient and arbitrary. In the nature of things, this seems to be true. The right of collective bargaining for the purpose of controlling prices is denied to capital by law, yet we have much evidence to prove that capital does resort to collective bargaining despite the law. But capital work quietly and easily evades the law. So capital likewise tends to become inefficient and arbitrary.

Farmers who are asking the right to bargain collectively could not consistently refuse that same right to labor. If the strike is the only effective instrument with which the principal of collective bargaining can be applied, then we must concede to the justice and reasonableness of the strike, whether it be employed by union laborers or organized farmers. But if collective bargaining and the strike are to be legalized certain definite rules should be laid down to prevent their abuse. If a number of workmen are employed under conditions and at wages that are not satisfactory, it should be proper for them to collectively agree to quit work until this grievance is adjusted. If a number of farmers have been selling a certain product for less than cost of production, if should be proper for them to collectively agree to raise no more or sell no more of that product until the public shall be willing to pay them a fair price. But no body of men should be permitted to strike to enforce demands which do not directly concern the welfare of each striking individual. What possible justice is there in a strike over the hiring of a non-union man to fill a vacancy or the discharging of a union man for inefficiency? What moral excuse can there be for labor organizations to picket the property of others, to threaten, attack or otherwise intimidate men who of their own volition seek to take the place of striking workmen at the lathe or furnace?

If the steel workers are striking to better their working condition, they will, we are sure have the sympathy of their fellow citizens thruout the land. But if the steel workers are striking for no better purpose than to force the steel heads to "recognize" their union, their claims will receive scant consideration from those who believe in democracy in business as well as government. Public opinion has never shown itself particularly friendly to the steel "trust" or other great combinations of capital, and even in the present crisis there is a natural tendency on the part of the public to lean to the striking workmen. But at the same time the public recognizes that the steel corporations have certain rights that must be respected and that justice for the steel workers cannot be secured by visiting injustice upon the employers.

The situation should not only command the immediate attention of congress which can do little to patch up the differences without the voluntary co-operation of the parties to the dispute, but it should afford the opportunity for the leading men of the labor organizations and of the employing capitalists to scrutinize the entire relation between employer and employe and seek to bring about a better understanding and a better working arrangement. Capital can the better afford at this time to make concessions. If it will not do this, how can we expect labor to. The issue is a critical one, and a great deal of the prosperity of the country depends upon an early and satisfactory settlement.

• • • •

The Farmer's Wages

IN EFFORTS to determine the cost of producing farm products there is one item that is quite frequently overlooked. That is the wage that is due the farmer for the labor of either his hands or mind or both. The farmer who wields a pitch-fork or follows the plow is no less entitled to a wage for his actual hours of work because he happens to be the owner of the tools he uses or the land he tills than is the man who has no money invested in the work he performs. It is the occasional farmer, rather than the average, who pays himself a wage as a laborer or overseer, or deducts at the end of the year an amount for that purpose when determining his net profits. That the farmer is entitled to such wage is not a new-fangled theory, nor was it first advanced by those early agricultural students who have insisted that the same rules of business that apply to manufacturing or commercial enterprise should also apply to agricultural enterprises. In fact, it is one of the oldest principles of economics, and was discussed and endorsed by many of the leading writers upon the subject. Nearly one hundred and fifty years ago, Adam Smith, in his book "Wealth of Nations," considered as "the best all-around statement and defense of some of the fundamental principles of the science of economics," said:

"Common farmers seldom employ any overseer to direct the general operations of the land. They generally too work a good deal with their own hands, as ploughmen, harrowers, etc. What remains of the crop after paying the rent, (or interest on the land) therefore, should not only replace to them their stock employed in cultivation, together with its ordinary profits, but pay them the wages which is due to them, both as laborers and overseers. Whatever remains, however, after paying the rent and keeping up the stock, is called profit. But wages evidently make a part of it. The farmer, by saving these wages, must necessarily gain them. Wages therefore, are in this case defined with profit."

* * * *

Overheard in the smoking compartment of a Pullman. Well-dressed gentlemen with diamond stud in shirt-front and smoking expensive cigar breaks into the conversation on high cost of living with this: "There's one class of people who haven't any cause for complaint, and that's the farmer. A small town banker told me the other day that all the farmers in his county were getting rich and paying off all their loans." Seedy-looking individual sits up and takes notice. "Makes me sick," he snorted, "to hear some gent who has just cut a forty per cent melon talkin' about the farmer gettin' rich." Well-dressed gentlmen with diamond stud in shirt front keeps on smoking expensive cigar.

* * * *

The cross roads oracle: Now that a whole raft of farmers can afford to own automobiles. they can certainly afford to send their youngsters to college if they want an education. Money put into a machine can't ever pay like that that's invested in trained brains.

* * * *

The cross roads oracle says: You can't expect to get good crops from land that you always treat rough.

* * * *

Our philosopher says: A field is like a horse, it's got to be fed an' handled an' thought about a good deal to be kept in condition.

WHAT THE NEIGHBORS SAY

ARE FARMERS USED RIGHT?

This is the proposition that confronts the farmers—are they being used right? Unrest in all trades but the farmer keeps going on in face of the lowering prices while the merchandise he is obliged to buy keeps going higher. Increased salaries and wages—but the farmer is being made the goat on every side and it's about time the farmer should take up arms for self protection. During the war the farmer stuck by and never whimpered, although many furnished sons for the fighting force of our great armies, furnished the eats and now, when he ought to be well paid back, is getting it in the neck. Even when the government officials do go after the big ones it usually sifts out nothing and the result is higher prices to offset the litigation they were put to the expense of. The farmers have increased production, especially in hogs, cattle and sheep, and today look at the prices we are offered and then look at the price he is forced to pay for bran, wheat middlings and corn products—it is a dollar a hundred weight alone and still they tell you stuff is higher. There is only one way out and that is for the farmers to also get together and stick until we have won.—*M. B. Russell, Arenac Co.*

Farmers everywhere are thinking along the same lines. The old gospel of stick together is getting every day application. The coming legislative session at Lansing will be a battleground for the farmers' rights.—The Editor.

PAYS TO ADVERTISE

I have been reading the Business Farming for 2 years and find good articles on what the farmer should do and I am sure they are willing to do their part in organizing but they need something to lead them. I have decided that the best and quickest way is to advertise, the same as we did in getting the saloon out. And that was by putting out signs. Now the thing for the farmer is to get busy and put out some good signs. They can be painted with a small expense and put upon their farms and highways, such as:

"Farmers must organize," "The Middleman must go," "Sell your own produce." There are hundreds of other good signs. This could be easily done and in a short time the whole state would be awakened and easy to be organized.—*F. E. Reynolds, Lakeview.*

Yours is indeed a good idea, Brother Reynolds. An educational plan might be carried much farther. Farm organizations are beginning to realize the necessity of presenting their side of the situation to the public, just like any other business would do. Hoping your good suggestion takes root.—The Editor.

FARM CONTROLLED CONGRESS

The following is a clipping from "Farm Machinery and Farm Power," regarding the repealing of the Daylight-Saving Act.

"There is little remaining to be said about daylight saving. Literally as well as figuratively we have turned the clock backward. For the first time in our history an honest reform, a measure of indisputable value, an obvious gain, has been deliberately wiped out. We have traded an hour of sunlight for an hour of artificial lighting, on, to be strictly accurate, an hour in the evening for an hour in the morning. The city dweller never gets up for the morning sun anyway and doesn't miss the first sixty minutes after sunrise. The farmer claims he does miss it. In fact, he must have it. And now he is satisfied.

"The city loses a great deal more by the repeal than the country can possibly gain. It costs fortunes to light the cities one hour extra, but what does the country man care for we of the city?

"The demands of the farmers have so overcome the vote-seeking truculent Congress that our misrepresentatives in Washington, in feverish haste to do anything the farmers ask of them, have overlooked the labor votes on the other side, and voted to abolish what other countries have for years enjoyed. But what could be expected o fthis Congress anyway."

Most of us have already read both the "pros and cons" but the writer evidently believes that the "little remaining to be said" should be said against the farmers, and as usual, we needs must make a few remarks in defense of these selfish, Congress-controlling farmers.

It seems it will cost the city dwellers a fortune to light the cities one extra hour, and for the season, that the city dweller "never gets up," or refuses to arise, one hour earlier in the morning. The farmer is unable to use the hour in the morning to as good advantage as the hour at night on account of natural conditions, but the city dwellers' conditions are all man-made.

We are well aware of the fact that the Daylight Saving Plan does not affect us in this locality greatly, but we are willing to accept the change.

However, we will agree with the author of the clipping in his conclusion, and join with him in wondering "what could be expected of this Congress anyway?"—*J. Howard de Spelder, Montcalm Co.*

We are indeed glad to learn from such an authentic source that Congress is listening to the farmers on a measure so vital to farming, the basic industry. It would pay Congress to keep right on listening good and hard and maybe the boys at Lansing would follow the example.—The Editor.

FARM BUREAU ORGANIZATION

We are beginning to use the word, organization, in a new sense. The idea may perhaps best be expressed by the ideals of the Farm Bureau.

It is organization, in the newer meaning of the word, that holds the key to success for the farmer of the future. It is a serious matter when an institution or an individual settles down satisfied with its present established methods and results. We as farmers, should be ambitious to gain something better. We should be always for progress, anxious to be in the front line trenches, never satisfied to stand still. Not, what has been done in the past, but what is next for us to do would be best.

The plans for such organization are now ready. They will be taken up by each county as that county signifies willingness to accept same. The services that will be rendered by such organization will be worthy of the support of every farmer in Michigan. If we wish to take our place in the New Day let us get back of this organization of the farmers, by the farmers, and for the common good of all, that justice and right may prevail and democracy made safe for the world.—*C. A. Bingham, Secretary of Michigan State Farm Bureau.*

Studebaker

THE LIGHT-SIX

A BEAUTIFUL, clean-cut car of 119-inch wheelbase with plenty of room for five passengers, and a 50-horse-power motor that takes you over country roads at top speed and climbs the steepest grades without effort.

On its mahogany-finished instrument board are conveniently grouped a speedometer, oil pressure gauge, ammeter, lighting and ignition switches; upholstery is genuine leather. Gypsy-type top with plate glass windows in the back.

Its power and staying qualities have been extraordinarily demonstrated in the hands of thousands of enthusiastic owners.

Studebaker builds complete in its own factories practically every vital part of this beautiful LIGHT-SIX, thus reducing middlemen's profits to a minimum and making possible such sterling high quality at its unusually low price.

THE LIGHT-SIX $1685 THE BIG-SIX $2135

A Department for the Women

Edited by MABEL CLARE LADD

WOMEN IN POLITICS

The question of how women should vote in local and state matters as well as national affairs has been covered very thoroughly indeed in a little booklet entitled: "What Michigan Women Should Know About Voting," which little booklet also gives the underlying principles of such important questions as government prices, taxation, land, labor and earning a living, competition and co-operation, credit, banking, etc. It is non-partisan and should be in the hands of every Michigan woman voter. Beginning this week we will quote from this little brochure, thus complying with our promise to bring before our readers a complete guide to the main principles on voting. If you want a complete copy of the work, we will be glad to advise how to obtain it:

"How Michigan women will use the ballot has close relation to proper conditions for right living. Many as yet do not realize this. A considerable number have no conception of the importance of the ballot as a weapon both of offense and defense. A vote for or against a candidate or a measure may bring to a community an extravagant or an economical administration. It may elevate to a position of authority one in no way qualified to give the kind of service the community needs or really desires; it may defeat a program of wise expenditure or needed retrenchment; or it may lay the foundation for social and economic reforms sure to be beneficial to the community's morals and prosperity.

Local Voting

"Voting is really a 'home' problem. Women's votes can favorably or disastrously affect the cost of living. To those who have given no attention heretofore to the science of government it may seem a far call to insist that the charges for groceries, or the price of clothing, or the rate for rent, is influenced by some one who may be elected to some office. Yet this is not difficult to prove to any fair-minded elector.

"Take the question of good pavements as an example of how conditions may influence prices. Goods can be delivered more economically on a well paved than on a neglected highway. Deliveries to the warehouse, to the merchant, and, later to the customer, reflect this cost in the prices charged for whatever it bought. Putting it concretely, it may be truthfully said that good roads make potatoes cheaper to the consumer.

"Again, pure water, at cost, and adequate sewers, mean better health and fewer doctors' bills. And this is true of many things in the control of the voters on which they make decisions.

State Politics

"What is true of local voting is also true of state politics. But here one must have a wider vision in order to vote intelligently. For an enlarged horizon changes the perspective. Matters of new concern are very likely to be thrust into the foreground, and policies of great local interest become of minor importance. How about state institutions, for instance? Shall they be run on an eleemosynary or a self-supporting basis? Shall trades be taught in our state prisons? Shall the commonwealth's charitable institutions be conducted as independent units, or shall they be controlled by some central authority?

"One cannot offhand intelligently decide such weighty matters. And though the question as to who shall be clothed with state authority to direct state affairs is momentous, after all, methods assume pressing importance.

National Problems

"As to national affairs, it is absolutely necessary to have some inkling of economic principles, often outside of party platforms, before an intelligent vote can be cast. Shall the nation incline to free trade? Is it best to have a tariff program based on the collection of the least possible sum that will finance the government economically? Or shall 'protection,' meaning the exclusion of foreign products and the purchasing and consuming of American-made goods only be followed? Do you favor an autocracy or a democracy? What does democracy mean? How about communism, socialism, anarchy? Some part of all of these things are already incorporated into our laws and customs? Where is the dividing line between the good and the bad in them?

"How can one vote intelligently on such intricate problems without having some understanding of political economy, once called 'the dismal science,' yet which is nothing but 'the science of the production and distribution of wealth?'

Learning from Others

"After all, voting is a comparatively new proposition, even for men. Not for long have men exercised the 'right,' or 'privilege,' or whatever you may choose to call it. And it needs only a cursory glance at history to see how fearfully men have blundered. But as one of the methods whereby progress is made is to profit by the experience of others, and thus escape engulfing pitfalls, voting women, and especially Michigan women should vote thinkingly.

Thinking Right

"Is the reader beginning to comprehend how important it is that women should think right on candidates methods and policies before entering the voting booth in order that they may cost their ballots in an intelligent manner? She must know more than merely how to mark her ballot. She must have knowledge of general principles in order to know—

"How to vote on local matters.

"How to vote on state affairs.

"How to vote on national problems.

"With the basis of good government firmly fixed in her mind, the thoughtful woman cannot go far astray in her exercise of the elective franchise. Often characters and abilities are misread, or a proposed program may be half right or half wrong. In such cases the voter may feel like 'taking to the woods,' and letting others make the decision. This is cowardly. No one is all-wise —certainly not the man voter; not even the woman voter. The only thing to do when confronted with such a situation is to stick as closely as possible to one's conception of fundamental economic principles, hoping that the good will outweigh the bad. Whist players have an axiom: 'When in doubt, play trumps.' Intelligent voters can well apply the formula: 'When in doubt, stick to economic principles that have stood the test of time.' And as a general rule, this will work out a satisfactory conclusion. At least, the voter's conscience will be clear, even if a mistake is made.

Voting Wisely

The right to vote involves the duty to vote intelligently. To vote intelligently requires an intelligent understanding of what is at stake. Women have more intuitive minds than men, and can more quickly perceive the right direction to take. But just as one cannot be a mathematician without at least understanding the multiplication table, so no one can vote intelligently without at least being faced in the right direction.

"The endeavor of this brochure is to face the Michigan voting woman in the right direction. Its 'rules of conduct' have been prepared in conformity with those economic facts and ideas generally accepted by thoughtful students of the science of government. It embodies no new theories, though accentuating some and relegating others to positions of minor importance. It is as applicable to voting men as to voting women. Indeed, it is because men have departed from principles herein set forth that they have so often made a mess of a democratic form of government.

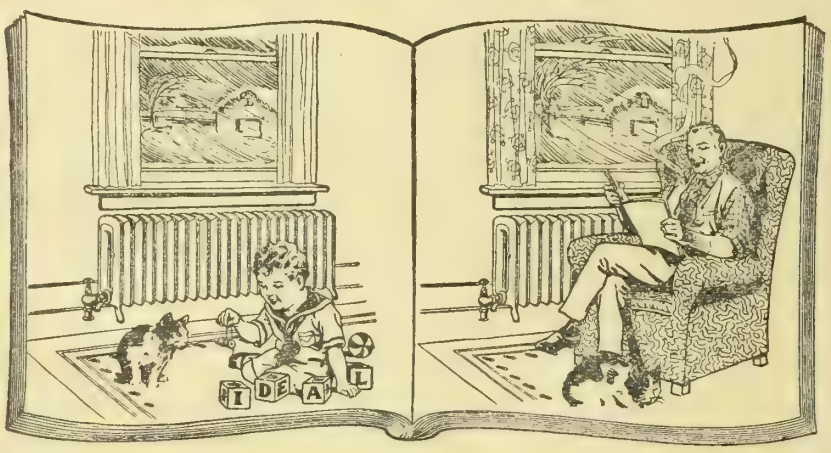
"Women ought to vote more wisely than men, because they have not acquired the bad habit of voting for 'labels.' This habit induces disregard for principles. And, besides, women do not have to unlearn in the world of economics so much that is economically pernicious.

Woman's Opportunity

"This is the Michigan woman's opportunity to improve the standard of intelligent voting. The scene is set for her entrance on the stage of world democracy. If she be neither mentally lazy, nor unthinkingly indifferent, there is nothing in the gift of the electorate that cannot be hers for the asking."

When Nature seeks an end she always furnishes the means . . . Thruout the fabric of our lives a thread of purpose runs . . . To follow it thru devious shades of gray and gold, as Time reveals the pattern, needs courage and persistency. . . . If noises fill thy ears with strife, until the purpose is lost, perchance thy eyes may trace the great design. . . . If shades of darkness intervene and all seem void of meaning, still let thy heart be filled with hope. . . . Brave souls trust, when they cannot see.

Cheapest Heat for a Lifetime of Comfort!

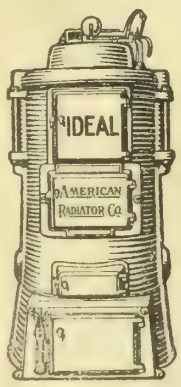


IDEAL Heating put in your farm house now for the health and comfort of your children —will give daily and yearly heating service until they and you reach old age

First cost of IDEAL-AMERICAN heating is soon saved by the continuous economical service you'll get from it—never needs repair or overhauling. Always on the job to give the best heat there is at the smallest fuel cost. Burn the low-priced local fuels. Save yourself labor and avoid the constant fussing and attention that temporary out-of-date heating makeshifts always give.

AMERICAN RADIATORS & IDEAL BOILERS

No other improvement will give as much happiness and health as IDEAL Heating



IDEAL Boilers will supply ample heat on *one charging of coal* for 8 to 24 hours, depending on severity of weather. Every ounce of fuel is made to yield utmost results.

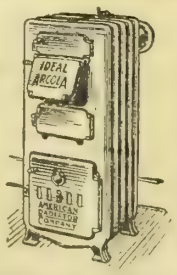
An IDEAL Boiler and AMERICAN Radiators can be easily and quickly installed in your farm house without disturbing your present heating arrangements. You will then have a heating outfit that will last longer than the house will stand and give daily, economical, and cleanly service.

Have hot water on tap for all uses

Our small IDEAL Hot Water Heating boilers for domestic supply are a source of greatest comfort and delight to the whole family. Gives the home every modern city comfort without dirt, labor, or fuss.

Free Heating Book!

Write today for copy of catalog "Ideal Heating" which is fully illustrated and gives complete information on this cheapest heat for a lifetime of comfort.



IDEAL-Arcola Radiator-Boilers for small houses without cellars. Hot-water heating as simple and easy as running a stove—one fire heats all rooms. Write for separate booklet "IDEAL-Arcola."

Sold by all dealers. No exclusive agents.

The Children's Hour

DEAR CHILDREN: It is too early to publish the prize story of the Fair, as I want to be sure that all are in before awarding the prize, but from the letters received I can see that a lot of you little folks went and that you are very observing, which is a very good habit to get into.

Early as it may seem there is a great deal of interest shown in the Children's Hour Christmas Club and a lot of children are working very hard for the prizes. One boy has set his heart on winning the watch offered, while a little girl wants a sewing basket with the scissors, thimble etc., and still another states that she never had a doll that opened and shut its eyes and had real hair and that she is going to work very hard, and we are sure that if she does, she will earn it in plenty of time for Christmas. And what the others are doing you can do also. Send in and secure a list of the prizes and the Club rules. This is no guessing game —you know just what you are working for and just when you will win it. Affectionately—LADDIE.

Dear Laddie—This is the first time I have written to you. I am 13 years old and I am in the ninth grade. We have 9 pigs and 6 cows and 3 horses, also some hens and turkeys. We have our rye and wheat all hauled in. I had to help load the wheat. I have two sisters and four brothers, besides myself. I am sending a story with this letter.—Lester Erbes. McBain, Mich.

Our Cherry Picking Trip

This year my mother and I decided to go cherry picking and so we started. Papa took us to the train, and then went back home again. When we got to Elberta near Frankfort we went off from the train and a truck was there to meet us. It had a load on already, but we packed in like sardines. Then we were hauled out to the cherry orchards where we lived in a packing shed for three days, then we were moved into a boarding house where we lived the rest of the time. Papa came up on Sunday and in the afternoon we went to the Lake, that is, Lake Michigan. We saw a big passenger boat come into the harbor. That was a grand sight. Monday we did not work hard but Tuesday we earned $10. We were very tired that night and the next afternoon we started for home. It was a trip of 85 miles in a Ford car.

Dear Laddie—This is my first letter I have written to you. We live on a hundred and seventeen acre farm on the end of town. The land for our schoolhouse is taken out of our land. I have about two blocks to school, cross lots and about three block around on the side walk. I am eleven years old and am in the fifth grade. I have brown eyes, and dark brown curly hair. I have three sisters and one brother. My oldest sister Martha is fifteen years old and in the ninth grade. Ervin is twelve years old and in the fifth grade. Esther is six years old and in the beginners class. Christina is four years old. I have two pet rabbits, one of them is black and white and the other rabbit is an angora. It is brown and white. My brothers has nine rabbits. We have a pet dog and he is as old as I am. We also have a pet lamb. We have fifteen lambs and forty sheep and twenty-three pigs, about a hundred chickens, four horses, eight milking cows, seven yearlings, one small calf. We also have two pet cats. I take music lessons. My teacher's name is Mrs. Wolansky. My father takes the M. B. F.. I like the Doo Dads very much. Hoping to see my letter in print.—Hilda Schafer, Hojkins, Mich.

Dear Laddie—My father being a subscriber to M. B. F., a very welcome magazine, I thought I would write to the M. B. F. as I seldom see a letter from Lowell, Michigan, so I thought I would make it known to other readers that there was such a place. Our farm is one of one hundred and twenty acres, on it we have four cows and three calves, five horses and fifty eight ducks. I think it is great fun keepink track of those bound to run away. I have three brothers; their names are Sylvester, Cecil and Otis. I am very much interested in the section of your paper entitled "The Children's Hour" I am always glad to find it when the mail comes. Iam just thirteen years of age. I am in the eighth grade. I like to attend school very much. I have composed a short poem for the amusement of the other boys and girls who are interested in this section:

"After a Good Time"

Let us gather up our books again
Vacation time is over,
Back to study now and
No more dancing in the clover.
Many happy days have passed
During this short season,
The days seem to have passed by fast
I guess all pupils know the reason.

With all best wishes to M. B. F. readers and hoping my letter will escape the waste basket, I am, Miss Marie Bibbler, R. R. No. 5, Lowell, Mich.

Dear Laddie—I have been reading the boys and girls letters in the M. B. F. and enjoy them very much. I have never written before, so thought I would write now. I am a girl fourteen years old. I passed the eighth grade last year but am taking it again this year to get it thoroughly and next year I expect to go to high school. I have three sisters and two brothers. My oldest sister is married and my oldest brother and my other sister older than I are going to school at the Ferris Institute at Big Rapids. I go to school every day. Yours truly, Dora Carpenter, Woodville, Mich.

WEATHER PROPHETS

Here are a few hints that will help you to judge the state of the weather, so that any changeable month will not be able to steal a march on you.

A red sky at sunset will mean "fine weather tomorrow."

A red sky in the morning will mean "wind or rain."

A yellow sky in the evening will also mean "rain tomorrow."

If the sun appears through a misty haze in the morning it means "the day will be warm."

If it is cloudy in the morning but the clouds begin to break it means "the day will be fair."

When the stars are very bright and twinkle more than usual it means "rain in the morning."

If your cat rubs himself behind his ears more than is his custom or is restless and lies with his back to the fire you can usually tell that bad weather is coming.

Mountains of Home-made Soap
Thousands of families make their own soap. The enormous quantities of soap made with Eagle Lye are incredible. One simply uses the kitchen fats and greases which otherwise are thrown away! Eagle Lye will turn these fats and greases into pure, white Sanitary soap. Try it! Save the fats and greases which you now throw away. Buy a Can of Eagle Lye from your grocer and make pure, white soap in your own home. No boiling—just mix as per directions on every can! It will reduce your "soap bill" 90%.

MARKET FLASHES

BUSINESS AND TRADE

Developments of the past fortnight which have indicated a growing industrial stability in Europe are summed up in the current issue of "American Goods and Foreign Markets," the fornightly review of foreign trade conditions issued by the Guaranty Trust Company of New York. The review, which gives in detail some of the commercial and industrial happenings in the most important countries of the world, says in part:

"The industrial situation in England, France and Italy, if increasing production can be called a criterion, is decidedly better than it was several months ago. The exports of Great Braitain, not to the United States alone, but to all markets which were accustomed to look to England for supplies, show a definite upward tendency. None but the most pessimistic can fail to see in such a turn of affairs, a gradual shaking off of the post-war lethargy which for a while had the workers of many countries in its grip. It can only mean that workers have begun to see the force of the arguments which have pointed out that production is the primary need of the world.

"Moreover, so far as Great Britain is concerned, the removal of the embargo on an important list of manufactued products as of Sept. 1, whatever its political significance, cannot fail to be of benefit to the American manufacturers in many primary lines. It is indicative, also of British belief in the ability of all of its industry, save that in the 'unstable key' group, to compete with American manufacturers in the home market, and of British finance to stand the strain of a wider range of imports.

"Shipments of gold, from New York to various countries in which exchange had moved against the United States, have served to restore the par relation and so have made it easier for the United States to buy and sell in those countries. Trade with the Far East is in a decidedly healthy state, Japanese buyings, and those of China as well, being in great volume.

"Re-establishment of trade relations with Hungary provides an immediate market for such manufactured products as can be financed. It also indicates the approach toward stability which has been increasingly apparent in Central Europe for the last few months."

Farm Values Rise 120 Per Cent During War

The farmers of the United States increased their acreage about 10 per cent during the war period and received an increase of approximately 120 per cent for their output. These figures, the result of a compilation by the National City Bank, New York, are based on the official records of the Department of Agriculture, showing the acreage and farm value Dec. 1 of the 10 principal crops of the United States, wheat, corn, oats, barley, rye, rice, potatoes, tobacco, hay and cotton, grown in the calendar years 1914 and 1918.

The area devoted to these 10 principal crops in 1914 was, according to the bank's compilation, 297,000,000 and in 1918 326,,000,000, an increase of approximately 10 per cent., and the farm value of the 10 crops Dec. 1, 1914, $4,933,000,000 and Dec. 1, 1918, $10,934,0000,000, an increase of about 12- per cent. Of all farm products the Department of Agriculture puts the value "based on prices at the farm" at $9,895,000,000 in 1914, and $21,386,000,000 in 1918, an increase of approximately 115 per cent. The increase in value of "animals and animal products" is about 90 per cent and of all crops 132 per cent increase, comparing 1918 with 1914.

WHEAT

Wheat closed a little higher on the Detroit market last week. No. 1 white being 2.24 and No. 1 red, 2.26. As for the Chicago market, we get the following report: Winter wheats showed litle change in price the past week. Millers and elevator interests took the heavy weight grain at a small premium over the basic, while the government secured the rest. Offerings of springs were mainly of the lower grades, while choice was in keen demand with shippers and millers active buyers and prices averaged higher with $2.73 secured for fancy dark No. 1 northern. Grain fit for seed is expected to bring a big premium over the basic. Rains have fallen over a good part of the belt and plowing for the new winter wheat crop is progressing rapidly.

OATS

Grade	Det'oit	Ch'go	N. Y.
Standard	.72	.71	.79
No. 3 White	.72	.70	

Oats had a range of 4 3-8@4 7-8c the past week, breaking early only to rally sharply and close with net gains of 1 -2@2 1-8c, December leading. Liquidation ran its course, and with free buying by shorts and removal of hedges against domestic shipping sales the rally was easily attained. There was no pressure of cash grain as farmers refuse to sell in volume, which more than offset the limited export call. Detroit quotes No. 2 white at 74 1-2c.

CORN

Grade	Det'oit	Ch'go	N. Y.
No. 2 Yellow	1.55	1.47	1.60
No. 3 Yellow	1.55		
No. 4 Yellow	1.53		

Week end adjustments of trades led to a material advance in the value of new crop deliveries of corn, but September showed weakness. The market closed unsettled, 3-4 cents net lower to 3 1-8 gain with December $1.25 7-8 to $1.16 and May 123 1-2 to 123 5-8. Oats finished 1 1-2 to 2 1-8 up, and provisions varying from 40 cents decline to a rise of $1.50.

General covering on the part of shorts in December and May corn kept those months on the upgrade throughout the session. It was apparent, however, that holders of September contracts were liquidating and that although September deliveries had been smaller than expected and prospect of a squeeze was not looked upon by many dealers as serious.

On the other hand, the smallness of the September deliveries and the lightness of offerings tended to make shorts uneasy as to whether new crop supplies would come forward freely. Besides hog quotations were higher and bullish sentiment was indirectly encouraged by an advance in foreign exchange rates likely to stimulate the export of oats and provisions.

Corn in Detroit market was quiet and unchanged. Wheat advanced 1c and oats 1c. The corn market was inactive and steady.

Recent wires have not added much to the information about corn and the market shows a tendency to rule steady. Bulls are not looking for a rally before the beginning of next week. There is no anxiety to buy and deliveries on September contracts have weakened that deal, while the others show little change.

BEANS

Here is the bean report of the Price Current Grain Reporter: Probably there-fourths of the bean crop has been harvested under ideal conditions and the balance will probably be taken care of in the next two weeks. The quality this year is excellent and while the acreage is light, the yield per acre is very good. We think possibly it will average thirteen or fourteen bushel per acre, which is one of the largest yields we have ever had. On this basis, the total crop will be around four million bushels, which is somewhat larger than last season.

M. B. F. is completing its survey on beans, to be announced soon. Many interesting and important facts are being held for the survey story. Detroit quotes beans at $7.15.

HAY

Receipts are increasing slowly. Some cars are coming from Canada but Michigan receipts are restricted owing to insufficient transportation facilities. Demand is active and the market steady. Quote: No. 1 timothy, $29.50@30; [illegible] light mixed, $28.50@29; No. 2 timothy, $27.50@28; No. 3 timothy, $25@25; No. 1 mixed, $24@25; No. 1 clover, $24@25 per ton.

RYE & BARLEY

Rye and barley are moving abroad freely. The recent loan to Germany has been reflected in a liberal quantity of rye being taken as it is the lowest bread grain in the world. The bulk of this business is being done via Scandanivian countries. Detroit quotes Rye No. 2 at $1.41! and barley, Cash No. 3 at $2.50@2.50.

POTATOES

With increasing receipts, the potato market is naturally easier, and there will probably be lower prices by the time the full fall movement is under way. The late crop will soon be coming to market. It has ripened well in most sections and the frost of Sept. 25th put an end to the gowing. Harvesting will be well under way by the time this issues reaches our subscribers, and we will then be in a better position to know what the yield will be. Potato men of the state predict a much lighter yield than the bureau of crop estimates has forecasted. The Detroit market on potatoes rules high, but in Chicago the prices are down to $2.25 per cwt. Detroit prices on Michigan stock is around $4.25 per 150-lb. bag.

One of the significant developments in potato industry in this state is the action of the State Grange in entering into an arrangement with the Michigan Potato Exchange for handling of the potatoes and other products of members of the Grange. If this arrangement is carried out, it will greatly extend the operations of the Exchange and make it a still more powerful factor in the Michigan potato deal.

DETROIT POULTRY DULL

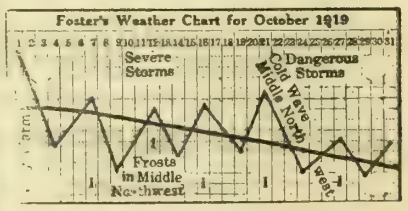
Poultry closed a poor week, with another dull market and decline. Buying was slow and dealers had plenty of trouble moving receipts. They expect a better market this week. Potatoes are in ample supply and easy. Buying has been rather slow and an unsatisfactory market is the result. In other lines of vegetables there has been a good demand and steady tone. Offerings in nearly all lines are sufficient. Dressed hogs are dull and lower. Demand has been slow for several weeks, but there is a firm market for dressed calves and a firm tone. Demand is active. The fruit market is not well supplied and the general tone is firm, but demand has recently decreased in the apple deal, and quiet trade is reported. Dairy products are all in good demand and firm. Receipts are sufficient. Under 150 lbs., 24 to 25c; over 150 lbs., 22 to 23c per lb.

NEW YORK BUTTER HIGHER

After being in the "slough of despond" for many weeks, the butter market took a sudden spurt this week and prices jumped every day up to today. The advance Monday was 1½c, the same on Tuesday and Wednesday while yesterday the advance was 1c. Receipts were light and the shortage of fine creamery more pronounced than ever, which in the main was responsible for the advance. Seconds and lower grades also advanced, but not so much as the higher grades. Firsts advanced only a little less than extras and higher scoring. Jewish buying for the holidays had some influence on the market also, and out-of-town trade took a fair amount of butter.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



The heavy horizontal line represents the normal of temperature. The zigzag line is the predicted movement of temperatures up and down. Dates at the top are for their time at meridian 90. If you are east of that line these weather features should reach you one or two days later; if west of it one to three days earlier. The I marks date of warm wave's arrival at meridian 90.

Disturbances will cross continent Oct. 5 to 9, 10 to 14 and 14 to 18. Warm waves will reach Vancouver about October 4, 9 and 13 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies at close of Oct. 5, 10 and 14, plains sections, 6, 11 and 15, meridian 90, great lakes, middle Gulf States and Ohio-Tennessee valleys 7, 12 and 16 reaching vicinity of Newfoundland about October 8, 13 and 17. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These weather events will dominate the weather of North America from near October 4 to 19. Temperatures will closely follow the seasonal declines but a great fall will have resulted from Oct. 1 to 9 and then a great rise from 9 to 21. Storm forces will be more intense and rains will generally increase during the five days centering on 13, and following that disturbance frosts will occur in middle provinces of Canada and in northern tier of states east of Rockies.

Weather of these two weeks will be favorable to winter grain and last half of October will be still more favorable although the dangerous storms during the week centering on October 25 will do damage in some sections. A severe cold wave and killing frosts are expected north of the cotton states in the middle west during that week.

The program of storm forces is arranged this way: Moderately severe storms during the week centering on Oct. 21. Much greater storms for weeks centering on Oct. 25, Nov 24, Dec 23. Precipitation is expected to increase with the increase in the intensity of the storms. Heavy snows in November and December are expected in snow sections. But the sections lying north of high ridges or mountain ranges running east and west will get the short end of these precipitations. The moisture to water the continent must continue to come from the Gulf of Mexico at least till end of October and those ridges and mountain ranges will cause the precipitation to accumulate south of them, as has occurred in South Dakota.

W. T. Foster

A HORSE CAN TRAVEL WHERE AN AUTOMOBILE CANNOT GO

Often in the deep snows of winter an automobile cannot get through the drifts, but the horse can travel anywhere if he can secure footing.
There is just one thing will insure safe footing on any road anywhere any time, no matter how icy or slippery, and that is the

Neverslip Red Tip Horse Shoe Calk

Whatever the occasion; a hurried trip to the doctor, an important call to town, a load of produce to be delivered—your horse is ready when you are ready. The wise horse owner will go to his horse shoer early and have the safe, reliable RED TIP SHOES put on. Then he can laugh at the weather. No sleet storm, no sudden freeze will hold him back. His sharp, strong RED TIP CALKS can be adjusted in 20 minutes, and he is ready for the road.
Avoid substitutes. LOOK FOR THE RED TIP

BOSTON WOOL MARKET

The Commercial Bulletin says, "The American wool markets have shown little change during the week being rather dull. Prices which have been more or less erratic, seem to have been somewhat stabilized as a result of the strength in London, where fine and medium wools both are 15 per cent above the last sales closing rates. Manufactureres report little or no change in the goods markets everyone being sold to capacity for months to come.

Quotations are: Michigan and New York fleeces: Fine unwashed. 63@64c; delaine, unwashed, 78@82; 1-2 blood, unwashed, 75@78c; 5-8 blood unwashed, 68@69c.

EAST BUFFALO LETTER

With 25 cars of cattle on sale today. the market was generally 25c lower and trading dull.

Receipts of hogs today totaled 2,080, and our market opened steady. Heavy hogs sold from $17.75 to $18, according to weight; and light mixed and yorkers sold from $18 to $18.15, bulk selling from $18.10 to $18.15; roughs, $14.50 to $15; pigs, $17.25 to $17.50.

Receipts of sheep and lambs are called 1,600. Choice lambs active and 25c to 50c higher. Best lambs, $16.25 to $16.50; culls, $12 to $12.75 yearlings, $10 to $10.50; wethers, $8.50 to $9.00; ewes, $7 to 7.50. The prospects look very favorable for Monday.

Receipts of calves are estimated at 500. Choice calves, $24.25 to 24.75; throwouts, 120 to 140 lbs., $17 to $19; heavy throwouts, 160 to 190 lbs., $10.50 to $11.50; heavy fat veal calves, $15.00 to $16.00, as to weight and quality.

CATTLE SCARCE IN DETROIT

The receipts of cattle last week at the local stock yards was very small and the quality largely of the common order. Two full loads brought $12.50, which was the practical top for any great number, although a few small lots of extra good steers brought a trifle more. The general tone all the week was some better than at the close a week before and the few offerings were picked up quickly at prices a little higher and the outlook is better for this week, prices averaging as follows: Best heavy steers, $12.50@13.50; best handy weight butcher steers, $9.50@11.00; Mixed steers and heifers, $8.50@9; Handy light butchers, $7.50@8; light butchers, $6.00@7.25; best cows, $8.25@9; butcher cows, $6.75@7.50; cutters, $6.00@6.25; canners, $5@5.75; best heavy bulls, $8.00@8.50; Bologna bulls, 7.00@7.50; stock bulls, $5.50@6.50 feeders, 8.50@9.50; stockers, $7.00@8.50; milkers and springers, $60@125.00.

The veal calf trade opened up with a rush and as high as $25 a hundred was paid for the best grades and bulk of sales was at $23 to $24. The price declined about 50 cents and then went off another dollar last Thursday. The trade was more active and prices were about 50 cents higher on the better grades and the close was strong, as follows: Best grades, $22.50@23.00; common and heavy, $9.00@19.00.

There was a good fair run of sheep and lambs offering and the quality was said to be some better. Closing prices averaged as follows: Best lambs, $14.75; fair lambs, $12@13; light to common lambs, $9.00@12.00; fair to good sheep, $6.50@7.00; culls and commons, $3.00@5.00.

The hog market opened last week with pigs steady and good mixed hogs a quarter higher than the close a week ago. Last Thursday Chicago broke 25 to 50c and the decline was followed here, pigs selling at $16.75.

Chicago.—Hogs: unevenly lower; heavy, $16.25@17.25; medium, $16.25@17.50; light, $16.50@17.65 light lights, $15.50@17; heavy packing sows, rough, $14.75@15.50; pigs $15@16; Cattle, higher, beef steers, medium and heavy weight, choice and prime, $15.75@17.85; medium and good, $11@15.75; common, $8.50@11; light weight, good and choice, $14.25@17.65; common and medium, $8@14; butcher cattle, heifers, $6.50@$14.75; cows, $6.50@13.50; canners and cutters, $5.50@6.50; veal calves, $20.25@21.50; feeder steers, $7@12.50; stocker steers, $6.25@10; western range steers, $8@15; cows and heifers, $6.50@13. Sheep; unsettled, lambs, $12@15.50; culls and common, $8@12.25; ewes, medium, good and choice; $6.25@7.50; culls and common, $2@5.75; breeding, $7@13.25.

NEVER was such two-fisted-smokejoy as you puff out of a jimmy pipe or home rolled cigarettes packed with Prince Albert! *That's because P. A. has the quality!*

Your taste apparatus certainly cannot be fooled! So, when you smoke Prince Albert and get a lot of delight *you know* you've got the big first prize on the end of your line!

Prince Albert's quality alone puts it in a class of its own, but when you figure that P. A. is made by our exclusive patented process that cuts out bite and parch—*well*—you realize why P. A. is so unlike other kinds.

No matter what your past luck has been on pipe smokes or makin's cigarettes, you put your confidence in Prince Albert for it certainly makes good every time the clock ticks.

Toppy red bags, tidy red tins, handsome pound and half pound tin humidors—and—that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition.

R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

SHORT POTATO CROP

Michigan's early potato crop was a practical failure and now it is certain the late potato crop will be 4,000 cars under last year's figures, it is said. Michigan will not ship more than 7,000 cars of potatoes this season, according to G. E. Prateer, Jr., sales manager of the Michigan Potato Growers' Exchange.

An Opportunity

THERE ARE 82 COUNTIES IN MICHIGAN, we want just exactly this many men who are capable of making $40.00 per week and who have some kind of conveyance to represent us in every county devoting their entire time to our interest in building up our circulation.

This weekly is the talk of all Michigan, hundreds of farmers in your county are just waiting to be approached to take Michigan Business Farming. We have from 100 to 3,000 subscribers in each county, so you see we are pretty well established. Your commission on renewals alone would net you a nice sum each year not considering new business at all.

We pay a most liberal commission on both new and renewal business. Any agent should be able to make good from the very start, as our paper is talked of more and has more friends than any other farm paper in Michigan. In fact, it sells itself. All supplies, sample copies, etc., will be furnished free.

If you want a good paying permanent position, write us today for full particulars. Experience is not absolutely necessary. The first application received from each county will be given thorough consideration.

What 15c will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its **20th** year. This paper fills the bill without emptying the purse; it costs but **$1** a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends. **The Pathfinder, Box 3, Washington, D. C.**

Crop Reports

KALKASKA, (S. W.)—The farmers are filling silos and sowing fall grain. There has been a heavy rain fall the last week and the ground is wet down. Some are digging potatoes and selling at $2.00 cwt. The weather is quite cold and indicates a frost soon. Potatoes are not turning out very well. About 50 to 75 bushels per acre.—R. E. B.

MONTCALM (S)—A heavy rain was received Friday and Saturday of last week, which was of much advantage to the early sowed grain and is now coming up. The [illegible] and wheat which had not been sowed on account of the soil being too dry is now being drilled. The husking of the corn has now begun which is yielding good and it is expected a high price will be received this year for corn as a large number of silos were built this fall. The majority of the beans have been put in the barns and have begun to thresh now which are yielding fair and are a nice quality.—W. L.

LIVINGSTON (N. W.)—Everyone is busy fitting the ground and sowing wheat, since abundant rains of the 20th, 21st. Soil is in first class condition, and good weather prevails. No one selling anything just at present, except a few cows, for big prices. —G. A. W.

GRAND TRAVERSE (W)—Farmers are very busy filling silos, picking apples, pulling beans, husking corn, etc. Some building and repair work are being done, but help is very scarce. Farmers of this township have organized a co-operative association. They had a meeting recently and membership now numbers about 40, but will grow fast. The main object at present is to use co-operation in buying supplies, such as hay, feed, fertilizer, spray material and supplies in carload lots. We have been having some good soaking rains during the last week or so which will help late potatoes to make a crop if frost stays away for two or three weeks. A great many apples are being sold here on the roadside at around $1.50 per bushel, the buyer furnishing the truck to haul the fruit to market. Soil is in good condition for fall plowing since the rain. —A. C.

BARRY (N)—The farmers in this part of the country are filling silos, though most of them are through. No frost yet, though a little snow fell the 25th. A state road is under construction from Hastings to Middleville, and will make an improvement in this joint. Many sales are reported, and horses are going low and cattle pretty high.—M. D.

BAY (E)— The recent rain has helped moisten the soil for wheat and also helped plowing. Some beans are out yet and some corn to cut. The bean crop will yield more than last year. Beet harvest has begun. The early beets seem to be good, while the lates ones will be rather light. Market seems to be on teh down-go and not much selling at present.—A. G.

MIDLAND (S. E.)—The farmers are sowing their rye and doing some fall plowing. The beans are all pulled and in the barns. Some bean threshing done. The weather is cool and windy. We had some rain. Well old Jack Frost has visited this locality. Farmers are selling oats and some beans. One silo was built in this neighborhood this fall.—J. H. M.

MANISTEE (N. W.)—The farmers are filling their silos also digging some potatoes, pulling beans and picking apples. Weather now is rainy nearly every day. Big, heavy rains. Soil is quite wet. Farmers will soon be selling apples. No grain now being bought here.—H. A.

OSCODA (S. W.)—Farmers are nearly through threshing. Had a good yield of all kinds of grain. Had the best corn this year that we have had for years. It got very dry so fires were raging, until it started to rain, which kept up for three days, which put out the fires and made it nice for fall plowing. —M. E. C.

MECOSTA (N)—Farmers are cutting corn, filling silos. Weather very dry. A few potatoes will be a very small crop this year.—L. M.

FARMERS SERVICE BUREAU

(A clearing house for farmers' everyday troubles. Prompt, careful attention will be given. Correspondence should be addressed to "Farmer's Service Bureau," Michigan Business Farming, Mt. Clemens, Michigan.

FEDERAL LAND LOANS

1. Is there any expense incident to the making out of an application, inspection of farm by the board, etc?

2. Is a chancery title a legal title and will the government recognize that without an itemized contract? The record of transfer is ommitted in the abstract, for a number of years back in the 60's, i. e. A gave B a warrantee deed; B drops out of sight. A number of years later C gives D a warranty deed without record of possession, from there on the abstract is unbroken up to date.

3. What would be the manner of procedure in these circumstances?

4. What is the legal charge for bringing down an abstract?—*Reader.*

1. Yes, the Federal Land Bank of St. Paul requires a fee of five dollars with each application, to apply on expense of federal appraisal. The National Farm Loan Associations may make an additional charge to provide compensation for local appraisals. In most associations this charge is ten dollars.

2. All abstracts of title are passed upon by the bank's attorneys at its office in St. Paul. If the title of record in a given case is defective, and reasonable assurance is furnished of undisputed occupancy of the land for such a period as will bar adverse claimants, the bank will accept the title as sufficient for its purposes. In other words, if the title in fact is good, the Land Bank will close the loan, although the records present flaws and imperfections.

3. The procedure in obtaining a Federal Loan requires that application be first submitted to the local National Farm Loan Association, name and address of which can be obtained by injuiry, with legal description of land, to the Federal Land Bank of St. Paul. An appraisal is then made by a local loan committee after which application is submitted to the land bank whereupon it is immediately assigned to a government appraiser for his appraisal and recommendation. With his report and that of the local loan committee before them, the loan is then passed upon by the officers of the Lank Bank and notice of allowance is sent to applicant. At this time the abstract of title, continued to date, is requested. Upon its receipt it is given immediate examination by the bank's attorneys, and if no serious title difficulty is found, mortgage papers are immediately drawn, and sent for execution. If defects in title of such nature as to demand correction are disclosed, report of such defects of title are made, and legal advice to assist in correction is given by bank without additional charge. Upon return of the executed note, executed and recorded mortgage and abstract continued to show the same disbursement of the funds is immediately made. The bank, at this time, directs the retiring of prior liens, taking up deeds and such other steps, as may be necessary to constitute its martgage a first lien on the premises.

4. Michigan statutes do not fix the rate of charge for abstract continuation.—*Federal Land Bank, St. Paul, Minn.*

Butter Will Not Gather

Can some of our readers tell me what to do to make my butter gather? I can churn five minutes and the butter will break in little spots and then I have to churn for hours before it gathers. My cows have good pasture and salt.

SOME POULTRY HINTS

There have been so many articles in the various agricultural papers concerning the raising and feeding of chickens, the trap-nesting of hens, and the proper proportion of meat scrap and charcoal in their daily diet that we find ourselves in a net of technical terms. Don't adopt a diet and stick to it through all seasons, and at all times. Why? Because one year there may be a superabundance of "nubbin" corn, another year the wheat may yield a quantity of light grains, and another will find oodles of small potatoes, turnips, carrots, or underdeveloped cabbage heads to add to the food. But do try and maintain a balanced diet; study the specialist's articles enough to know what element each food you possess has then go ahead and use what you have. Never buy meat scraps in the winter. There are the "cracklings" and all the "off-fallings" of a butchering time to be garnered, and there is a plentiful supply of sour milk, and commercial meat scrap is a superfluity. If you burn wood in any of your stoves, the question of charcoal is solved; you can crush or grind it yourself. Sand and gravel are hauled in from a nearby creek. You do have to buy the oyster shells. Having a lot of common navy beans discolored by a quick shower after the vines were pulled, use these in the mash, thoroughly cooked.

A Great Fur Season Opens

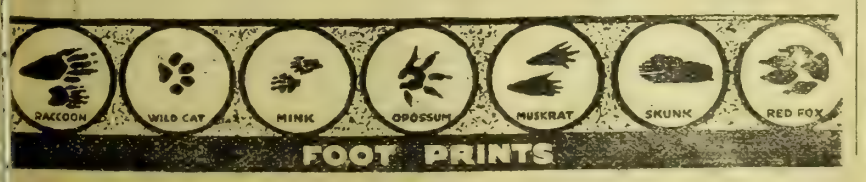
All indications point to this being one of the greatest fur seasons of a decade. Not only are fur prices sure to be high (because of various conditions creating a demand for furs,) but there should be an unusual number of fur-bearing animals throughout the country, they having trapped less during the war than heretofore.

However, we of the Trappers' Trail must not become too impatient, and begin trapping before the furs are "prime"—or at least, almost so. A fur caught at a season when it will turn dark blue in spots, will bring only about one-half or one-third as much as the same fur would, if the animal hadn't been captured till cooler weather. If, after capturing an animal or two, their skins do not appear of a uniformly flesh-white color it will be wise to postpone trapping till the weather grows still cooler.

Old-time trappers used to say that any month in which the letter "r" appeared was suitable for beginning the trapping season, but this rule will not hold good anywhere in our Temperate zone sections. In our northern tier of states it is well to wait till November 1st before actively engaging in trapping; while farther south, this date should be extended several weeks, according to location.

Of course, one can put in some good licks for future trapping by choosing good routes for his operations, locating dens and various haunts of animals, arranging pens or "houses" for setting baited traps, and even putting out some baits where traps will be set later on. By putting baits at various points, and keeping it up regularly, the animals will become accustomed to visiting these places, and thus be easily taken when one actually begins trapping.

It is also a good plan to have several stretching boards all shaped up and ready to use when furs begin to come in. Animals should not be left lying around with the skin on, nor should the skins be left un-stretched very long after being removed from the animal. In fact, the furs will stretch better and show up to greater advantage if they are stretched while still warm.—*M. Coverdell.*



After the Moult—
EGGS

REMEMBER, going through the moult is like going through a long spell of sickness. To force out the old quills and grow new feathers saps a hen's vitality.

If you expect your hens to be fall producers and winter layers, then feed them Poultry Pan-a-ce-a during and after the moult.

Dr. Hess Poultry Pan-a-ce-a

will start your pullets and moulted hens to laying

It contains Tonics that put your moulted hens in fine condition—Tonics that tone up the dormant egg organs—Iron that gives a moulted, run-down hen rich, red blood and a red comb. It contains internal antiseptics that destroy disease germs that may be lurking in the system. No disease where Pan-a-ce-a is fed. It pays to feed Pan-a-ce-a regularly.

It brings back the singing—it brings back the scratching—it brings back the cackle. That's when you get eggs; and it's eggs you want—fall eggs, winter eggs—when eggs are eggs.

Feed Pan-a-ce-a to all your poultry to make and keep them healthy. The dealer refunds your money if it does not do as claimed. Tell the dealer how many fowls you have and he will tell you what sized package to buy. Always buy Pan-a-ce-a according to the size of your flock. 30c, 75c and $1.50 packages. 25-lb. pail, $3.00; 100-lb. drum, $10.00. Except in the far West and Canada.

TAXATION

(Judson Grenell, secretary Michigan Site-Value Tax League, has consented to answer to the best of his ability any question regarding taxation that readers of Michigan Business Farming may ask. He may be addressed direct at 308 Thompson street, Ann Arbor, or through this office.)

In how many localities in Michigan do the assessors separate land from improvement values, on their books, so a taxpayer may know what his improvements are assessed for? How about the rest of the country?—E. L. Kent County.

Ans.—So far as known Detroit is the only assessing district in Michigan where the books show land values separated from improvement values. Massachusetts annually publishes a pamphlet in which site values are separated from improvement values, for each political division in the state. The tax commission there reports it a splendid check on erroneous assessments.

Is there any place in the United States where site-value taxation only is used for assessing and collecting taxes?—J. W. Jacobus, Oakland county.

Ans.—For local taxes, yes. Fairhope, Ala., is a "single tax" colony where taxes are collected from land values only, and improvements are exempt. This has been the custom there for a score of years, and the place has thrived more than has the surrounding country. In California improvements in irrigation districts are exempt from taxation, and land made valuable by irrigation must bear the tax burdens in proportion to the values thus created. As a result, owners are encouraged to make improvements.

What is the land (social) value of Michigan?—G. W. Barclay, Wayne county.

Ans.—No figures have ever been published. However, the state tax commission is in possession of the figures, and it is hoped that some day they will be compiled and published. At a guess it might be said that Michigan site values are worth half the assessed value of the real estate and personal property of the state. The state is assessed for $4,500,000,000; so that would make the land value $2,250,000,000. It is argued, in defense of these figures, that on the average improvement values about equal the social (community) value of the land.

One of my neighbors says that the income taxes collected from the big Chicago meat packers are passed on to those who buy their meat. Is this so?—*A. E., Clinton Co.*

Ans.—All taxes on production are passed to the ultimate consumer. One of the Chicago meat packers giving testimony before a congressional committee last spring, testified that the $9,000,000 of income tax, the concern paid was charged to "overhead expenses," the same as insurance, and added to the cost of production.

Is all the land in Michigan taxed?—*M. O'S., Livingston Co.*

Ans.—No. Nor is all the other property in Michigan taxed. There is church property, for example. The state owns many acres, which nobody just now wants; left on its hands by lumbermen who cut down the trees and then refused to pay the taxes. Many thousands of acres in railroad rights of way and valuable terminals pay no taxes as such, though these corporations do pay a direct tax, which is returned to the people thru the schools.

I've been buying some machinery, and my assessor has got me on his books for it. I say the law exempts tools, but he don't see it that way. Who is right?—*T. S., Monroe Co.*

Ans.—The assessor is right, if your "tools" exceed in value the exemption allowed by law. A good many things in Michigan not taxed are taxable, according to law, but as it would cost more to list and assess than the tax would amount to, the law is ignored. For example, watches are taxable, yet how many are taxed? If you buy a tractor? That's what you get for being ambitious.

BAKER'S COCOA

PURE AND DELICIOUS

It is a most satisfactory beverage. Fine flavor and aroma and it is healthful.

Well made cocoa contains nothing that is harmful and much that is beneficial.

It is practically all nutrition.

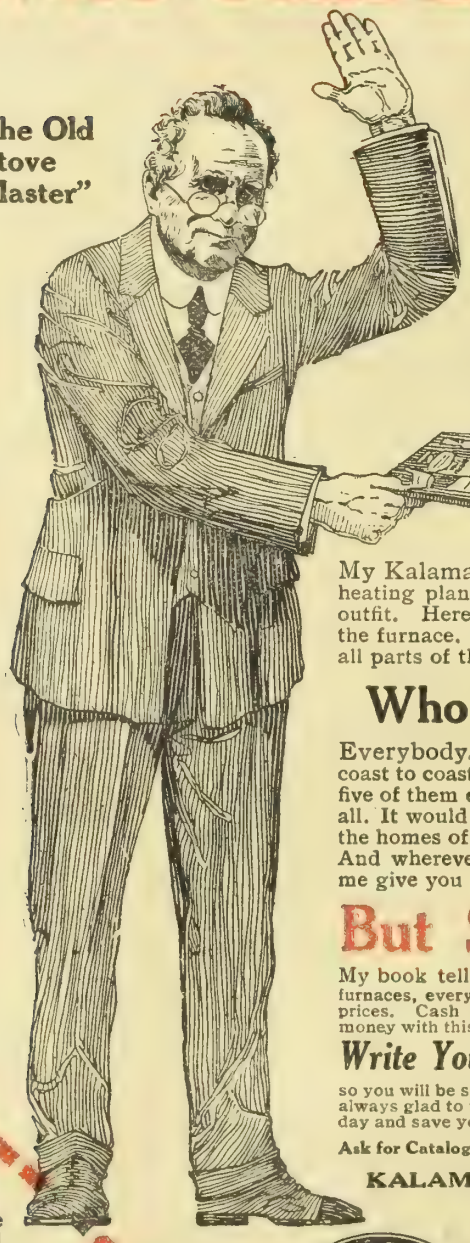
I Build 'Em Myself—
Who Can Beat My Prices?

Kalamazoo Pipe Furnace

For homes with warm air registers wanted in different parts of the house, our heating engineers draw up plans showing how to install to get the best heating results. Burns any kind of fuel.



NEIGHBOR, let me ask you a question. Does boosting the price of a furnace $25 to $80 after it leaves the factory make it a better heating plant?

I don't think it does. I think that $25 to $80 is as good to you as anyone else. And that's *what I can save you* when you get "A Kalamazoo Direct to You." Because you deal direct with the manufacturer. And no one can quote lower prices than the man who makes the goods.

Write and Get My Price On a Pipe or Pipeless Furnace

Mind you, these are real quality heating plants. The kind the best homes want. Furnaces made with good heavy castings which mean long, satisfactory service.

Heat your home with a pipeless furnace this winter and save money. Save money on installing and in fuel bills. Burn any kind of fuel.

My Kalamazoo Pipeless Furnace is a wonder as a home heating plant. You can't compare it with the ordinary pipeless outfit. Here you get separate flues for bringing cold air back to the furnace. Complete, healthful circulation of warm air through all parts of the house.

Who Buys From Kalamazoo?

Everybody. You'll find my satisfied customers from coast to coast. If you started out to visit them all and could call on five of them every day it would take you fourteen years to see them all. It would take you to farms and small towns and big cities. To the homes of well-to-do folks and homes where every dollar counts. And wherever you go you would find a satisfied customer. Let me give you the names of a few of my customers near you.

But Send for This Book

My book tells the story. It shows my full line—stoves, ranges, furnaces, everything needed in home heating—all at "Direct-to-You" factory prices. Cash or Easy Payments. Unconditional Guarantee. You'll save money with this book. But

Write Your Name in the Coupon Right Now

so you will be sure to mail it. Or send a postal or a letter, as you prefer. I am always glad to mail this book. You are welcome to a copy. Let me send it today and save you what you ought to save in dealing direct with manufacturers.

Yours truly,
"The Old Stove Master."

Vol VII, No. V | MT. CLEMENS, SATURDAY, OCTOBER 11, 1919 | $1 FOR ONE YEAR (3 yrs $2; 5 yrs. $3)

Michigan Bean Delegation Leaves for Capitol

BY THE TIME this issue is in the hands of Business Farming readers, a delegation of men representing in various capacities the bean industry of Michigan will be on its way to Washington to plead before the Ways and Means Committee of the House for a special tariff bill levying an import duty on oriental beans. Simultaneously delegations of growers and jobbers will leave from California, Colorado, New York and other navy bean states, and joining each other in the national capital will submit such a mass of evidence as is expected to induce Congress to adopt this very necessary legislature without delay.

A. B. Cook, president of the Bean Growers' Ass'n., left for Washington the first of the week. Others who are expected to go from Michigan are Christian Breisch, president of the Bean Jobbers' Ass'n.; Nathan F. Simpson, farmer and manager of the Clearing House Ass'n.; W. J. Biles, of Saginaw, and F. E. Lewellyn, of Grand Rapids, bean jobbers; and Forrest Lord, editor of Michigan Business Farming. This delegation was chosen at an informal and hurriedly called conference at Detroit last Saturday afternoon, at which was present a committee of growers and jobbers from California. The California men insisted that Mr. Grant Slocum should head the Michigan delegation, but owing to other duties, Mr. Slocum found it impossible to go. The particular men selected were chosen because it was known that they could go, and probably present the facts and figures as well as any group of men who might be chosen.

"When the Frost is on the Pumpkin"

Manipulators Use Jap Bean as Whip

It was brought out at the conference that Japanese and Manchurian beans are now imported virtually tariff free, as the present duty of 25 cents per bushel, does not appreciably offset the great difference between the cost of producing Jap and American beans. It was asserted that the oriental beans can be produced, placed on shipboard, landed in the United States and delivered to almost any point for four cents per pound. Need we ask the growers of Michigan how they can compete with this price? Consumers might claim that there was some advantage to them in this situation, but as a matter of fact they profit very little. For it has been disclosed that the same gentlemen who conspired to bear the market last winter while holding responsible positions with the Food Administration are still on the job and are using oriental beans as a lever to manipulate the market on the domestic product. Let us explain. These gentlemen contract for a large amount of oriental beans at a low price, say three to four cents a pound. But instead of selling these beans on the basis of what they cost them, they quote them slightly under the domestic article, naturally forcing down the price. But when the market gets a little wobbly they withdraw their quotations, and as soon as the demand for navy beans strengthens the market, they again spread their quotations broadcast over the country. In other words, they play a sort of teeter teeter game and no matter which way they go the American grower gets bumped on the head. They are able to play this game only because oriental beans are admitted to this country virtually free of duty. They are playing it to the limit now, and the navy bean growers and jobbers are face to face with the possibility of utter extinction of the navy bean industry unless this manipulation and this competition of the oriental product be checked.

California Costs Are High

The California men submitted figures showing the cost of producing beans in their state. It is much higher than the Michigan cost as revealed by our recent survey. The California growers include among their items of cost a superintendency charge based on a salary of $3,600 per year. Hands up please, you Michigan growers who write yourselves a check for $300 at the end of every month and on top of that figure in six per cent return on your investment! Now, why don't you do it? It isn't because you don't think that your services are worth anything, but it's because your crops don't return a high enough price to enable you to pay yourself a fair salary as a manager. Yet, by all the rules of business, Mr. Farmer is certainly entitled to charge against his business a reasonable salary for his managerial ability. California growers recognize this fact. They are including this item in their costs. Business Farming's survey shows that the cost of production for this state will average around $45 per acre, but this does not include such items as salary, depreciation of land and buildings, fire insurance, life insurance and many other incidentals that might be mentioned and will be made a part of the cost figures to be submitted to the Ways and Means Committee.

The delegates who go to Washington will not be asking anything unreasonable of Congress. At nearly every session bills are passed readjusting the tariff scale to meet changing conditions. The United States cannot compete with the Orient in the production of commodities which are common to that section for reasons that are well known. Congress recognizes this fact and nearly all other industries are rightly protected from this ruinous competition. A few years ago we did not need to fear the inroads of the Asiatic bean, as practically all such were consumed near where grown. But the failure of crops in the United States, the high prices due to the war and other conditions of the time, have resulted in an enormous expansion of the bean industry in the East. For two years past the oriental jobber has been looking to the United States to supply him with a market, and he has not looked in vain. And so, whereas, a few years back no one gave any thought to a protective tariff on beans because there was no need of it, today all interested in the navy bean industry are agreed that the Oriental product must bear an import tax if the American bean industry is to be saved to posterity.

The California growers are insistent that a duty of at least 5 cents per pound be placed upon the Kotenashi bean which is the principal competitor of the navy bean. In fact, it is alleged that canners are now putting up this bean and selling it as a native variety. The suggested tariff is arrived at by a comparison of production costs in the Orient with those in this country, and it will require at least a 5 cent per lb. duty in order to place oriental and U. S. beans on an equal footing. In case this duty is adopted, the Jap bean cannot be profitably sold in this country at less than 8 to 9 cents per pound. The delegation will ask for a duty on other varieties of foreign beans, the size of the duty in all cases being merely enough to protect the domestic producer on his cost of production.

We want the bean growers of Michigan to feel that this delegation goes to Washington fully representing their sentiments and their welfare. It is the grower whose interest is most vital, and it is the grower's side of the case that we expect to see the most vigorously presented. Moreover, it will be the grower, if anybody, who wins Congress over to take the immediate action that is desired.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

NATION CHURCH SURVEY STUDIES FARM INTERESTS

The Interchurch World Movement of North America, a co-operative organization supported by a majority of Protestant denominations, is conducting a nation-wide survey of religious conditions that is certain to throw new light also upon the special problems of the farmer and the farm community.

The broad purpose of the investigation is to ascertain the whole truth as to the country church and particularly the extent to which it is meeting its obligations and opportunities in its own community. What it can do to take a larger share in the every day life of the people and how it may assume a just proportion of all the civic burdens of its constituency are to be determined when all the facts are in hand.

Actual collection of information has been assigned in each of 3,000 counties to residents familiar with local conditions. Their findings are to be examined by all the denomination interests of the county in special conferences called for the purpose. These will come to every possible agreement as to programs of local work.

Each rural survey has in mind two things, the individual church and the separate community. The church is examined as to the nature, number, ages, sex, welfare and occupation of its members, the extent of its pastoral influence, its financial methods, its relation to all other churches, to granges and arbors, and its physical surroundings, such as roads, railroads, trolley lines, etc. The community is examined as to its population, trade territory, social environments, etc.

When complete it is expected that maps may be drawn of every rural county in the United States, showing every road, railroad, trolley line, church, school, arbor, grange, social center, village, hamlet, town, the boundaries of each church's territory and the situation of every farm house in relation to some church or social center. These maps will be available for every social purpose they can subserve.

Foreign Dairy Competition

"European needs for dairy products may be largely supplied from prewar sources within two years' time, and the American dairy industry may again feel foreign competition on home markets." This is the conclusion of Roy C. Potts, specialist in marketing dairy products, Bureau of Markets, United States Department of Agriculture, speaking before a recent meeting of food officials in New York City.

In explaining the work of the Bureau of Markets in gathering and distributing accurate market information on dairy products, Mr. Potts pointed out the stabilizing effect of such information on prices and stated that fluctuating prices at wholesale make for wider margins between producer and consumer, while stabilization permits greater economy in distribution.

Recent monthly reports on milk prices in 200 cities have called attention to the wide difference in distribution costs prevailing in different sections of the country. While economies in distribution are possible in some communities the speaker pointed out that a saving of 10 per cent in the cost of distribution would make only a very slight saving to the individual consumer. A much greater loss to the public, he said, lies in paying top market prices for inferior qualities of dairy products. He advocated standardization of methods of production and distribution with quality of product as one of the great needs of the dairy industry.

Fertilizer Tests Show Profit

An increase of more than $50 an acre in the value of wheat crops has been secured by the use of lime and complete fertilizers in soil fertility tests made at the Michigan Agricultural College by M. M. McCool and G. M. Granthan of M. A. C. soils department. This increase was above the cost of applying the fertilizer.

The following report is sent out by Dr. McCool at the finish of his test:

"On untreated sandy soil we obtained $10.55 per acre from the wheat crop. On soil where lime was used the acre value was $25.11 above the cost of treatment. Where lime and complete fertilizers were added, the acre value was $66.00 above the cost of the lime and fertlizer. The fertilizer consisted of one hundred pounds of nitrate of soda, one-half being applied at the time of seeding, and the remainder in the spring as a top dressing, two hundred and fifty pounds of acid phosphate and one hundred pounds of potash applied to the previous crop."

State Drive Begins in Oakland

With arrangements rapidly nearing completion for the inauguration of a membership campaign in Oakland County, October 15, the Michigan State Farm Bureau is now preparing to start similar drives in every other county in the state in a movement to strengthen and correlate the work of all farm organizations, to improve facilities and conditions for efficient and economic production and marketing of farm products, further enactment of constructive agricultural legislation and in brief—to promote agricultural interests in every possible way.

To carry out this vital program successfully, a large membership and adequate finances are necessary, hence the campaign is now under way. Workers will be expected to organize thoroughly every township in the county so that the most intensive sort of campaign work may be possible, and every farmer visited.

Farmers Protest Squirrel Killing

Because of the avidity with which many hunters in the vicinity of the farms and woods in Washtenaw have exhibited this fall in the killing of squirrels, farmers have voiced a note of disapproval, according to one of them Saturday.

"The hunters come into our woods without so much as asking permission, and then go ahead and shoot the squirrels, cut down wire fences and do other damages," he declared,

The Herd at the U. S. Soldiers Soldiers' Home Dairy Farm

Out of the 500 acres of land belonging to the United States Soldiers Home in Washington, D. C., 175 acres are devoted to the farm and dairy combined. On this model dairy farm there are seven barns for cattle, one feed barn, three silos, a hospital, milkhouse, office and other necessary small buildings, which are all arranged so as to economize time and labor as much as possible. All the buildings of this dairy are made of concrete, with metal finishings. The exteriors of the buildings are pebble dashed. The cow barns are amply supplied with daylight and air, large doors at either end providing perfect ventilation. Metal rails separate the stalls, while a metal halter suspended from a rod confines the head of the animal and keeps her in place. The troughs are of concrete, the floors of the stalls are of cork brick,

Soldiers' Farm Herd

Grading Calls for Experts

The increasing demand for trained inspectors to grade grain on the basis of the Federal grades has caused the farm crops department of the Michigan Agricultural College to start a special course for its students. as licensed inspectors of grain.

SHORT COURSES PLANNED FOR MICHIGAN FARM BOYS

Special short courses in agriculture, planned especially for Michigan farm boys and girls, will be given by the Michigan Agricultural College during the coming winter. The first of these courses, that in general agriculture open on October 27, while others will start as late as March 1, at which time the second truck and tractor school will begin.

More interest is being taken in the winter courses than ever before, according to Ashley M. Berridge, director. Many young men who are unable to take the four year course at the college will take advantage of the special work in preparing for scientfic agricultural pursuits. Increased interest in all farming is partly responsible for the large numbers of inquiries that are coming into the director's office.

Nearly every phase of agriculture is covered in one or the other of the short courses, which include work in general agriculture, cow testing and barn management, creamery management, horticulture, poultry, gardening, bee-keeping, farm engineering, and truck and tractor work. The courses are open to all Michigan boys and girls over 16 years of age.

Catalogs and full information regarding the work may be had by writing to the Director of Winter Courses, M. A. C., East Lansing.

Offers Farm Roads Advice

Owners of large farms and rural estates seeking a more satisfactory type of entrance road have applied to the Bureau of Public Roads of the United States Department of Agriculture for advice regarding the application of bituminous material on main entrance and much-traveled farm lanes. The bureau's engineers point out that such applications may be made successfully on any farm road which has already been constructed of stone, gravel, or other similar material, and is in a thoroughly compacted and reasonably smooth condition. A coal tar preparation applied cold, or an asphaltic oil, can be used if applied by the farm employees, the cost should not exceed seven or eight cents a square yard for materials. The compacted gravel or stone road should be thoroughly cleaned of dust and the bitumen applied with ordinary sprinkling pots from which the perforated nozzle has been removed and the spout carefully flattened into a symmetrical rectangular opening about one-quarter of an inch wide, so that the material may be poured in a broad, flat stream. If a large amount of work is to be done, a specially designed pouring can may be purchased of dealers in road equipment. Care should be taken to have an even distribution, and the quantity applied should be approximately one-half gallon to a square yard of road surface. After applying the bituminous material, clean gravel or stone chip should be spread evenly ove the surface, and if possible, rolled with a lawn or field roller. Where gravel or chips are not available, clean, coarse sand will serve as a covering material. It should be spread in sufficient quantity to prevent the bituminous material from adhering to tires of passing vehicles. Attention is called to the fact that this treatment should not be made where drainage from the stables or barns will flow over it.

Sleep Later After October 26

The nation will get up one hour later on October 26. At 2 o'clock on the morning of October 26, the last Sunday in October, the hands of the clocks of the United States will be set back one hour, marking the finale of the daylight saving law. The law will die by act of congress at the overwhelming demand of farmer and miner interests and with protests from cities and industrial centers.

How You Can Help With the Bean Tariff

THERE ARE three members of the delegation who will represent Michigan beans growers before the House Ways and Means Committee, who will have to pay their onw expenses. The jobbers have the money in their treasury to pay the expenses of their committee. But the Bean Growers' Ass'n has no funds. President Cook has in fact spent his own money on many occasions in behalf of the bean growers. Others have done the same. This is not right, of course, and it has occurred to us that the bean growers of the state might be willing to contribute a fund to take care of the necessary expenses. It is impossible to go to Washington, stay two or three days and return for less than $100 to $125. This is quite a sum for each individual to pay, but if pro rated among the bean growers of the state, it would represent a very insignificant amount per person. We are therefore making this public appeal to the bean growers to help bear the expenses of those who go to represent the growers. There is nothing obligatory about it, of course. The growers' representatives will go and cheerfully at their own expense if necessary, for they feel that it is a matter in which the entire future of the bean industry in this state is involved. They would appreciate some help from the growers, we are sure. No one has asked us to make this appeal. In fact, every man understands that he will have to pay his own expenses but he'll feel a lot better if the growers help. If you think this is a worthy cause and should be supported, please fill out the coupon below and mail with as large a remittance as you feel you can make. A strict account will be kept and made of every penny received and expended and if there be any surplus the amount will be returned pro rata to the givers.

October .....1919.

Michigan Business Farming,
Mount Clemens, Mich.

Gentlemen:

I am heartily in sympathy with the move that is being made to protect the Michigan bean industry, and I enclose $..... to help pay the expenses of the delegates who go to represent the growers.

U. S. Makes Survey of September Milk Prices

Trend of Nation at Large is to Set Figures so Producers Can Make a Fair Profit

PRICES FOR MILK have been set in the Detroit area and elsewhere at a figure known to be below the cost of production—from the milk producers' standpoint. Needless to say the producers are dissatisfied. How could they be otherwise, when obliged to sell at a dead loss?

Although many are selling off their cattle to take up more profitable lines of business, probably the majority are going to bide their time until the next meeting of the Detroit Milk Commission, and similar bodies elsewhere in the state. The producers who will wait have confidence that the commission is merely waiting a more opportune time for putting the price where it belongs—over the cost of production.

In other parts of the nation, producers are coming or have come into their own in regard to prices and profits. The following article, prepared by government experts, tries to show the methods generally used throughout the country. Some statements may be doubtful or wrong, but it is one of the best documents of its kind ever drawn up and every milk producer or dealer should read it:

The following table presents the prevailing prices of "standard grade milk" paid by different classes of buyers in various markets of the United States. The term standard grade milk is used to refer to that grade of milk which is most generally sold within the particular city for which prices are quoted. This grade of milk may be either raw or pasteurized, but in case of most of the larger cities it is pasteurized milk.

Unless otherwise qualified the prices given in the first column in the following table show the cost of milk delivered to dealers at either city railroad terminals or at the dealers' distributing plant where deliveries are made direct by producers. When the price paid by dealers to producers applies to deliveries at country receiving stations and does not include payment for transportation to the city, the average transportation cost of some dealers has been added to the country station price in order that the cost to the dealer (not including country station expenses) may be shown.

The "dealer's spread" or the difference between cost and selling prices for both wholesale and retail transactions can be ascertained if the butterfat test of milk as delivered to different classes of trade is known. In order to determine the actual cost price of the grade of milk sold in any city, it is necessary to make allowance of the amount given opposite each city in the third column of the table, for each pint of butterfat that the milk actually tests above or below 3.5 per cent (the standard arbitrarily assumed as a basis for the comparison of prices given in the first column of the following table.) To reduce prices per hundred weight to either a gallon or a quart basis divide by 11.63 or 46.53 respectively.

Review of Price Changes

A comparison of the prices agreed to be paid producers by fluid milk dealers for milk delivered during the month of September in the different markets listed in Table 1 of this review, with the prevailing prices for August in the same markets shows that for the United States as a whole, "producers prices" increased approximately eight tenths of a cent per quart, or 39 cents per hundredweight. The average of producers' prices reported for the East North Central States (Kentucky, Tennessee, Alabama, Mississippi) remain the same for September as for August. The increases per hundredweight for the other sections of the United States were as follows: New England 5 cents; Middle Atlantic, 8 cents; East North Central, 94 cents; West North Central, 23 cents; South Atlantic, 2 cents; West South Central, 7 cents; Mountain, 26 cents, and Pacific, 9 cents.

A comparison of milk dealers' selling prices for August and September shows that out of a total of 101 cities the retail prices were increased in only 18 cities. In most cases the increase in the price of bottled milk delivered to family trade amounted to either 1-2 or one cent per quart. In only one or two cities did the increase amount to as much as 2 cents or more per quart.

Dealers' September Prices

The following table shows the wholesale and retail prices reported for "special" and "certified" milk and certain other dairy products delivered at wholesale buyers' places of business or at the homes of retail consumers in various leading cities. Wholesale prices are reported on the basis of bulk goods sold to and delivered at establishments of large scale consumers or users. Quotations for wholesale milk and light cream have been reduced to a gallon basis. For heavy cream, the wholesale price is quoted per pound of butterfat. For prices of "standard milk," see table 1 of this review.

Producers' September Prices

The following table presents a comparison of the prices per hundred weight of both common and special grades of raw milk which have been offered or agreed to for the present month by dealers or concerns whose chief business is the market distribution of fluid milk. These prices are to be paid producers who make deliveries in their own cans either at local milk plants or at country shipping stations. They are based on the prices given for each market listed in Table 1, of this issue of the review and a few additional markets not included in that table. The much larger number of "local markets" given in the following table is to be explained by the fact that in Table 1 the cost prices to dealers are given on an f. o. b. city basis, and that these basic prices, reduced by the transportation rates applicable to different stations and railway shipping points from which considerable shipments of milk are regularly made to the cities listed in that table. The "weighted average" prices given in the following table were obtained on the basis of the average net prices applying to the different shipping points supplying each market given in Table 1. The final averages shown in the following table, were obtained by "weighing" the average net producers' price of each distinct market in accordance with the number of local railway shipping points and milk stations supplying each of those cities.

The prices given herewith apply to milk testing 3.5 per cent butterfat, as do also the producers' prices given in the first column of Table 1.

Table II—Dealers' Wholesale and Retail Selling Price for Goods Delivered

Cleveland, Special or grade milk, retail cents per quart, 20; Certified milk, retail cents per quart, 30; Common buttermilk, wholesale cents per gallon, 25; retail cents per quart, 12; Light cream, 18 and 20 per cent; wholesale, per gallon, $1.80; retail cents per 1-2 pint, 20; Heavy cream whole sale per lb., B. F., $1.11.

Chicago, Special or grade milk, retail cents per quart, 22; Certified milk, retail cents per quart, 25; Common buttermilk, wholesale cents per gallon, 40; retail cents per quart, 10; Light cream, 18 and 20 per cent, wholesale per gallon, $16.0@ 1.75; retail cents per 1-2 pint, 16; heavy cream, wholesale per lb. B. F., $1.03.

Milwaukee, Special or grade A milk, retail cents per quart, 20; Certified milk, retail cents per quart, 25; Common Buttermilk, wholesale cents per gallon, 26; retail cents per quart, 8; Light cream, 18 to 20 per cent, wholesale per gallon, $1.60, retail cents per 1-2 pint, 15.

Detroit, Special or grade A milk, retail cents per quart, 20; Certified milk, retail cents per quart, 23; Common buttermilk, wholesale cents per gallon, 28; retail cents per quart, 11; Light cream, 18 and 20 per cent, wholesale per gallon, $1.80; retail cents per 1-2 pint, 16; heavy cream, wholesale per lb., B. F., $1.07.

Table III—Range and Average of Net Prices at Producers' Local Delivery Points

East North Central, For Standard or Grade B Milk, No. of local markets, 192; range of prices applicable, $2.69 and $[illegible]; Weighted average price, $4.35; For Special or Grade A Milk, No. of local markets, 7; range of prices applicable, $3.56 and $4.38; weighted average, $4.09.

West North Central, For Standard or Grade B Milk, No. of local markets, 90; range of prices applicable, $2.58 and $3.97; weighted average price, $3.33; For Special or Grade A Milk, No. of local markets, 13; range of prices applicable, and $3.90; weighted average price, $3.56.

The Basis of Producers' Milk Prices

What are the prices of milk based on? Or what are the immediate bases of the changes in prices? The answer that milk producers and dealers almost invariably make to such questions is that "prices are determined by the law of supply and demand." Economists, or students of economic values and market conditions, generally offer the explanation that under competitive conditions the "long run average price" of milk (like that of most other commodities) tends to equal the cost of production plus a reasonable profit; and that seasonal changes in prices are caused chiefly by changes in the demand for and the supply of fresh milk available for market distribution. Undoubtedly those are the basic factors affecting the prices of all commodities; but the mere citation of fundamental economic laws does not explain the methods by which milk prices are determined or the immediate basis of current price changes.

In most of the more important milk producing and market areas of the United States, buyers of milk stipulate in advance the prices they will pay producers for milk to be delivered during certain months of the year. Formerly it was customary for milk dealers in some markets to issue, during September, their schedules of "winter prices" for the six months beginning with October and ending with March of the ensuing year. Their schedules of "summer prices" applying to the remaining six months of the year were usually issued during the month of March. Since 1917, however, advance price announcements by dealers, or price agreements between producers' marketing associations and milk dealers, have not generally applied to more than monthly periods.

As a general proposition such monthly price schedules are formulated on the basis of considerations of current costs of production and the available market supply of milk. But producers and dealers have not always been able to agree in advance with regard either to the probable cost of production or the volume of the available supply of milk in excess of a particular city's requirements for fresh milk. The result has been that various bases have been employed for facilitating price agreements. Although these price agreements are variously worded—and many of them have certain features that are peculiar to only one or two markets—when reduced to their simplest terms or most essential provisions, practically all of them fall into some one of the following seven classes, which are briefly described under the two following headlines:

Prices Determined in Advance of Delivery

1. Price agreements based on general considerations of probable cost of production and the available supply in relation to the estimated market requirements, with or without allowances for variations in butterfat test or other criteria of the wholesomeness or quality of the product delivered. (At present this is the prevailing basis of prices paid by leading fluid milk dealers in most of the markets of the United States.)

2. Prices based on the previous month's prices of cheese in some primary cheese market, with an additional allowance for the extra costs of producing a high quality of milk plus the estimated value of whey for feeding purposes on the farm.

3. Prices based on the previous month's prices of butter in some important cutter markets like Chicago, New York and San Francisco, either with or without separate allowances for the value of the non-fat content

(Continued on page 11)

Michigan Strives to Conserve Game Supply

Opposition to Laws Causes Educational Campaign by State Game Commissioner

GAME AND FISH in Michigan have for some time been under the restrictions set up by the legislature in an effort to save the species from wanton destruction and to make them serve as a continuous good to the public. Although many farmers have been affected each trapping season in the state requirements they have not, we understand, been the ones who did the biggest damage to the natural inhabitants of our forests and lakes. Naturally the latest law has roused protests from farmer trappers and hunters who know the game and who are careful and do not waste it. They relaize that green hunters and trappers from the towns cause a great share of the havoc.

If the game laws were abolished, it is quite evident that the game in Michigan would not last very long. Some laws therefore are necessary, and those which are unfair and unduly harsh upon the farmers should be revised. In order to clear up misunderstandings, a campaign of education on this important subject has been set under way throughout the state. Newspapers are taking up the matter.

Every farmer voter should be posted on the game laws particularly as they affect his section of the state. Discussions might well be held at the meetings of the arbors, granges, unions, farm bureau groups and other farmer clubs. One of the interesting explanations concerning the new game and fish laws was published as follows in a Detroit newspaper:

Michigan is beginning to realize that the fish of her lakes and the game of her forests are not so innumerable as the sands of the sea. Also, that if the state doesn't begin to take measures to conserve them the present supply will be materially depleted.

Under the auspices of the state game department, and with the approval of John Baird, commissioner, Ed A Nowack, a deputy game warden at Kalkaska, is starting an educational campaign to teach the young people of the state the necessity of conserving the game supply. In Kalkaska County Mr. Nowack during the last year visited 57 schools, talked to the children, and offered prizes for the best essays on game and fish conservation.

The youngsters were all interested, for virtually all the boys who were old enough fished and hunted, and even some of the girls frequently played sportsman.

In fact, some of the girls' essays were among the best of the 100 published. One of the girls, well versed in Biblical history, used exhortations and illustrations from the Bible advising people against wholesale slaughter. Then she went on to tell how the Indians and the Pilgrim Fathers killed only as much game as they actually needed, and showed how modern hunters might well take a lesson from these older examples.

The campaign will undoubtedly become general throughout the state, and the help of the department of public instruction is being enlisted. And with the youth of Michigan engaged in another children's crusade on behalf of the game and fish of the state, the next generation ought to see the offenses against the game law reduced to a minimum.

These infractions of the law have been numerous, a fact which could be gleaned from the State Fair exhibition of but a few of the weapons and implements confiscated from hunters who were violating the game regulations. All manner of traps, snares and deadfalls with which the hunter captured his prey were shown at this exhibit. Some of these traps are legal during certain seasons, but the deadfalls are exceedingly cruel and slowly crush the animal to death or break its back, so are never allowed. Many spears, used with jacks (bright lights employed in a boat at night to see the fish which are lying on their backs at the bottom of the lake.) are among the confiscated weapons. These lights stupefy the fish so that a man can drive his spear home. Thus the fisherman is able to gain a large supply of fish, but sportsmen look on this method as cowardly and it is strictly forbidden except in the case of certain obnoxious fish.

Dynamiting the lakes so that all the fish in that part of the water have been killed is another disastrous practice which has resulted in the wholesale depopulation of our lakes. But with the young army of the state completely aroused this is not likely to happen any more.

By means of educational propaganda Michigan ought to realize what it has in the way of wild life, and what that wild life means in the way of food supply. If proper restrictions are observed concerning the killing of fish and game, much should be accomplished towards the reduction of the high cost of living. In the past we have been guilty of singular folly. We have spent money raising and planting fish, and then allowed outside companies to come in, catch great stores of our fish, take them outside the state and there hoard them in cold storage for a couple of years, to be shipped back here and sold at 30 cents a pound, although not fit to eat by this time.

But, briefly, the doctrine enunciated by the state game department is simply the observance of the law. And of course the observance of the law necessitates a knowledge of it. Attention is, therefore called to some of the changes recently enacted by the legislature.

One of the changes affects the hunting of partridge. The rapid depletion of the partridge supply in the past made necessary very strict laws on partridge hunting, but this year an open season on partridge is assured. These may now be hunted in such Upper Peninsula counties as are not closed by local petition, from Oct. 1 to Oct. 31 inclusive. In the Lower Peninsula they may be hunted from Nov. 1 to Nov. 30 inclusive.

The bag limit is five in one day, ten in possession at any one time. During any one calendar year no person is allowed to kill more than 25.

The state and federal laws concerning duck hunting are now identical. The season to be enforced in Michigan henceforth on ducks, geese, brant, wilson or jacksnipe, coots and gallinules, is Sept. 16 to Dec. 31, both inclusive.

One piece of legislation will delight the heart of the deer hunter. Now, deer hunting parties of four may secure camp permits entitling them to one deer—formerly this permission could only be obtained for parties of six.

The new law erects the divisionary line in Michigan for the hunting of muskrats according to the respective seasons, on range five. This line is the north boundary line of Arenac, Gladwin, Clare, Osceola, Lake and Mason counties. North of this line, but not including the counties named, muskrats can be trapped from Oct. 15 to April 15. South of this line they may be taken from Dec. 15 to April 1. Rifles of no more than .22 caliber can now be legally used in killing muskrats.

The status of the skunk under the game law has fallen greatly, or rather has collapsed. It has now been taken from the list of the protected animals and placed with the predatory beasts. Under the new law the skunk may be killed, trapped, smoked out or dug out, and is common prey for all.

There are now two zones for rabbit hunters in Michigan. The dividing line is the same as that for muskrats. North of that line rabbits may be hunted from Oct. 1 to March 1, inclusive. In the zone south of that line they may be hunted from Nov 1 to March 1, also inclusive.

A shorter season is made effective on beaver. These may be trapped from Nov. 1 to April 15. The season formerly extended to May 14. The season is also shortened for otter, fisher, martin and mink. These fur-bearing animals may be trapped this year from Nov. 16 to Feb. 14, inclusive instead of until March 15, as formerly. The dates for raccoon hunting are changed to Oct. 15 to Dec. 31 instead of from Dec. 15 to March 15.

The closed season has been extended from 1920 to 1921 on black and gray squirrels and all pheasants.

A bounty has been placed on woodchucks and crows, 50 cents on the former and 25 cents on the latter. Two bounty laws instead of one now include all noxious birds and predatory animals. Township, village and city clerks ar ethe proper officers to issue certificates for bounties on weasels, hawks, crows, owls and woodchucks.

A specific law provides punishment for violators who molest game and insectivorous birds in any manner. This law was made necessary by the conduct of certain aviators at Selfridge Field, Mt. Clemens, some months ago, when they were apprehended for shooting ducks on the wing. The penalty on conviction is $25, or one month in jail.

(Continued on page 11)

Mr. I. B. Careless bumps into the new game law.

St. Joseph Stages a Tractor Demonstration

THE FIRST and only tractor demonstration which has ever been conducted on a competitive basis in Michigan was held at Centreville, St. Joseph County, September 24, 25 and 26. From the standpoint of machines entered it was not as large a demonstration as one or two others which have been pulled off. Owing to strikes, transportation, scarcity of help, etc., some of the machines entered had to be left out during two days, but for real value in the way of furnishing information to the farmers as well as the tractor men themselves, it was the real stuff.

The tractors arrived on the scene of action on Tuesday afternoon where the first thing on the program was the drawing for plots. This was followed by some preliminary plowing to get everything in good working order. The plowing test proper was conducted on Wednesday on a splendidly located field one mile east of Centreville. The field was as nearly uniform as possible and ideal for a test of this kind. This field had been previously measured up and divided up into strips containing slightly over two and three acres in each strip. The two acre strips were allotted to the two bottom tractors while the three acre strips were given to the three-plow outfits. Each tractor was alowed to plow two preliminary rounds on its particular plot in order to adjust the plows and outfit before the beginning of the test. At 9 o'clock all fuel tanks were emptied and fuel was weighed in from the common source (a Standard Oil wagon which was on the ground.) Each tractor operator specified the kind of fuel (gasoline or kerosene) he wanted and this was weighed into the tank. The amount of fuel allowed was in proportion to the size of the plot and the number of plow bottoms. Each machine was given approximately three gallons of fuel (exactly 40 pounds) per acre and plow bottom, with a pint of gasoline extra for starting the machine. Owing to the difficulty in draining some of the fuel tanks, the process of filling tanks was a slow one and consequently we were late about starting the test. When all the tractors were supplied with fuel Professor Musselman raised the flag which was the signal for the start and the machines were off to a flying start. All of the machines plowed until they had either completed their plots or run out of fuel. Four machines succeeded in finshing up with their allotted fuel while the rest had to have an extra supply before they could complete their area. During the plowing test there was an observer (a local farmer) keeping tab on his particular tractor, checking them up on the depth of plowing, etc. Eight inches was the depth of plowing required and the tractors were given credit for extra depth or charged with any deficiency which might be found. Running the test in this way, it was to the interests of the tractor men to keep the plows down to the required depth as they all realized it was the number of cubic feet of earth turned over which counted in the contest. When the tractors stopped for want of fuel or at the completion of the plot the ground was measured again and if there was any fuel left this was weighed out and the tractor given credit for this amount of fuel. So we now have figures on the time required, the cubic feet of earth turned over and the amount of fuel used to complete the test. This we consider very valuable data.

Thursday and Friday the belt power tests were conducted on the fair ground at Centreville. The tractors were taken in the same order as the number of their plots in the plowing contest. The machines were run into a roped space where they were belted to a Prony Brake. The Prony brake consists of two pulleys on a shaft. The one pulley is for the belt while the other has a brake fitted over it to which is attached a lever which rests on a platform scale. As the brake is tightened, pressure is brought to bear on the scale and the number of pounds of pressure is weighed. The operators kept tab on the speed of the tractor, the speed of the brake and the time. The speed and the pressure on the scales was taken into consideration in figuring the belt power. Each tractor was given a thirty minute preliminary run to get everything adjusted and the test proper was run for a period of thirty minutes. Belt power was figured six times on each tractor at intervals of five minutes and these

(Continued on Page 15)

An Old Fable That Proves a Big Fact

A certain man had several sons who were always quarreling with one another. And try as he might, he could not get them to live together in harmony. So he determined to convince them of their folly by the following means:

He bid them fetch a bundle of sticks and invited each in turn to break it across his knee. All tried and all failed. And then he untied the bundle and handed them the sticks, one by one. They had no difficulty at all in breaking them. "There, my boys," said he, "united you will be more than a match for your enemies, but if you quarrel and separate, your weakness will put you at the mercy of those who attack you."

—AESOP'S FABLE

Together You Win

Aesop, in his ancient fable, in his "Together You Win," voiced no new fact.

Throughout the history of man, the really big things in life have been achieved by organized effort.

In pre-historic times, each man worked alone, supplying the crude needs of himself and family.

Civilization, however, has been the history of the development of organized effort. The gathering of people into great cities—the building of wonderful structures and gigantic, industrial institutions.

Labor began centuries ago to organize and thereby raised itself from practical serfdom to the good earnings and working conditions it enjoys today.

Manufacturers in every line of business have organized and thereby protected themselves against ruinous competition and insured fair prices for their products.

Farm folks alone have lagged behind in this great development of organized effort.

While all the world has been organizing, the farmer has been working alone, buying alone, selling alone.

Organizations working along restricted lines such as we have in our own State have done great things and will do more.

But, in spite of all this, the farmer is still at the mercy of the organized manufacturers of everything he buys and of the city organized marketing machinery in selling every thing that he raises.

There is not a progressive farmer anywhere but realizes that in order to solve the farmer's problems of high producing costs, lack of labor and vanishing selling profits, a powerful farmers' organization is absolutely essential.

Today, the farmers of Michigan are creating such an organization.

The farmers of other states are well on the way.

If Michigan only equals the record being made in Illinois a year from now over 75 per cent of all the farmers in Michigan will be enrolled in this great organization.

We are going to beat Illinois. We are going to beat all the other states in the Union.

We want every farmer in the State a member of the Greater Michigan State Farm Bureau.

With such an organization as this we can solve the problems that are confronting us—we can reduce our production costs and solve our help problem—we can market our products for a fair return, not only on our investment but on our labor. We can secure legislation which will be favorable to the farmer.

The great organization campaign starts actively in Oakland County on the morning of October 15th.

Other counties will follow as rapidly as they can be worked, until every farmer in Michigan has been visited personally and asked to join at a yearly membership fee of $10—$5 to the County Bureau and $5 to the State. This will give ample funds to accomplish the great work we propose.

But don't wait. Get your counties organized well in advance of the State organizers. Learn all the details about this great movement by communicating with Mr. C. A. Bingham, State Secretary, Birmingham, Mich.

Collective Bargaining

"QUIT YER kiddin," jocularly exclaims the editor of the Rosenbaum Grain Review commenting upon the desire of the farmers to bargain collectively, "not only in their own interest, but in the interest of the consumers." "Any time," adds this witty writer, "the average of the horny-handed takes his hand off his own pocket book, 'in the interest of the consumer,' call me early mother dear." But in a more serious strain our trade paper friend declares his intention of fighting collective bargaining "to the limit of his ability."

There, there, calm yourself, brother editor. You wouldn't use up so much valuable space to tell us that the world is round or the war is over or that Congress is having a fit over the League of Nations. We know you are against collective bargaining. You don't have to tell us so. We know that you and your brothers in the grain trade, the vegetable trade, the live-stock trade, and all the other farm produce trades will fight collective bargaining to the limit of your ability just as you have resisted every effort of the farmer to secure economic freedom.

We have had some misgivings upon this collective bargaining proposition ourselves. We can't fall for it simply to show the farmers that our heart is in the right place. We cannot approve of legislation that gives to the farmer an absolute monopoly, wipes out all competition and leaves the consumer entirely at the mercy of the producer. We do not fear that the type of farmer who raises the bulk of the food today would abuse this privilege, but we do fear that were such favors granted to those engaged in farming selfish capital would at once be attracted to exploit agriculture and profiteer under the protection thus accorded by the government. It is to the farmer's eventual welfare that he does not at this time ask for unbridled license in fixing the selling prices of his products.

We have only to review the recent fluctuations in market values, which cost the farmers millions of dollars, to appreciate the justice of the farmers' demands that they be given legal means for controlling to a certain point the selling price of their products. Supply and demand have had very little to do with the enormous losses the farmers have suffered the past several months. Cost of production has been ignored by the influences which are tearing down the grain and live stock markets, and the farmers are powerless to cover their losses or prevent further declines. Who, besides those who are the sole beneficiaries of such a system, can stand up in its defense. Who with justice can say that all is well with the farmer and that he has no "kick" coming?

Farmers should be permitted to bargain collectively, and to withhold their crops from market until the price bid for them shall equal cost of production plus a reasonable profit. The principle of collective bargaining, for the protection of an industry, is right, and can be excused upon almost identically the same grounds as a protective tariff. Duty is placed upon many imports to encourage domestic industry and make it possible for invested capital to return a fair dividend. But a tariff that enables a manufacturer to make exorbitant profits is indefensible. The right to bargain collectively is needed at the present time to make it possible for farmers to secure a fair return upon their labor and invested capital. But the abuse of this privilege should not be tolerated. It is possible to accord to farmers at this time the right to bargain collectively without imperilling the interests of the consumer one iota.

* * *

Think Twice, Mr. President

RUMOR COMES from Washington that president will remove the war ban on alcoholic liquors at an early date. There is a simultaneous statement that Kentucky distillers are prepared to flood the country with booze the instant the president signs the order.

Think twice, Mr. President. You have said that these are critical times. You are aware that men are saying and doing things today who in their saner moments would laugh at the folly of their actions. Unbalanced zealots are preaching mob rule, strikes, sabotage, incendiarism, even the overthrow of the government. Would you add fagots to the fire? Would you place dynamite where there is now only flash powder? Would you release the stuff that fires men's brains into a consuming conflagration of reason, and send them off upon expeditions of rapine, destruction of property and murder?

Think twice, Mr. President. The people have declared for national prohibition. What excuse can you give for tilting the lid for a paltry two or three months in order to satisfy the clamorings of a small, selfish group of citizens? Will you be prepared to accept the consequences,—to face the wrath of the people—if you in an ill-advised moment give liquor once more a free reign and invite the nation to an orgy of drunkenness?

* * *

In Memory of Roosevelt

THE CAMPAIGN is on, nation-wide, to secure funds for erecting a suitable memorial to Theodore Roosevelt. The appeal for funds in this state should meet with instantaneous response from Mr. Roosevelt's thousands of admirers. No state in the union stood more loyally by Mr. Roosevelt than did Michigan during many trying political battles, and if the respect the people of Michigan had for the great statesman during his life has survived his death, Michigan can be counted upon for a generous contribution. It is quite unnecessary to enter again the portals of the hall of fame in which the deeds of Roosevelt are recorded. Admitting all his faults, remembering how bitterly he fought against the decrees of fate during the last year or two of his life, and acknowledging his mistakes, both those who would like to have been his supporters and those who were his enemies know that he was great, and that the spirit of the man who now rests upon Sagamore Hill still lives and will live thruout the ages. It is fitting that the nation should erect a monument of enduring stone to his memory, and every citizen should feel it a personal obligation and privilege to contribute to the cause.

* * * *

A Bonus for the Soldier Boys

THE AMERICAN LEGION has just taken a step which may have far-reaching effects in further disturbing the financial and currency standards of the nation. Several branches have voted to petition congress to pay every soldier and sailor a bonus in the form of a $50 Liberty bond for every month in the service.

We have had a feeling that the nation has not fully paid its debt to the young men who gave up active business careers to fight for their country. In North Dakota, that notorious strong-hold of non-partisans, the people's conscience, was quick to recognize this debt and a state law was passed which gave to North Dakota soldiers a partial financial recompense for the time they had spent in the service. But apparently the rest of the country, if it felt the obligation at all, pushed it aside and went on about the routine of business. But there was one individual who didn't forget it. That was the soldier himself, and the subject has been repeatedly discussed in gatherings of the local branches of the American Legion.

Congress and the nation at large have had every opportunity to liquidate this debt upon a just, safe and practical basis. It has not done so. The initiative having been left to the soldiers themselves, they have been quick to grasp it, and now present a plan which involves a further issuance of bonds totalling nearly six billion dollars, and may, if adopted have a most detrimental effect upon the credit of the government. Liberty bonds are being used extensively in trade and to float another issue in such a huge amount to individuals whose first step may be to convert them into cash, will, we are afraid, greatly depreciate the current value of the bonds already issued and increase the circulating media of barter and exchange to such an extent as will greatly aggravate the present situation in which we find ourselves by reason of our inflated currency.

* * *

Aid for Those Who Need It

WORD COMES that several national farm loan associations in the northern part of the state have been dissolved because the Federal Land Bank refused to make the desired loan against the security offered. It is alleged that appraisers were sent to examine the farms who were residents of lower Michigan and unfamiliar with the type of northern Michigan soils. It is also stated that these men proceeded in their examination as if of the settled conviction that these lands were practically worthless and great caution should be used in recommending loans against them.

One visiting the upper counties of the state is not impressed at first glance with their agricultural possibilities. Generally speaking, the farms do not have that air of prosperity about them that is characteristic of the farms in some of the lower counties. Here and there a farm is seen that compares favorably with the best of Michigan. The farm buildings are well-built and well-kept. The fences are of the best material. The orchard shows the result of careful and intelligent attention. Modern equipment and conveniences are in evidence, and the entire place bespeaks a progressive owner. Viewing such farms as this, one must take it for granted that the soil is fertile and productive.

But the average type of farm in northern Michigan is a disappointment. If its owner has prospered his premises give no indication of the fact. For they have a sort of down-at-the-heel appearance which deceives the observer as to the true character of the soil. But if one were to go back to the earliest history of that average farm he would find in the majority of cases that the owner started in with scarcely a dollar to his name, went in debt for everything he bought, built his buildings at odd moments, and underwent hardships, discouragements and set-backs as can only come to the man who attempts to farm without capital or credit.

The purpose of the federal farm loan system is to provide financial aid to those who need it and cannot easily and cheaply secure it through the regular channels. If any farmers in the United States come within this class, should not the farmers of northern Michigan be counted foremost in the lot? If appraisers are sent to that section who permit their judgment to be swayed by their prejudice or ignorance and appraise the land so low that it loses its desirability as security, the purpose of the federal aid so far as northern Michigan is concerned, is thereby defeated. We should like to see the Federal Land Bank at St. Paul make a thorough investigation of the agricultural situation in northern Michigan and establish a policy that will permit of greater assistance being given to the farmers of that section.

WHAT THE NEIGHBORS SAY

EIGHT HOUR DAY FOR FARMERS

Enclosed you will find a statement of my expense in growing this year's crop of beans. It was such an expense to me that I had to call my boy's attention to it. We supposed we were growing beans at a profit until last evening when we sat down and filled out the blank clipped from M. B. F. Our yield per acre you will notice is no less than the average for the state, according to threshers returns for the past two years. Our charges for growing this crop are not exhorbitant. I have refused $6 per day overseeing the building of a county road past our farm and my eighteen year old boy with the team could have gotten $7 per day all summer. But we decided to work for nothing on the farm, sixteen hours each day so that the eight hour city man would not go hungry.

Will you kindly tell us then, M. B. F., how much longer we must do this. We have been offered $150 per acre for the farm and have just about decided to sell it, send the boy to the M. A. C. and move to the city. There is a fine 80 acre farm for sale nearby which I offered to buy for this boy last spring but he don't want it. He has seen the folly of working hard all day to produce a crop and sell it for less than cost of production. There never was a time when there was so many farms for sale as there is now. Farmers have discovered that it is costing more to produce a crop than they can get for it. and that they are working early and late just for the fun of it while the city man is working only 8 hours and getting from five to ten dollars per day.

Every afternoon at 4:30 we can hear the carshop whistle blow and everybody connected with the shop or with the railroads quit work while we farmers toil on till bed time.

Farmers throughout this section are wondering if it would not be a good plan for them to adopt the 8-hour day, work about half their land, let the balance rest and take things easy. Would not the price of farm produce advance so that we would not have to grow it at a loss and would we not have more time to visit more time to spend in the city at the movies, lectures and social functions, without moving there, and have more money than we now have. What do you think of it? We must do something if we are to keep the boys on the farm. Sincerely yours—U. G. Stiff.

Your letter calls to mind the oft-repeated charges that farmers never realize they are losing money until some of their "half-baked leaders and farm paper editors come along and stir them up." It may seem strange but it is nevertheless a fact that many farmers lose money every year and don't know it. But they remain in business, live fairly comfortably, buy motor cars and seem to get along pretty well, which makes their position the harder to understand by the city consumer. If we look at farming as an industry as we rightly should and compare it to other industries in which capital and labor is employed we find that it exists and apparently prospers only because those who are employed in it are willing and obliged to work much longer hours at much less pay than those engaged in other industries. For some reason we find it very hard to force into the consciousness of the average city man that all who live upon the farms toil upon it and are not paid full measure for their labor. We cannot fairly compare the profits of the business of farming with those of the business of merchandising until we allow every individual who performs labor upon the farms a recompense for that labor just as the city merchant pays a wage to his employes. Few men engaged in the city professions and trades expect that their families shall be wage earners in the business, or being so expect that they shall labor for nothing. In fact, the average city man who often criticizes the farmer severely because of his complaints would view with repugnance the suggestion that his wife and children perform such ordinary and arduous labor as the women children on most of our farms are compelled to perform, if they are to "remain in business, live comfortably, buy a motor car, or get along fairly well." It is possibly true that farming does not pay any less today than formerly. The trouble is that the farmer is awakening to the consciousness that he is toiling while other people spend their substenance in riotous living; that his capital returns at best only a meagre six to ten per cent while other capital pays double and treble returns. Hence, the present dissatisfaction among the farmers, and their demands for an "eight hour day," "time and a half for over-time," "collective bargaining," and other privileges enjoyed by labor and capital in other fields. The problem is a real one, and demands the earnest attention of all honest minds —The Editor.

A SATISFIED CO-OPERATOR

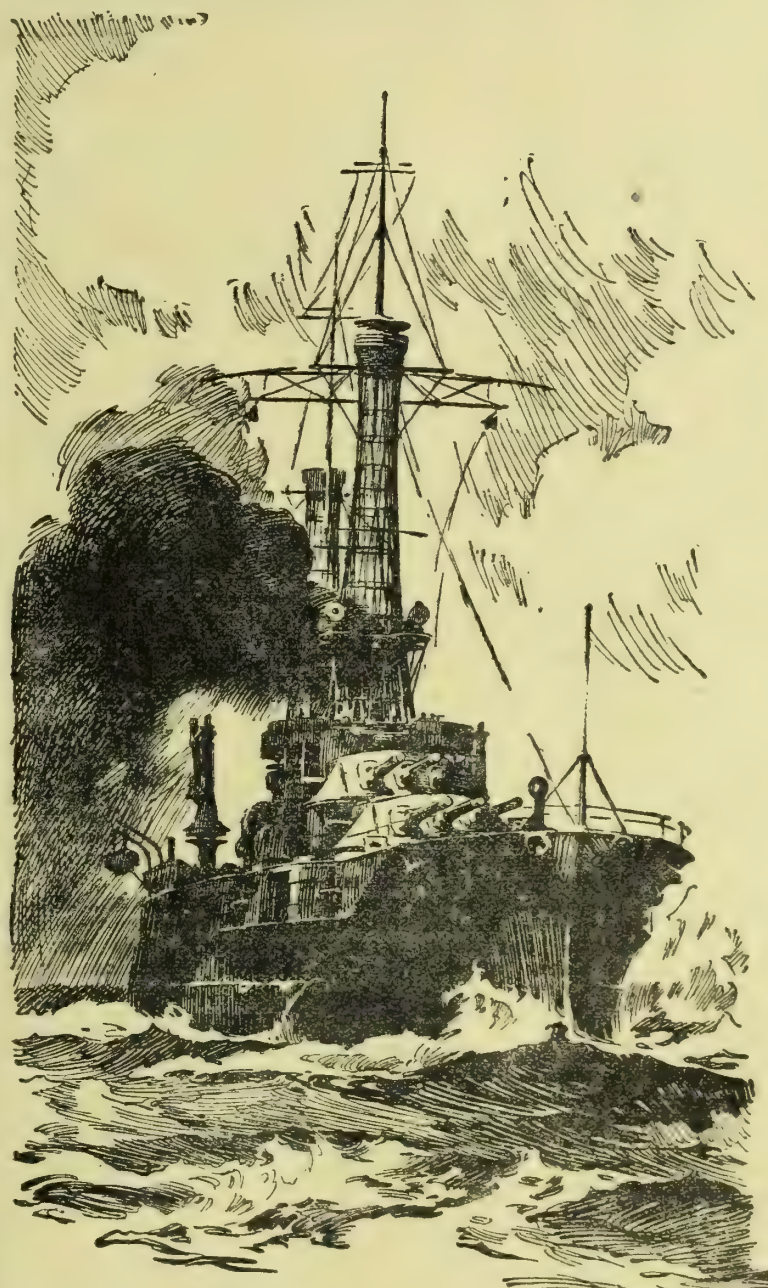
I ENCLOSE a fair estimate of my bean crop for this year. As I have not yet threshed, of course, cannot give you exact yield per acre. I helped one of my neighbors thresh beans today, the first job our beaner has done this year. He threshed eight acres and got 215 bushels of about 27 bushels per acre, but this was an exceptionally good crop, quality almost perfect with scarcely a pound pick.

Beans right around here are better than last year, but is other parts of Huron county not so good. I have preached co-operation and better understanding among farmers for mutual benefit and better prices for several years, but farmers seem to be slow to grasp the principles of co-operation. Last April, thru my efforts were organized the Pigeon Live Stock Ass'n and to date we have shipped 16 cars of live stock, and in less than three months' time we had the drovers practically put out of business. We now have 191 members and there isn't a shipper but what is thoroughly satisfied and would not think of going back to the old way of shipping. The $3 per car more or less now comes back into their pockets instead of going into the drovers' pocket. Just another case of eliminating the middleman. I am an ardent reader and supporter of your paper and wish that it would be in the home of every farmer.

Now just a final word in conclusion. Please do not let that farmer's candidate for governorship slip your mind. Jim Helme or Herb Baker will do, and I will do everything in my power to help land our man.—Wm. S., Pigeon, Mich.

Editor's Note: Your neighbor is particularly fortunate to secure 27 bushels of beans from an acre of ground. Have him tell us how he did it, as there are quite a few thousand farmers in the state who would like to follow his example. As you may know the average will run much less, probably not to exceed nine or ten bushels per acre. If every Michigan grower could secure 27 there wouldn't be any complaint. A good farmer governor would be fine.—Edtior

If you had been on the Arizona



HERE she comes, homeward bound, with "a bone in her teeth," and a record for looking into many strange ports in six short months.

If you had been one of her proud sailors you would have left New York City in *January*, been at Guantanamo, Cuba, in *February*, gone ashore at Port of Spain, Trinidad, in *March* and stopped at Brest, France, in *April* to bring the President home. In *May* the Arizona swung at her anchor in the harbor of Smyrna, Turkey. In *June* she rested under the shadow of Gibraltar and in *July* she was back in New York harbor.

Her crew boasts that no millionaire tourist ever globe-trotted like this. There was one period of four weeks in which the crew saw the coasts of North America, South America, Europe, Asia and Africa.

An enlistment in the navy

gives you a chance at the education of travel. Your mind is quickened by contact with new people, new places, new ways of doing things.

Pay begins the day you join. On board ship a man is always learning. There is work to be done and he is taught to do it well. Trade schools develop skill, industry and business ability. Work and play are planned by experts. Thirty days furlough each year with full pay. The food is fine. A full outfit of clothing is provided free. Promotion is unlimited for men of brains. You can enlist for two years and come out broader, stronger, abler. "The Navy made a man of me" is an expression often heard.

Apply at any recruiting station if you are over 17. There you will get full information. If you can't find the recruiting station, ask your Postmaster. He knows.

Shove off!

Join the U. S. Navy

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

THERE ISN'T a question of more importance to the mother than that relative to her children's education, if she be a progressive mother who wants her offspring to have just a little better education than she enjoyed and so be able, because of that better foundation, to more easily cope with the problems confronting them in later life. And yet this year we are faced with a dearth of teachers, and why? Undoubtedly partly because they receive more money for their work in other lines, and also have work the whole year around, but by no means is this the whole reason.

In our office there are two ex-school teachers who have only last year given up teaching to take up clerical work. And when I asked them the reason, one immediately replied: "Well, you know I just love my work and most of my pupils, but did you ever stop to think that you are not only held responsible for the progress each child under you makes, but you are expected to teach them deportment, etiquette, etc., and then, if you have occasion to correct or punish them, you are very often criticized by the parents." I tell you it is no small task to please the parents of every pupil as well as the school board and with all do your work conscientiously and well."

Why not get near your teacher—the teacher who has charge of your children for so many of their waking hours five days in the week, and co-operate with her. Did you ever teach school? if so, then you know something of the work the teacher has to keep the attention of her classes near the end of the day, keeping some interested in their studies while she hears others recite, and then when the day's recitations are over, there are the papers to correct and the lessons to prepare for the next day, which often takes three out of five of her evenings. Mrs. Dillenbeck has put the story into a little poem—we hope that the case cited is an exception. Public sentiment can do much along this line as well as all other lines of public improvement.

"Those who educate children well are more to be honored than even their parents; for these only give them life; those the art of living well."—Aristotle.

The Country Teacher

IT'S FUN to hear the people talk about the country teacher—
Though all the parents strike and balk, from this most gentle creature,
We still expect rare discipline and genius quite in learning.
We say as soon as school begins, "Her salt she is not earning."
We talk of it till fall of night and in the mOrning hours,
We wish such frolic was our right and pathway strewn with flowers.
To work at nine at play at four (we housewives die of envy)
And then we rant at her some more her blessings are so many.
The children straightway take it up, and carry it to school—
And then we set the supper UP till evening's twilight cool.
Because the children had to stay, COUNFOUND THE IDLE TEACHER
And thus it is from day to day—sometimes we add a feature—
In form of spicy note or slur we send her by a youngster,
And then we raise an awful stir and want the board to bounce her,
Because she had to use a whip if she would run the school.
We set the children up to skip because she's mean and cruel.
From day to day she labors on with ne'er a care or trouble—
That Jack Or Mary, Grace or John does not proceed to double.
We read the evening papers through and deem it most alarming—
Five hundred teachers have skidooed and taken up with farming.

VACATION'S PAST—HOME'S BEST

POSSIBLY the best benefit we derive from going away from home for a vacation is appreciation we have of our homes and of our work when we return.

How we look forward and plan for that vacation period all through the year, resolving to go here or go there—to see this or to see that; then when the time nears we secure all the folders and advertising matter possible in order that we may determine just which offers the most for the time and money—and then finally we're off.

So it was with the writer. A vacation spent at a popular resort where you spend a lot of money in order to live in a summer hotel and dressed for every meal in a different outfit, didn't appeal to us. We wanted to see something we had never seen before—to go somewhere; rub elbows with our fellow men and see how the other half of the world lived, rubbing off corners in the contact. And so finally the Thousand Island and Saguenay trip was the one decided upon. There were seventy who finally made up a party, escorted by a representative of the Canadian Steamboat and Railway lines. There was the tired business man with his equally tired wife; then there was the man and his wife who had plenty of money but who can't go to Europe this year because that sort of travel isn't encouraged y[illegible] and who for the first time w[illegible] ing the beauties of their own land, for, although we were in Canadian waters or on Canadian soil most of the time, it seems as though we were sort of sisters, the relationship of these two countries having been so closely cemented since the war. Then there were the girls who, like ourselves had saved for a whole year from their office earnings for the trip and were alive to every thing, and enjoying themselves every minute of the time.

The trip never grows monotonous because of the many changes. You are obliged to change steamers at Buffalo and take the trolley around to Niagara and along the Gorge route to Queenstown where a small steamer is boarded which takes you as far as Toronto. There another change is made for a smaller one, which carries no night accommodations in the way of extra state rooms as the steamer is simply used to shoot the rapids along the St. Lawrence, and so after this exciting afternoon and arriving at the quaint, picturesque old city of Quebec, we again changed boats for the larger boat which was to take us up the Saguenay to Ha Ha Bay, way up where the mountains rise higher and higher until at Echo Bay they form two peaks known as Capes Eternity and Trinity, either of which is larger than Gibraltar. On this salt water stream, we forgot that it was not yet winter and unless we donned every article of clothing we could get one, we wore a "goose flesh suit" much to our discomfort and against our will. For the tang of the salt air made us remember that we were near the Labrador current.

However it told the enthusiastic fishermen on board that the cold trout streams were near at hand and that in the same stream we were traversing was to be found the beautiful salmon. Some of these fresh fish were served to us on board our boat and whether it was our appetites or the fish, I can't say, but surely never did fish taste so good.

On the way we stopped at Toudasac, the first French settlement in this country, and there, with the exception of the tourists, French is spoken entirely. A wonderful salmon fish hatchery engaged our attention at this point as well as an old Catholic church, 272 years old, long ago supplanted by a newer, larger edifice.

At St. Alphonse, on Ha Ha Bay, we tied up for the night, and when we woke in the morning we found that instead of being tied to a dock we were tied to an ocean going freighter which was loading with bales of paper pulp, the chief industry along the shores of this country. There we learned that during the short season of three months the Canadian government would ship from this one port two million tons of paper pulp to France and England, supplying almost their entire need, while New York City alone takes the product of two and one-half acres of this spruce pulp each day to supply paper enough for its circulation of 98 million which papers of course go all over the world. Little did I think when I left that I would learn how the paper for which I wrote was manufactured.

At Toronto, Montreal and Quebec our stay was so limited that in order to see the most in the time we had, we boarded the famouns "rubber-neck" wagons with which every city abounds, and do you know I really feel sorry for the rich folks who are so well off that they have their own cars and chauffers, as they truly miss a lot. Those fellows on these wagons in spite of their fooling, will give you more real information about a city than you could learn in a whole week by yourself. Have you ever noticed that they were usually like the policemen, Irish?

We all laughed heartily when pointing to a hill toward which we were coming, he called it the most artistocratic and popular "Rest Camp" in that country, and then a moment later we spied the tombstones which told us the kind of a Rest Camp it really was. No one is allowed to be serious on a vacation trip. Nearing a quaint little wooden building, we were told that it was the most popular "Flatiron" building in the city; only later to read on the sign board "Chinese Laundry." And on one corner we passed there was a brewery, a church, a boarding house and a school. Our guide described that as being the only corner on earth where you had salvation, starvation, ruination and education all on one corner. Oh yes, old and young, rich and poor, we all left our dignity at home and spent nine delightful days, but so much did we see and so fast did we travel that when once more we sighted Niagara Falls, and knew that we were again on American soil and near home, we felt like the little poem below very aptly expresses it:

The Spot That God Loves Best

The west begins where the east leaves off
And no man knows the spot;
The starting point of the sunny s[illegible]
Is the place where the north is n[illegible]
We call it east where the welcome s[illegible]
First tints the rosy skies;
We call it west where the shadows fade,
When the evening twilight dies;
We call it north where the snowdrifts pile,
When the wintry blizzards blow;
We call it south where the orange blooms
And the sweet magnolias grow;
We will travel east, we will wander west,
To the north or south we'll roam;
If we're still in sight of the Stars and Stripes
The spot is home, sweet home.
For the starry banner shall float aloft,
From the calm Pacific shores
To the rugged rocks of the far-off coast,
Where the broad Atlantic roars,
There is no north and there is no south,
And we know no east, no west,
For any old place in the U. S. A.
Is the spot that God loves best.
—Selected.

SOME HELPFUL HINTS

Belding, Mich.

Editor Mich. Business Farming.

Dear Sir:

I am a reader of your farm paper and noticed in the July 12 issue that you ask for helpful hints from housewives. I will send a few that are very helpful to me, and would like to have you print the suggestions.—*C. D., Belding, Mich.*

For cleaning the outside of a copper boiler which has become tarnished and stained, instead of spending hours scouring and polishing, try using a piece of old woolen cloth wet in kerosene and see what perfectly good and quick results you obtain.

To clean a water pitcher which has become coated with lime try soaking well with good vinegar and see how easily it can be made clean.

To bake a crust for a lemon or cream pie, try baking it on bottom of tin instead of the inside. It will be more satisfactory when baked.

Try using paper under the burner to your oil stoves and see how much easier it is to be kept clean.

Instead of putting baby to bed nights cross and irritable try cooling him with a luke warm sponge bath and see how much sweeter he sleeps.

SEEN IN CITY SHOPS

The most popular color for fall is brown. Persons with brown or auburn hair and with hazel or brown eyes will find this color most becoming. However, if it makes you look sallow as it does some, don't be discouraged, as the ever-popular blue is shown just as much and doubtless will be worn even more.

Then there is fringe again—narrow and wide. Some of the afternoon dresses and evening gowns have a whole overskirt of long fringe, making you think of the Hawaiian dresses. Fringe is so dressy that it really should not be worn for street costumes.

Shoes for "best" promise to be high again—as high as fourteen inches, now that the restriction imposed by the war has made it possible for the manufacturer's to use as much as they desire. And the prices are equally high.

ESSAY ON "GEESE"

JOHNNY Truehard of St. Louis, Mo., won first prize in a competition on "geese" recently. Johnny may never develop into a Shakespeare, but he is original at least. Here is his effort:

"Geese is a heavy set bird with a head on one side and a tail on the other. His feet is set so far back on his running gear that they nearly miss his body. Some geese is ganders and has a curl on his tail. Ganders don't lay or set. They just eat, loaf and go swimming. If I had to be a geese I would rather be a gander. Geese do not give milk, but give eggs, but for me give me liberty or give me death."

DEAR CHILDREN: What a glorious season is the fall! How we do love to walk beside the road and scuff our feet in the leaves, and what splendid fun it is to go nutting, gathering in our store for winter even as the squirrels do. When the cellar and barns are full, we have a great deal to be thankful for, and this year especially with the war over we have more cause than usual to be thankful.

There are to be two prizes for Thanksgiving. One for the best drawing of a subject fitting for the holiday and the other for the best story of why you are thankful on this holiday. Now get busy, children and see if you can earn one of these prizes.

Several original prizes have been received but it is too early to award a prize. Perhaps next week we can publish one and tell you who the prize winner is.

And though it is very early there is a whole army of our Children's Hour members earnestly striving to get the wonderful Christmas presents that I am awarding for just a little work. Are you one of them? It's not too late if you hurry. Send in and ask me all about it.—Affectionately yours, "*Laddie.*"

OUR BOYS AND GIRLS

Dear Laddie:—I am a reader of the "Children's Hour," and would like to be a member of the Christmas Club. My father takes the M. B. F. and says it is the best paper he has ever taken. He can hardly wait until it comes each week. Our school began September 8th. We have a school of 23 pupils and our teacher is Mrs. Dowling. I like her very much. I am 13 years old and in the 9th grade. I passed the 8th grade examination last year. Well my letter is getting long so I will close with lots of love to all the children.—Rebecca Hayes, Bailey, Mich.

Dear Laddie:—We take the M. B. F. and I enjoy reading the letters from the boys and girls. This is the first time I have written. I am a boy 13 years old and in the 7th grade. I like my teacher and like to go to school. For pets I have a pair of pigeons which are very pretty. During my vacation I help work on the farm for we have 110 acres. I would like to hear from any of the boys and girls. I hope to see my letter in print.—John Klug, Abbottsford.

Dear Laddie:—This is the first time I have written to you and I hope to see my letter in print. We live on a farm in northeastern Michigan. I have four brothers. I am 11 years of age and go to school, being in the 5th grade. There are three in my grade. My teacher is Miss Harriet arpenter. There are 17 pupil in our school. I have six studies.—Thelma Keith, Ponca.

"A generous lad's my brother Ned,"
Said little Johnny Lovitt.
He takes the middle of the bed
And leaves me both sides of it."

Dear Laddie:—I am going to write another letter and would like to see it in print. I wrote once before but did not see my letter. I enjoy reading the letters of the boys and girls and also the Doo Dads. They sure are mischievous little people. The last two M. B. F's we received did not contain the Doo Dads. I go to school and am in the 5th grade. Our school started September 3 and I was glad to go to school. We have lots of fun. We sometimes play Step. Maybe some of the boys and girls would like to have me teach them how to play step. The first thing we do is to have one person stand still and he will tell the rest to go ten steps away. The one stand still will count five and while he is counting they take as many steps as possible without his seeing them but if he sees anyone step he will give him so many steps to get to where he has been blinding, but if he can't get there in as many steps as he is given he will have to be the one that blinds for the next game after the rest have all gotten there. When we blind we always put our hands over our faces. Maybe you children won't like this game but I think it is fun to play it. Well my letter is getting quite long so I guess I had better save room for another little girl's letter.—Mildred Bugg, Ponca.

Dear Laddie:—This is the first time I have ever written to you. I am a girl 10 years of age and live on an 100-acre farm. I have one brother, Leonard. We have four horses, one cow and 25 little pigs. My father takes the M. B. F. I like to read the girls' and boys' letters. I have been sick since last April; am not well yet so I am not able to go to school. I was in the 4th grade last year. I will have to close for my letter is getting long. I hope to see it in print.

THE JUNIOR COOK

Cornmeal Mush

Three cups of water; three-quarters teaspoon salt; put in a two quart pan and bring to a boil.

Just before the boiling begins, while the bubbles are ready to dance up from the bottom, shake in very slowly: one cup of yellow cornmeal; stir till smooth and then cook for ten minutes over a slow fire. The success of this cornmeal depends on adding the cornmeal gradually just before the water boils. If done right the mush will be smooth and delicious.

MARJORIE DAW

WHEN Marjorie and her twin sister, Ellen, went to spend a week's vacation with Uncle John, they didn't half guess all the fun they would have. They knew about feeding the chickens and watching the milking and riding to town with Uncle John when he took the great cans of milk to the afternoon train. But they didn't know about Tip.

Tip was a pretty little white dog—not so very little either but just the right size to play with little girl visitors. He had lived at Uncle John's only a week when the girls came and so he was almost as much of a strager as they were. Perhaps that was why he thought it was so jolly to romp around with them and to explore all the sights of the farm.

One morning when the three were running through the orchard they spied a teeter-totter; a great, big, high teeter-totter with the board to ride on, all set in place as tho Uncle John had just been out to fix it for them. (And who knows but he had for it was he who suggested their going to that part of the orchard that morning?)

"What's it for?" asked Marjorie.

"To teeter on, silly," laughed Ellen. "Don't you know, we had one in the playground."

"But that was red and green," answered Marjorie, "and this isn't painted at all."

"But it teeters just the same," said Ellen. "Now you hold that end Marjorie and I'll hold this just so. Then we'll climb on together. Wait now! Don't you climb till I do!"

There's one thing about being a twin—both folks are sure to be about the same size and Marjorie and Ellen found that very convenient when they got on that teeter. They each crawled on very carefully, balancing the board just so; then they bounced, oh, just a very little bit, and got the board to swaying and there they were teetering just as fine as you please.

But Tip didn't fancy that one bit. He felt very much left out and he barked his opinion of teeters and particularly of this teeter till the girls stopped in mid air to decide what to do about him.

"Let me down very slowly," suggested Ellen, "and I'll grab him up and he can ride with us."

So she wiggled and squirmed till she got near the ground, then she made a grab for Tip and settled him on her lap.

"Now let's go up," she said. But the teeter didn't move. With Tip's weight added to her own they kept the board down close to the ground.

"Let me down!" shouted Marjorie getting a bit frightened at her long stay in the air, "let me down, Ellen!" But the teete rdidn't move.

"Let me down," she shouted again, "I want to get down!"

Then she suddenly realized what the trouble was.

"Tip," she called. "Tip! Come here to me! Here, Tip!"

The little fellow looked up the long, slick board then looked questioningly at Ellen.

"Yes, Tip," nodded Ellen, who was getting anxious about her sister but was afraid to get up for fear the board would come down too suddenly and hurt Marjorie, "yes, Tip! Go to her."

The dog started up the long board—one step, two steps and he was still safe. Maybe he could do this queer thing his little mistresses wanted him to do. Three steps—he was getting braver now—four steps, five, and he touched the middle with his reached-out front paw. He passed the middle and the long board began to sway. Ellen's end left the ground and the two girls, evenly balanced as long as Tip was in the middle, hung teetering in their. Just at thit minute, when both girls were reaching their toes to catch, the ground and steady the board, Uncle John called from the fence, "Need me, Marjorie Daw? Or can tip take care of you?"

Marjorie wasn't afraid any more and she called back, "Tip's taking care of us, uncle! We're going to teeter a long time." And she did. Such a very long time that her uncle nick-named her Marjorie Daw for the rest of her visit.

Lily White

"The Flour the Best Cooks Use"

There is probably no other flour that really equals its all-around goodness.

All inferior materials are eliminated from LILY WHITE.

It is all clean, pure, wholesome flour. Thirty-five years of expert, conscientious milling experience are behind it.

LILY WHITE has won its fame on its merits. And we intend to keep its quality, so that it will continue to be "The flour the best cooks use."

Its satisfaction is backed with a money-back guarantee.

VALLEY CITY MILLING CO.,
Grand Rapids, Mich.

MARKET FLASHES

WHEAT

A few readers report the refusal of local elevators to buy wheat at the government price. We would like to have all such instances referred to us for investigation. In reporting such cases, be sure to give all the particulars. There is no change in the wheat situation. Practically all sales are now being made on the basis of the government's guarantee, and the crop is plentiful enough and moving fast enough that no premiums are offered. Detroit quotes: Wheat No. 1 ,white, $2.25; No. 1 red, $2.27; No. 1 mixed, $2.25.

CORN

Grade	Det'oit	Ch'go	N. Y.
No. 2 Yellow	1.52	1.51	1.65
No. 3 Yellow	1.52		
No. 4 Yellow	1.50		

The corn market reached its lowest level last week, and many believe that it has touched bottom. Quite a large number of farmers have rushed the balance of their old crop to market, fearing that prices would go even lower. This is, of course, a mistake and one for which all the farmers of the country suffer. While it is true that the quality of this year's corn has never been excelled, and that there is to be a large quantity to meet all needs when the new crop is harvested, it is preposterous to think that corn can go any lower because of the much higher prices of other grains. Speaking of the corn situation the Price Current Grain Reporter says:

"New England is speculating on the future price of corn and has a good buyer for deferred shipment, paying a big premium for grain that will not reach them until next May to October. This buying ahead in volume is a factor in the situation that sooner or later will have an effect on the price, as it will mean larger distribution whether the price advances or not. It is this constant speculating that helps greatly to stabilize the market. Farmers are apparently becoming more familiar with the use of grain futures as a price insurance proposition, and there has been a large amount of December sold against standing crops which will move later in the season. In many instances the producer will secure a price for his grain in this manner far above the prevailing level."

Yes, and in many instances he will secure a price in this manner far below the prevailing level. The speculators who gamble in futures will use every means at their command to keep market prices down.

The speculators who thus gamble in futures will use every means at their command to keep prices down that they may fill their contracts without a loss.

OATS

Grade	Det'oit	Ch'go	N. Y.
Standard	.74	.73	.80
No. 3 White	.73	.72	

Farmers are not very keen to sell oats at the present low levels. The crop is way short, and should the export demand pick up prices should go materially higher. We expect to see higher prices quoted on oats by the first of the year.

RYE AND BARLEY

Rye and barley markets still cling to the levels established several months ago, and the demand is uncertain. Detroit quotes $2.40@2.50 for No. 3 barley, and $1.42 per bushel for rye. The future of the rye market depends almost entirely upon the export demand. It is believed in some quarters that Germany will become a large buyer of this grain this year in which case there should be higher prices.

BEANS

The bean market has recovered from its September slump and prices are slightly higher all over the country. The Detroit market this week quotes $7.30 per cwt. for the best. But this price is a long way from what it ought to be. Trading is very active, if we may believe the reports coming to our office. But so long as Jap beans are imported into this country in such huge quantities there can be no hope that prices will reach a level which wil pay the growers a fair profit. If the special tariff bill goes through, there is a very good chance that beans will go up at once.

Regarding the present activity in the market, Mr. L. A. Nixon, editor of the Bean Bag, writes us as follows, under date of September 30th.

"Although we have no direct reports or any strong foundation for our opinion we feel as if the market will be a little stronger this week than last. The action of the farmers in pegging the market has been a strong factor, and rumors of short crops in the Orient will make the Japs higher in their prices with a consequent betterment of the domestic market. We believe beans will go up now, not a great deal, but we believe and hope that the low tide in the market has been reached. Of course, prices have been lower heretofore and may go down again, but the demand is bound to come sooner or later and we believe the market will re-adjust itself very soon."

Weekly Crop and Market Review

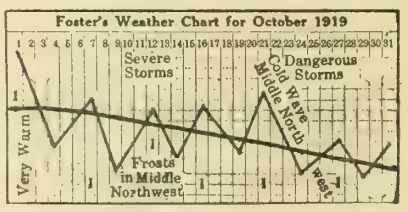
THE TWO BIG influences affecting general trade and market conditions the past week have been the steel strike and the illness of the president. The steel heads claim that the strike is practically over and that the men are going back to work. At no time have any of the larger mills been forced to close completely, although their output has been greatly reduced. It is easy to see how the fear that the strike might cripple other industries, injects an element of uncertainty and weakness in all trade deals. The president's illness has had a powerful effect and the concern shown in his condition shows how much the people value his influence. If President Wilson should die, we would lose the strongest figure in our national life, and for a time might drift about like a ship without a pilot. It is not to bewondered at that many people enter trade deals under these cicrumstances with fear and trembling.

There is virtually no change in the general aspects of the grain markets. The government and the speculators who set deliberately about a few months ago to force down prices have succeeded admirably in one respect. They have slaughtered the corn market, demoralized the live stock markets, and smashed the bean market to smithereens, but the consumer still pays the same old prices and the graft goes to someone in between. The farmers everywhere are showing a strong desire to take hold of the situation and protect their interests, but they have to proceed with great care lest they be hauled into jail for wanting a fair profit on their investment. There are a score or more criminal actions pending against farmers' organizations thruout the country, but the greatest crime that can be laid against them is that they sought to remove the middleman and charge the consumer what their product is worth. We are going to have an accounting soon. The farmers are perfectly willing to go before the bar of the court of public opinion for a verdict.

We think the grains have reached their lowest levels and that there will come a reaction. A review of the grain trade papers shows a somewhat greater confidence in the future of the grain markets than has been noted for some time. The bears have gone back to the old Argentine bugaboo, although it must be remembered that this club was held over the heads of the producers all last winter, without success. The foreign demand has slackened, however, and we need not expect to see any great activity in the grain markets for sixty or ninety days. The car shortage looms up as a big problem Already many sections are unable to ship products for lack of cars and under this circumstance the farmers find it difficult to sell at any price. Fortunately, the situation in Michigan is not bad and we have had no reports of where local shippers are unable to get all the cars they need.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



Foster's Weather Chart for October 1919
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31
Severe Storms
Dangerous Storms
Cold Wave Middle North
Very Warm
Frosts in Middle Northwest
West

WASHINGTON, D. C., Oct. 11, 1919.—Warm waves will reach Vancouver about Oct. 10, 14 and 19 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 11, 15 and 20; plains sections, 12, 16 and 21; meridian 90, great lakes, middle Gulf states, Ohio-Tennessee valleys 13, 17 and 22; eastern sections 14, 18 and 23, reaching vicinity of Newfoundland about Oct. 15, 19 and 24. Storm waves will follow one day behind warm waves and cool waves about one day behind the storm waves.

These storms will dominate the weather of this continent from near Oct. 1 0to near Oct. 24. Temperatures will fluctuate but, while the season calls for a general trend downward of about 9 degrees I expect the average trend to be upward more than 10 degrees from Oct. 9 to 21 and then a cold wave that will bring a great fall, causing frosts to threaten northern parts of the cotton belt.

The two principal storms of the month come within this 14 day weather period and they will largely increase the amount of precipitation which will continue to be in about the same sections as fo the past three months. These principal storms of October will occur during the five days cent on Oct. 12 and 25 and last storm will be unusually severed and will probably develop two sets of storms one, described above, the other a tropical storm which may develop into a hurricane.

These hurricanes are not well understood; they constitute one cause of the occasional failures of these forecasts The hurricanes often destroy th transcontinental storms, turning a high temperature upside down and in a cold wave or bizzard. Mr. Glines, of Winnepeg, did more than any other man in furnishing means for solving these great weather problems, but he died before he reached the important question of tropical hurricanes transcontinental storms and the crop-weather controlled by them have been solved. If the tropical hurricane was solved—and it can be—North Amer would be immensely benefitted. Whoever provides for solving that problem will accomplish a great work for his or her race.

These October storms will greatly benefit the principal winter wheat sections, particularly where winter grain is sown for pasture, but in the spring wheat sections, north of the high ridges that run east and west, precipitation will continue short because the moisture must come from the Gulf of Mexico and will be precipitated on the south side of those ridges. Precipitation will continue to be heaviest in the cotton state and in the Arizona New Mexico country.

W. T. Foster

POTATOES

A subscriber writes that he is holding his potatoes and wishes our advice on the future of this market. We will not advise, but we will be glad to give our opinion. We know that the yield is short of last year's by many million bushels. Moreover, a great many sections, Maine, New Jersey, Minnesota and Wisconsin and reporting an epidemic of rot which is ruining millions of bushel. The trade papers are full of reports of potatoes rotting in local warehouses, in transit and on the market. Consequently the demand is poor and the price not what it ought to be. Michigan's crop is in excellent condition, we understand, and with the other states putting out such a poor quality, our prices ought to command premium prices. Maine farmers are getting only $2.50@2.75 per 165-lb. bag, whilst Pennsylvania farmersr are selling freely at $2.50@2.75 per cwt.. Minnesota reports a good demand from nearby states which ordinarily grow their own requirements. At the present time the market is weak and draggy, but this is not due to a surplus of supplies but of the poor condition. Neither buyers nor consumers will purchase supplies for winter storage that are in poor condition. We may expect this condition to continue until the poorer qualities are cleaned up, and then the market ought to come into its own. We feel that Michigan potatoes should bring a higher price than the producers are now getting. The Detroit market quotes $3.75 per 150 pounds, Michigan round whites. Producers are receiving from $1.50 to $3.00, according to the locality.

FRUIT AND POULTRY DULL

The fruit market and the poultry deal suffered the chief blows, from the farmers' standpoint, in Detroit and a number of other markets during the past week or so. Consumers did not appear so active as usual. Grapes, however, are scarce and firm. The vegetable deal is slow, in face of plentiful supply and slow demand. A moderate supply of eggs and butter in Detroit is accompanied by firm markets. Quotations follow:

Butter—Fresh creamery, firsts, 56@57 1-2c lb.; fresh creamery in 1-lb. bricks, 59 1-2@62c lb.

Dressed hogs—Choice country dressed, under 150 lbs., 25@26c; over 150 lbs.. 23@24c per lb.

Eggs—Fresh eggs, 49@57c per doz., as to quality.

Crabapples—$3.75@3 per bu.

MAINE POTATO AND BEAN CROP CROP ARE SHORT

The potato harvest is well under way here in Maine with yield per acre above the average but the acreage much less than for some years past. The quality is of the best, but the price offered at present is not enough to cover cost of production, being only $3 to $3.50 per barrel, but if the dealers can get the most of them into their hands they will forget that it is unlawful to sell by collective bargaining, and the price will advance sharply. Beans are very good in quality and yield but acreage is greatly reduced. Apples are not very abundant, but owing to the shortage of sugar the price is not so high as it should be. Speaking of profiteering, who gages the scale of profit on beans? I know of merchants who pay at the rate of 16 cents per quart and sells at the rate of 32 cents per quart, and other produce on the same scale. This may have something to do with the high cost of living and the lack of profit in farming.—R. L. Herrick. West Paris, Maine, Sept. 29th.

TRAPPING PRIZES OFFERED

Have you made money trapping? Of course you undoubtedly have, if you ever went in on that fascinating business. Probably you struck some new stunt which might help other trappers get on the right track. Michigan Business Farming wants to further such an exchange of hints and therefore offers prizes for the best letters on "How I Have Made Money Trapping."

Letters should all be in by November 8, because a special supplement is being prepared for the last of November.

HAY TRADE LACKS LIFE

Trading in the hay markets of the nation lacks life during the last several days and values are rather easy. Reports from New York state that there are plenty of shipments arriving for the trade, especially since the buyers are fighting shy of the markets at present. Tame hay production totals 86,723,000 tons, according to the government report for September and this report has had a tendency to make consumers feel that present prices are too high. Thus buying is none too encouraging. Producers, on the other hand, state that they aren't getting cost of production plus a reasonable profit.

From the Detroit market comes the following report: Scarcity of cars is holding back the hay movement and a firm market is quoted. A few cars come in from Canada, but demand could easily take more. Quote: No. 1 timothy, $29.50@30; standard and light mixed, $28.50@29; No. 2 timothy, $27.50@28; No. 3 timothy, $23@25; No. 1 mixed, $24@25; No. 1 clover, $24@25.

LIGHT APPLE CROP

The apple market condition indicates a rather light general crop in the United States, with liberal early shipments, resulting in prices higher than last year. The northwestern boxed apple crop is the largest on record and of excellent average grade. The eastern barrel apple crop is the lightest in recent years, and includes much light grade stock. Crop is generally light. Canada's large crop will likely take care of the heavy foreign demand anticipated. The low tariff on Canadian apples is not likely to keep them much out of this country. Demand in big American markets has been good. Michigan's crop has been very light, and good prices are reported in numerous places.

Detroit quotes Michigan apples, small, $1.25 to 1.50 per bushel. The best apples bring down from $2.25 to $2.75 per bushel.

Plenty of early apples are in sight, according to the government reports, causing a tendency toward lower prices in some markets. Carlot figures for apples thus far this season are one-half heavier than last season up to date, nothwithstanding the lighter total of the crop for this year. It appears that the early yielding apples are doing much better than the late yielding varieties. Michigan, Delaware, Illinois and West Virginia are shipping well in excess of last year, while Virginia and Arkansas are shipping three times as many as last year. Some of these shipments are going into storage, although the amount is hard to estimate.

DETROIT LIVE STOCK

The Detroit cattle market last week closed strong at the following prices: Best heavy steers, $11.75@14.00; best handy weight butcher steers, $9@10; Mixed steers and heifers, $7.50@8.50; handy light butchers, $7.50@8; light butchers, $6.50@7; best cows, $9. butcher cows, $7@8; cutters, $5.75@6; canners, $5@5.50; best heavy bulls, $8; bologna bulls, $7@7.50; stock bulls, $6.00@7; feeders, $8.50@9.50; stockers, $7.00@8; milkers and springers, $60@125.

There was a good run of sheep and lambs and a good active market for them all the week. Best lambs, $15@15.50; fair lambs, $12.50@14; light to common lambs, $9@11.50; fair to good sheep, $6.50@7.25; culls and common, $3@4.50.

In the hog department the trade was dull and draggy all the week, not one day in the week was anything sold until afternoon. Monday they brought $17.25 for mixed grades, and $17 for pigs. Tuesday they were 40c to 50c lower, pigs bringing $16.50 and mixed hogs $16.50 to $16.75, with the bulk of sales at $16.75. Wednesday they went off 25c to 35c more selling at $16.50 for mixed and $16.25 for pigs. Thursday they broke badly and were 50c to 75c lower.

CHICAGO LIVE STOCK

Hogs: Receipts, 10,000; higher, heavy, $15@16.50; medium, $15.25@16.70, light, $15.75@16.75; light lights, $15.25@16.50; heavy packing sows, smooth, $14@14.75; packing sows, rough, $13.50@14; pigs, $15@16. Cattle, receipts, 4,000; steady; beef steers, medium and heavy, choice and prime, $16.50@18.25; medium and good, $11.25@16.50; common, $8.50@11.25; light good and choice, $15@18.25; common and medium, $8@15; butcher cattle, heifers, $6.50@14.75; cows, $6.50@13.50; canners and cutters, $5.50@$6.50; veal calves, $19.25@20.50; feeder steers, $7@12.50; stocker steers, $6.25@10; western ranges beef steers, $8@15; cows and heifers, $6.50@13. Sheep, receipts, 15,000; firm, lambs, $13.75@16.15; culls and common, $9@13.25; ewes, medium, good and choice, $6.75@8; culls and common, $3@6.25; breeding, $7@13.25.

PEA MEN MEET

Pea growers for the W. R. Roach & Company Canning factory, will get together, Saturday afternoon, October 11, to discuss matter pertaining to the pea crop for the season of 1920. They have found out with the increased costs of labor, fertilizer, machinery, etc., that they cannot grow green peas for three cents a pound and make any profit. The factory pays a flat rate of three cents a pound for green peas delivered at their plant at Kent City. They charge $3.00 per bushel for seed; four bushels to the acre is usually sown. The straw is elevated to a big stack for ensilage. A farmer is entitled to ensilage equaling 25 per cent of the gross weight of peas and vines he brings in. They charge him one dollar per ton for the ensilage he gets.

COMPETITIVE TRACTOR DEMONSTRATION

(*Continued from Page 4*)

figures were averaged. All figures and readings were recorded on a large blackboard where they could be easily seen by the assembled crowd. Some of the tractors ran somewhat below their advertised belt power. Some just made it while others ran considerably over. Taking it all in all, it was a mighty successful and satisfactory contest.

The crowds were very much interested in all the tests. It is estimated that a crowd of fully ten thousand people witnessed all part of the tests at different times during the three days taken in conducting it.

The demonstration was arranged by the St. Joseph County Farm Bureau in co-operation with the St. Joseph County Fair Board. J. M. Wendt, County Agricultural Agent, had general charge of all arrangements. Professor H. H. Musselman, Professor of Farm Mechanics at the M. A. C., acted as Field Manager during the contest and he was assisted by Messrs. Wrench, Straight, Boonstra and Flour of the M. A. C. and County Agents Nash and Jamieson, of Branch and Calhoun counties respectively. Much credit is due the entire management for the way in which the entire demonstration was conducted. It means something to put on the rst actual tractor test and obtain for Michigan Business Farmers actual figures on tractors by an impartial management. The figures on these tests will be given to the public through the medium of the press in a short time or as soon as they can be figured over by the management.

U. S. SURVEY OF SEPTEMBER MILK PRICES

(*Continued from page 3*)

plus an extra alowance for special quality of milk, and sometimes an arbitrary allowance for variations in seasonal costs of production.

4. Prices based on both butter and cheese prices as shown by agreed upon quotations for a period of a month preceding the date of the announcement of prices to be paid for the ensuing month. This composite basis (a combination of the bases (2) and (3) just described) has been used for several months in the New York market and the prices obtained by the use of this basis is practically an average of the two prices obtained by the use of two formulas similar to those in use in the Minneapolis and Evansville markets. The allowance of value of whey, skim milk, extra costs of quality and variations in seasonal costs of production, vary with different localities.

Prices Based on Current Month's Prices of Milk or Manufactured Milk Products

5. Same as arrangement (3) except that prices cannot be determined until several days after the end of the month in which delivery of milk was made. (This arrangement exists between certain dealers and producers in the Louisville, San Diego and Indianapolis markets.)

6. Prices based on the net market returns to dealers. In the case of co-operative concerns such an arrangement often applies to all milk handled, whether sold in the form of fluid milk and cream or disposed of or held in the form of manufactured milk products. In case of private milk marketing concerns, however, such a price basis is sometimes applicable only to "surplus milk" that has been converted into various manufactured milk products.

7. Prices contingent upon the prevailing prices of milk in some large centers of consumption or at various condensaries, cheese factories or milk stations supplying a large market. (Such price agreements are very common among many small scale milk dealers or manufacturers of cheese or condensed milk.)

GEORGE LIVINGSTON.
Acting Chief of Bureau.

Keep Them on the Job

You know the dangers of neglecting painful lameness, bruises and swellings. Put Sloan's Liniment on the job and let it relieve those poor dumb faithful beasts from suffering. Just apply a little *without rubbing*, for it *penetrates* and keeps the animals efficient.

For family use, too, Sloan's Liniment soon relieves *rheumatic twinges*, *lumbago*, *stiffness* and *soreness* of *joints* and *muscles*. A bottle around the house is a thoughtful provision for first aid emergency.

Six times as much in the large bottle as you get in the small size bottle. Bear in mind, Sloan's Liniment has been the World's Standard Liniment for thirty-eight years. 35c., 70c., $1.40.

IMPORTANT NOTICE

Thresh When You're Ready

RELIABLE information has reached us that many farmers this year are experiencing difficulty in getting their threshing done in time to save their crop.

Individual or Community Threshers

We have in stock, ready for immediate shipment, grain threshers of sizes that can be opened by small steam engines—or any size gas tractor.

Give us the size and kind of your power and let us quote you on a thresher suited to your needs and power.

Wire or Telephone Your Order at Our Expense

Remember we can ship machine same day order is received.

Crop Reports

JACKSON (N. E.)—The weather has been good for farmers to get the work cleaned up, though recently we saw this section visited by a severe storm of wind, hail and rain, considerable damage being done by hail. Farmers are getting the winter grain in in good shape. Nothing being marketed, as prices are too low.—A. F. W.

ST. CLAIR, (E)—Farmers are threshing and sowing wheat and rye. Silos all filled. The weather is fine for all fall work. The recent rains put the land in fine condition for fall seeding. Corn is a bumper crop in this locality. Potatoes are a poor crop here. Apples ae non to speak of. Nothing going to market now. Farmers too busy to go to market. Lots of auction sales and prices good. Quite a large acreage of wheat going in. The following prices were offered at Smith Creek: wheat, $2.10; red, $2.15; oats, 65; rye, $1.20@1.30. Hay, No. 1 timothy, $18@20; No. 1 light mixed, $17@20; beans, (C. H. P. Pea), $6.50; bulk apples, $1.00 bushel; potatoes, $2.25; cabbage 10c each; hens, 22c; springers, 26c; eggs, 50c sheep $8@10; lambs, $10@12; hogs 15@17; beef steers, $8@10; beef cows, $6@9; veal calves, $17@20. —I. J.

MANISTEE (N)—The farmers are picking apples and husking corn. Some still as yet sowing grain, finishing harvesting beans and various other work. Weather is quite moist. Rains frequently terribly heavy. Soil is wet now. I do not think the farmers are selling much now unless it is apples. I do not know what farmers are holding for higher prices possibly potatoes or rye or apples and corn. Farmers here are not seemingly buying much now or building much. Prices for apples are good. No rye being bought as yet as I know of or corn or much hay. Beans not threshed yet or late potatoes dug either or many chickens being sold. Butter is 50 cents, eggs, 40, butterfat 57. Beef is worth 5 to 8 cents alive; pork 14 to 15 alive, 18 to 20 dressed: veal 10 to 13 cents alive, 18 to 20 dressed; live hens 20 cents a pound; spring chickens 20 cents; beef hides 25 cents a pound; horse hides, $10.00 each.—H. A.

SAGINAW (S. W.)—The farmers are sowing their wheat. It is getting a little late but the soil is in fine shape it is up an inch high in a week. Commenced to thresh beans which are of good quality and yielding from 10 to 20 bushels per acre. Some are husking corn which is very good. Not much going to market at present prices. The following prices were offered at St. Charles: Wheat $2.05; oats, 64c; beans (C. H. P. Pea) $6.25. Poultry, hens, 20c; butter, 60c; butterfat, 65c; eggs, 46.—G. L.

ARENAC (E)—Weather has been very hot and dry and most impossible to plow for fall grains and the consequence is that very little fall grains are being sown here. Fall grains are disappointing in being threshed and that also has a tendency to make it less. Prices on stock is very low and most of the stuff going to market is rather thin. Auction sales are not bringing very extra prices. Good cows going as low as $60 where last fall were sold as high as $125. Sheep also show the declines and hogs follow suit. Beans are down fifty cents and talk of still lower prices. Many farms changing hands, some moving to the city others retiring.—M. B. R.

JACKSON (E)—The following prices were offered at Jackson: Wheat, $2.10; oats, 80c; rye $1.25; Hay, No. 1 timothy, $26; No. 1 light mixed, $25; straw, $10; wheat-oat, $10; potatoes, $2.50; onions, $2.25 hens, 28c; springers, 32c; butter, 59c butterfat, 60c; eggs, 50c; sheep, 9c; lambs, 13c; hogs, 17c; beef steers, 10 1-2c; beef cows, 7c; veal calves, 18c.—B. T.

OCEANA (S. E.)—The farmers are still putting in grain, digging potatoes, husking corn. The weather is cloudy with some rain. Had a light frost recently. Soil is in good condition for plowing. Farmers are selling rye and potatoes, onions, apples, peaches, pears. Some wheat being sowed this fall.

must be in the pink of condition. Every care must be taken in their feeding to keep them up to perfection.

Stock fed on Buckeye Feeding Molasses will present a smoother, healthier appearance and a sleeker coat.

Molasses not only makes the stock look better but it actually improves their condition by aiding materially in digestion.

Progressive stock men have found that molasses feeding puts both females and males in better condition for the ring.

One quart is considered equal to three or four quarts of oats. It is cheaper and gets far better results.

Write us today for full information and suggestions as to feeding molasses.

Ward Work-a-Ford

Can be used with Ford, Overland, Dodge, Reo and Chevrolet 490 cars and Fordson Tractor. Your automobile has a powerful engine—it will outlast the car and you might as well save your money and use it to do all your farm work. **No wear on tires or transmission.** Hooks up in 3 minutes. No permanent attachment to car. Cannot injure car or engine.

Friction Clutch Pulley on end of shaft. Ward Governor, run by fan belt, gives perfect control. **Money back if not satisfied.** Ask for circular and special price.

WARD MFG. CO., 2066 N St., Lincoln, Neb.

For Sick Chickens

Preventive and curative of colds, roup, cank... swelled head, sore head, chicken pox, limber neck, sour crop, cholera, bowel trouble, etc. Mrs. T. A. Morley of Galien, Mich. says: "Have used Germozone 17 yrs. for chickens and could not get along without it." Geo. F. Vickerman, Rockdale, N. Y., says: "Have used Germozone 12 years; the best for bowel troubles I ever found." Frank Sluka, Chicago, Ill., writes: "I have lost but 1 pigeon and no chickens in the 3 yrs. I have been using Germozone." C. O. Petrain, Moline, Ill.: "I never had a sick chick all last season." Bernard Horning, Kirksville, Mo., says: "Cured my puniest chicks this spring." Ralph Wurst, Erie, Pa., says: "Not a case of white diarrhoea in 3 yrs. I raise over a thousand a year." Good also for rabbits, birds, pet stock.

GERMOZONE is sold generally at drug and seed stores. Don't risk a substitute. We mail from Omaha postpaid in new 25c, 75c and $1.50 sizes. Poultry books free.

GEO. H. LEE CO., Dept. 416 OMAHA, NEB.

FARMERS SERVICE BUREAU

(A clearing house for farmers' everyday troubles. Prompt, careful attention will be given. Correspondence should be addressed to "Farmer's Service Bureau," Michigan Business Farming, Mt. Clemens, Michigan.

LAW ON HYPNOTISM

Tell me if a person has a right by the laws of Michigan, to use his will, mind and personal magnetism or so-called by some people hypnotic force, on other people, with or without them willing to be a mind wrestler? —A reader. Webberville.

I am of the opinion that the laws of Michigan will permit a person to exercise his or her "will, mind and personal magnetism" for the purpose of securing a good husband or wife. I would also be of the opinion that the "hypnotic force" would not work on one who was not willing. "Barkus must be willing!"

Many strange cases in which hypnotism became involved have been the subject of both legal and medical investigation. The books refer to the case of Hayward, who was hanged in St. Paul. Minn., in 1895, accused of having induced Blitz, by hypnotic suggestion, to murder Miss Ging. Blitz was sent to the penitentiary for life. The case of Czynski is commented on also. Czynski was tried in the higher courts of Munich, Bavaria, on the charge of having had recourse to hypnotic suggestion in order to win the affections of a woman of high social position and obtain her consent to live with him in criminal intimacy and subsequently to marry him, after he had subjected her to his will imposed upon her by his power of hypnotism and was convicted upon the charge and sentenced to prison after a protracted trial. These two cases have been many times commented upon and in one editorial it was said that there are few cases in which the hypnotized subject will not refuse to do a wrong act or to submit to a wrong no matter if it be suggested and that scoundrelism can not flourish on hypnotism, and the case of the murder of Miss Ging, and the confession of Hayward and the statements of Blitz that he was hypnotized by Hayward to kill Miss Ging has been investigated and found to be mostly false and while it is not safe to assert that crime never was or can be committed with the aid of hypnotism experience has taught that such a case is highly improbable. Another author says with reference to the case of the murder of Miss Ging that it would be quite outside of any legal experience to accept as entitled to any credit the waking story of murder committed by the accused while under hypnotic influence. Such statements should be entitled to no credit and I know of no authority which would justify the position that the subject, on awakening from a hypnotic trance, could remember all or relate anything done while under hypnotic influence and it would be a very unsafe proposition of law in regard to testimony to place a witness in a hypnotic trance and to accept as truth the statement of events that he in that state described as having occurred at a previous time. It is said that Hayward undoubtedly possessed a strong influence over Blitz but the latter never claimed it hypnotic and that plea was never made in defense. Hayward hired Blitz to do the deed for $2,500 and when he found his courage failing drugged him with whiskey in order to nerve him up to doing the deed.

A prominent author says: "A hypnotized person can not be made to do that which is against his character or ethics or anything that it was impossible to make him do under general daily conditions, without the aid of suggestion or magnetism. Because if that which he is suggested to do should be something that his whole nature and soul revolt against the experiment will fail and the influence of the experimenter will be at an end. A hypnotized will obey when acts commanded do not antagonize the moral standard he has set up for himself; but criminal or immoral suggestions meet the auto suggestion arising from his own conscience and confusion results.

I am satisfied that in Michigan a marriage between persons competent to contract will be held valid even though it is claimed to have been influenced by "hypnotic influence."—W. E. Brown, Legal Editor.

SEEDING RYE AFTER RYE

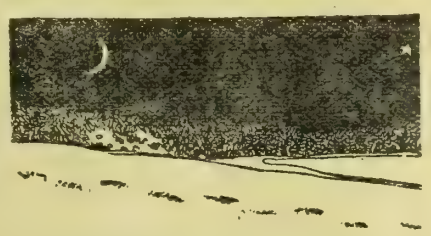
In reply to the inquiry of your subscriber concerning planting rye, which you recently forwarded, there is no special objection to seeding rye after rye if the soil is in a good state of fertility. However, it is generally recognized that crops planted in rotation give better yields than when grown continuously. This applies to rye as well as to other crops. When a clover seeding fails it is not uncommon to seed rye the second year in order to seed clover again.

The fact that rye gives better better yields on depleted soils than the other cereals has led to the belief that it is hard on the soil. The crop is a hardy feeder and seems able to extract food from soils when many other plants cannot, however, I do not believe the idea that it is especially "hard on land" is warranted.—C. E. Millar, Associate Professor of Soils, M. A. C.

HOW TO CHECK MILKWEEDS

Concerning the letter regarding milkweeds, which Mr. G. L. B., of Grant, Michigan, wrote Michigan Business Farming we have obtained the following data:

Repeated cutting of the milkweed plants at the time they are in blossom and then when they spring up after the cutting will ordinarily so discourage the milkweed in pasture lands that it will die out in a couple of years or so. If the land is put into cultivation and cultivated frequently, using a sharp-edged sweep cultivator so as to cut the stems off below the surface of the ground, the milkweed can sometimes be practically exterminated in one season, but usually it is desirable to put the land into another cultivated crop next year unless it is planted in the spring to some rank growing crop that will smother out the milkweed. —E. A. Bessey, Professor of Botany, M. A. C.



TO CONSERVE THE STATE GAME LAWS

(*Continued from page* 4)

Perhaps the most important change in game legislation is the measure levying a license on all hunters who travel the woods at all times. In the past poachers have often declared, when caught hunting without a license, that they were merely in pursuit of noxious birds or predatory animals. But under the new law this ingenious bit of evasion won't save them. Henceforth, if you wish to hunt at all, you must buy a license and carry it with you. The only exceptions made concern those hunting on the lands domiciling them likewise their minors.

Changes in the fishing laws affect brook trout and open and smallmouth black bass. The open season has now been made uniform for the state from May 1 to Sept. 1 for brook trout, and June 16 to the last day of February for the bass.

Such are the new game and fish laws in effect in Michigan. A strict observance of these and the other regulations will help to conserve the game of Michigan and keep this state in the front rank, so far as the inhabitants of its lakes and rivers and the wild life of its forests are concened. When the effects of the new educational campaign begin to make themselves felt the poacher will find himself in much the same category as the burglar.

TRAPPING SECRETS

—a Great Book on Trapping. Full of hints of how to make big catches. Holds you with the thrilling adventures of America's trappers—Crockett, Carson, Boone, Kenton and others. Tells of their skill, daring and woodcraft. It follows them on the trap line and carries you down to the methods of the present day, with a wonderful fund of secrets.

Book sent FREE to fur trappers only. Write today. We will also keep you posted on the fur market.

MICHIGAN BUSINESS FARMING

The only Independent Farmer's Weekly owned and Edited in Michigan

Vol. VII, No. VI | MT. CLEMENS, SATURDAY, October 18, 1919 | $1 FOR ONE YEAR (3 yrs $2; 5 yrs $3)

Protective Tariff on Beans Seems Assured

MICHIGAN DELEGATES representing the farmers' interests arrived in the National capitol last week-end and are actively and successfully at work presenting to the high powers of the nation the side of the producers. The occasion is especially opportune, inasmuch as the great Industrial Conference or Round Table, called by the president, is now in session; also the Congressional Ways and Means Committee, headed by Congressman Joseph Fordney, of Michigan, is holding the famous hearing on a bean tariff, which already has created a young panic among the bears of the bean market.

Word arrived at the offices of Michigan Business Farming this week that the proposed tariff to keep the cheap oriental beans out of competition with the home-grown beans, has been favorably considered by the Ways and Means Committee of the House of Representatives in Washington. Considerable opposition had been suspected from the Democratic minority members of the committee, but no such opposition materialized during the hearing on the bean question. Congressman Fordney publicly announced his support of the policy of protecting home-grown beans against the cheap, coolie labor of foreign countries. He stated for publication that he felt it was necessary to protect not only beans, but also sugar and other products grown on the farm in this country, against the cheap foreign competition which would drive many American farmers out of business if present tendencies continued. Mr. Fordney added a statement that ninety per cent or more of the cost of growing or manufacturing commodities in the United States is a labor cost and that it must be protected.

Representatives of the press, members of the committee and others interested ir the delegation at Washington declare that the presentation by the bean men was one of the most complete and convenient ever made before the Ways and Means Committee.

The hearing on beans was held open for a few days, following the initial presentation of the case by the representatives from Michigan, California, Colorado and New York. Additional testimony may have been submitted after the hearing announced up to the present time, but it is believed that nothing more of special importance will be reported in the matter. So there is weeping and wailing and gnashing of teeth in the camp of the bean bears, and the bulls are the most cheerful they have been for some time.

Kimball Affair to be Aired

Michigan bean growers will be especially interested to hear that the presentation of the case by the Michigan growers lead to the promise by Congressman Fordney that the Kimball speculations will be thoroughly aired, thus bringing about a long deserved victory for the forces contending against the manipulations of the bean market in the past toboggans of the prices. Mr. Fordney assured the Michigan delegates that the whole sinister business would be aired fully before the Ways and Means Committee in the near future.

Secretary Frank B. Dreese, of the Michigan Bean Jobbers' Association, in connection with this matter, offered to turn his transcript over to the Ways and Means Committee if so requested. The co-operation between jobbers and growers during the whole affair is regarded as having a beneficial effect for both parties. The copy of the proceedings in the bean manipulations which ruined prices for the growers not so long ago will be secured from the Department of Justice, it is believed. The Michigan delegation will be aided in this work by the Calfornia people who are also right on the job before the Congressional hearing.

WESTERN UNION TELEGRAM

Washington, D. C.,
October 13, 1919.

MICHIGAN BUSINESS FARMING,
Mt. Clemens, Mich.

Ways and Means Committee regards tariff proposition favorably. Suspected Democratic opposition did not develop during hearing. Congressman Fordney publicly states his support for the proposed tariff.

"It is necessary," he says, "not only to protect beans, but also sugar and other agricultural products grown in this country, against competition of cheap foreign labor. Ninety per cent or more of the cost of growing or manufacturing commodities in this country is a labor cost and must be protected."

The presentation by the bean men is declared to be one of the most complete and convenient ever made before the committee. Matter will be held open for one week for submission of additional testimony.

Of special interest to Michigan growers is testimony relating to Kimball speculations which Congressman Fordney declares will be aired before the Committee. F. B. Dreese, secretary of jobbers, says he will turn his transcript over to Ways and Means Committee if so requested.

I will make effort with aid of California people to secure copy from Department of Justice.

FORREST LORD.

Michigan was ably represented by A. B. Cook, president of the Michigan Bean Growers' Association, Owosso, who left the first of last week for Washington; Nathan F. Simpson, farmer and manager of the Gleaner Clearing House Association, and Forrest Lord, editor of M. B. F. The last two men left before the end of last week. Among others representing Michigan's bean interests were Frank B. Dreese, secretary of the bean jobbers.

Farmers Pay the Way

Although the letters from the bean growers have only started to come in, it looks as though the farmers by subscribing small sums will pay for a large part of the expenses of the representatives of their interests to Washington. A complete report of this fund will be made later on. The Bean Jobbers' Association has a fund which paid the expenses of members of the bean jobbers. But the Bean Growers' Association has no fund and the delegates paid their own way. The generosity of many farmers, however, is likely to make back a large part of the expenses of the long trip to the delegates.

The effect on the bean market is already noted as beneficial. There has been more activity and prices have risen somewhat. At last, it looks as though the long fight waged by M. B. F. and its loyal supporters is being fully triumphant. It is hoped that through this winning fight, the splendid bean industry of Michigan will thrive again and the farmers get the prices they deserve.

Michigan Business Farming has completed a survey of cost of bean production in the various important bean growing counties in the state. Most of these reports were received in time to turn over the evidence to the Ways and Means Committee. But scores of careful, excellent reports came in from farmers after the report was taken to Washington. The composite results of all these hundreds of reports will be presented in the near future for the readers of Michigan Business Farming.

Other agencies have taken up the cry now for careful production costs, not only in beans and milk production, but also in other important lines of produce. The Michigan Agricultural College is among the institutions which recently have begun a campaign to get accurate costs of production.

"Farmers are not likely to be caught another time," says one expert at the college, "without having in their possession full and authentic figures as to the cost of raising beans. With this evidence known thoroughly to themselves, the jobbers and the public, it is believed that there will be far less trouble in getting a price high enough to assure a reasonable profit. This principle applies not only to beans, but to practically every line of the farm business."

It is with delight that Michigan Business Farming noted the quick and state-wide response to our appeal for costs of production in the bean market. And it is felt that the evidence thus gathered had an important bearing on the Ways and Means Committee. It is expected that full details of the hearing will be printed in a week or so, in order that the growers may learn the full scope of their initial victory in the great battle royal for fair prices.

Letters from various centers of the bean industry tell how the markets have already risen sharply, due to the talk concerning a tariff against the kotenashis. Even the oriental beans have raised in price about 50 cents or more. Bean growers in general are holding back at least part of their beans for the fairer price which seems to be coming.

Here is a letter typical of a large group received, showing the attitude of the growers at the present time:

"I have just filled out the M. B. F. bean production cost coupon. The price we are offered in Central Michigan at this writing is only about $6 per hundred. That is about $6 too low. When you consider the price we pay for help, machinery and repairs and for threshing, we find there is no drop there, but a mighty stiff boost in the figures. I think it about time we growers staged a little strike in this instance. If we don't 'walk out' we'll keep on digging from daylight till dark seven days per week without getting anywhere.

"Brother Farmers, let's not sell a bean until the first of December, and that is what I mean by 'strike.' All those in favor hold up their right hands."—Subscriber.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

FARMERS GAIN HEARING AT INDUSTRIAL CONGRESS

Farmers are being heard from with a vengeance at the Industrial Conference, called to Washington by President Wilson.

During a certain session Mr. Barett of Union City, Ga., representing the Farmers' Co-operative Union startled the conference by taking the floor with an armful of papers and asking permission to pass around the "preamble" to a resolution he proposed to offer. Somebody suggested the resolution was following in a dray. Mr. Barrett announced the resolution would require President Wilson to appoint a commission to formulate a national agricultural policy.

Calls Farmers Neglected

Indications were given in Mr. Barrett's preamble of the dissatisfaction which the farmers have been said to feel because of their comparatively small representation in the conference. "To attempt to settle the grave questions now agitating us without the assistance of the farmer is like trying to put Hamlet on the stage with the hero left out," the preamble stated. "Why were only three men as representatives of the greatest industry in the world invited to participate in these momentous deliberations?"

Won't be Foot Ball

"Don't, gentlemen, allow yourselves to be deluded into the false idea that agriculture can not kick, that it will continue to be the foot ball of other national interests.

The neglect of the farmer in connection with this conference has aroused a suspicion, I fear, in many minds, that organized labor and organized capital might get together for some plan for reducing the high cost of living and allaying unrest and that the tiller of the soil would be made to pay the bill. If any member of this conference holds to such a view let him understand now and forever afterward that the farmer will not make up the deficit; he will not be the goat."

200,000 at Saginaw Fair

In the midst of a blaze of jolly glory the 1919 Saginaw county fair passed into history as the greatest event of its kind ever conducted in that county. The day and night with their tens of thousands of attend ants, put the record for the week well over the 200,000 goal and gave an excellent start toward a quarter of a million mark. From early morning until the final attraction closed at midnight the grounds fairly thronged with life and wherever there was anything to see the visitor was required to force his way through crowds to arrive at his goal.

Hillsdale Fair Honors Veterans

A successful Soldiers' and Sailors' day was held at the Hillsdale county fair. The attendance was good, and the soldiers of the late war turned out to help the old veterans make the day a success. It was the largest gathering of the younger soldiers which has been together since the war. Veterans of the Civil war, the Spanish-American war, and the European war and the W. R. C. assembled at the court house and at 10:00 o'clock marched to the fair grounds, escorted by Ewing's Zouave Band and the Hillsdale martial band. There were about 400 in line.

Kent County Holsteins Sold

The dispersal sale of the Buth Bros. herd of registered Holsteins at the Buth farm north of Grand Rapids was 60 head and the proceeds totaled $44,300, an average of $738, including the calves. Of the herd 52 were cows, heifers and calves and these brought an average of $812. Eight bull calves brought an average of $260 each. The highest price was $3,200 for a 6 year old cow with a butterfat record of 30.98 pounds per week. She was taken by Elliot G. Stevenson of Detroit for a farm he owns in Canada. One 4 year old cow went at $2,500 and another at $2,250, and an 11 months old heifer calf, daughter of a 30-pound cow sold at $1,725. Four heifer calves under a year, daughters of 30-pound cows, sold at an average of $1,494. The prices are the highest ever noted at a Grand Rapids sale. A gratifying feature of the sale is the high prices paid for the young cattle bred here, indicating the recognition Grand Rapids is gaining as a Holstein center.

Many of the cattle were sired by Glen Alix DeKol, owned jointly by the Buth and Maryland farms. The cattle sold will be shipped to half a dozen states, the West Virginia buyers alone taking about $10,000.

The West Michigan Holstein Breeders' association consignment sale of 80 head at Comstock Park, mostly cows and heifers, attracted much attention and the attendance was large.

Hull Scores Milk System

Municipal milk wagons and taking over by cities of all milk distribution as a means of reducing the price, was advocated by N. P. Hull, of Lansing, president of the Michigan Milk Producers' Association during his testimony recently before Judge Howard Weist in the state inquiry into high prices.

"There is something wrong with a system under which half a dozen and sometimes as many as 15 milk wagons pass the same door every morning," the head of the dairyman's organization said.

"It ought not to cost as much to distribute milk as it costs to produce it, but that it what it is doing. The producer is receiving less than than 8 cents a quart for the milk that is delivered in Detroit for 16 cents a quart."

Hull presented figures prepared by the dairy department of M. A. C. to show that it costs $3.85 a hundred pounds to produce milk from October, 1918 to May, 1919. These were based on books kept on 25 farms, and show actual expenditures, not theoritical costs. During this period the dairymen's leader said farmers received as low as $3 a hundred for milk.

The only way to reduce the price of milk to the consumer he said, is to eliminate part of the waste due to duplication of plants and effort in distributing it in the cities.

On April 17, 1918, Bert R. Saxbe of Mechanicsburg, Ohio, unloaded seventy head of lean cattle at Newberry and put them to pasture on grass of the cut-over land at the Eight Mile Corner. On September 26, 1919, those same cattle passed over the scale and showed an average gain per head of 215 pounds.

My Ten Commandments in My Farm Business

By P. C. GROSE

I.

THOU SHALT have no other business than farming. Not that one cannot be interested in other enterprises; but when some other business becomes more engrossing and interesting to me than farming, it becomes time right then and there for me to cease being a farmer and go into the other business. One can not make a success of a thing if his heart is not in it.

II.

Thou shalt not be too ambitious. I find that there is a tendency in all of us young farmers to set our stakes a little too high, as it were, and then as a consequence we are robbed of many of the real pleasures of life that come with moderation.

III.

Thou shalt be a "cash" man. In other words, one who never has a lot of debts to settle for each month. I believe that the proper way to do in making the various small purchases for commodities that we all have to make is to pay the dealer cash right as one goes. If one has to be in debt at all; be in debt to the bank, or to some one individual. It is a lot better to owe one party for the whole thing (and let him have a note for it) than to owe a lot of parties for a lot of little sums.

IV.

Thou shalt allow no other place to become more attractive than thy home. Mrs. Winifred Sackville Stoner, the famous originator of Natural Education, a system of training that accomplishes such wonders with the children, has that for one of her ten precepts. When I read it in one of her articles, a few years ago, I then and there decided that it should be one of my "Ten Commandments" too. We farmers can have nice, interesting homes, as well as our city cousins, if we just think so.

V.

Thou shalt have a place of labor that thou shalt call thy office. It can be in the barn, in the house, or wherever thou shalt elect; but it thou surely must have. It shall be to thee a place of thought and figuring and systematizing, so that thy business may be a profitable business. Several years ago I came to the conclusion that every farmer should have a desk as the center of his business operations just as does every other business man. I have mine right in the living room of my home. It makes an attractive piece of furniture and adds to looks of the room.

A Business Farmer

"Thou shalt have a place to work, which shall be called thy office."

VI.

Thou shalt always strive to avoid the disease, "more acres mania." I have seen so many farmers whose lives have become dwarfed in their relentless desire to secure acres, more acres that early in life I sought to cultivate the notion that as a farmer I should prefer a few less acres and a few more of the amenities of life.

VII.

Thou shalt make thy payments by check whenever possible; thus at one writing thou providest thyself with a receipt for payment transactions.

VIII.

Thou shalt deal squarely. I prefer to go down through life with the feeling that the other man will always feel just as satisfied with a deal as do I. If one is to be cheated, I prefer it to be me.

IX.

Thou shalt have a name for thy farm. As I am manager and operator of my father's land, our letterhead reads, "The W. E. Grose Farm." We believe in naming a farm after the owner, as other businesses do.

X.

Thou shalt keep records of thy farm matters. I believe that figuring and record keeping is just as essential on the farm as in the city business.

FARM BUREAU OBTAINS ASSURANCE OF BACKING

From every section of the state assurance of support in the reorganization of the Michigan State Farm Bureau into a powerful union of the majority of Michigan's 200,000 farmers are coming into the state offices at Birmingham, Mich.

The membership drive which will be state wide commenced in Oakland county October 15. It will cover Barry county next, where the preliminary campaign organization work already has been done. Montcalm, Allegan, St. Clair and Lapeer counties will be visited within the week by State Secretary C. A. Bingham to get them ready for the drive. A dozen other counties have asked the state office for help in organizing membership campaigns.

Interest in the movement, which is intended solely to make the business of farming more profitable and attractive to the farmer, is not confined to the existing county farm bureau units, however. Farmers from every county in Michigan are flooding the state offices with hundreds of letters asking full details of the aims of the reorganized bureau and offering assistance in helping the movement to a successful conclusion.

Some of the most prominent agriculturists in the state, including Roland Morrill of Benton Harbor, Charles B. Scully, of Almont, A. E. Illenden, of Adrian, Colon Lillie, R. G. Potts, U. S. Ewing, B. A. Holden, Whitney Watkins, George M. Low and others are solidly behind the movement.

Farmers Honor Gleaners

Michigan is the scene of the 25th anniversary celebration of the Ancient Order of Gleaners, of which more than 50,000 members are enrolled in the state. Silver Jubilee rallies and meetings are being held in various parts of the state, the most significant gathering holding forth in the Hotel Cadillac, Detroit, October 10, when prominent Gleaner workers from all parts of the nation assembled to give honor to the Gleaner organization, the largest strictly agricultural order in America, and to its founder and chief, Mr. Grant Slocum.

During the past several days an important conference of the field workers has been held in Detroit, where the National Gleaner Temple is located, and plans for state celebrations of the twenty-fifth anniversary of the organization were outlined. Also a campaign to increase the membership and activities of the order is now under way. The field workers at the conclusion of their conference presented their chief, Grant Slocum, with a traveling case, as a token of their esteem.

Celebrations of the Gleaner Anniversary began with the first week of September, when the Michigan State Fair devoted an entire day to the Gleaner farmers and business men, thousands of whom assembled to hear speeches, notably that by Milo D. Campbell, of Coldwater, national president of the various dairy associations of America. Gleaner Day at the Davison fair, Sept. 12, at Standish, Sept. 17, at Hale, Sept. 17 and other occasions have formed a part of the Silver Jubilee fete.

Reawakenings and revivals in the thousands of Arbors will be the order of the day during October, not only in Michigan but throughout the Middle West. Scottville, Mich., will rally Oct. 22; Manton, Mich., Oct. 23; Big Rapids, about Oct. 30. Grant Slocum, Supreme Secretary, Ross Holloway, Assistant Supreme Secretary and other leaders will be speakers at various rallies.

The Conway and Handy Farmers' club met recently with Mr. and Mrs. Clay Gordon, says the Fowlerville Review. Meeting was called to order by President Arwin Killinger. Singing by club, after which the Lord's Prayer was repeated in concert led by Mrs. G. Carr. Speeches followed.

Michigan Breeders Compete at National Show

Jerseys and Holsteins Lead in Entries at Great Cattle Exhibit in Chicago

"EAST IS EAST and West is West and never the twain shall meet." These words by Rudyard Kipling were probably spoken without giving much thought to the future, for since the National Dairy Show which has sprung into such great prominence in late years called for entries for its thirteenth annual exhibition. Eastern states responded with their unbeaten kings and queens of dairydom while owners of the cream of the dairy aristocracy from the Southwest, Middle West and Far West were not slow to answer the summons.

Cattle from Massachusetts, New York and New Jersey were sent to defend the Eastern territory while Montana sent her prides to defend the Golden West. Canada on the North and Texas on the South were also represented, with the Ed. C. Lasater herd of Jerseys from Falfurrias, Texas, probably the most prominent of all entries. In all nearly 1,000 animals of the five leading breeds are entered for the final showdown of the season. Jerseys lead all the breeds in numbers with 294 entries by 20 breeders. Holsteins come next with 172 entries by 34 exhibitors. Guernseys number 131 head, being shown by 13 exhibitors, and the Ayrshires crowd them numerically with 127 head, shown by 10 breeders. The Brown Swiss breed was represented by four breeders showing 69 animals.

Michigan Men Contend

Included in the above array of contenders were the following Michigan breeders: L. S. Marshall & Sons, Leslie, showing Brown Swiss cattle; E. S. George, Pontiac, with Jerseys, and John Ebels, Holland, with Guernseys.

Holstein cattle were first to be led into the ring for conclusive honors in that breed. In the get of sire class which calls for four animals, Wisconsin scored a big victory when N. Dickinsin of Lake Geneva, won first on the get of their herd bull, Iowana Sir Ollie. This animal later won first in senior bull class and grand championship. Moxwell Farms of Waterloo, Iowa, won second get of sire, and Maywoods Farms of Richester, Minn., won third.

A college bull, Iowana Mercedes Homestead from the dairy farm at Ames, Iowa, school, crowded Iowana Sir Ollie hard for the grand championship and got second place. This is the Iowa entry's first show this season. In 1916 he was first as a two-year-old at the National show, when it was held at Columbus, Ohio.

A Canadian entry was a feature of the senior class. He is Bonerges Hartog and was shown by Haley & Lee of Springfield, Ont. At the recent show at Toronto, said to be the greatest agricultural fair in the world and where about 200 Holsteins were on exhibit, the bull won first in his class and captured the grand championship. He was only good for fourth in Chicago, however.

The Junior champion Holstein bull was owned by N. Dickinson & Sons this animal being Walcowis Ollie Netherland, sired by Iowana Sir Ollie.

In the exhibitor's herd N. Dickinson & Sons were first; R. E. Haeger, Algonquin, Ill., second; D. G. Maxwell, Waterloo, Iowa, third; Haley & Lee, Springfield, Ont., fourth and A. E. Hulet, Ontario, fifth.

In the young herd awards Dickinson was first; Haeger, second, Maywood Farms, Richester, Minn., third; Haley & Lee, fourth. In the breeders calf herd, Dickinson was first; Maxwell, second; Haeger, third; Haley & Lee, fourth.

Grand Champion senior cow was awarded to Minerva Beets owned by R. E. Haeger of Algonquin, Ill.

Brown Swiss awards were made next. Senior and grand champion bull, Gallatin Browney, was exhibited by Hull Bros., Painesville, Ohio, while the junior champion, Juras M's King, was shown by W. O. Bohart, Bozeman, Mont.

Michigan Takes Championship

Senior and grand champion cow honors went to A. E. Bower, Cleveland, Ohio, on Bettie of Lake View, while Michigan came to the front with the junior champion cow Minnie M. Bravura, shown by L. S. Marshall & Sons, Leslie, Mich.

In the Ayrshire breed only the Senior and junior champion bulls were made up to the time of going to press. These honors went to John A. Ness, Auburn, Maine on Strathglass Gold Chink and Wendover Farm, Bernardsville, N. J., on Admiral Beatty of Wendover, respectively.

The Jersey and Guernsey awards were made too late for publication.

Fourteen teams engaged in the Student's Judging contest which is a big feature of the show, three states have teams which never were represented before, namely, Indiana, Wisconsin and South Carolina. Minnesota is here after dropping out for several years.

The four teams which were at Waterloo—Iowa, Nebraska, Kansas and Missouri—are in the contest of skill. The other states represented are Maryland, New York, New Hampshire, Ohio, Massachusetts, South Dakota and Washington. The Missouri team won first at the Waterloo contest.

Each team consists of three men and an alternate and is accompanied by their coach. Helmer Rabild of the Bureau of Animal Industry, Washington, D. C., is in charge of the contest.

A class of 4 bulls, 4 cows and 4 heifers was passed on in each of the five breeds. Supervisors of the contest are wrestling with a mass of figures and will not be able to give out the winners until later.

Six boys entered the junior judging contest. They are the champions of their states, having won out in county and state fair competitions. In this competition Raymond G. Nesbit of Hopkins, Mnin., won premier honors, Burton Forney of Waterloo, Iowa, was second; John Stansfield of Lawrenceville, Ill., third; Clarence Rogers of Pendleton, Ind., Ivan C. Galpin, Ann Arbor, Mich., and Cyrus Shabaz of West Alls, Wis., were next in order named.

Young Nesbit won $100 in cash, a silver loving cup offered by the National Dairy Association and a silver loving cup for best judge of Holstein cows offered by the Holstein-Friesan Association of America.

The United States Department of Agriculture is participating in the show not only to honor the dairy cow, but also to further the principles and practices of good dairying. The government exhibits show the exact amount and kinds of food required to keep a cow for one year also a farm scene showing a hay stack and a fodder rack, containing the necessary amounts of dry forage; a silo, 5 feet in diameter and 11 feet high, which will hold the silage necessary for the cow; and a large pile of ear corn and the mill feed in sacks which the cow will eat during the 12 months. A huge milk bottle 4 1-2 feet wide and 9 feet high with a capacity of 6,000 pounds of milk is used to illustrate the cow's production. To complete the picture a cow and calf of the type which consumes the feed and converts it into the amount of milk exhibited are on hand. The amounts of feed and the milk supplied are actual averages of results obtained by the Dairy Division from practical test with dairy farmers in northern Indiana. A small milk house, wherein is demonstrated the proper methods of cooling milk is also part of this feature.

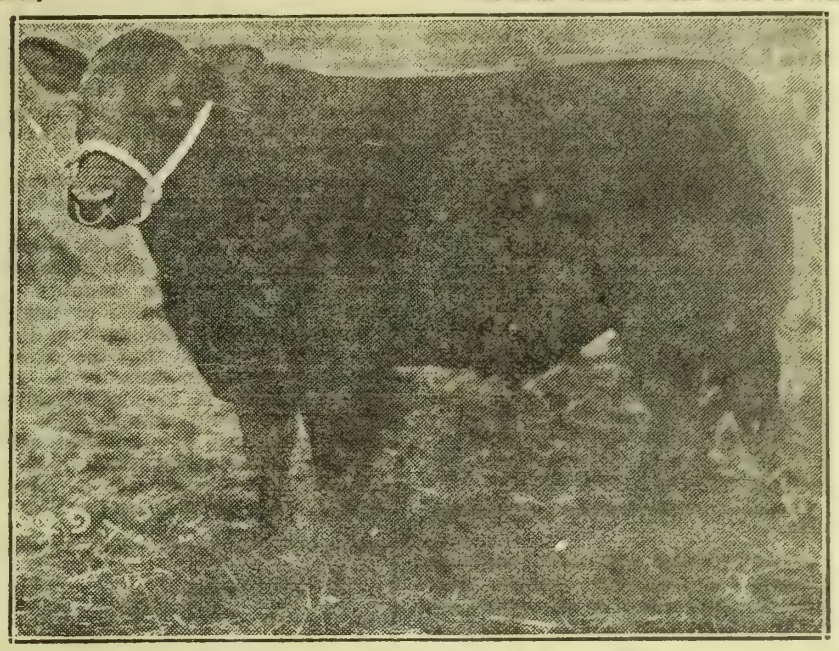
Milking Machines Exhibited

Wandering from the big judging arena to the machinery section, show visitors are soon lost in a maze of booths, watching the marvelous performance of machines for taking milk from the cow to the consumer's table with the minimum amount of labor and loss of food value. Over a hundred exhibits of interest to dairymen are to be seen.

Mingling with the crowd of farmers and dairymen are big business men, many of them millionaires who have entered herds and closed their desks for a few days of sightseeing at the show.

Governor Frank O. Lowden of Illinois is one of the notable visitors but as he prefers to attend the show as a farmer and dairyman no special reception was planned for him.

Another notable visitor registering was Brigadier General B. Enstin, of the Union of South Africa, who is accompanied by A. J. Beyser. They represent the agricultural department of their country. Visitors have registered from five other counties, France, England, Finland, Sweden and Japan. Richard B. Cross, chief administrative officer of the British bureau having control of foods arrived for a close-up study of dairy conditions in this country while Masamichi Suminokura, manager of the Tokio Dairy corporation and his secretary, Itsuzo Shimahara were sent by the Japanese government to see the dairy industry of America as it is now on exhibition.



ERODEMAS, EDGAR OF DALMENY'S SON

This Bull Calf won all championships at the Perth show and sale, and sold for 2,100 guineas, or around $11,000, depending on how the exchange is figured. Two other sons of Edgar of Dalmeny were second and seventh in their classes, and Major Cummings' group of three was second reserve champion group of the show. 280 bulls selling. Mr. William E. Scripps of Detroit imported Edgar of Dalmeny last year, being the only bull of the breed to get across last year.

Michigan in Dairy Cattle Congress Held at Waterloo

By DR. G. H. CONN

THE DAIRY Cattle Congress opened late last month, at Waterloo, Iowa and continued throughout the week. The untiring efforts of the Mgr. E. S. Estel were amply rewarded for a finer collection of animals were never gathered together before in this state. This is by far the biggest and best show the Cattle Congress has ever had.

The Holsteins were most in number; the Minnesota breeders sent a large number of them to the show and went home with a lot of prizes. They seemed to be the most popular breed at the show. The Jerseys did themselves proud both in numbers and quality. More Jerseys at the show this year than ever before. The Ayrshires and Guernseys, while not so plentiful in numbers made a very good showing. Some very good animals in both classes and from the throng of admirers always near them, they bid fair to become very popular. For beauty and pleasing appearance they easily head the list. The Brown Swiss a breed very little known in this country was well represented by three herds the largest and best of them being from Ohio. It looks as though they will become more generally known in the next few years.

The entries here are mostly from the section of the country surrounding Iowa. No doubt the National Dairy Cattle Show held at Chicago last week has kept many of the Eastern breeders from coming here.

In connection with the dairy cattle show, an industrial exhibit was held and was of a very high class. Modern fixtures and implements of interest to the dairy man, stock man and farmer, were displayed to the visitors. Each afternoon and evening a horse show and an animal circus was held in the new coliseum. It was high class and was greatly enjoyed.

An unusual and interesting exhibit was a cow, a man and a small boy, all of which was made of butter. This pictured the man as having milked the cow, and in the act of pouring the milk into a pitcher for the small boy. A most wonderful work of art. A marker below bore these words, "We should worry if the whole world does go dry." It attracted as much, if not more attention than any exhibit on the grounds.

The entries were well scattered as some were from Texas, Kansas, Nebraska, Kentucky, Ohio and Michigan.

The Ayrshires and Brown Swiss were judged by L. S. Gillette, Fostoria, Iowa. Holsteins were judged by H. H. Kildee, Prof. of Animal Husbandry at Ames, Iowa. Jerseys were placed by C. H. Staples, Baton Rouge, La. The Guernseys by W. A. McKerron, St. Paul, Minn.

The judging team from Minnesota State Agricultural College won the Collegieate judging contest, which was held the first day of the show.

In the Holstein classes N. Dickinson & Son of Lake Geneva, Wis., carried off more than their share of the trophies. They secured Grand Champion Bull on Iowana Sir Ollie 114,797. His fouth win this year. He was a very poor yearling but has been improving each year. They secured Junion Champion Bull on Wallcowis Ollie Netherland 254.004. Also first on exhibitors herd.

Senior and Grand Champion Holstein Cow went to Belle Hazeltine Ormsby 374,236 owned by T. H. Etrei of Glyndon, Minn. A most wonderful cow. Junior Champion Cow was won by Moxwell Farms, Waterloo, Iowa on Queen Ormsby Netherland Parothenes 484,158.

In the Jersey class Senior and Grand Champion Bull went to Brook Wood Farm, Berrysville, N. Y., on Peerless Jolly Fern 143,653. Junior Champion Bull went to Raleigh Farmer's Glory 165,429 owned by Allen Dale Farms, Shelbyville, Ky. The Junior Champion Heifer went to the same owners and was won on Eminents Fairy Fontaine 422,819. The Senior and Grand Champion Cow went to Brook Wood Farms on Imp. Fern's Golden Lass 451,261.

In the Guernsey classes W. W. Marsh of Waterloo, Iowa won Senior and Grand Champion Bull on his Cherub's Prince 41548.

Mysteries Cleared Away Concerning Soils

M. M. McCool Turns Light of Science Upon Subject Vital to Success in Farming

SOIL improvement is attracting serious attention among business farmers everywhere, and they will be interested in this second article by Prof. M. M. McCool, of M. A. C., on Soil Formation.

Soil Definition

Soil covers the land surface of the earth as an orange peel an orange, or a cover a base ball. It varies greatly in thickness. In some places the bed rock lies within a few inches of the surface, in others it approaches within a few feet, and in still others it may be buried several hundred feet deep.

The soil mass may be divided into surface soil and subsoil. The former is commonly spoken of as the mass that is turned by the plow, the latter that which extends downward from the bottom of the furrow slice to bed rock

Soil Composition

The soil is an exceedingly complex ever-changing mass. Mineral matter, which was formerly solid rock, makes up by far the greater part of the upland soils. It exists as particles of different sizes, shapes, colors, and composition as well as salts. There is present vegetable matter consisting of roots, stems, and leaves of plants in different stages of decay, and also living and dead organisms, such as various kinds of bacteria, molds, and fungi; the soil atmosphere, and the soil moisture which dissolves and carries in solution various substances should also be mentioned. Thus, the soil is not an inert lifeless mass as most people look upon it but on the contrary it is complex and ever changing and lends itself to much study. The soil that one tills this season is not the same as that which he cultivated last season or those prior to that, indeed those who are alert to the situation realize that the effects of some methods of soil management may be strikingly observed for several years.

A study of the methods of formation of the soil is fascinating to many. As the properties of soils and therefore their management are governed in a large measure by the processes which brought about their formation these should be briefly considered at this time.

To begin with we had the parent rock. This may have been either a solid mass, or material laid down by wind, water or ice, as shown later on. It is true that the nature of the original material is important in affecting the properties of the resulting soil, but so far as the soils student is concerned it seems that the agencies that brought the soil to its present condition as well as the age of the material are of chief concern.

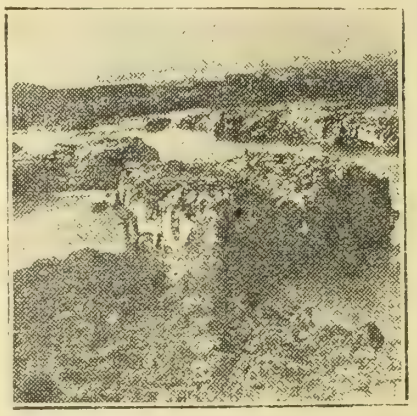
Owing to the fact that there is a gradual but constant removal of the desirable plant-food elements from the soil by drainage waters there is a constant tendency for all soils to approach each other in composition. Some soils are so old, geologically speaking, that they are practically devoid of plant-food elements. It is now believed by some that the backwardness of the African negro may be attributed to the age of the soil, it being probable that here lies the oldest soils in the world.

The breaking down of rock and the formation of soil therefrom and its subsequent changes are spoken of as weathering. There are several processes that aid in this transformation. Although the most important may be conveniently classified into physical, or mechanical, and chemical, we should not lose sight of the important fact that these work in conjunction with each other, however, in some cases the physical forces predominate and in others the chemical.

In speaking of physical or mechanical changes with respect to rocks or soils, the change in form or size of the particles that comprise the mass rather than the composition is considered. In this group falls the action of heat, cold, frost, and erosion by wind, water and ice. Changes in temperature from day to night of exposed surface of rocks are potent factors in breaking them up into small fragments, moreover the formation of ice from rain water in the crevices of the rocks assists somewhat in this process.

Erosion or the wearing away of exposed surfaces tends to level the earth's surface and has played an important part in soil formation. The cutting of deep gorges through thousands of feet of solid rock are excellent examples of this and though less striking, yet important, is the wearing action of small rivulets and streams.

Wind erosion is most effective when it hurls small particles against



Water erosion as it worked in Columbia River.

exposed surfaces and most active in the arid and semi-arid regions, however, it takes place in all directions and in almost every clime. The dust in a cubic mile of air may reach 126,000 tons during a severe storm.

Ice movements, as glaciers played a profound role in soil formation. As the enormous masses of ice moved southward during the glacial period they pushed along some previously formed soil which was mingled with rock powder, gravel and boulders to fill up in some instances valleys and river beds. On its march it also ground down hill tops, and left solid rock exposed here and covering it from a few to several hundred feet there. Some of this debris was transported hundreds of miles from its original home. Some of the material has since been quite thoroly mixed by running water, in some instances the force has removed the fine particles and left only the course or sandy material. Glaciation and the subsequent reworking of the debris by water accounts for Michigan's unparalelled diversity of soils.

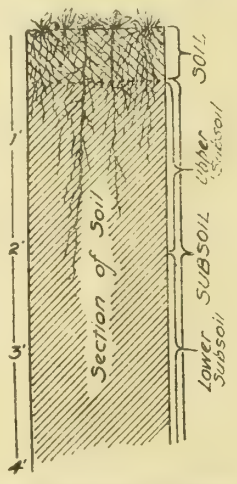


FIG. 2 – Ideal section of soil, showing the large distribution of roots in the topsoil and their somewhat smaller distribution in the subsoil. Roots of many plants will penetrate to a depth of several feet if the drainage is good. The topsoil is generally richer in decaying organic matter, which gives it a darker color

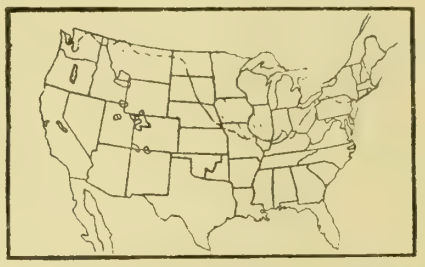
Chemical Agencies in Soil Formation

When we speak of chemical changes we refer to the formation of new compounds, rather than to the changes in size or form. Chemical changes are responsible for the leaching of plant food from soils by drainage waters as well as to others.

All minerals tend to oxidize or "rust" when exposed to air in the presence of appreciable amounts of moisture. This is true of the minerals when in the rocks as well as in the soil. The result of such action is most visible in rocks that are high in compounds of iron, as evidenced by brownish or yellowish streaks or stains. As a result of this oxidation the rocks fall apart more rapidly when acted on by the physical forces, and more rapidly pass into solution, as spoken of below.

Water is nature's great solvent. No rock or rock forming material is insoluble in it; but it is true that some minerals are far more soluble than others. Water always carries in solution appreciable amounts of mineral matter, vegetable or organic matter, oxygen and carbon dioxide. It is estimated that the Mississippi river deposits annually in the Gulf of Mexico 86 tons of dissolved minerals for every square mile of territory drained by it. Thus solution aids in breaking down rock to form soil, and it also aids in releasing food from the soil for the plant.



Glaciated areas of U. S. are shown here.

The amount of rainfall has a profound influence on the properties of soils. We recognize four divisions in North America based upon precipitation; they are:

Arid, regions that receive 12 inches or less of rainfall annually; semi-arid, regions that receive from 12 to 20 inches of rainfall annually; sub-humid regions that receive from 20 to 30 inches of rainfall annually; humis, regions that receive 30 or more inches of rainfall annually.

Whether the physical or chemical factors predominate in weathering to form soil depends chiefly upon the rainfall. The physical forces spoken of previously predominate in soil formation in the arid or semi-arid regions. The most striking characteristics of these soils are, (1) low content of organic matter. (2) generally light or gray in color, (3) great unformity throughout their depth, (4) rather porous nature, (5) small quantity of clay, and (6) very fertile when irrigated.

The chemical forces predominate in the weathering of rocks in the regions of higher rainfall, and are especially active in the warm, moist areas. The soils occurring in much of the sub-humid regions may be described as dark colored prairie soils and comprise a vast stretch of country extending northward from the Gulf Coast of Texas into Canada. The most striking properties of these soils are:

(1) High per cent of organic matter. The conditions that favor the accumulation of organic matter in soils are sufficient rainfall to encourage plant growth, yet not enough to cause it to be removed in solution and high lime content.

(2) Dark or black color, due to dark colored humus, or vegetable matter.

(3) Marked contrast in color between the surface and the subsoil.

(4) High agricultural value

The soils formed in humid regions outside of the glacial area contain only a moderate amount of organic matter. They are generally light in color ,possess shallow surface with finer textured subsoil. The natural vegetation over most of it formerly was timber.

Slope Also Influences the Properties of Soils

Soils formed on north slopes of mountains and larger hills, in general exhibit finer texture, are darker in color, deeper, and are more fertile than those formed on the south slopes. Such variations are attributed to the differences in the moisture content and the temperature relations. On many of the south slopes the winds and sunshine quickly dry the soil, thus the chemical forces are at a minimum, while on the north slopes the water content remains higher and the temperature is lower, and the conditions are more nearly ideal for the accumulation of vegetable matter and chemical activities. Where the seasons are long the north slopes are usually in favor for crop production, but in the regions of short growing seasons the south slopes are usually more desirable.

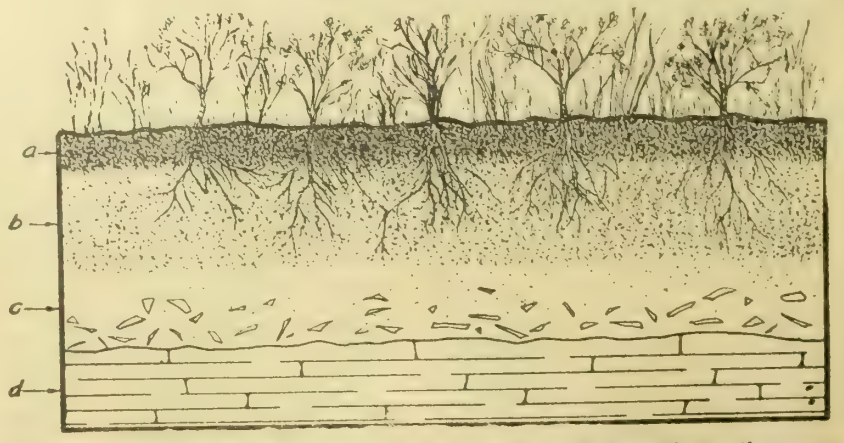
Color of Soils

Soils exhibit wide variations in color, depending much upon climatic conditions. The color is generally due to the materials that coat the soil particles. There are two chief coloring matters in soils, namely, iron compounds and organic matter. The iron compound give rise to red, yellow, blue and gray colors, depending upon the state of oxidization, or rusting, as well as upon the thickness of the oxidized layer; organic matter is responsible for the dark or black, and in some instances, the gray colored soils. If the organic matter is formed in soils that contain rather large amounts of lime, it is usually dark or black in color. On the other hand if formed in soils that contain small quantities of lime, it is more often less dark. Where both the oxidization of iron compounds and the formation and decay of organic matter are active, various intermediate tints result, such as reddish browns and others.

Red soils are common in the tropical regions, in several of the southern states, and in portions of the states west of the Cascade Mountains. They are less common in the northern states, and seldom occur in the western mountainous states.

Color is important to the farmer's eye, in many regions dark colored soils are looked upon as being fertile, while deep red soils are in great favor in others. As a general rule the color of the subsoil is indicative of the drainage conditions under which the soils were formed. If the subsoil is gray or only slightly mottled in color the drainage was poor. If brownish or well mottled, drainage conditions were much better.

(Other articles by Professor McCool on the important subject of soils will appear in later issues of Michigan Business Farming.)



Formation of residuary soil. (a) Surface soil, dark in color due to the presence of vegetable matter. (b) Sub-surface. (c) Rock fragments forming soil. (d) Solid rock.

MICHIGAN U. S. SENATORS FIGHTING FOR FARMERS

United State Senators Truman H. Newberry and Charles E. Townsend of Michigan, are going to bend every effort for legislation that will divorce agricultural interests from the provisions of the Clayton Anti-Trust Act that now prohibits collective bargaining, buying and selling by the farmers, according to State Senator Charles B. Scully of Almont, Mich., delegate of the Michigan State Farm Bureau, who has just returned from a conference of the national board of farm organization held in Washington recently.

This is an enlarged reproduction of the membership button given to each member. It is a badge of honor and power that should be worn by every Michigan Farmer

What You Get *for* Your Money

Within a short time you are going to be called on by a representative of the State Organization and asked to join the Greater Michigan Farm Bureau.

The campaign starts in Oakland County on October 15th.

What will you say?

We hope that your answer will be "Yes."

But, before you make up your mind you have a right to know what the organization will accomplish and what your money will be spent for.

We can show what the results of this organization will be, first, by what the plan is; second, by what it is accomplishing elsewhere.

The work of the State Farm Bureau will be divided into three great divisions—educational, marketing and legislative.

The program in these three divisions is too extensive to be gone into in great detail here. It includes work to solve every problem which now confronts you—crops, livestock, prices, labor, buying—each subject handled by the most experienced man we can find. We can best cite examples of what actually has been done along these lines in other states, notably Illinois.

There, the educational work on crops, soils and livestock has been carried far beyond anything that has been before attempted, because they have had sufficient funds to go at this work as it should be gone at—conducting investigations and hiring real experts with practical knowledge who can show how to put extra dollars into the farmers' own pockets.

Along the lines of marketing similar great advances have been made.

Illinois wool was this year sold through the association at an average of 65c per pound as against 45c which is the highest price offered for average grades by the brokers before the farm bureau took it up. This is but a typical example of what you can expect in actual cash returns from the marketing division of your own State Farm Bureau, not only on wool but other farm products.

In regard to legislation, a Legislative Committee was maintained at the State Capitol which saw to it that the farmers got a square deal from the legislature.

They succeeded in passing at the last session every bill of which they approved and killing every bill to which they objected.

That is what your own State Farm Bureau will do, if you furnish them the organization and the means with which to do it.

These are definite, tangible things which you will get for an investment of a few dollars in the farm bureau.

There is nothing mysterious or hidden about the whole proposition. This is not a pet scheme of any one man or any group of men.

You farmers are merely building the same strong, substantial, far-reaching sort of an organization that exists today in manufacturing, marketing and labor fields.

Think of the power of 200,000 Michigan Farmers working together. With this power you can accomplish any fair, legitimate object which you attempt.

You cannot shoulder this responsibility onto your neighbor. If you do not join this organization, you have no right to ask the next fellow to do it.

Every farmer who refuses to join weakens the organization by just so much. You have a personal responsibility in this matter. You know that this great work we have outlined is absolutely essential if farming as a whole is to become what it ought to be—the most pleasant, profitable occupation in the world.

It is a critical time. Farmers are either going forward or going backward, and whether they do go forward or go backward depends on you.

When the representative calls, say "Yes".

C. A. BINGHAM, ***Secretary***

Why a Special Session?

IT IS reported that Governor Sleeper may call a special session of the Legislature. It seems that the city of Saginaw has reached the limit of its bonded indebtedness as fixed by the law and Saginaw wishes the state to fetch its legislators back to Lansing at the people's expense to pass a special a permitting Saginaw to sell more bonds to repair its antiquated water system. Saginaw's water system has been on the "bum" for years, and those who have stopped at Saginaw's hotels will remember the little signs here, there and everywhere, "This water not fit to drink." The Legislature was in session for nearly four consecutive months, and the Saginaw city authorities had all the chance in the world of getting through their special act. When we asked someone the other day why the matter was not presented while the Legislature was in regular session, we got this reply: "The city officials couldn't agree."

From the day that the attorney-general discovered that Squire Squeezem of Pinchem Corners, charged one of his customers twelve and three-fourths cents a pound for sugar instead of the regular price of twelve and a half cents, the politicians have been clamoring for a special session of the Legislature to pass a law to hang the squire. But while the governor was making up his mind about this, the public forgave the squire for his offense, and presto! the politicians' hopes for a special session went a-glimmering. But then, oh joy! The Saginawians came to an agreement. "We are ready now for our special act," they chorused, "Call in the Legislature and let the job be done."

It's a long, long way to Tipperary, but not so long in the minds of some wire-pulling politicians as it is from the middle of May when the Legislature adjourned to the last of August when the primaries are held. Many things can happen in the interim. Political fences that were built up during the solons' sojourn at Lansing and left intact last May have suffered some damages. A board has been knocked off here and there; a post broken off; a gate unlatched. Strange cattle are browsing in the political meadows. This will never do. We must get the boys back to Lansing to fix these fences. We'll have a special session, and charge the job to the state."

Governor Sleeper said we were to have a "business administration; no useless expenditures; no wasting of funds; strict accounting of the people's money. But the Legislature spent money like a drunken sailor and the governor beat the tom-tom in approval. We haven't heard anyone complaining about taxes not being high enough this year. Special sessions of the Legislature are expensive luxuries which we can't afford this year. Squire Squeezem is dead. The people of Saginaw have satisfied their thirst some way or other for the last year and a half. Let it drink from the same source the next year and a half. But don't call upon the people to dig a hole in their pockets to pay the bills of a special session.

* * *

Why Not Run the Other Way?

HAVE YOU SEEN a child chase a butterfly? Each time as the childish fingers close upon it, the pretty thing flutters up and away, always just within reach and then just without. Sometimes it is caught, but the thoughtless child crushes its beautiful wings into a shapeless mass and it is no longer desirable. Soon another hovers about and the chase is on once more.

But butter-fly chasing is not confined to the children. Grown men and women the country over are chasing butterflies, seeking their heart's desire. What that desire is, no man seems to know. They only know that the desire is there, a strong and itching desire, which drives them to a chase that is empty and endless.

Let us make a suggestion. Instead of chasing the butterfly, why not go the other way? Instead of running over the multitude in the road, why not turn back and take the detour? Instead of pushing your neighbors off the globe, why not press back and make room for them? Instead of grabbing everything in sight why not leave something for other folks? If every individual in every class of people would follow this excellent procedure the turmoil would soon be hushed, the unrest satisfied, the butterfly caught and the chase ended.

Selfishness is the mother of much of the evil in the world. Man does not oppress his brother because he likes to see him suffer. The oppressor of whatever name or nature is usually the victim of hyper-selfishness, and in the smug satisfaction of acquiring the things that add to his material wealth or comfort, looks over the heads of those who have been deprived for his benefit. The oppressor cannot forever oppress his victims revolt. Neither can any man forever cheat and rob and drive tricky bargains with his fellow-men; he is found out and his fellow-men turn upon him.

This is what is happening today. Men in every walk of life have been taught the trick of "turning a spare dollar to good advantage." But too often that dollar has worked to the disadvantage of someone else, and that's where the trouble begins. No such situation as confronts us now could have been possible in a land where men are considerate of the welfare of others and careful in their dealings with each other. Let us turn back before it is too late. Let us have a little less chasing of the butterfly at the expense and a little more indulgence in the milk of human kindness. Let us revise our national motto, "Every man for himself and the devil take the hindmost," and make it, "A square deal for all."

* * *

What's the Difference?

WHEN A MAN gets on a soap-box in New York city and yells "Down with the President," he is put in the cooler. When a United States senator stands on a platform in the Middle West and says, "Wilson is a menace to the country," he is applauded and someone nominates him for president. What's the difference?

President Wilson has met the bitter storms of criticism and invectives that have been hurled against him incessantly during the past three years, with a grace and dignity unparallelled in political history. His public defense of the positions he has taken has been singularly free from personal abuse. He has confined himself to the merits of his argument and let his enemies go with merely a passing reference. But consider, if you please, the passionate outbursts of his opponents. Is not the public vilifying of his name by the Missourian Senator Reed a thing to bring the blush of shame to any American's cheek? Do we wonder that the patriotic people of a little western town turned the senator's cloak to the resemblance of an egg omelet when he goaded them beyond endurance by his besmirching of the president?

Speeches from the stump, soap-box or platform are all right. Once in awhile they help to enlighten public opinion. But speeches calculated to arouse the passions of the people against the government of the United States are all wrong and should be suppressed. This applies with equal force to the Bolshevist with a patch on the seat of his pants and the politician who covers up the patch with a swallow-tail coat.

* * *

Avoid the City

HOUSING conditions in the cities have become so bad that warnings are being sent to returning soldiers about certain congested centers, such as Detroit. This same warning might just as well be issued to the farmers in sections of Michigan where crop discouragements have stimulated the migration to the cities. In Detroit the condition was bad last spring and people had to wait for weeks and months before finding suitable quarters. But now the condition is far worse. Colonies of tents, despite the cold weather approaching, are increasing on the outskirts of the city. For the young man or woman coming in from the country, it is almost miraculous if a room can be found.

This same thing may be said of Flint and other great, booming towns or cities in Michigan. The same condition prevails in other states, as well as in Michigan. Take Indianapolis, for example, which has not been widely known to have grown rapidly. Nevertheless Indianapolis resembles Detroit in house shortage, only the rents seem to be a trifle higher.

The cause back of all this unfortunate condition, of course, is the small amount of building done during the war, while the population increased considerably. And now, when war would release the energies of the people toward building, the prices of building material are so high that the building being done is far below what is needed.

So fortunate indeed may the farmer feel to have a roof over his head and a business to conduct without riding many miles on jammed street cars to get to work. Especially may the farmer feel lucky if he owns his home and farm, or if he sees his way clear to that estimable goal. City folks are making a rush for farms in sections like the Corn Belt, because they have found that the intangible quality of happiness lies not in big income in the crowded shuttle of the metropolis where high prices sweep away the increase of inflowing gold. They have found that a roomy home on a farm with God's fresh air and honest, useful work, with health and a chance for happiness stack up better than city life. Not that farming is a soft snap. It is the biggest man's size job in the world. It takes real brains and brawn to make a success of that business, but once success comes in farming, the one who succeeds may know that he has gotten somewhere. He may feel proud in not having been lured away by the call of the village spire or the thunder of the traffic of the city.

* * *

The news that Congress is likely to kick Oriental beans out of the market, by a protective tariff, now being urged so forcefully by the Michigan bean men delegation at Washington, has sent the bean bears in a cloud of dust toward the tall timbers for the time being, at least.

* * *

When the news came out that the president is suffering from lesion of the brain, a lot of unjustified personal abuse against him hushed up like a clam.

* * *

France and England are already at peace with Germany this week, but the United States senate is still at war, though the allies are at peace.

* * *

If the State Farm Bureau is opposed to the strike, as has been announced, how is it going to enforce the right of collective bargaining?

* * *

Cross roads oracle says: "Lots of land and big muscles'll pay, but less land an' plenty of active brains'll pay better.

WHAT THE NEIGHBORS SAY

FARMERS WILL SOON BE RICH

The quality of beans here is mostly very good. Mine and a few other fields did not come up even on account of dry spells, not ripening. Don't know just how they will turn out. The grasshoppers took half of mine and chewed the rest badly. Many other farmers have had the same loss. I spent many dollars for poison and labor and then lost all hay and oats. Would not have had a bean had I not kept right after them. Two years ago I sold fifty tons of hay. Last year I had enough to pull through. This year not any. Farmers will soon be rich here.—Geo. D., Grand Traverse county.

Quit yer kickin,' George. Doesn't the city press say that you're the luckiest man alive. Haven't you been getting $2 for wheat, $20 for hogs and 50 cents for butter'n and eggs, "the highest prices in the history of the farmer." If you don't like farming why don't you sell out to the city newspaper editors, merchants and laboring men who are trampling down the grass along the country roads in a wild stampede to purchase farms and get into the business?—The Editor.

RELIGIOUS TOLERANCE IS BLAMED FOR WAR

I would like to know what "the Neighbors say" on subject of War, the Cause and Prevention. We charge speculative theology with responsibility for the conglomeration of religious doctrines. The difference of religious opinions is responsible for the liberty of action by the oppressor. If the Kaiser knew that he would go to hell for doing what he did, he would not have done it. The speculative doctrines of religions are responsible for Junkerism. Junkerism is oppression. Oppression is hell. Hell is war. War is the effect of religious tolerance. The doctrine that God is a God of war, that Jacob, David and Joshua were righteous; that the atrocities committed by them was God working thru them. One might get the idea that you can live a life of piracy and if you can hold your breath long enough at the last snuffle and cry out "Lord have mercy on me a sinner," the angels of heaven will fall over one another to welcome you home. Such a religion is blasphemy against the supernatural intelligence of man. The prevention of war is a knowledge of our spiritual nature and its relation to God, which is within the power of the human mind to attain. Paul's doctrine to the contrary notwithstanding. Psychotheology is the gospel of Christ.—J. L. C., Shelby.

You have a theory which is rather unique, Friend J. L. C., and we want to hear what the other neighbors have to say about this interesting subject. You will find, I believe, that some will think that the war was caused by conflicting commercial systems in the race for mastery of the sea and the world's business. They may say that the speculative theology was largely influenced by commercial and other practical considerations. You might find an interesting phase of thought on the subject by comparing the religious doctrines in the Roman Empire. Let's hear from you again. Perhaps you have some comment to make on religion of today in agricultural districts and the outlook.—The Editor.

WHO MAKES PROFIT?

I would like to comment through the columns of your paper, our paper as I call it, inasmuch as everyone around here takes it. We all swear by it. Well, a friend of mine was here from Illinois the other day and was telling about the bean business. He is a farmer in the Corn Belt, and his wife had to pay 26 cents a pound for beans in threshing time. Out of that she picked a teacupful of rotten beans. Now when they buy them from us, they stand them on end and turn them over eleven times to see if they can find even so much as a fly speck on them, so they can call them pickings. Who makes the profit on beans?—C. A. C., Alma.

We were just talking with a bear elevator man from a town very close to Alma, neighbor, and he was trying to bear the market, I guess, because he was trying to tell me that the farmers in what he called "Starving Gratiot" were raising around 25 to 30 bushels per acre. The state estimates that 10 is a pretty good yield per acre. So you probably hear a lot of strange things about beans. But this much is certain from the vast numbers of letters received from all parts of Michigan by M. B. F.—very few farmers are making any noticeable profit on beans Likewise the consumer doesn't seem to be profiting, as your letter shows. Now there almost certainly is a profit somewhere or the business wouldn't keep going on. Now who can answer this little puzzle: If neither producer nor consumer make profits on beans, who does make what profit is made?—The Editor.

TWO MEANINGS OF CAPITALIST

I read in M. B. F. recently an article by S. H. Slagle regarding capitalism. In one sense of the word the farmer is a capitalist, but not a monopolist, nor is the business man ecessarily a monopolist. He simply takes a commission. Now it doesn't require any amount of zeal for a merchant to buy a broom for sixty cents and sell it for one dollar in order that the profit may go to pay for his living. The farmer buys at retail and sells at wholesale, while the merchant buys at wholesale and sells for retail. How long would the merchant stay in business if he had to buy at retail and sell at wholesale? The Socialists believe in legislation to abolish capitalism, and the Non-Partisan League believes in legislation to control capitalism or government ownership of unavoidable monopolies.—E. W., Gladwin.

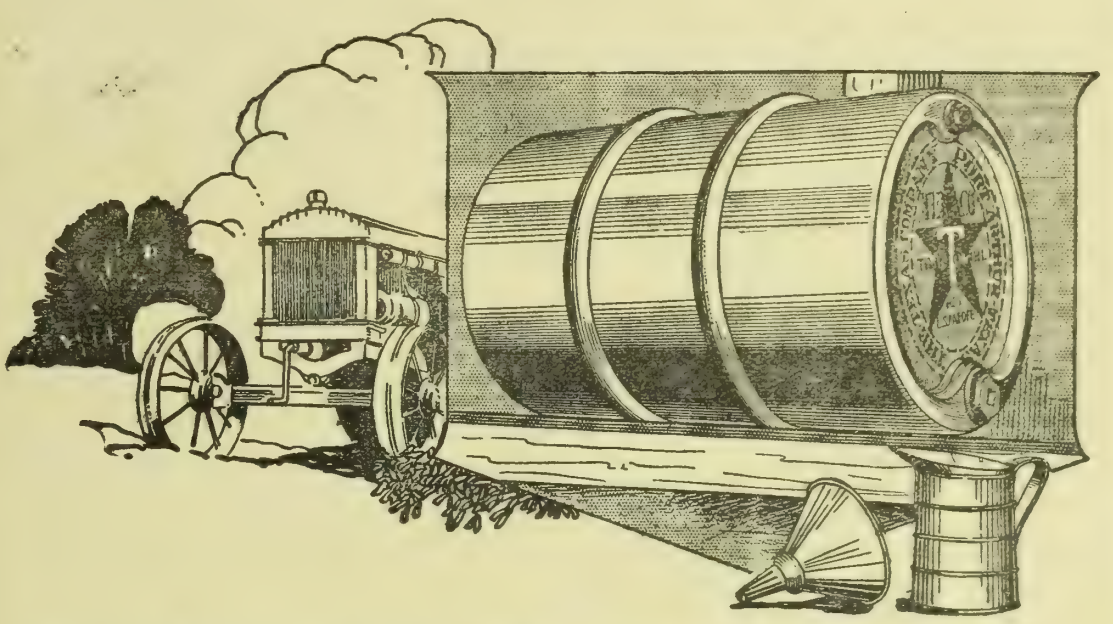
Of course, the farmer isn't a capitalist in the common sense of the word as most people understand it. Remember that technically it refers to anyone who employs capital to make earnings therefrom. But if all "capitalists" were as square and honest as the farmers, there would be no kick coming. In fact, the millenium would be just around the corner.—The Editor.

GEN. SHERMAN WAS RIGHT

General Sherman said. "War is Hell," and Sherman was right. The Kaiser tried to start the war a few years before it actually began, so when he was headed off he said he would "fix 'em for that." He said "those whom we can't control we will suppress." Big business has used this same method with the farmers.

Another method of big business is to increase wages high enough to pacify the laborers in the factories, though the farmer will foot the bill. The idea of big biz here was to create high pay for the city workers so as to give the impression of good times and prosperity in the world, in spite of the war.—S. S.

Sherman was right, without a doubt, and farmers are certainly realizing it in many communities. Ayone employing the tactics of the kaiser is surely employing reprehensible measures, and if big business looks only to its own temporary advantage, it will work only to its own detriment.—The Editor.



TEXACO

TRACTOR OIL

Texwax

THE sure seal for all preserves. One of the family of quality petroleum products. Some others are:

Texaco Motor Oil
Texaco Axle Grease
Texaco Crater Compound
Texaco Cup Grease
Texaco Gas Engine Oil
Texaco Harvester Oil
Texaco Separator Oil
Texaco Home Lubricant
Texaco Thuban Compound

The Most Responsible Lubricating Work

Why we are particularly proud of Texaco Tractor Oil

AMERICA'S farmers, realizing the urgent need of increased harvests to feed the world, have turned to the tractor. For the next few years, therefore, just how much food-stuff we are able to produce, will depend directly on the service the tractor renders the farmers.

If the tractor operates continuously without breakdown or stoppage, the successful fulfillment of our promise to feed the world is assured. Lubricating the tractor may then well be considered one of the most responsible duties that oil must perform. We are proud of our part in this great peace-time work.

Texaco Tractor Oil will continue to be the economical lubricant, and will assure protection, constant operation, and long-life to the tractor. Its uniform high quality and correct body will continue to reduce friction to nearly nothing. It will continue to be the dependable oil for the most responsible lubricating work. Try it. In wooden barrels and half barrels, 15, 33, and 55 gallon steel drums, and one and five gallon cans.

THE TEXAS COMPANY

Petroleum and Its Products

General Offices—Houston, Texas. Offices in Principal Cities

DISTRICT OFFICE—CHICAGO, ILLINOIS, McCORMICK BUILDING

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

THE SUGAR SHORTAGE

PROBABLY nowhere does the sugar shortage work so great a hardship as to the women of the farm who have quantities of fruit to preserve and cannot get the sugar with which to do it. We notice that the huge canneries and the candy making shops are all running, full blast with apparently no shortage while we are obliged to sell all our fruit or allow it to rot on the trees and ground because we cannot get enough sugar to preserve what we need for our own family's winter consumption.

We may be criticised for our advise on this matter, but we feel that the only way to keep from a repitition of this shortage is to buy sugar enough in the spring to do our canning in the late summer and early fall. This is not hoarding it—it is only obtaining our share when it is plentiful. Soon the sugar beet factories will be turning it out by the ton, but it will then be too late for our fruit. And so next year we will "beat the profiteers to it," by heading the old adage to "Go thou and do likewise."

SEEN IN CITY SHOPS

WHITE NECKWEAR has almost disappeared in the city shops. On the dark serge and silk dresses, the necks are finished with a mere binding or facing of the material, and the neckline is left unbroken save for the string of beads which still holds its own as the chief ornament of milady, but in order that we shall spend more money the beads are now woven in a flat chain—about one-half inch wide—some as wide as an inch, and the bends are woven, forming a pendant at the end.

And because kid is scarce and higher than ever the glove saleslady tells us that gauntlet gloves are really the correct thing for street wear. Of course if you drive much in the winter the gauntlet glove is almost a necessity.

Coats are shorter in length and higher in price this winter and fortunate indeed are you if you have an old one on hand that you can cut off to sport length, thus saving your dollars and keeping in style at the same time.

Probably no form of fancy work is receiving more attention at the present time than stenciling. A good grade oil cloth is obtained and with a pattern, almost any clever woman can make tea sets, dresser sets or can paint over the old kitchen chairs and stencil a pattern on the back, while flower pots are stenciled to match the color tone of your living room.

WHAT THE MICHIGAN WOMEN SHOULD KNOW ABOUT VOTING

(This is the second installment on this subject from the pen of Judson Grenell. It is non-partisan and can be read with profit by all.)

Legal Requirements

IN REGARD to voting, it is with women as it is with men. Not all men living in Michigan can vote, and the legal requirements governing the voting of men also apply to women. The intent of these laws is to safeguard the ballot box against its unlawful use. There are neither property nor educational bars; the poor and the illiterate can vote, as well may the rich and the educated.

Women Who Can Vote

All women born in the United States, and 21 years of age, and having lived six months in the state and 20 days in the precinct, or township, with the exception of children of diplomatic agents, or of hostile aliens, can vote. But she loses her citizenship and her right to vote if she marries an alien.

Women of legal age, born in foreign countries, whose parents at the time of their birth were citizens, can vote.

Women of legal age of foreign birth, married to citizens of the U. S., and who might be lawfully naturalized if single can vote.

Indian women of legal age, who have adopted the habits of civilized life, and who no longer live in tribal relations can vote.

Naturalized women of legal age can vote.

In order that the alien woman, which means the woman who is born in some foreign country, may become naturalized, she must appear before a federal or a state court There she takes an oath of her intention to become a citizen of the United States. She must renounce forever "all allegiance to any foreign prince or state," and particularly of the one she may at the time be a citizen or subject.

Not less than two nor more than seven years after this "declaration of intention," the alien woman may apply to a Federal or State court for full admission as a citizen. If the judge is satified that the alien woman can speak English, can write her own name, and has a good moral character, then complete citizenship is conferred. Thereafter the naturalized woman has all the political rights of the woman who is American born.

Chinese and Japanese are not entitled to naturalization. Neither are persons professing to believe in anarchy, or openly opposing all forms of government. Otherwise neither race nor color is a bar to citizenship. Religious views are not considered; she can be a Christian, a Mohammedan, a Buddhist, an agnostic, an atheist, or hold any other religious or non-religious belief.

Must be Registered

But simply being a citizen is not enough, in order to be entitled to vote. There are other requirements. Michigan is divided into some 3,000 election precincts or districts. The woman registers from the precinct in which she lives. If she sleeps in one precinct and eats in another, as is often the case in the commercial and industrial centers the court has decided she "lives" in precinct in which she sleeps. In the case of commercial travelers, the legal residence is where the family lives. For registration and voting, a woman can live in only one precinct at a time.

The woman entitled to vote can appear at any time before the city or the township clerk, and register; or she can appear on some stated day, which is always well advertised, before the proper registration officials, and have her name placed on the registration roll for that precinct.

Registration necessitates giving to the registration official name, address age (which can be stated as "21 plus") and whether the applicant is a native or a naturalized citizen. While this information is public, it does not necessarily mean common publicity. But even if it did, there is nothing in the information given that is worthy of a moment's hesitancy. To hint at such a thing, even, is to play on credulity.

The object of all these regulations is to confine voting to only those entitled to vote.

Registration districts are large or small in area, according to population. In Detroit, a district may consist of only a few city blocks; in the country is may cover a whole township of 36 square miles. There is a general registration in Michigan every four years—the year of the Presidential election. The next general registration in Michigan is in the fall of 1920. Not to exceed 600 voters, it is said, can be comfortably handled in an ordinary voting place in a day; so districts are subdivided as the number of votes increase, in order that no one may be deprived of voting because there is not time to handle the ballots.

Marking the Ballot

On election day the duly qualified voting woman presents herself to the polling place. She announces her name, and also her residence, if living in the city, and when it is found that she has been duly registered and is entitled to vote, the official ballots are handed her. Then she enters a booth alone, to mark her ballot.

Marking a ballot is a more or less perplexing problem in proportion to the number of candidates to be voted for, and the number of political parties demanding recognition. Further complications arise when constitutional amendments, propositions for bonding for public purposes or decisions to be made of public policy, are also placed in her hands

Often the official ballot is a formidable looking document, containing scores of names under party emblems and for local, county, State and national offices.

In order to vote independent of party for a candidate, it is necessary to place a cross (X) before the name of one's choice. Scan the entire ballot, placing this cross (X) mark before each name selected, being careful not to vote for more than one person for the same office; for such a mistake will vitiate your vote insofar as these candidates are concerned.

Nature's Medley—Autumn

Goldenrods are nodding fluffy, yellow heads
Truant leaves a-rustle, dainty browns and reds.
Birdies all are pouting; summer time is o'er;
Talk of waving rice fields found on southern moor.
Eager laughing children gather nuts to eat,
Master squirrel is scolding, calling them a cheat.
Plump and golden pumpkins clinging to the vine
Look like jack-o-lanterns only not so fine.
Rosy, mellow apples hanging on the trees,
Seem to bear the message, "Take one if you please."
Barns are nigh to bursting, cellars brimming too,
Turkey's strident cackle bidding friends adieu
All the hopes of springtime, and fears our spirits chilled,
Return to us in autumn as promises fulfilled.
Such wealth of golden sunsets, hazy summer hours,
With purple hills resplendent with blue and yellow flowers,
The fickleness of springtime, the joys that summer knew
Are found in all their splendor in autumn's varied hue.

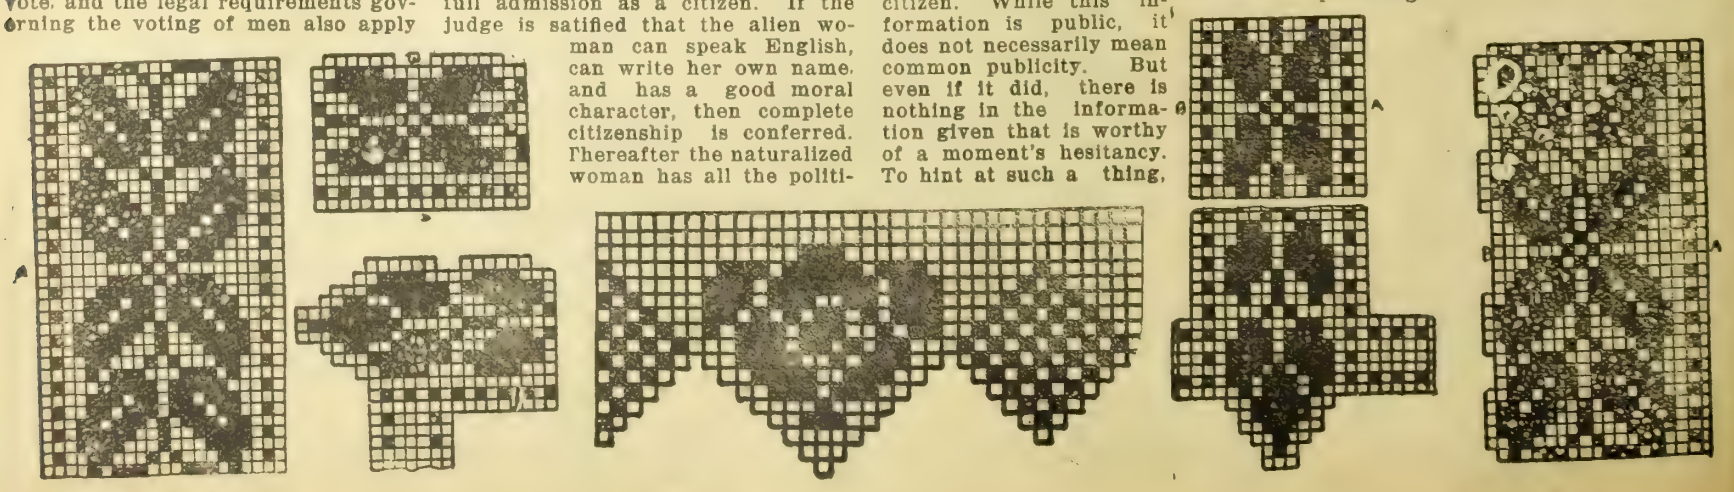
By C. SHIRLEY DILLENBACK

CHRISTMAS FANCY WORK

New designs for crochet patterns are always in demand, and especially useful and pretty gifts can be made by combining plain linen with the home-made insertion and edge. A set for the bedroom which matches is not only useful and beautiful but wears twice as long as the ready made lace or embroidery.

We are sure our readers will appreciate the pattern shown below for the dresser scarf for it gives the corners. We show two edges of lace and one central strip of insertion. The edges are finished with a single crochet and picot edge. A B indicates the center of the scarf.

The second design shown is a fillet lace edging which is particularly pretty for pillow cases, towels and the whole set can be made by making the dresser scarf of the same. This calls for crochet cotton No. 50 and is finished with a single crochet and picot edge.



What Susie Gave Up

THE FIVE little Tuppers sat at their supper. Margie Tupper shook her head when the sugar was passed around. Ernie Tupper shook his head too, so did Freddie Tupper, who usually did whatever Ernie did. The baby was too little to know about giving up things for the war, but Susie wasn't. Susie was seven years old and came next to Ernie who was nine. Susie didn't shake her head when the sugar was passed around. She took a whole heaping spoonful and spread it thick on her baked apple.

"I'd like to know what you are giving up," said Ernie. "I bet you aren't giving up anything!"

"So do I!" said Margie. "I'd be ashamed! Even Freddie is giving up."

"Are you giving up?" asked Freddie.

Susie nodded her curls.

"What is it." said Freddie. "Please tell!"

"No, Freddie," said Susie. "It's a secret."

"Is it something you don't like anyway?" asked Ernie, who liked to tease sometimes.

"Or something we never have?" put in Margie.

Susie's black eyes flashed but she replied gently:

"It's something quite hard to give up."

"Muddy-kin didn't say we had to give up anything," Margie said. "We could if we felt like it."

"And we ought to give up something we like best," put in Susie.

"Well, you don't like anything better'n sugar, do you?" Ernie asked.

Susie nodded her curls again. "Is Polly coming tomorrow?" she asked, to change the subject.

Polly was a little neighbor who came nearly every day to play with the five little Tuppers. The other children knew Susie was trying to change the subject, but she spoke so nicely and smiled too, which wasn't like Susie somehow, that not even Ernie said any more about giving up anything.

The next day Polly did come to play and just as they had decided what to play, Muddy-kin came to the door carrying Baby all dressed for going out. Ernie was saying: "I'll play Father if you'll let me spank the children."

"You horrid boy!" cried Margie. "Spank my dollies! I guess not!"

"Why don't you be shopkeeper," suggested Susie quickly. "We'll get some leaves off the box hedge for money. Oh, Muddy-kin!"

The children ran to their mother and kissed Baby, who looked "as cunning as a sugar-plum," so Margie said.

"Dears," said Muddy-kin, "Fitzie has taken her afternoon off and I expected to take Baby out but Mrs. Thomas has just come to call. Which one of you will take Baby out for me?"

There was hardly the weeniest pause and Susie said: "I will! Is his carriage ready?"

"Oh dear!" sighed Margie. "Babies are cunning but they are so much bother!"

Susie tucked baby in his carriage and soon she was wheeling him up and down the pavement singing to him about Pussey-meow and her silk petticoat.

Soon Freddie came out of the house, looking a little guilty, and took hold of the handle and walked along beside Susie. He thought it was more fun to walk and hear about Pussy-meow than to play with old dolls, he said. But it wasn't long before Margie and Polly came out.

"Susie, what do you think!" cried Margie. "That's a wicked, bad little boy and I wouldn't let him walk with me, if I were you!"

Freddie puckered up his face ready to cry, and said quickly: "Susie, I'm awful sorry!"

"He broke Clarissa!" cried Polly.

For a minute Susie felt all stuffy and queer, as if she couldn't breathe. Clarissa was her favorite doll. Margie held it up showing the damage. Freddie began to howl and woke up the baby.

"Hush!" said Susie. "Hush, Freddie! I know you didn't mean to. It's all right."

There were tears in Susie's eyes and she walked quickly away to hide them and Freddie came too, muffling his howls as best he could.

"Well I never!" exclaimed Margie turning to Polly. "What can be the matter with Susie? She used to be the baddest tempered creature! I was sure she would give Freddie a good cuff on the ear."

"I think she's a dear!" cried Polly.

Polly left Margie's side and ran to Susie and put her arm through Susie's.

"I think Clarissa can be mended as good as new," she said. "My big brother, Bob, can mend anything. He often mends dishes for Mama."

Meanwhile Margie ran into the house where Ernie was fixing his shop.

"Say," he cried excitedly. "I bet I know what Susie's giving up."

"What?" asked Ernie. "I suppose now the game is all spoiled. I told you not to go and tell Susie about her old Clarissa until afterwards. Now I suppose she's gone and hit Freddie and Freddie's gone and told Muddy-kin and Muddy-kin's sent Susie upstairs and you'll have to mind the baby and the game is spoiled!"

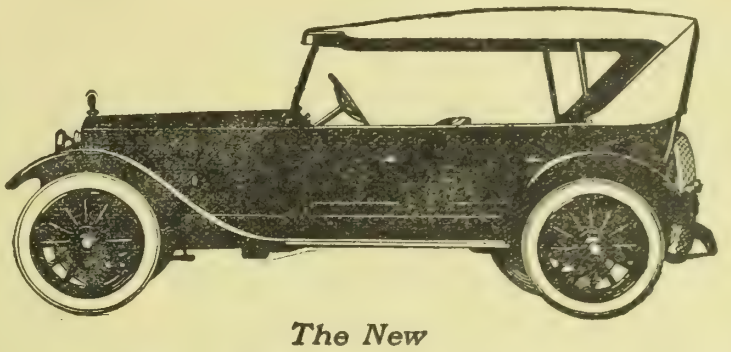
"That's just it!" cried Margie. Susie didn't hit Freddie or even scold. That's what she's giving up! I've been wondering and wondering what was the matter with Susie."

"That's right!" replied Ernie after a moment of thought. "I remember now she hasn't said anything mean or cross for weeks. I s'pose if Susie's goin' to be so nice I'll have to reform too," she said with a sigh. "What bad habit do you think I ought to give up, Ernie?"

"I dunno," replied his brother. "I know what mine is. If just one person giving up being mean makes it so much pleasanter, I guess it'll be awful-awful agreeable if two give up," said Margie.

Later the five little Tuppers sat at their supper. Margie took a whole heaping spoonful when the sugar was passed around and Ernie took some too. Freddie looked a little surprised and asked: "Is war all over now?" But Earnie and Margie only looked at each other and smiled.

AN ENTIRELY NEW MODEL



The New

GRANT SIX

The new Grant is now being exhibited in the show rooms of Grant dealers throughout the country. It is a larger, handsomer and more powerful car than any previous Grant. In it is embodied the fruits of our experience in building over 50,000 light sixes.

It is a beautiful car. Those who have seen it say it is the world's handsomest light six. We make no comment beyond the statement that we are sincerely proud of this model. We hope you will see and judge it for yourself.

With the speedy rakish lines of a fine sport model, the body combines the roomy comfort of a full five passenger touring car.

The upholstery is in genuine leather, trimmed at the edges with leather covered moldings. Top is of Neverleek. Steering wheel is 18 inch notched mahogany and carries both spark and throttle control. Instrument board is mahogany finished. Tool kit is carried in left front door. Equipment includes an engine driven tire pump and a Boyce Motometer.

The overhead valve motor will take this car as fast as most men dare to drive. It is exceptionally quiet, flexible and responsive.

Naturally you will expect a fine chassis. You will find the Grant Six is a model of clean cut engineering. It is built to give satisfactory service—it is built to stand up and last. It is built wholly from the standpoint of quality and service.

We will be glad to send you descriptive literature with full specifications but, we suggest that you see the new Grant Six at your earliest opportunity and find out all about it at first hand.

MARKET FLASHES

BUSINESS FORGES AHEAD

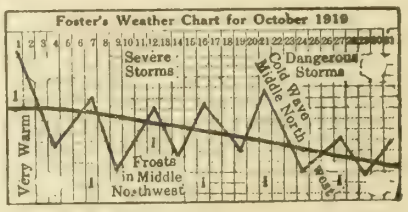
Business is good in nearly all the cities of the nation, and with the high cost of living agitation quieted down, there remains only the labor troubles to affect seriously the markets at present. The effect of the steel strike on business seems to have lost its power and the strikes in other industries, notably of longshoremen and others connected with the export work, are having a more real effect.

In the cities business is now forging ahead so swiftly that the volume done compares well with the exceptional record of mid-summer. The markets for agricultural products are picking up somewhat in some instances. It has been felt that the great industrial conference at Washington between capital and labor has had a beneficial effect on business. Agricultural leaders have been protesting because farmers, the largest class, are being given only three representatives at the conference, while many more are given to the capitalists and labor leaders. It is hoped that some concrete advantages will be gained through the conference to work for the betterment of business and trade.

Looking across the ocean, one sees the European farmer getting back on his feet. It is likely in a few years that Europe won't need but a little of America's farm products, as compared with what is exported from here at present. There is still felt to be inflation caused by the war in certain lines. Although some say the worst is yet to come in the markets, there are more bulls who are giving sunny views of the future.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Oct. 18, 1919 —Warm waves will reach Vancouver about Oct. 18, 24 and 28 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 19, 25 and 29; plains sections 20, 26 and 30; meridian 90, great lakes, middle gulg states, Ohio-Tennessee valleys 21, 2 7and 31; eastern sections 22, 28 and Nov. 1, reaching vicinity of Newfoundland about Oct. 23, 29 and Nov. 2. Storm waves will follow one day behind warm waves and cool waves about one day behind storm waves.

These storm disturbances will control weather events on this continent from about Oct. 18 to Nov. 2, except that a tropical hurricane is probable in the. aribbean Sea during that period. These hurricanes sometimes break up the storm movements on the continent interfering with their dates. They sometimes invert a warm wave on the continent, turning it into a cold wave. This is one of the greatest difficulties I have to deal with. It can be, should be and will be remedied as soon as I can get the means to employ sufficient force.

I expect a severe cold wave in the middle northwest during the week centering on Oct, 25. Preceding this cold wave dangerous storms are expected in the great central valleys. But if a hurricane appears in the Caribbean Sea, the central valley storms will be weakened or broken up and in their place the cold wave much increased. This great storm is expected to largely increase rainfall. I fthe hurricane organizes the increased rainfall will be in the cotton states. But if no hurricane appeas the increased rain will be in the great central valleys of the middle northwest.

W. T. Foster

WHEAT CONTINES FIRM

Grade	Detroit	Ch'go	N.Y.
No. 1 red	2.25	2.27	2.38
No. 1 white	2.27		
No. 1 mixed	2.25		

Wheat continues to show a firm undertone in the cash markets, receipts having fallen off in all parts of the country. This condition is due to the fact that there is probably less wheat being held back on the farms this year than for a long time. It has been rushed to market under the guaranteed price, while all other grains were tumbling down. The car shortage also has had its finger in the pie, although that factor hasn't troubled Michigan much. Middle Western states which stored wheat out in the open fields lost a great deal during heavy rains recently. The crop was of rather poor quality in the face of greater demand for flour, and it is thought the price may go up considerably.

Farmers in Michigan have planted large quantities of winter wheat, putting in 80 per cent of the normal crop while all other states except Nebraska are planting only 50 to 65 per cent of the normal crop. Michigan has had pretty fair luck with its wheat this year, the average yield of winter wheat being 19.5 bushels per acre as compared with 14 for last year and the ten-year average of 17 bushels per acre. The total production in Michigan for 1919 was twice as great as last year, the present total being 19,246,000.

It appears that if a farmer is holding some wheat of pretty good quality he can get a better price later on, since most of the wheat is marketed and the demand runs strong. Detroit quotes Cash No. 1, red, $2.27; No. 1 mixed, $2.25; No. 1 white, $2.25.

CONFLICT IN CORN DEAL

Grade	Detroit	Ch'go	N.Y.
No. 2 yellow	1.49	1.42	1.56
No. 3 yellow	1.48		

There are so many conflicting influences at work in the corn market now that sharp fluctuations are expected to be the rule within comparatively narrow range for futures, while the cash may advance or decline 5c or more a day without causing any unusual comment. Those who should be in a position to know say that the supply of old corn back in the country is much smaller than the trade believes and that it will all be wanted before the new is ready to market. The scarcity of cars and of storage room would seem to preclude a big early movement unless the unexpected happens. Detroit quotes Cash No. 3, $1.48. Chicago quotes No. 2 mixed, $1.32.

OATS PERK UP SOMEWHAT

Grade	Detroit	Ch'go	N.Y.
Standard	.74	.72	.81
No. 3 white	.73	.70	
No. 4 white	.72		

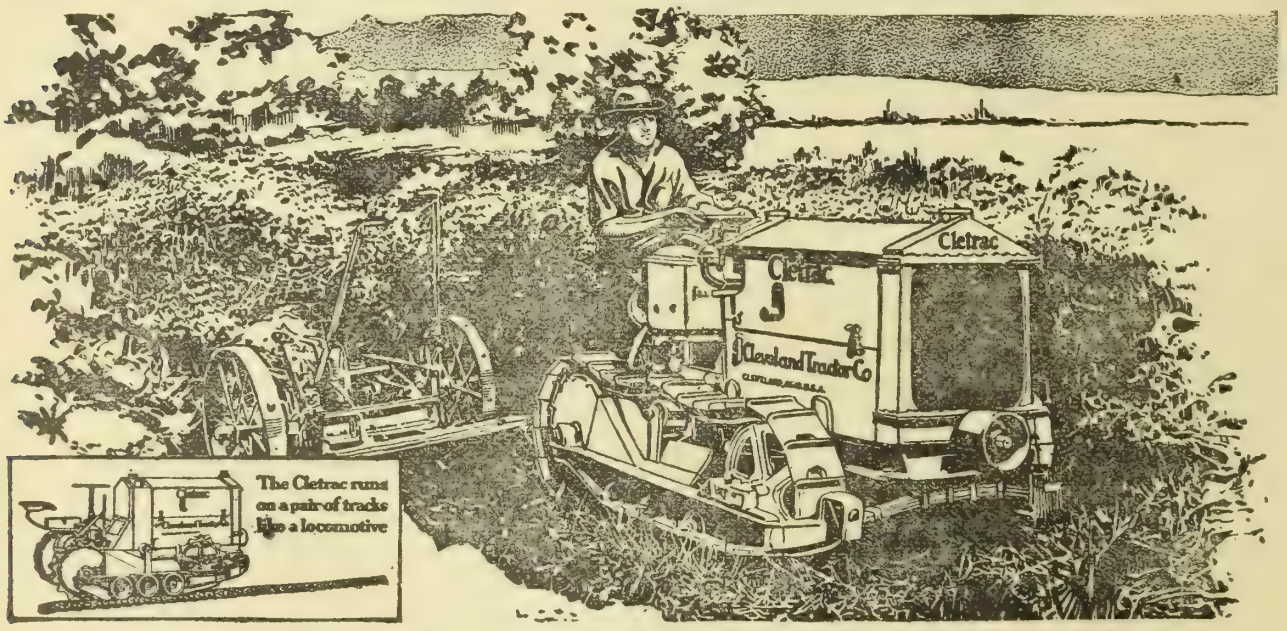
After having been in a state of coma for many weeks the foreign demand for oats has revived materially. Taken as a whole oats has more friends than corn, and it is still more or less affected by foreign developments, having for the time being become somewhat of an international grain due to the shortage in Europe. France, Italy and Scandinavia are reported to have been the best buyers of late and free purchases made by seaboard exporters in the West have caused a lot of hedges to be removed. The producer is not selling his grain and a further decrease in the visible supply is looked for when the grain sold of late commences to clear for the East. The visible is by no means large and has decreased for three weeks. With cars shot and new corn about ready to move it is expected that the latter will receive the preference as there is no question as to the keeping quality of th oats. Detroit quotes Cash No. 2 white at 74c. Chicago quotes No. 2 white at the same price.

LIGHT BARLEY OFFERINGS

The barley market has been under the influence of light offerings of the better qualities, but prices moved within a very narrow range and without any particular advance although the general tone of the market was good. For the most part the malsters were the only buyers. Trade in rye in Chicago is largely in the way of removing hedges for northwestern account against sales to exporters. Detroit; Rye, Cash No. 2, $1.42; Barley, Cash No. 3, $2.25 per cwt.

BEANS PICK UP

There has been more activity in beans recently. Just the news that congress is considering putting a protective tariff to keep out the wild inrush of cheap oriental products is having a bullish effect. And there seems to be little doubt that the bean growers and bean jobbers, now working in harmony at Washington, will convince the Congressional committee that such action is necessary to protect Michigan's great bean industry as well as that in California



The Tracks Save Power

THE Cletrac Tank-Type Tractor runs on metal tracks like a locomotive. Six wheels, three on each side, carry the entire weight of the machine and run on the endless tracks which are laid down and picked up as the Cletrac goes along.

This distinctive and efficient type of construction enables the Cletrac to go practically anywhere. No matter what the soil conditions, it runs *on its tracks*—nothing stops it.

It doesn't have to expend *extra* energy to push *itself* along. This saves *power*, saves *fuel*, saves *time*.

The power isn't wasted propelling the tractor. It goes into the "pull" on the implement.

And the tracks being broad, *distribute the weight* of the Cletrac as snow shoes distribute a man's weight. Think what that means in the preparation of your seed bed. Think what a tremendous advantage it gives you on hilly ground. Think of the extra power and the lower upkeep under hard conditions. Think of the greater speed and the easier handling.

The Cleveland Tractor Co.

18939 Euclid Avenue Cleveland, Ohio

and other bean states. Detroit quotes: immediate and prompt shipment, $7.25 per cwt.

Wholesale grocers have been active buyers the past ten days at prices ranging from $7.25 to $7.75, and inquiry has materially increased as the market advanced, say Grand Rapids jobbers. Wholesalers will buy at reasonable prices. They are not asking for $7.00 beans.

From present indications many jobbers are short Octobers and will stop at nothing to break the maket. In these wild speculative endeavors to get on "easy street" they are wrecking the industry.

Elevators report lighter movement from farmers . Some sections reported farmers are refusing to sell at $6.75 basis. A great deal of stress has been placed on the Kotenashi beans, but if you have followed the market you will notice that they have followed the advance of Michigan beans until they are now 65c higher than on October first. This merely shows that Michigan is still the barometer of the bean market.

Late potatoes show some improvement since the recent rains, but only 50 per cent of a crop is expected, according to the report of Coleman C. Vaughan and Verne H. Church, respectively of the state and national governments. They have figured that the state's production is 28,571,000 bushels as compared with almost the same amount last year. The quality of the crop in general is good and the digging has started in various sections. Country dealers are getting from around one dollar up, according to the district.

DETROIT LIVE STOCK MARKET

Best heavy steers, $12@13; best handy weight butcher steers, $9.50@10.50; mixed steers and heifers, $8.50@9; handy light butchers, $7.50@8.25; light butchers, $6.50@7.00; best cows, $9.00; butcher cows, $7@$8.25; cuters, $5.50@5.75; canners, $5@5.25; best heavy bulls, $8; bologna bulls, $7.00@7.05; stock bulls, $6.50@7; feeders, $8.00@9.50; stockers, $7@8.50; milkers and springers, $65@125.

Sheep: weak; lambs, $12.50@15.65; culls and common, $8.50@12.25; ewes, medium, good and choice, $6.25@7.50; culls and common, $3@6; breeding, $7@12.50.

EAST BUFFALO MARKET

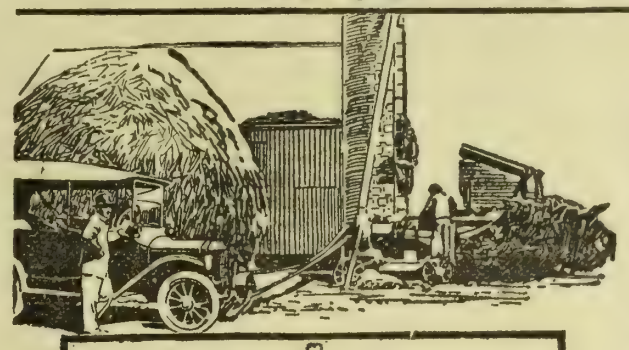
Dunning & Stevens' report—Cattle, slow. Hogs, slow; heavy and yorkers, $16@16.10; pigs, $15.75@16. Sheep, lower, top lambs, $14.75@16; yearlings, $10@10.50; wethers, $8.60@9; ewes, $7@7.75. Calves, $8@22.50.

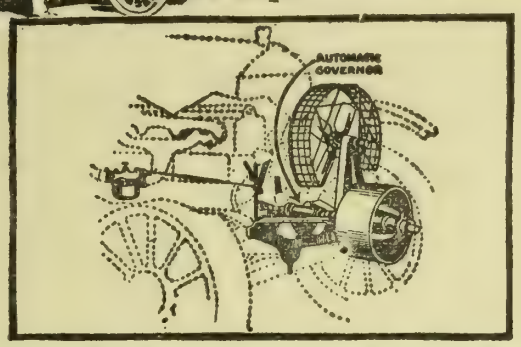
SUGAR BEETS IMPROVE

Michigan's sugar beet crop is improving due to better weather conditions, and where the stand was satisfactory the production is expected to be one of the largest in history. Nebraska has already begun the harvesting of the sugar beet crop. Other western states report fairly good or good sugar beet crops, while the sugar cane states are optimistic because of improved weather conditions. If prices of sugar beets go high, it will not be because of any tremendous shortage of crops, according to present indications.

Farm Power from Your Ford

At One-Sixth the Ordinary Cost





The Knight Metal Products Co. holds Sole License Under Gramm Basic U. S. Patent No. 807, 457, Dec. 19, 1905. All other crankshaft attachments are infringements and will be rigidly prosecuted.

Efficiently Operates at Required Speeds:

Grain Grinder	Well Drills
Ensilage Cutter	Pumps (All Kinds)
Wood Saw	Churn
Sprayer	Milking Machine
Fanning Mill	Lighting Plant
Corn Husker	Washing Machine
Corn Sheller	Concrete Mixer
Hay Press	Cider Press

Cotton Gin

WITH this inexpensive power plant for **Ford** cars you can fill your silo, grind your grain, saw your winter's wood, and handle the many belt jobs on the farm.

When you have any kind of work that requires power, you simply drive your car into position—and your **Ford** engine and the **Autopower** do the rest.

The **Autopower** delivers the full power of the engine. It operates *Automatically*. A governor regulates the power to the load, provides *Constant Speed* at required r. p. m. and prevents stalling or racing of the engine on variable loads.

The Auxiliary Fan is guaranteed to prevent Overheating under all load and weather conditions. Friction Clutch permits Cranking the engine before throwing in the load.

The **Autopower** takes power direct from the crankshaft, and delivers the full power capacity of the engine.

The Fuel Consumption of **Autopower** is about one gallon of gas per hour at maximum speed, and less proportionately for slower speeds.

McGill **Autopower** is guaranteed *free* from material or mechanical defects *for one year*.

A few minutes' investigation will convince you that McGill **Autopower for Ford Cars** will save you many hours of hard work every year and that it will save money by enabling you to do more in less time. If you don't know who the McGill **Autopower** dealer in your town is, write—

BUSINESS FARMERS' EXCHANGE

CLASSIFIED ADVERTISING

5 CENTS A WORD PER ISSUE. To maintain this low rate, we are compelled to eliminate all book-keeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farming, Adv. Dep't, Mt. Clemens, Michigan.

NOTE:

An illustration helps greatly to sell farm property. By adding $10 extra for each insertion of your ad, you can have a photographic reproduction of your house or barns printed at the head of your ad. Be sure to send us a good clear photograph for this purpose

Crop Reports

MONTCALM (S)—Farmers are continuing to prepare their soil for wheat and rye, but it has been impossible to drill grain on account of the rainy weather which has been received during the last week in this vicinity. The husking of corn is being done very rapidly which is yielding at a medium average and the quality is about the same. A large acreage of buckwheat was sowed this year considering the acreage that has been sowed in the last few years and a fine yield is expected although the threshing has not begun yet. They are now digging the late potatoes which are of a fine quality and are averaging good, the local market quoting the price from $1.90 to $2 per cwt.—W. L.

OAKLAND (N)—I see you are publishing reports from correspondents again. We have been busy filling silos and sowing wheat and have about finished. Not as much wheat put in as usual on account of dry weather. Could not plow the ground. Corn is a fine crop. Potatoes are looking good when they were planted in season. Barley nearly a complete failure. Oats little better than half a crop. Beans very small acreage planted. Cattle, sheep and hogs are looking well. Some lambs are going to market at 12 to 14 cents a pound. Most farmers are selling milk. Apples a light crop but good quality.—E. F.

ARENAC (E)—Weather has been rainy and not much of anything being done and as there are considerable beans out as yet. People who have them out are wondering which will be the next move. Grains are being threshed out and are very poor, especially spring wheat. Not much fall grains being sown this fall. Prices for the farmer are lower, but the stuff he has to buy is higher. Some have begun fall plowing before going after the sugar beet crop. Beans will yield about 9 bushels per acre and will be quite heavy pickers, as the grasshoppers have raised hob with some of them.—M. B. R.

ANTRIM—Farmers doing a little of everything. Cutting clover seed, plowing, etc. Large number attending the fairs. Weather is variable, lots of rain, too much for potatoes on lowlands. Soil in good condition for plowing. Farmers selling apples early potatoes. Large number of auction sales billed. Some already held. Stock not going very high. Many farmers dissatisfied with their business. Too much hard work and too small profits.—N. T. V.

KALKASKA—Farmers are digging potatoes. The weather is very wet. The soil is very wet. Farmers are selling potatoes. Silos are all filled. Corn is very good. Fall grain and seeding is very good. Alfalfa, sweet clover and timothy being sowed. Potatoes are not very good. Mrs. James A. Drake, one of the pioneer settlers, died September 22, 1919.—R. E. B.

WEXFORD—Quite a seige of rains have set in. Some of the farmers are digging potatoes and some are husking corn. Some are selling out and going to New York state. Quite a bit of fall grain is being sown, mostly rye. Potatoes are not much of a crop in some places.

CALHOUN (W)—Farmers are seedinf and husking corn. The weather is fair. The rains have put the soil in fine shape. The farmers are not selling much now. There is no building going on except the necessary repairs for winter.—C. E. B.

SAGINAW (S. W.)—The farmers are husking corn, digging potatoes, threshing beans and have commenced to lift and draw their sugar beets. Plenty of rains of late. Fall wheat looks fine but not much sown.—G. L.

LAPEER—Farmers are sowing wheat and rye, and the ground seems to be in pretty good shape and quite a good acreage is going in. Imlay City fair is in full swing and some very good sheep and swine are to be seen. Cattle and horses are few and far between in the Department of Agriculture. They have some good corn and potatoes. Very few apples and the grain is about as usual.—C. A. B.

BAKER'S COCOA

PURE AND DELICIOUS

It is a most satisfactory beverage. Fine flavor and aroma and it is healthful.

Well made cocoa contains nothing that is harmful and much that is beneficial.

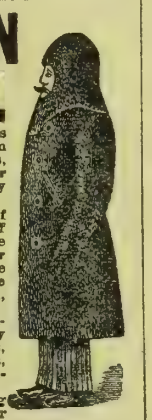
LET US TAN YOUR HIDE.



Horse or Cow hide, Calf or other skins with hair or fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered. **Your fur goods will cost you less** than to buy them and be worth more.

Our illustrated catalog gives a lot of information. It tells how to take off and care for hides; how and when we pay the freight both ways; about **our safe dyeing process** on cow and horse hide, calf and other skins; about the fur goods and game trophies we sell, taxidermy, etc.

Then we have recently got out another we call **our Fashion book**, wholly devoted to fashion plates of muffs, neckwear and other fine fur garments, with prices; also **fur garments remodeled and repaired.**

You can have either book by sending your correct address naming which, or both books if you need both. Address

"SOME TRICKS OF THE TRADE" IN TRAPPING

These hardly can be termed "tricks," but rather are "secrets" and "helps," since they really are parts of the trapping business—parts which are jealously guarded, locally, by rival trappers.

Secrets of Successful Trapping

I never like to set traps directly in a den. One or two animals are easily captured in this way, but the others which den there, are pretty sure to become suspicious and afraid, moving their quarters to some other den.

After finding a den that is inhabited or frequented, I set traps in the runways leading to it, or build small "houses" of sticks, bark, etc., with a bait in the back side of them, and a trap set at the opening in front. This last method is by far the best I ever have employed.

For a good bait, capture small fish, kill them and stuff them into a bottle. Hang the bottle in the hot sun, or near a good fire. Do not allow the bottle to get too hot, and leave the cork loose in the mouth (or do not cork it at all) else the bottle will burst. When the fish become well rotted, they will give off an odor that will attract any animal. Allow the bottle to cool thoroughly, cork up, and set away for baiting traps. If a few drops of oil of Rhodium and Sweet Anise are added, so much the better.

A mink has an "in" and an "out" opening in his den; that is, the animal goes in at one hole and out at the other, and it will use these openings in no other ways. The larger of the two openings is the "in" the smaller one the "out." Set your trap at the "out" and when "Brer Mink" goes into his den he is pretty sure to attempt to pass out over the trap at the 'out" end of his den, rather than turn around and go back and out at the "in" opening. If your trap is at the "in" opening—nothing doing! Brer Mink will pass on to some other den.

Stretching Furs for Best Results

In stretching a fur, I draw the loose skin near the tail around and over the edge of the stretching board, fastening it was a tack on the side the legs at tacked to. This shows up the fur much longer than if the loose skin is allowed to cure loose.

I always stretch a fur the second time, loosening the tacks and restretching it after removing the fat and meat from it, pulling it into shape and tacking it the first time. This does not enlarge the pelt but spreads it over more suface, adding considerably to its appearance and value.

I have very thin stretching boards which allows the skin to spread out wide and long, showing up large. These boards are also neatly dressed down all over, and the furs left right on them till they are sold. The skins show up much better on the boards than after they are removed, and will command a higher price. The darker the place, the better, for furs, provided it is dry and cool.

The Selling Side of Trapping

As in all lines of business, the disposition of your fur products very largely decides how profitable your trapping operations will prove, although this selling proposition is slighted by many an unwise trapper.

As a rule, I secure from my local dealer almost as much for my furs as though I shipped them myself, and I have no risks whatever to run. By "risks" I mean, that one sometimes gets less for his furs than the fur circulars promise—or appear to promise. The trouble is, your furs will not grade as high as you perhaps think they will, and as a consequence you do not receive as much for them as you figured, although you may receive all they really are worth in the market.

However, where one cannot secure a reasonable price for his furs from his local dealer, they may be shipped with good profit. Ship your first consignments with instructions to the dealer to hold your furs separate till remittance is made for them; then, if prices are not satisfactory, you can demand the return of the furs. Another good plan is to send your first consignments of furs to some friend in the city, and allow him to dispose of them for you.

$1000 TRAPPERS CONTEST

Abraham Fur Co.

Greatest trappers' contest ever offered—costs nothing to enter—write today for particulars.

What 15c will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center in the Nation's capital that prints all the news of the world and tells the truth; now in its 26th year. This paper fills the bill without encroaching the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.

The Pathfinder, Box , Washington, D.C.

THE DAM OF OUR SIRE WAS Grand Champion at the Grand Rapids fair this year. Bull calves for sale at reasonable prices. C. L. Hulett & Son, Okemos, Mich.

SHORTHORN

WHAT DO YOU WANT? I represent 41 SHORTHORN breeders. Can put you in touch with best milk or beef strains. Bulls all ages. Some females C W Crum, President Central Michigan Shorthorn Association McBrides Michigan.

SHORTHORNS THREE REG SHORT HORN bulls. 5, 8 and 18 mo.'s old for sale, red and red and white. Bates breeding, will crate and ship. Satisfaction guaranteed or money refunded. Write or come and see, Wm. D. McMullen, Adrian, Mich.

SPECIAL OFFER SHORTHORNS—Cows, $250.00 to $300.00. Bulls, $200.00 to $250.00. Wm J. Bell, Rose City, Mich.

NO STOCK FOR SALE AT PRESENT. Shorthorn Breeder. W S. Huber, Gladwin, Mich.

THE VAN BUREN CO Shorthorn Breeders' Association have young stock for sale, mostly Clay breeding Write your wants to the secretary, Frank Bailey, Hartford, Mich.

THE BARRY COUNTY SHORTHORN Breeders Association announce their fall catalog ready for distribution. Scotch, Scotch Top and Milking Shorthorns listed. Address, W. L. Thorpe, Sec., Milo, Mich.

HEREFORDS

LAKEWOOD HEREFORDS
Not how many but how good! A few well-developed, beefy, young bulls for sale, blood lines and individuality No. 1. If you want a prepotent sire, that will beget grazers, rustlers, early maturers and market toppers, buy a registered Hereford and realize a big profit on your investment. A lifetime devoted to the breed. Come and see me.—E. J. TAYLOR, Fremont, Michigan.

120 HEREFORD STEERS, ALSO know of 10 or 15 loads fancy quality Shorthorn and Angus steers 5 to 1000 lbs. Owners anxious to sell. Will help buy 50c commission. C. F. Ball, Fairfield, Iowa.

HEREFORDS BOB FAIRFAX 494027 AT HEAD OF HERD
11 heifers for sale; also bulls any age; either polled or horned. Earl C. McCarty, Sec'y H B Association, Bad Axe, Mich.

HARWOOD HEREFORDS

If you want a start from the Grand Champion Hereford Bull of Michigan see us. Young bulls from 9 to 13 months. Don't write. Come and see. Jay Harwood & Son, Ionia, Mich.

HEREFORD BULL CHEAP

Being obliged to change herd bulls, we offer our three year old Double Standard Hereford bull cheap if taken at once. Is perfectly gentle.
COLE & GARDNER, Hudson, Mich.

ANGUS

RAISE A $100 BABY BEEF
from your grade dairy cow by use of a Thousand Dollar Angus bull. Less than $2.00 service fee. Write for our co-operative community plan; also our method of marketing beef and milk, by use of a cheap home made calf meal. There is money in it for the owners of grade cows everywhere. Cows of Angus blood not necessary. If of mixed blood, calves will come black, thick meated and without horns, like sire. Geo. B. Smith, Addison, Mich.

RED POLLED

WE OFFER PURE BLOOD RED POLL cattle at reasonable prices. Bulls 7 to 10 months. Bred heifers. Well bred and good individuals.
J. A. Battenfield & Son Fife Lake, Mich.

JERSEY

The Wildwood Jersey Farm
Breeders of Majesty strain Jersey Cattle. Herd Bulls, Majesty's Oxford Fox 134214; Eminent Lady's Majesty 150934. Herd tuberculin-tested. Bull calves for sale out of R. of M. Majesty dams.
Alvin Balden, Capac, Michigan.

FOR SALE—FEGISTERED JERSEY Bull 2 years old. Kind and gentle and sure. Write for pedigree. J. E. Morris, Farmington, Mich.

SWINE

POLAND CHINA

WONDERLAND HERD--LARGE TYPE Poland Chinas. Some cracking good spring boars and a few June sow pigs at private treaty. Holding a few boars and all my early sows for my sale Nov. 11th and Col. Ed. Bowers, South Whitley, Ind., and of Col. Porter Calstock Eaton Rapids, Come and see the two greatest boars living. Free livery any time.
Wm. J. CLARKE
R No. 1 Eaton Rapids, Mich.

When In need of something right good in a L. T. P. C. boar just come and see or write, W. J. HAGELSHAW, Augusta, Mich.

BIG TYPE POLAND CHINAS WITH QUALITY
Pigs, from L's Big Orange 291847, both sex, for sale. Prospective buyers met at St. Johns. J. E. Mygrants, St. Johns, Mich.

BIG TYPE P. C. SPRING PIGS—EITHER SEX
A. A. WOOD & SON, Saline, Michigan

Walnut Alley Big Type Boars
I will sell 13 head at Ionia Fair grounds Nov. 5 in the Wesley Hill Sale. 7 sired by Arts Senator No. 328539; 6 sired by Orange Price No. 327743. Send for catalogue.
A. D. GREGORY, Ionia, Mich.

BIG TYPE P. C. SPRING PIGS, EITHer sex. From choice bred sows and sired by a grandson of Grant Buster and other prize-winning boars. Price reasonable. L. W. Barnes and Son, Byron, Mich.

Big Type Poland Chinas
Spring boars ready to ship, sired by Mouw's Big Jones 3rd, out of granddaughters of Disher's Giant. None better in Mich. Gilts will be ready Jan. 1st. Bred to Wiley's King Bob by Harrison's Big Bob and out of Samson Lady by Sampson, by Long King. Priced reasonable.
JOHN D. WILEY, Schoolcraft, Mich.

L. T. P. C. SOW AND 7 PIGS BY side. Price $100.00. Spring boar ready after Nov. 1st. Better engage your pig selected now. The longest and tallest lot ever on the farm. H. O. Swartz, Schoolcraft, Mich.

LARGE TYPE POLAND CHINA SPRING PIGS FOR SALE—
E. A. EISELE, Manchester, Mich.

BIG TYPE P. C. CHOICE SPRING boars from Iowa's greatest herds. Big boned husky fellows. Priced right. Elmer Mathewson, Burr Oak, Mich.

LEONARD'S Big Type Poland China Boars, all ages. The kind that makes good. Call or write, E. R. Leonard, St. Louis, Mich.

BIG TYPE POLAND CHINA PIGS, sired by Bob-O-Link, by the 2nd Big Bob, Michigan Buster by Giant Buster, and Big Des Moines 5th, by Big Des Moines. Also sows bred to these boar. O. L. Wright, Jonesville, Mich. Jonesville is located 25 miles north of the Ohio and Indiana line.

A New Herd Boar
(his name) Big Bob Mastodon
sired by Caldwell Big Bob, champion of the world in 1917. His dam is Mastodon Josie; she is a daughter of A'S Mastodon the Grand Champion at Iowa State Fair in 1917. Ready to ship boars.
(Come and see him.)
C. E. GARNANT, Eaton Rapids, Mich.

FOR 25 YEARS We have been breeding Big Type Poland China hogs of the most approved blood lines. Our new herd boar "Michigan Buster" is a mighty good son of the great "Giant Buster" dam "Mouw's Miss Queen 2." Some breeding! Litter of 14. We are offering some sows bred for fall farrow. J. C. Butler, Portland, Mich.

DUROC

Duroc Opportunity
We are now booking orders for July and Sept. pigs cheap. Also March and April pigs of either sex. Shipped C. O. D.
EAGER, BROS., R 1 Howell, Mich.

DUROC JERSEY SWINE. BRED Sows and Gilts all sold. Nice bunch of fall pigs, both sex, sired by Brookwater Tippy Orion No. 55421, by Tippy Col., out of dam by the Principal 4th and Brookwater Cherry King. Also herd boar 3 yr. old. Write for pedigree and prices Satisfaction guaranteed. Thos. Underhill & Son, Salem, Mich.

Peach Hill Farm
Meet us at the Fairs
Bred Gilts all SOLD.
INWOOD BROS. - - Romeo, Mich.

DUROC BOARS OF SIZE, QUALITY and breeding, including several State Fair winners. Newton Barnhart, St. Johns, Mich.

5 DUROC BOARS AND 4 SOWS Pigs from Austin's Wonder No. 125917 for delivery November 1. Write for pedigree and prices. Satisfaction guaranteed. C. H. Stanley & Son, Paw Paw, Mich.

FOR SALE 200 LB. DUROC JERsey Boars. Price $75. We have some other boars for $60 C. E. Davis & Son, R 1, Ashley, Mich.

DUROC BOARS FROM PRIZE WINNING STOCK ready for service. Geo. B. Smith, Addison, Mich.

BOAR ONE YEAR OLD. SIRE ROMeo Cherry King No. 96745. Dam Brookwater Fancy Lady 13th, No. 219398. Also a few gilts. J. E. Neuhauser, Imlay City Mich.

REGISTERED DUROC JERSEY swine. Quality. Size. Prepotency. Both sexes, all ages. Write for description and price. The Gun Plains Stock Farm, Plainwell, Mich.

PHILLIP'S PRIZE WINNING DUROcs for sale—A few good boars of breeding age, also a few good gilts, price right, let me convince you. Henry D Phillips, Milan, Mich.

DUROC JERSEY BOAR PIGS. Grandsons of Brookwater Cherry King or Panama Special. $20 at 8 weeks. Registered. E. E. Calkins, Ann Arbor, Mich

O. I. C.

Shadowland Farm
O. I. C.'s
Bred Gilts in May and June. Booking orders for Spring Pigs. Everything shipped C.O.D. and registered in buyer's name. If you want the best, write
J. CARL JEWETT, Mason, Mich.

MICHIGAN BUSINESS FARMING

The only Independent Farmer's Weekly owned and Edited in Michigan

Vol. VII, No. VII | MT. CLEMENS, SATURDAY, OCTOBER 25, 1919 | $1 (3 yrs $2; 5 yrs $3 FOR ONE YEAR

Low Production Cost Makes Jap Beans Menace

THE MICHIGAN delegation of bean men have returned from Washington, well content with the results of their journey, and satisfied that the arguments presented will move the Ways and Means Committee to an early recommendation of a special tariff bill. In fact, Congressman Fordney practically assured the delegation it could expect the committee to take this action, but in conjunction with Rep. Hawley of Oregon, reminded the delegation that the committee could only recommend and that it was the business of Congress to enact. It was rumored that Senator Penrose, of Pennsylvania, chairman of the Senate finance committee, has openly denounced special tariff bills and made the boast that no more special tariff measures would get by his committee. In view of the fact, however, that the senator has let at least two other special tariff bills get through his committee this session, there is reason to hope that he will look kindly upon the bean tariff when fully informed of its urgent nature.

In addition to the dislike of Congress for special tariff measures, the bean tariff bill will also have to run the gauntlet of the free-trade Democrats and the president. Free-trade Democrats are becoming mighty scarce, however. Congressman Garner, of Texas, is a Democrat, but he believes in protection. At least he said he did. He told the delegation of bean men that he was in sympathy with their efforts to protect the industry but wanted to be convinced that the amount of tariff asked was not excessive. Congressman Kitchin, formerly Democratic leader of the House, asked a few questions but did not seem greatly opposed to the measure. Interrogation of the bean men from the Democratic side was mostly confined to these two gentlemen. Nevertheless, it is almost certain that some opposition will develop when the bill gets before Congress, and it behooves every bean grower to stand by the guns and help.

Tariff of $4 Per Cent. Asked

It was stated in the October 4th issue that the California bean men would ask for a $5 tariff, but upon the completion of their cost figures it was found that $4 per cwt. would be sufficient to offset the difference between the costs of production in the orient and this country. One or two visiting bean jobbers were of the opinion that the $4 figure was too high, but they were soon convinced that a less tariff than that would not afford the necessary protection.

It was asserted by Aaron Sapiro, attorney for the California Bean Growers' Ass'n., and his statements were borne out by the U. S. consular service in the U. S. Commerce Reports, as well as by Jap statements, that Jap speculators had purchased Manchurian beans and laid them down in Japan for $1.72 per cwt. and that these same beans were sold in the United States at $5.75 per cwt., a difference of almost exactly $4 per cwt. In 1916, 305, 531 bushels of Japanese beans were imported into this country; 1,651,139 in 1917; 3.232.983 bushels in 1918, and the rate per month is even higher so far in 1919. Encouraged by high prices of beans and the easy access to U. S. ports the production of small white beans in the orient has increased over 1,000 per cent in the last three years so that Japan is in a fair way of being able to supply all the beans America needs if Congress wants her to.

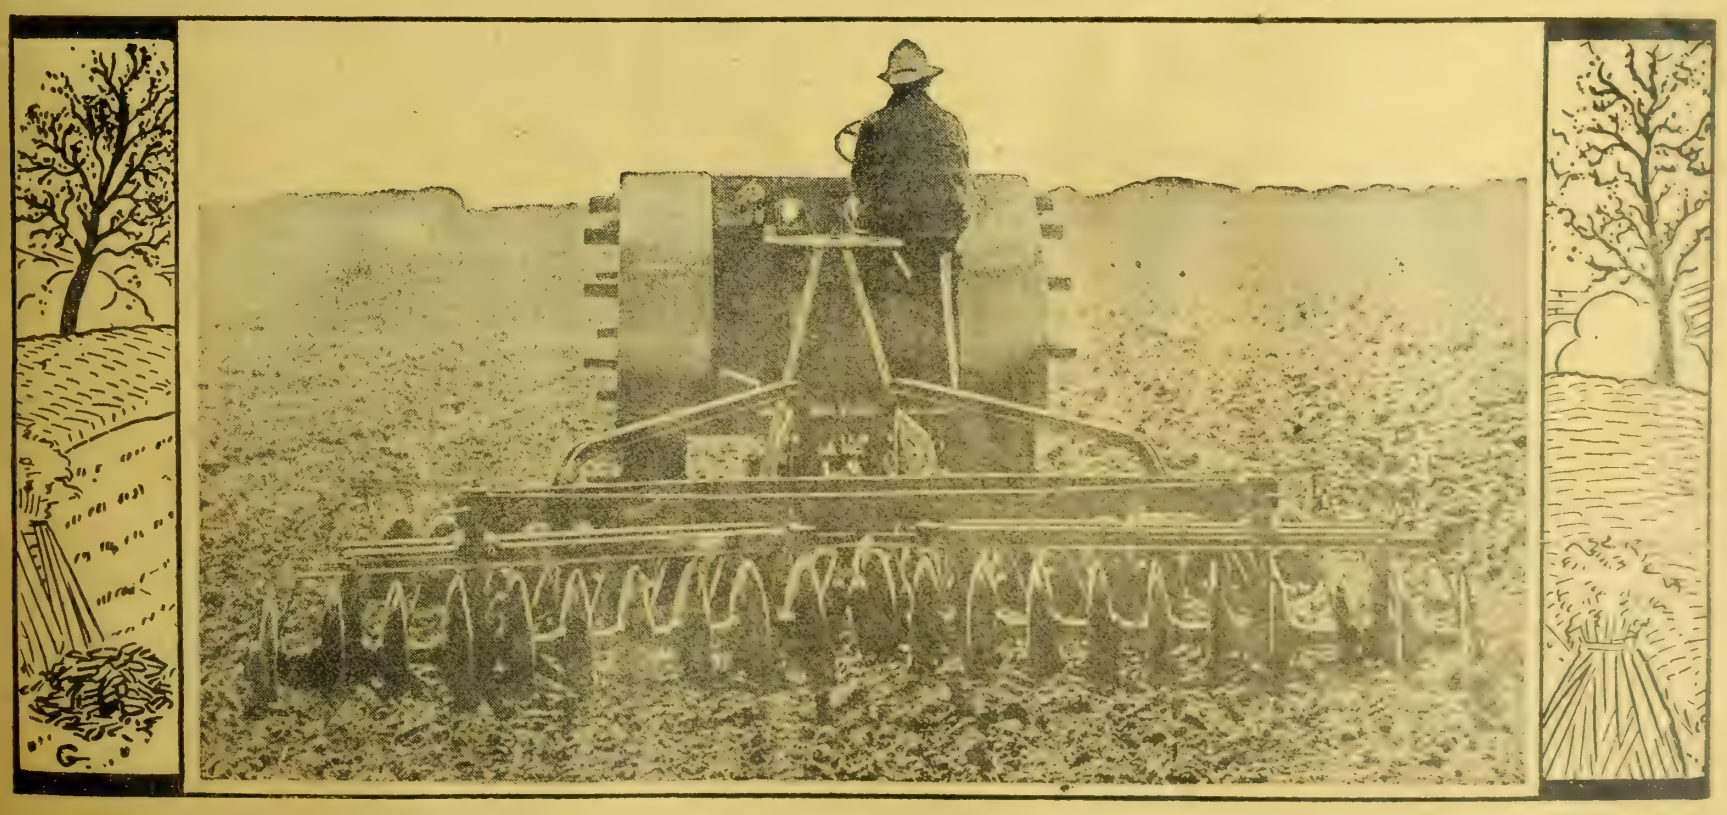
As a result of the Jap competition bean acreages in this country have rapidly decreased. New York's 1919 acreage was but 54 per cent of the 1918 acreage; California's but 69 per cent and Michigan's but 65 per cent. This clearly shows that the majority of domestic producers have been losing money.

Jap Cost of Production

Figures showing cost of production varied somewhat in the three states represented. California showed a production cost of 7 cents per pound. The New York extension department, thru its office of farm management, announced a cost of $55 per acre for the year 1918. The reports submitted by Business Farming as compiled by its readers varied from $38 to $55 per acre, with an average of $42 per acre. This does not include, however, hoeing of beans which many farmers (*Continued on page* 11)

What of the Immediate Future?

OF PRIME interest to the Michigan bean grower right now is the question, "What is to be the condition of the bean market the next few months?" Were a protective tariff already in operation that question would be easy to answer. But with the tariff at least two months off, it is not easy to comprehend what is going to happen in the immediate future. We know this to be a fact, however. Immediately following the announcement that a tariff would be sought on Jap beans, the bean market strengthened very noticeably and as we go to press there is good demand and rather brisk trade. It is possible that the practical certainty of the tariff matter going through has given buyers confidence, and that the market will continue strong throughout the season. But there is another element that must not be lost sight of and may be responsible for lower prices within the next sixty days. If the Jap speculators have contracted for large quantities of Manchurian beans for export to the United States, we may reasonably expect that there will be a flood of Jap beans to this market before the tariff bill becomes a law. Japan may realize that this will be her last opportunity to compete with American beans and "hog" the market" for the next sixty or ninety days. We have no positive information that this will be the case, but it is a contingency that it is well to keep in mind.



CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL'S

CO-OP. BUSINESS PLAN OF DETROIT CREAMERY

W. A. Ross, head of the butter department of the Detroit Creamery Company, which, he states, is the largest creamery in America, has formulated a plan of a form of co-operation with milk producers thruout Michigan. His statement follows:

"While we have done a very large business in the manufacture of creamery butter, this is the newest department in the business, and it is our wish to expand this department until it reaches the volume whereby we can operate efficiently enough to give to the producer the utmost for his raw material, as well as sell to the consumer at the least possible price, thus serving both the producer and consumer.

"We want to conduct our business in a co-operative spirit, and we believe in practice we will be able to net farmers better results than if their product was handled in the usual co-operative method. We would like to have a good reliable representative in every town in Michigan, where enough cream will justify such a station. Twenty or more patrons will be sufficient to place the necessary equipment to conduct a cash station in a community, especially where the prospects are fair to develop to greater extent.

"We will figure with any individual who wishes to look into our proposition or we will deal with co-operative selling associations, or we will buy cream shipped direct to us. For some reason a large per cent of the producers prefer to sell to a cash station, where they can see the cream weighed, sampled and tested, and are able to see their cream handled, get the money for same, and return of their empty can at time of delivery. It is a fact however, that if able to ship in lots of eight to ten gallons, it will net more money to ship direct. In shipping direct, we will absolutely guarantee against any loss in every ordinary deal. We also expect to have much better railroad service from this time on."

Exit, Mr. Spud Speculator

Michigan's potato yield is but half a crop this year. That is a matter for all persons to worry about, more or less, according to temperament, and the marketing system and price control have been all shot to pieces, which is a matter for the commission men to worry about, says the Detroit News.

Consumers don't appear to be worrying so much, for prices to them are no more abnormal for potatoes than for other things. But the commission men, meaning potato buyers here in the great Michigan potato belt, where what the Department of Agriculture now calls the "commercial potato" is raised, are doing a great deal of worrying. The condition has even worried some of them out of the business.

One of these personages was found in Stanton, county seat of Montcalm county, an eminent potato region, clerking in a meat market. He had sold his potato warehouse with its scales and potato grading machine because, he said, the various systems of direct marketing are putting the old-time potato speculator where he would have to eat his own potatoes raw to sustain life.

Barry Drive Planned

B. A. Holden, of Milford, Oakland county, former superintendent of schools in Hastings, has been selected by the Oakland county farm bureau as director of the membership campaign there that will be duplicated in a few weeks in Barry county.

These county campaigns, which will cover the state, are all under the auspices of the state farm bureau federation, and are intended to cement the majority of the farmers of the state into a union powerful to fight for and give the agriculturists their rights commercially, socially, politically and educationally, in brief to make farming more of a profitable and enjoyable business than it is now.

The campaign in Barry county, which will be prosecuted by the county farm bureau organization, probably will start in the latter part of October.

Made $10,000,000 Contract

Wm. H. Cansfield has accepted a position with the Michigan Milk Producers' Association. This makes the line-up force of Secretary Reed's force—who is the secretary, selling agent, manager, adjudicator and editor of the Milk Messenger, as follows: George W. Burt, superintendent of the Detroit aea; R. E. Woodruff, superintendent of organization work; Wm. H. Cansfield, advertising department of the Milk Messenger; I. W. Borst, tester; Miss Grace Horner, superintendent of office at Howell, assisted by Miss Ruth Travis. There are 166 locals in the state with practically 15,000 members and with contracts for this year's milk supply in Detroit alone amounting to over ten million dollars.

Hoosier Farmers Active

Members of the Blackford County Farmers association attended a banquet at the Hartford, Ind., hotel. Mr. Hickman, vice president of the State Farmers' association, gave a report on the work accomplished by the State Federation of Farmers.

Mr. Hickman acted as toastmaster and made a short address at the conclusion of the banquet. Every member of the local farmers' association present also made short pointed talks encouraging the formation of a county farmers' organization.

Fifty-four counties of the state have now become federated with the State Federation of Farmers, W. H. Hickman, vice president of the organization stated. Other counties in the state are now forming and will soon become federated with the state body, he stated.

Great Grape Harvest

The grape harvest in Berrien, Van Buren and Kalamazoo counties this year was enormous. The total production in the three counties is placed at 52,500 tons. Van Buren and Berrien counties supplied the bulk of this total. It is estimated the total grape crop for the three counties brought the producers more than $4,000,000.

Throughout the grape season the market was generally firm. There was a big demand for grapes this year, and the demand, coupled with the big crop, brought good prices.

Great difficulty was experienced by many growers in obtaining sufficient baskets at the right time and in instances where a wait was necessary considerable loss was suffered because the grapes rotted on the vines.

Berrien county's grape crop was all exported. Berrien grapes have gone to every section of the United States in iced cars and to the great South Water street market in Chicago by boat. Kalamazoo and Van Buren grapes were mostly sold to the big grape juice factories centering in Lawton.

Attention, Rabbit Growers

The keen interest that has been aroused among the growing number of rabbit breeders of the Thumb has created a desire for oganization and it has been determined to form a local branch of the International Hatch & Loft association in Sandusky. This is a splendid move to greater success for it will permit of authorized judging of stock and registration right at home and protects the novice and new breeder and affords him a much better opportunity to make a success of his business than is at present obtainable. It will further advance the individual interest by creating a fraternal spirit and acquaintance that is certain to be educational as well as to create a better business condition.

While rabbit growing has just started in this county, it is wonderful how rapidly it is spreading and it will be a long time before the present demand for rabbits is met. It means good meat produced cheaper than any other. The membership of the local organization will not be confined to this city but will be open to all breeders in the county. For particulars any one may address inquiries to Frank Manary, Sandusky.

Some Michigan Apples

Apples didn't make the branches bend over like this in many places this year, but they did on the trees of T. J. Bigg, Hersey, Mich.

Oaklanders Organize

At a meeting of Oakland farmers and several state and county farm work experts, final plans for the organization of a community buying and selling association were adopted.

C. C. Raviler, state organizer of community market projects was present and gave suggestions and B. A. Holden engaged in similar market work at Wixom, also spoke.

It is expected that the Leonard organization will take nearly the same form as that at Goodison. The Goodison branch of the Oakland County Farm bureau has taken over the buying and selling of produce for farmers in its vicinity, has acted as central purchasing agent for fertilizers and the like, and is now negotiating with a large implement company to obtain farm machinery at cost.

A representative of the Dun financial agency who recently visited Goodison gave the organization an exceptionalky high rating because of the large number of leading farmers directing the project.

Big Fair in Chippewa

More than half a thousand people from two counties and ranging in age from three months up to 93 years thronged the fair grounds of the Stalwart Agricultural Society, and with the most glorious weather enshrouding them, saw the best fair and had the best time that has been enjoyed since the fair was organized, in 1906.

Sturgis Dairy Co. Sold

The Sturgis Dairy company was sold to Chester Gradey, of Sturgis. Mr. Gradey plans to make business of the Sturgis Dairy Co. a part of his new milk station, now in the course of construction on North Prospect street.

BARNES ASKS REMOVAL OF WHEAT EMBARGOES

Julius Barnes, director of the U. S. Grain corporation, has asked President Wilson to raise the export and import embargoes on wheat, the house was informed today by Representative Young, Republican, North Dakota. Mr. Young introduced a bill levying a duty of 25 cents a bushel on wheat imports.

Mr. Young also said grain corporation officials had advised him by telephone that they had received the following message yesterday from Mr. Barnes at Missoula, Montana:

"Have advised trade generally everywhere that I am convinced that export and import restrictions of all kinds should be eliminated at the earliest possible moment, and trade should be prepared for such."

Besides the levy on the wheat imports, Mr. Young's measure also would levy a duty of $1.32 1-2 a barrel on wheat flour, and 10 per cent ad valorem on other wheat products.

Mr. Barnes for the last two weeks has been seeking an interview with President Wilson to discuss recent recommendations for lifting all export and import embargoes on grains and flours, it was stated at the grain corporation offices.

Europe Farmers Get Back on Feet

Crop prospects in eastern Europe are much better than previous official reports and unauthentic rumors have indicated, according to a representative of the United States Department of Agriculture whose observations were taken into account in the department's recent suggestions for fall plantings in America. This representative, under detail to the United States Grain Corporation, made extensive first-hand investigations in Europe. One of his reports was that the territory included before the war in Hungary, Bulgaria and Roumania probably will export at least 1,650,000 tons of bread grains from current crops compared to 3,900,000 tons in average pre-war years.

So far as its production of bread grains is concerned Bulgaria is practically on a pre-war basis and Hungary almost so, but Roumania is still far from complete recovery. The most optimistic claims of Roumania for export this year at 500,000 tons as against 1,700,000 tons of pre-war years. In the wheat producing region of southern Hungary the average planted this year is fully 90 per cent of the normal pre-war acreage. In that part of Roumania occupied by the armies of the Central Powers, considerable land was not cultivated this year, while that which was devoted to crops was found in rather poor condition. This came about because the Teutonic armies ravaged the country of much of the work stock and agricultural implements However, despite this Roumania will be more than self-supporting, and as the maize crop is improving on account of conditions during the summer, Roumania will have a certain amount of export surplus.

On the eastern border of Poland and the western border of Russia the population was largely evacuated during the war. At present, the peasants are returning to their former homes despite the fact that food conditions, due to lack of cultivation, are very bad. In some places, the peasants live on bread made from grass, nettle and heather.

Ship Hogs to Chicago

Edward Arney, president of the St. Joseph Valley Shipping association, recently shipped three carloads of hogs to the stock yards in Chicago. They brought $17.15 a hundred pounds. Considering the demoralized condition of the pork market, this price is considered very satisfactory. During the week Mr. Arney shipped a carload of lambs which sold for $14.50 a hundred.

Explanation of How Mr. Jap Bean Got His Start

Being the First Chapter in the Amazing Story of Mr. Kimball's "Deals" Oriental Beans

FOREWORD

WE TRUST that those of our readers who do not produce beans have not tired of the many articles recently published upon the subject. In former years, beans were Michigan's greatest cash crop. The acreage and production have gradually dwindled from year to year, however, until the industry is almost upon the verge of extinction, and will certainly depreciate in value to a much greater extent unless the unusual conditions that have brought about its decline are removed. Business Farming wants to help save this industry and put Michigan back in the front ranks of bean-growing states. It wants to encourage the greater production of this crop in Michigan, for under proper conditions it can be made to yield as great if not greater profits than any other crop that can be grown in the state. That is why we are giving so much attention to the matter at the present time.

Our readers will remember that we have discussed the activities of Mr. K. P. Kimball, head of the bean division of the Food Administration, for upwards of a year and long before he was relieved of his duties we suspected irregularities in the conduct of his duties. We used every effort to stem this man's operations, and believe that we were largely instrumental in bringing about the investigation which finally led to his discharge. We have tried by every fair means to secure a copy of the testimony that was submitted at his hearing, but without success. The writer hoped to secure this while in Washington, but the testimony is in the hands of the Department of Justice which will not release it except upon the orders of men higher up. Congressman Fordney will ask for a copy of this testimony. Failing to secure it, he will introduce a resolution in Congress, and if Congress orders the Department of Justice to produce it, it will be forthcoming immediately.

The accompanying article is the briefest kind of a summary of the information gleaned at Mr. Kimball's hearing. It was placed in our hands by Mr. Aaron Sapiro, attorney for the California Bean Growers' Ass'n, with the assurance that it was authentic. Until the complete transcript of the testimony is available, it will give at least an inkling of what transpired during Mr. Kimball's connection with the Food Administration to give the Japanese bean a footing in this country—The Editor.

IN FEBRUARY, 1919, a special hearing was held before the officers of the Food Administration, Mr. Boyden presiding, Mr. Fox conducting the examination, to determine the facts involved in charges that Mr. Kimball, advisor of the Food Administration on bean matters, and Mr. Gerks, bean buyer for the Grain Corporation, had favored Mr. Abe Kutner of the Western Import Company of San Francisco and the Lewis E. Sands Company of New York in the purchases of beans for the United States government.

In March, 1918, at a conference at Washington, Mr. Kimball secured the approval of Mr. Hoover to a policy of purchasing oriental beans in preference to American beans.

Mr. C. H. Bentley of San Francisco was also present at the conference as a member of the Food Administration.

Mr. Kimball had long been a close friend of Mr. Kutner and had had intimate personal and business relations with him.

During the year following this date, the Grain Corporation and the Food Administration purchased over 1,250,000 bags of oriental beans (over 125,000,000 pounds) from various dealers including the following:

Western Import Co. (Kutner), bags	819,000
(Kutner failed to confirm 120,000 bags)	
Tojo Trading Co., bags	120,000
Mitsui & Company, bags	20,000
W. R. Grace & Co., bags	50,000
Albers Milling Co., bags	70,000
Lewis E. Sands (not all orientals) bags	187,000

It is interesting to note that two of the above firms are Japanese. It is also significant that the orders to Kutner comprised over one-half of the total and that these orders were practically all issued thru the Food Administration directly instead of thru the usual procedure of the Grain Corporation. It was also noted that in many instances the orders to Kutner were open orders, without time limits. This enabled Kutner to have a few weeks within which to sell down a market or to find beans at the price which would net him a profit under the government order. Failing this, he would refuse the order. In one instance, he took an order for 100,000 bags of beans when he had only 20,000 bags under contract. He apparently found that he could not fill the order at the original price. He, therefore, secured thru Kimball, a cancellation of the balance of the order on the ground of a "mutilated telegram." There after he got a new order for the 80,000 bags at a half a cent a pound higher. There was no evidence to sustain the theory of a "mutilated telegram."

During the summer of 1918, Kimball visited the Pacific coast and incidentally borrowed $40,000 from Mr. Kutner. Some inadequate security is supposed to have passed. There is no need to emphasize the lack of discretion in this transaction, if nothing worse. During the same year, Mr. Gerks states that Mr. Kutner offered to lend him some money to help set him up in business.

In explanation of the so-called open orders, Kutner said that he needed time, usually several days, within which to receive reports from his agents in Japan. Investigation showed that the usual time for cable and answer was less than twenty-four hours.

In November, 1918, Hoover gave an order that the purchase of oriental beans should cease, in order to give the American growers a chance. In spite of this order, Kimball still gave Kutner orders for oriental beans, even at a time when Kutner had to wire his agent in Japan that the prices of domestic beans were lower than the prices of foreign beans, as quoted to him. During this period Kutner cabled his agent in Japan, "This is the opportunity of my life." Apparently Kutner did not need a second invitation.

In February all of these facts and many more significant points were brought out before the agents of the Food Administration and the committee of Michigan jobbers and a Mr. Braun of California, and Geo. A. Turner, president of the California Bean Association. Thereafter the Grain Corporation distributed an order for 500 cars of beans (300,000) bags.

* * *

At the original conference in March, 1918, oriental beans may have been preferred because of the then high price of domestic beans. At that date, however, all of the California crop of 1917 was in the hands of the dealers, or of a few large growers. As a whole the growers were out of the market. The 1918 crop of beans was the first crop handled by the California Bean Growers' Ass'n. This crop was not harvested until August, September and October of 1918. Whatever justification may have existed for some of the early orders for oriental beans, certainly ceased to exist in the summer of 1918. At that time the California growers were preparing to harvest a crop which they had been urged by Mr. Merritt and others of the Food Administration, during the spring of 1918, to plant in preferance to any kind other crops. Regardless of price, if the Food Administration did not intend to buy American beans, it should have urged the growers to plant them intensively.

WE ARE well pleased with the response that our readers made to our request for funds to help pay the expenses of the bean delegates to Washington, and we are sure that when all remittances have been received they will assist very materially. Below we publish a list of those who have already subscribed. If you wish to help in this move for a better market for Michigan beans, please clip the coupon below and mail with your check or currency. Thus far the contributors are:

Rural Publishing Co.	$25.00
A Botright, Caseville	2.00
Walter C. Gunn, 109 N. Dearborn St., Chicago	3.00
L. C. Gardner & Son, Rosebush	2.00
Mr. Gardner writes: "We grow no beets nor beans but want to help just the same." That's the spirit !	
Mason Hobbs, Mt. Pleasant	1.00
Joseph P. Simon, Fowler	2.00
Hildreth & Lee, Bailey	2.00
Herman Schriber, Marshall	.50
Wm. R. Symons, Sterling	1.00
Geo. E. Taylor, Linden	1.00
H. Bode, Marion	1.00
F. M. Monzo, Carsonville	2.00
Wm. F. Beebe, St. Johns	.50
W. F. Litchfield, Mulliken	1.10
Mr. Litchfield says, "This is 10 cents per acre on my beans. It is little but if every bean grower will do the same it will pay the expense of the delegates and they can smoke, too." Worse luck, none of 'em smoke !	
J. J. England, Caro	1.00
Mr. England says, "If this is not enough send to me for more."	
H. D. Horton, Sec'y Meade Twp., Huron Co. Bean Growers' Ass'n	15.00
Total	$66.10

USE THIS COUPON

October 1919

Michigan Business Farming,
Mt. Clemens, Mich.
Gentlemen:

I am heartily in sympathy with the move that is being made to protect the Michigan bean industry, and I enclose

$..... to help pay the expenses of the delegates who go to represent the growers.

Name .....

Address .....

WANTED ÷ A BEAN TARIFF WITH A REAL KICK IN IT!

CHAS. B. SCULLY CANDIDATE FOR LIEUTENANT-GOVERNOR

We take pleasure in announcing the candidacy of Senator Charles B. Scully of Almont, Michigan, for lieutenant-governor. We do not know whether Mr. Scully will make a better lieutenant-governor than either of the two gentlemen who are after the job. His principal recommendation in our sight is that he is a farmer and has the farmer's viewpoint. He has just completed his second term in the Michigan Senate and his record will, we think, stand the scrutiny of the farmers of the state. Mr. Scully has not ALWAYS been right. We have found it necessary to differ with him on some points but nevertheless we are satisfied that he is a man whom the farmers can safely and proudly support.

Mr. Scully was born on the same farm near Almont, Lapeer county, where he now resides and makes his principal living. He specializes in pure-breds. That's good recommendation in itself. He is 41 years of age and ever since he learned the alphabet he has been talking about farmers to farmers, and knows his subject pretty thoroughly. He has spoken frequently at Grange and Gleaner gatherings, and was formerly president of the State Association of Farmers' Clubs. He took a prominent part in the recent campaign for good roads.

At the beginning of his second term in the Senate he was elected president pro tem, and in that capacity when occasion permitted filled the position which he now seeks with grace and dignity. He also served on several important committees. He was chairman of the insurance committee during both terms in the Senate, and a member of the taxation, elections and industrial schools committees. He has been a consistent and frequently an active worker in legislative matters for farmers' rights.

"My policy," says Mr. Scully, "will be a square deal to all."

Grangers Meet in Montcalm

Stanton's banner day was that of the Grangers when they met from all parts of the county and one hundred received the State Grange Degree conferred upon them by State Master, John C Ketchum, of Hastings, assisted by other State Grange officers. Besides State Master Ketchum the state officers present were A. E. Illenden, of Adrian, Mrs. Dora H. Stockman, of Lansing, Peter Klees of Sumner, and Mrs. J. C. Ketchum, of Hastings.

Building Bees Create Great Farmer Warehouse

By VERNE E. BURNETT

OUT OF THE north comes a story of true co-operation by farmers working against great odds and with amazing success, in erecting a warehouse big and good enough to help solve their marketing problems. With the true spirit of brotherhood of the great fraternity of Agriculture, the farmers of southern and western Antrim country along the shore of Lake Michigan, have held a series of building "bees," giving their time and labor free to remake an old structure into a modern well-equipped terminal.

The story in all its details would be a long one, for the affair was far from a summer night's dream and it was not the result of the work at one or two "bees." The leaders of the work have had the project in mind for year's back. The first news of the work came to Michigan Business Farming early in the summer, when crop reporters, in the neighborhood of the famous Torch Lake and Grand Traverse and Kalkaska districts, sent in enthusiastic accounts.

N. T. Velliquette, proprietor of the Busy Gleaner Farm, near Kewadin, writes that Fred Powell, vice-president of the Elk Rapids Co-operative Marketing Association, has been the leading spirit in the work, although the whole association acted with one accord in getting the work done quickly and efficiently. The push and hustle of Mr. Powell and his brother officers were merely typical of the spirit of the whole affair.

Some time back the association of Elk Rapids bought the big building, which, we are told, had been used at one time in balmy pre-war days for a novelty factory. Although financing this purchase was hard to begin with, it was as nothing compared with the labor necessary to get the structure into shape suitable for business. A picture has been sent to us, showing scores of farmers thronged about the warehouse just as the last of 1,500 loads of sand were being drawn in to fill the floor of the main building to a height of three feet above its old level, so as to build a cement floor on a level sufficiently safe from overflow of the river. This is just one of the items which shows how scientifically the association went at the work. The illustration sent us shows the real spirit of co-operation among the workers, grouped about the building during the last days of the "bee."

Financing Plan Submitted

The association at Elk Rapids is so enthusiastic about the work that they want other faltering associations to benefit, if possible, by the successful experience of he brothers in Antrim county. Accordingly Elk Rapids people have submitted their financing plan to Michigan Business Farming in hope that it might be of service to others. New co-operative buying and selling associations of various sorts are growing up almost continually throughout Michigan these days, and one of the main breakers in the course in which they must steer is that of finance.

It should also be admitted in all frankness that it is no soft snap to start and keep a co-operative association going. It is a man's size job for every member of such an association and needs steady, hard, brainy work. Because of lack of interest or improper financing, numerous co-op adventures naturally have failed. These have tended to discourage the farmers from similar ventures many times; but with pep and the right kind of system and men, the co-operative marketing business is one of the few sunshiny prospects in the farming business. Farmers buy at the high retail prices from the merchants, while the merchants buy at wholesale. The farmer sells cheaply at wholesale, while the merchant puts a dear price on his goods. It is hard for farmers to keep up the pace in that sort of game.

The Elk Rapids plan, which the members believe to be the best, is something like this. The building when completed will cost between $10,000 and $12,000. Of this amount $6,000 has been pledged by members to be loaned to the association. The association, in borrowing this money, gives its note to each member making the loan. The note runs for ten years with interest at five per cent per annum. The principle and interest is all to be paid back within ten years, in ten equal, annual payments. Or, in other words, ten per cent of the total amount will be paid back to each stockholder every year, and the interest payments will be averaged up and the average amount of interest paid with payments on the principle.

Thus the stockholder who pays in a loan of $100 will get back $12.75 each year for ten years. No originality is claimed for this system of financing, because it has been tried out elsewhere with success. Its supporters claim that it is about the simplest, soundest plan in the running just now, in the co-operative marketing business. Some may disagree, but on that platform the Elk Rapids farmers take their stand for better or worse. And the farmers in Antrim County aren't easily fooled. Just to get the full significance of the importance of their story, read this report sent for that county to Michigan Business Farming a few weeks ago:

Cloud With a Silver Lining

"Antrim County farmers are busy doing a little of everything these days, cutting clover seed, plowing, etc. Weather is variable with lots of rain—too much for potatoes on the lowlands. There is a large number of auctions billed. Some already held. Stock not selling very high. Many farmers dissatisfied with their business. Too much hard work and too little profits."

That feeling, we understand, applies to many of the northern farmers this fall. There has been trouble this year in getting the capital needed to develop the North. Crops have not been so good and prices low. It is the life of the pioneer with many discouragements, in many parts of Northern Michigan, although it is also a land with boundless opportunities.

Despite discouragements and gloom, the Antrim farmers have bobbed up before the agricultural public of the state with the splendid co-operative marketing stunt to their credit. Thus we feel that when one knows of the fight these Northern farmers had to wage and still have to carry on, he can hardly help but feel a real tribute to them.

Some Cow!

BELLE De Kol Colantha is some cow, even if her owner, John Rinke, of Warren, Mich., says so himself. She is now around 17 years old, but she is producing better every year, keeping up somewhere near a hundred pound record and presenting the Rinke purebred Holstein herd with a calf every year. Mr. Rinke bought "Old Belle" about seven years ago, when she was already an old animal, and he was soundly laughed at by numerous friends. She is not for sale, despite her age. She is responsible for many of the prizes won by the herd to which she belongs.

Livestock Disease Conference Sends Out Appeal

DISEASE in live stock makes one of the biggest risks in the breeding business. Michigan live stock is by no means so badly infected with live stock disease, especially tuberculosis, as some other states. But it is surely dangerous. During the summer months this year a Dairy Tour was held in Southern Michigan by a large number of farmers. Frank Sandhammer, assistant state leader of county agents, accompanied the men on the tour, and he has reports of cattle never before known to be diseased, which were found to be infected with tuberculosis on examination. In Lenawee county a herd of Holsteins which had been known as "a perfect herd" was found to be badly afflicted with the white plague. Probably other owners have cattle which they do not know are troubled with the same dread disease. The accompanying article gives hints on how to prevent the plague from spreading.

WITH LIVE STOCK and its products on a higher plane of values than in previous years, there has come to stockmen and farmers a keener realization of the need to stamp our animal diseases. This important development in livestock raising was shown repeatedly at the conference which assembled in Chicago, October 6 to 8, to discuss tuberculosis eradication. Michigan herds have been quite free from the white plague, but cases have just been found among Michigan herds which were totally unsuspected. Thus the conference was of great interest to Michigan owners of stock.

Whereas in the past the unwillingness of cattle owners to have their herds tested in order to locate the disease has been a limiting factor in the work, now there are waiting lists, and the problem confronting state and federal officials is to meet the demands. Coupled with that problem is the need for improved methods of testing and a more uniform system of certifying to the health of animals so that stock may be shipped interstate with a minimum of inconvenience and delay.

First Conference of Its Kind

The conference, called by the Federal Bureau of Animal Industry to discuss these problems, was the first of its kind, and 158 delegates from various parts of the country were in attendance. In opening the meeting Dr. John R. Mohler, chief of the bureau, emphasized the importance of conducting disease eradication in a manner that is practical and workable as well as being scientifically correct. Likewise he announced the desire of the Federal Government to receive information from all sources to supplement the work of the U. S. Department of Agriculture investigators. A problem of considerable importance is the tuberculin testing of cattle at public stockyards.

Such testing is aimed to check traffic in diseased animals and to protect communities which have little bovine tuberculosis from infection by cattle that are diseased or of doubtful health. This condition applies especially to dairy stock and to breeding cattle, but in preventing interstate movement of tuberculosis animals, live stock sanitary officials recognize the need for doing the work in the most expeditious manner.

Delegates from all parts of the country reported keen interest in their localities in the so called accredited herd plan, under which the federal and state authorities grant a certificate to owners of herds found to be free from tuberculosis and which are maintained in a prescribed manner. The principle of the plan was warmly endorsed as a constructive means of tuberculosis eradication, and the conference favored its continuance along present lines or with additional requirements that will increase its effectiveness. A topic receiving special emphasis was the need for painstaking and thorough disinfection of premises where disease has been found, followed by continuous attention to sanitation of buildings and surroundings.

Eradicating tuberculosis from cattle will practically solve the problem of controlling the disease among swine. That was the opinion of veterinary experts experienced in the handling and postmortem examination of swine received at the principal market centers. By means of a simple and practical marker, hogs may be tattoed with distinguishing letters and figures and when disease is found by postmortem examination, the identity of such animals is known.

How Stockmen Can Help

The discussions revealed a wide difference of conditions and problems many of them intricate, but there was unanimous agreement on the main topic—to eradicate tuberculosis from live stock throughout the United States and to do it at the earliest possible time. Farmers and stockmen of the country virtually have set a pace in their demands for testing that is faster than was anticipated a few years ago, but the live stock sanitary officials are not to be outdone.

The Federal Bureau of Animal Industry is now producing about three times as much tuberculin as a year ago, and it is being distributed free to federal, state, county and municipal officials. Those in charge of the work in different states recognized that the present progress is but a beginning, and to avoid confusion there must be uniform policies and methods. They stressed also the importance of doing the work thoroughly and well, so there will be no reaction and loss of confidence.

Live stock owners may be of great immediate assistance in the work, with much benefit to themselves, if they will isolate all animals brought into their herds until such animals are definitely known to be healthy, and also will maintain clean and sanitary surroundings. The gradual increase in the number of live stock in the United States and also in the shipment and exchange of animals make disease control and eradication a problem demanding the closest co-operation among live stock owners, sanitary officials and the public in general.

The regulations which have been found necessary are directed, the conference showed, at a small minority of conscienceless people who, if unchecked, would spread disease all over the country. In addition many of the provisions regarding handling of live stock in interstate traffic are a check on carelessness or indifference to public welfare. It is believed that the great majority of live stock men, knowing these facts, will support regulations which are aimed to correct the conditions.

There Is a Delco-Light Man Near You

No matter where you live, there is a Delco-Light man within easy reach of you.

This means much more to you than mere convenience in the purchase of a Delco-Light plant.

These men are trained men—They KNOW electricity as applied to farm use.

They can advise you as to the size of plant you should have.

They can see that your house and barn are properly wired—

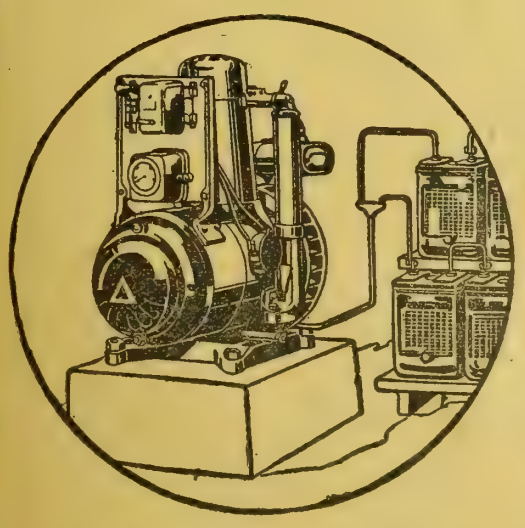
They can superintend the installation of the plant so that it will give you the most efficient and economical service.

They can tell you where and how to place your water system and what kind of a water system to have to meet your particular requirements—

They can give you intelligent advice as to the purchase and use of washing machine, churn, separator, milking machine and other appliances that you can operate with the electricity furnished by Delco-Light.

And—After the plant is installed they are always near-by to advise with you and see that you get full hundred per cent satisfaction out of its operation—

Delco-Light is lightening labor, bettering living conditions and actually paying for itself in time and labor saved in more than 75000 farm homes.



A complete electric light and power plant for farms and country homes, self-cranking—air cooled—ball bearings—no belts—only one place to Oil—Thick Plates —Long Lived Battery—RUNS ON KEROSENE.

The President Gains

THERE is a marked change in the attitude of Americans toward their president since the day he returned from the west, broken in health and weary in spirit. Nowhere perhaps, is this change more noticeable than in Washington. A few months ago sentiment ran strong against the president, in the Capitol city and the political tirades against him in the Senate naturally did not help to soften the feeling. But the tension has relaxed. People now pass the White House in a more reverential mood and look with more or less misty eyes toward the wing of the great structure where the president is thought to be confined, slowly recovering from his illness, and throngs of citizens anxiously watch the bulletins that are flashed at frequent periods from one of the newspaper offices giving official information as to his progress.

The first important legislative development that has taken place since the president became confined to his bed, and one that is construed as marking a reversal of sentiment, is the action of the Senate in voting down the Lodge Shantung amendment to the Peace treaty. The fight in the Senate over this section of the treaty has been very bitter and two days before the vote was taken, well-informed congressmen were saying that the Lodge amendment would be carried. It would be impossible to say which influence should receive the most credit for the defeat of this amendment, a change of conviction on the part of supposed supporters or a feeling of sympathy toward the president. It is clear that many senators were not thoroughly satisfied that the Shantung section should be amended and that it did not require much influence to line them up behind the president particularly after he became unable to longer defend his position in that matter.

The illness of a president at any time is a serious matter. But the illness of President Wilson at this particular time is peculiarly unfortunate, for it is certain to have an overshadowing influence upon the great issues which are now being discussed in Congress. In spite of the mistakes the president has made and his unpopularity in certain quarters, it is very evident that he holds a strong hand over the nation. He has demonstrated his rights to leadership and all but a reactionary few have conceded him leadership. His powerful utterances and his determined stand for what he thought was right have left a deep impress upon the country and though his lips are for the time being silenced, the people still unconsciously bend to the power of his personality and reachments. No heart could be so hardened at will not soften at the news that the president will soon be himself again and able once more to direct the helm. And let us devoutly hope that in the future all those who would criticize and revile his name will remember that after all he is but human, and liable to all the errors of humans. It will be an inerasable blot upon the United States if her politicians are permitted to slaughter President Wilson upon the altar of public opinion and make him a martyr to the cause he has so whole-heartedly embraced.

* * *

Words,—Mere Words

ENGRAVED across the front of the magnificent Union depot in the city of Washington are these words, "The Farm—best home of the family,—main source of national wealth,—foundation of civilized society,—the natural Providence." Similar tributes to the farm and farmer may be found inscribed in other places in the beautiful public buildings, and scarcely a day passes by that some speech-making congressman or senator does not pay flowery homage to the men of the soil. In fact, no public man is considered to have quite done his duty who has not at some time or other in his career acknowledged the farm as the "bulwark of civilization" and made some flattering references to the "horny-handed disciple of the plow." We dare say that there is no great man, living or dead, who has not left some printed evidence that he was one of the "best friends the farmers ever had." But strange as it may seem, these "friends" have lived and passed on, and except for the printed record of their occasional remarks, no one would suspect that they ever gave a single thought to the farmer. The status of the farmer is practically the same today as it was fifty years ago, and well-meaning orators are still proclaiming in the same fashion as a half century ago, that "the farmer's rights must be protected."

The words we have heard uttered upon this subject are fair enough,—too fair. By constant repetition and emphasis they rather lead us to suspect a lack of sincerity. A good word well spoken gives encouragement. But promises that remain forever promises and are never translated into action destroy confidence. The farmer has listened long and patiently to the fine words of the statesmen and politicians. Now he wants action. And the time is not far distant when these "friends" will be put to the test and the sincerity of their words sounded to the depth.

If the farmer occupies the place of importance in the economic stratum that nearly everyone admits, it is high time that he be accorded recognition in some other manner than by mere words. It is no longer enough to say, "The farmer is the corner-stone of the nation's prosperity," and let it go at that. His counsel must be sought; his interests protected; his business encouraged and assisted. No great national policy should be determined without consulting him. He should be accorded leadership and his opinions should be carefully weighed.

The farmer is slowly coming into his own in these respects but little of the credit belongs to those who pose as his friends. He is rising to a new plane of dignity and power by the force of his own efforts. He is being heard because he demands to be heard and not because those who hold superior positions desire him to be heard. Ten years from now no great leader or no great party or power will wish or dare to follow a line of action that does not take complete account of the farmer's welfare.

* * *

Faith Versus Death

"RELIEF" can not express the feeling which swept over the newspaper readers the last week or so when little Shirley and Edna Luikhart, of Michigan, who had been poisoned by their mother, passed safely the crisis which the doctors said would mean sure death to both. The two pretty, golden-haired children had been given corrosive sublimate about three weeks ago by their mother, who has since been sent from Pontiac to Ionia prison, where she will be kept locked up as criminally insane.

The girls were rushed to Detroit where physicians attempted valiantly, tho almost hopelessly, to counteract the slow, deadly poison. The Detroit doctors finally had to admit failure. Then the whole reading public was thrilled by the message of Dr. Thomas Carter, of Chicago, who offered to treat the case without charge to the sorrowing father, who stayed constantly between the girls' beds, although he, himself, was in ill health. A year ago Dr. Carter had been working 24 hours a day in a dressing station in the shell-churned Argonne, and his own little daughters were reported to be dying in Chicago, because of influenza ravages. The doctor then had been unable to attend his own daughters, who finally recovered, but now he saw an opportunity to put his very soul into the fight which he would have put up for his own youngsters.

The whole episode is regarded by many as a real miracle, a case where Science was transcended by Faith and Will and Love. The devotion of the father who would not for a second admit anything except that the Luikhart babes would recover; the fight of the doctor who put up the inspired battle he would have waged for his own blood; the appeal to the finer sentiments in human nature—all these phases combined to make it a never-to-be-forgotten event. And the public interest shown by all who heard of it strikes a silver harmony through the complex make-up of the American people. The bums on the street wept when they read the story. Men in offices dived for their check books to send financial aid for the impoverished Luikhart family, and even little children in school sent in the nickels and dimes to help swell the blue china pig bank of the little Luikhart girls.

The whole affair shows the good in human nature which can well up in greatest munificence and fineness, and also the power which almost blind faith can exercise over the destiny of mankind.—V. B.

Where Should Public Ownership Begin,—and End?

PUBLIC OWNERSHIP of utilities has many honest advocates. That is to say that some of the brightest men in the country who are against socialism or the nationalization of all industry are strongly in favor of governmental control of what are commonly known as "public utilities."

They find it hard sometimes to define their position. A critic will say: "You believe in government operation of the merchant marine, the railroads, the canal routes, etc. Then why should you oppose government operation of farms, grocery stores, printing establishments, banks, and all the other machinery of production and commerce?" The answer that these are not "public utilities" does not satisfy. For in a sense they ARE public utilities. A large percentage of the commercial and industrial enterprises of the day have become so interwoven with our scheme of living that they are in a large measure indispensable to the public comfort and convenience. Yet there are few to argue that these enterprises should be nationalized.

But the advocates of public ownership of transportation lines are for the most part sincere in their convictions. They believe that certain industries should be under the control of the public and that other industries best serve the public under private management. They seem to have found a definition that will fully explain their position and clear away any confusion as to where they think public ownership should begin and where it should end. They favor government control "over all industries based on public grants, privileges and monopolies."

Do you see anything wrong with that?

* * *

A visitor from Europe traveling through farm districts notes that American farmers have practically ceased the wearing of long chin whiskers; well, that's all right seeing that Uncle Sam himself has the goshdingest goatee that ever floated in the breeze.

* * *

If all the great reporters on big city papers could be lined up at the edge of Michigan and trotted across it, there wouldn't be so much ignorant, harmful talk going on in these critical times of reconstruction.

WHAT THE NEIGHBORS SAY

THE FARMER AND ORGANIZED LABOR

By what method of reasoning do you figure the farmer to be a capitalist? A capitalist is an individual who has a more or less steady income of cash earned by some one else. The farmer never was a capitalist and at the present time by doing all his work alone inside of sixteen hours he clears considerable less than other labor at eight hours a day.

The mortgaging of farm property has been on the increase for a good many years. Does that argue that the farmer is a capitalist, in fact or in a state of coma. Organized labor has accomplished a great advance in their condition even by strikes but will accomplish more rapidly and in a more satisfactory manner by political action. If the farmer could go it alone as you advise what would he gain but delay. I think Mr. Young is offering the farmer a mighty fine opportunity to go right ahead and place himself in a position to commence living with other people.

The only way a farmer could strike would be cut down overproduction to a point where it would equal underconsumption and enough more to break the back of price manipuation. Better political control will keep him posted on what progress he is making all the time and get him some where, something that has never been accomplished yet since the days of Adam.—M. M. Martin.

A better definition a capitalist than you have given would run like this: "A capitalist is a man who employs money in the conduct of his business," and every man who employs money has a right to expect that it shall earn a fair rate of interest, and the public should concede him that right. The reason farm mortgages are on the increase is because the farmer as a capitalist has not received that fair dividend. Granting that the necessity for political action is great, and as a reader of Business Farming you know we have laid great stress upon the subject, there are still many reasons why a political alliance between farmers and organized labor is unfeasible. Who, may I ask is behind the determined efforts of the government to reduce the cost of living? Organized labor. Organized labor said, "reduce the cost of living or we strike." Organized labor has dealt the farmers a severe blow, for the farmer is the only one who has suffered as a result of the investigation. Organized labor has never been interested in farmers' welfare. It demands cheap food. It will get cheap food. if possible. How can you get and team work between a man who wants all he can get for his products and a man who wants to pay the least price for them?

"LET'S NOT SELL A BEAN"

I am a friend of M. B. F. I have taken it since it was first printed, and have paid up for five years to come, also have taken a good many subscriptions, in summing up, no farmer should be without it. I have been watching it closely in regard to beans and have just filled out the coupon on cost per acre and think the price we are offered here in Montcalm of $6 per hundred too low considering the price we pay for help, machinery and repairs it also costs the same for threshing, no drop in price there and I think it about time we were going on a strike. I do not mean lay down or walk out, because we have to keep digging from daylight until dark to keep our work up, as I find it so working 120 acres with the help of my wife and children at times. But I do mean to strike this way. Brother Farmers lets not sell a bean until the first of December. All in favor of this hold up your right hand, and for God's sake hold your beans, and we have struck. —Montcalm Co. Subscriber.

You've got the right idea, all right, Bro. Subscriber. I have no doubt, if not a single Michigan bean was sold till December 1st, but what it would bring higher prices. But if you add up the farmers who are satisfied with the price and those who have to sell now because they need the money you wouldn't have enough left to make your "strike" effective. Moreover, the State Farm Bureaus say it is wicked to strike. I think that if proper import duty is placed on Oriental beans, it will not be necessary to strike in order to get a fair profit. What do you think?—The Editor.

THINKS LEAGUE COVENANT SHOULD BE RATIFIED

Here is the opinion of a reader of your valuable paper, in regard to this "momentous question" viz, Ought the Senate to ratify the peace treaty unamended?

I believe it ought to.

I believe the proposed League of Nations is the logical outcome of the late war and the only outcome worthy of the sacrifice the world has made. The covenant is not perfect but it is certainly a big (and only) step forward. It may not be a positive antidote for war, but it is by far, the best one ever prescribed.

Some that oppose the treaty are for the most part greedy and unreasonable "politicians" who care little for America or the world. They are not honest and progressive thinking people. They would tear down the world's most sensible and progressive document for the "prevention of war," and allow a "foundation for war" to stand.

Another conflict might wreck the world. It would be more terrible than the last one, for death dealing mechanical agencies of more terrible variety would be used. At any rate has America a safe guarantee of winning? She might have to submit to terms vastly more obligating and oppressing than the League requires, besides paying the other horrible penalties that that war's toll would exact.

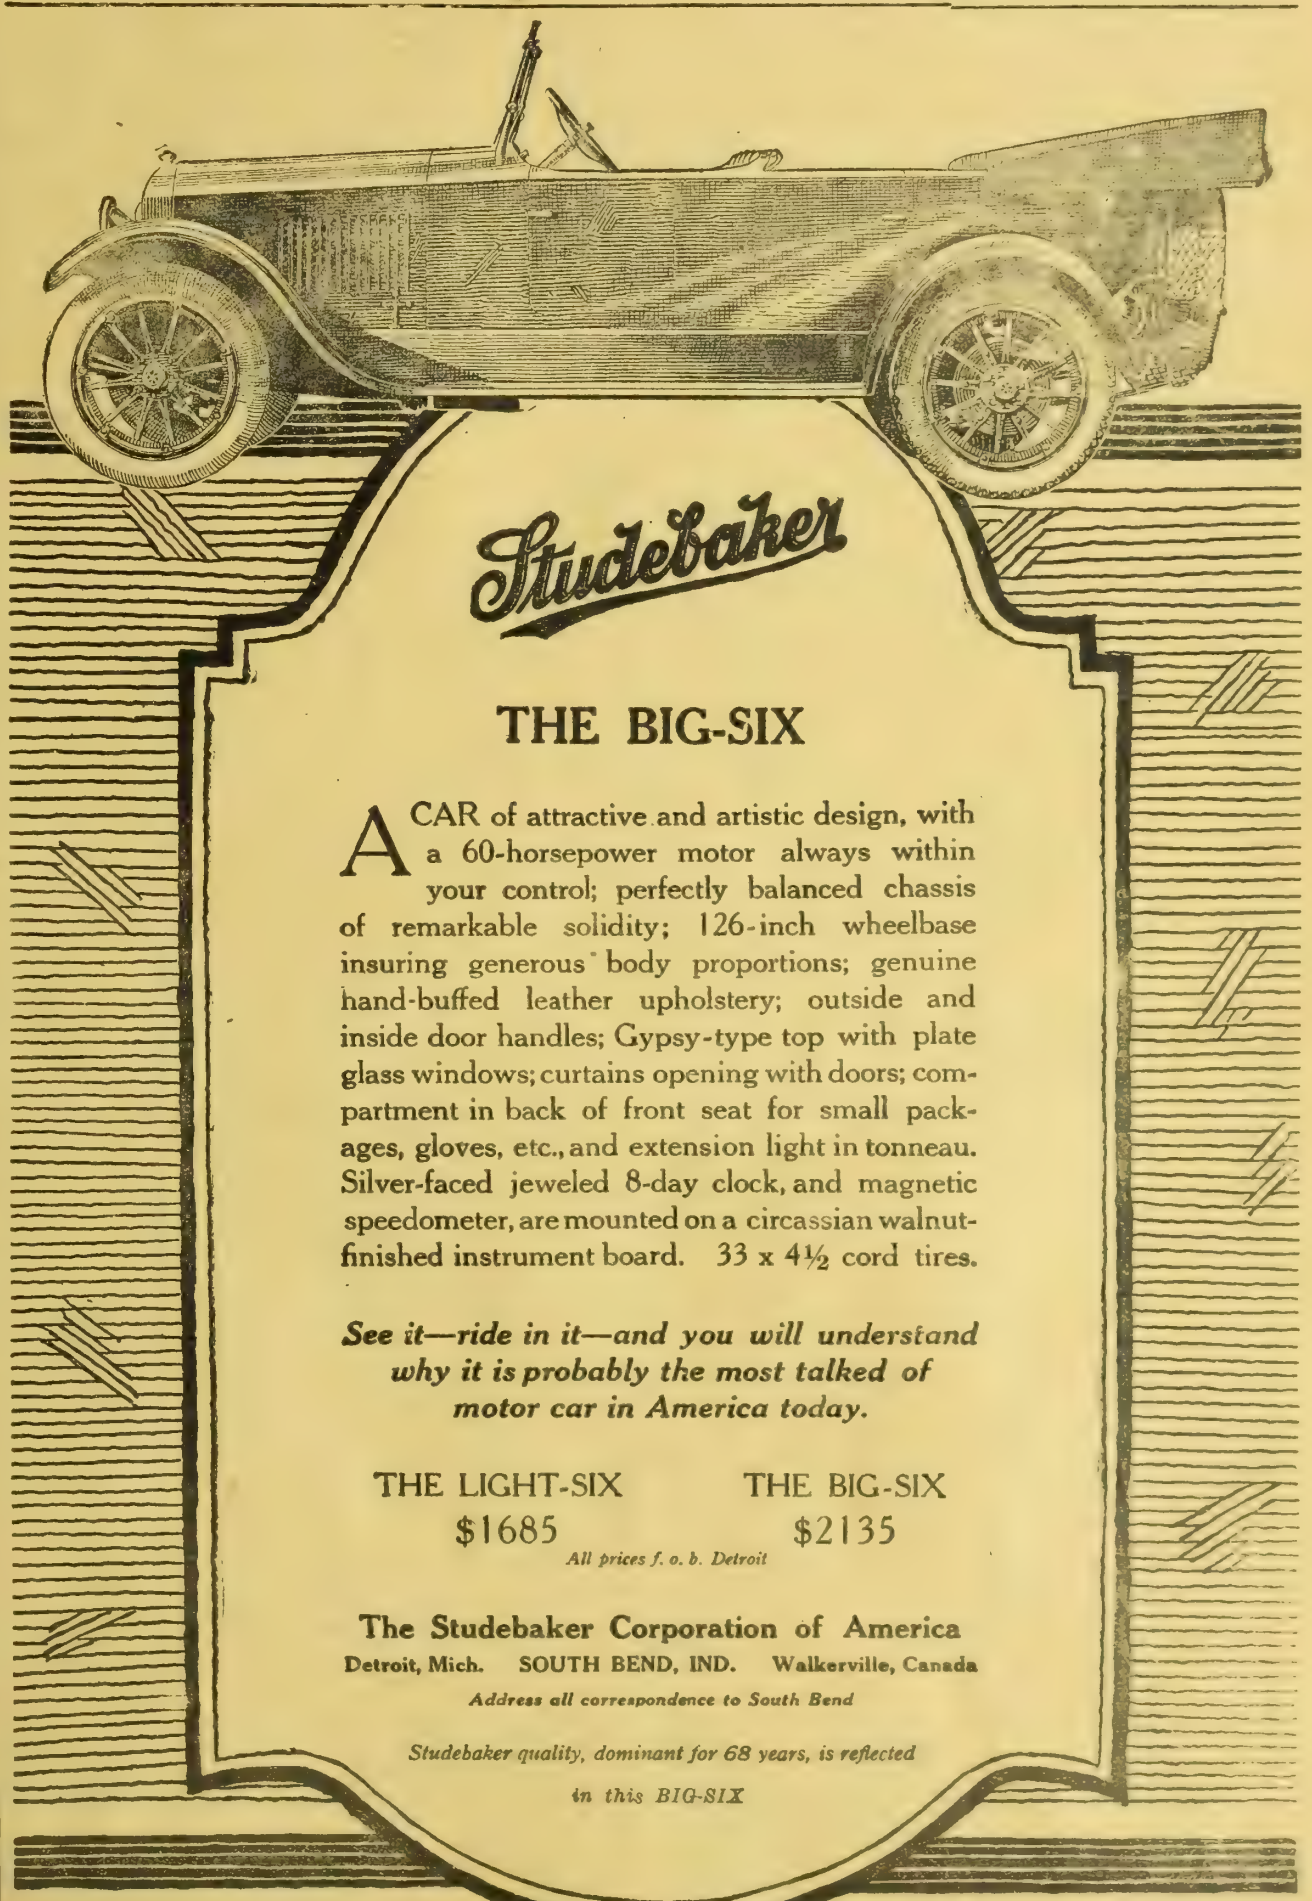
What have the enemies of the pact to offer to insure peace? Nothing.

They would return to the old system of "Hidden Treaties," secret diplomacy ,the old "balance of power."

Each nation would become greedy and envious, suspicious and deceitful. Tax upon tax and loan upon loan would be heaped upon the people by their respective governments (or alliances of them) for building a "man-destroying" machine that could do better execution than the [illegible] possessed by and of the others, claiming of course that it was necessary to do this or stand always [illegible] They would be made up of hostile nations and—just another [illegible] Archduke."

Stand up! Stand up! for the league. It exposes us to no dangers that would not be present without it. —L. B. K., Ithaca.

I am very glad to hear such [illegible] commendation of the League of Nations from a reader who evidently thinks for himself. It is true, the covenant is not perfect, but it provides its own machinery for amending. Great confusion will result if Congress makes changes in this covenant now. Let them be made when the times are less perilous and our statesmen think in saner terms. The important thing NOW is get the treaty of peace signed and the League Covenant ratified, and every day that Congress puts the job off only increases the difficulty and peril of our position. I should like to hear from more of our readers on this subject. —The Editor.



THE BIG-SIX

A CAR of attractive and artistic design, with a 60-horsepower motor always within your control; perfectly balanced chassis of remarkable solidity; 126-inch wheelbase insuring generous body proportions; genuine hand-buffed leather upholstery; outside and inside door handles; Gypsy-type top with plate glass windows; curtains opening with doors; compartment in back of front seat for small packages, gloves, etc., and extension light in tonneau. Silver-faced jeweled 8-day clock, and magnetic speedometer, are mounted on a circassian walnut-finished instrument board. 33 x 4½ cord tires.

See it—ride in it—and you will understand why it is probably the most talked of motor car in America today.

"AN OUNCE OF PREVENTION IS WORTH A POUND OF CURE"

IN ORDER to prevent our buildings from decay we paint them. They not only look better, but wear longer, and when the horse kicks a hole in the barn floor, we immediately repair it before it becomes larger. Do we always take the same care of our human dwellings, the most wonderful and highly tempered house known?

Because women spend more time in the house, necessarily, than men, they get less fresh air and sunlight, two of nature's greatest health-giving tonics. T. W. Higginson, a noted writer says: "Few things are more important to a community than the health of its women—if strong is the frame of the mother, says a proverb, the son will give laws to the people—and in nations where all men give laws, all men need mothers of strong frames."

Perhaps the house in which you live was not planned and built by you; the kitchen may be built on the shady side of the house and be dark. The first essential in remedying this evil is to realize the need of it, and then, at a very little expense, you can at least provide one or two more windows on the side where the sun will shine in and then can perhaps change the arrangement of your room so that your sink for dishwashing comes under the window. We know that food will quickly spoil in a damp, dark place; then can we expect more of our bodies?

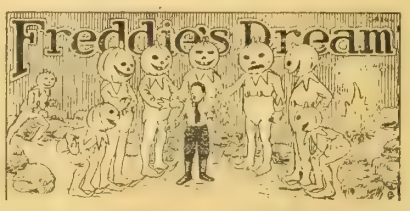
And while the dishes are being washed in the morning, for five or ten minutes, you can throw open the living room door, even on the coldest day, and let that general room have a good airing. You will find that the cold, fresh air will heat twice as quickly. Or you can air it while you are sweeping and dusting, as you will not catch cold while exercising. Of one thing you may be sure; if plants will not thrive in your living room, you cannot be healthy there either. Plants breathe just as we do, and air filled with dust, with fumes from the stove and air which has been breathed by a number of persons is not fit food for humans any more than it is for plants.

One of the most striking examples of sanitation as bearing on health can be found in the way in which the army camps were conducted. Hurriedly built huts housed thousands of men, and considering the number there, sickness was less than in any city or town. But the doctors and officers in charge were forever on the lookout that the floors were kept scrubbed with hot soapy water, for soap is one of the best disinfectants known, that each man had so many square feet of space so that there would be sufficient air, and all garbage was carried out immediately from the kitchen so that no flies, or any other kind of disease carriers would be attracted thereby. And the boys who have returned have a new standard of living set which they will not soon forget and because of this new standard they will be better fathers and will notice these little things in their homes much more quickly. It therefore behooves the women of the land to keep pace with their boys and their men and encourage in them a new standard of sanitation in the home.

The pursuit of happiness is strong within all of us, and health is absolutely necessary to perfect happiness; then let us guard our health as the most precious of all our possessions.

Instead of the usual beauty column which is run in so many of our papers, we intend to run a series of articles dealing with the subject of "keeping well," for no one can be beautiful who is not happy, and no one can be happy who is not well. If you have a cold with the consequent red, swollen nose and lips, and weepy eyes, the best cosmetics in the world will not make you attractive, therefore the best course in beauty culture which we know is the gospel of keeping well and keeping happy.

Next week we will take up the discussion of the Teeth in their relation to health and beauty.



By C. Shirley Dillenback

Master Freddie, aged five, was very fond of pumpkin pie,
And just as sure as I'm alive (of course I wouldn't tell a lie)
He ate so much one night at tea he had a fearful dream—
He sailed upon a yellow sea to pumpkin land 'twould seem.
Where no one lived but giants tall with jack-o-lanterns for a head,
Poor Freddie seemed so weak and small he like a coward ran, 'tis said.
The giants came from everywhere with gleaming mouth and staring eyes—
Of master Fred to get a share—Poor Freddie raised some awful cries.
Just as his mother reached the bed—a giant grabbed him by the jeans—
And said, "I'll teach you master Fred to eat less pie on Hallowe'ens."

SEEN IN CITY SHOPS

THOSE beautiful wool scarfs so much worn this fall are not difficult to make, and are wide enough so that they protect the shoulders as well as neck, and the wide belt serves to hold them in place in the wind. They are nice for the elderly lady sitting inside who needs something aound her shoulders, but who wishes her arms and hands free, as they will not slip off like a shawl, and the young girls would welcome one for skating and sleigh riding. They can be crocheted with a cap to match for sports wear and would be a very lovely Christmas gift. Yesterday coming up from town on a car a lady was wearing one made of gray yarn, and the piece which folded back around the neck and down the front forming the tuxedo front was of a gold colored yarn. Her suit was gray and also her gloves. The effect was very pleasing.

The necks of street and house dresses for afternoon wear are made much higher; just as high in fact as they can be made and still left without a collar, and the neck line left pretty. And they are finished without collars, either in square or round effect. Whether or not this style will continue is problematical, but the most highly priced waists and gowns being shown are affecting this style.

WOMEN IN POLITICS

(By Judson Grenell)

IN THIS week's installment of Mr. Judson's comprehensive treatment of this subject, he takes the question of "how to split your ticket" if you don't want to vote a straight ticket, how to properly mark your ballot and how to challenge the voter, all of which should be thoroughly understood by every voter before they enter the polls. If our women readers will take the time to read these articles as they appear each week, they will be better prepared to vote than most of the men who enter the voting booths.

Voting a Straight Ticket

If you wish to vote a "straight" party ticket, a cross (X) mark is made in the place designated under the party emblem. In this way a complete ballot can be voted by simply making one cross (X) mark. It is a simple method; but unfortunately the result is that, as one party seldom if ever makes the wisest selection of candidates for all positions, the voter favors candidates who ought to be defeated, as well as candidates who ought to be elected. Still, there is this advantage in placing a cross (X) mark under the party emblem; you are sure to vote a full ticket; you have made some selection, even if not entirely the best one.

But supposing, after having selected your party, you still desire to favor candidates on other tickets? In that case all you have to do is to place a cross (X) mark before the name of each one you wish to favor, and it will be counted for your candidate, and against the opponent on the party ticket; in such a case the cross (X) mark under the party emblem does not count.

In local elections, at least, it is no longer considered "good form" or good sense to persist in voting the "straight" ticket, and in some localities the "party" emblems have been dispensed with. This is the case in Detroit. Seldom does one party make the best selection of nominees for all the positions in the gift of the electorate. The best equipped candidate for the office of the greatest local importance may be the candidate of a numerically weak party. There is wisdom in independent voting.

Helping to Mark Ballots

The law provides for "helpers" for illiterate or physically incapacitated voters. The election inspectors designate one of their number for this purpose. Sometimes well educated people ask the inspectors to aid them in marking their ballots, but the "helping" clause in the law governing elections was never intended to encourage such mental laziness. Besides, helping people to mark ballots opens the door to vote buying and other unlawful conduct. Helping to mark the ballots of those who can read is something to which all right-minded men and women object.

The words "physically incapacitated" have reference to those who are blind, to those unable to use their hands, or who are without hands, or who are otherwise physically helpless. These are entitled to be assisted by duly authorized inspectors who are forbidden to attempt to influence voters for any particular party or candidate.

After the woman voter has been handed her ballot, and she has made her choice, she then folds it in such a way that the number appearing on one of the corners can be torn off without mutilating or disclosing the ballot. Each ballot must also carry the initials of one of the inspectors; otherwise it will not be counted. So it is the duty of each voter to see that her ballot has been initialed. It is her further duty to see that the identical ballot she hands to the inspector is placed in the ballot box. A voter has the right to insist that this be done in her presence immediately it is handed to the inspector.

If you make a mistake in marking your ballot do not try to erase it. Exchange it for another ballot. Attempted erasure will invalidate the ballot.

Challenging the Voter

If, during these proceedings, some one should challenge the vote, do not be disturbed. Sometimes this is done in order to frighten people away from the polls. It is also resorted to as an underhand method of winning out, by making voting so slow that the polls are closed before all the ballots have been deposited. Then, again, the challenger may honestly think you have no right to vote.

So long as you know that you are entitled to vote, being of age, and having registered in that precinct, just "swear in" your vote. Laugh it off as a good joke on those who tried to frighten you from doing your duty.

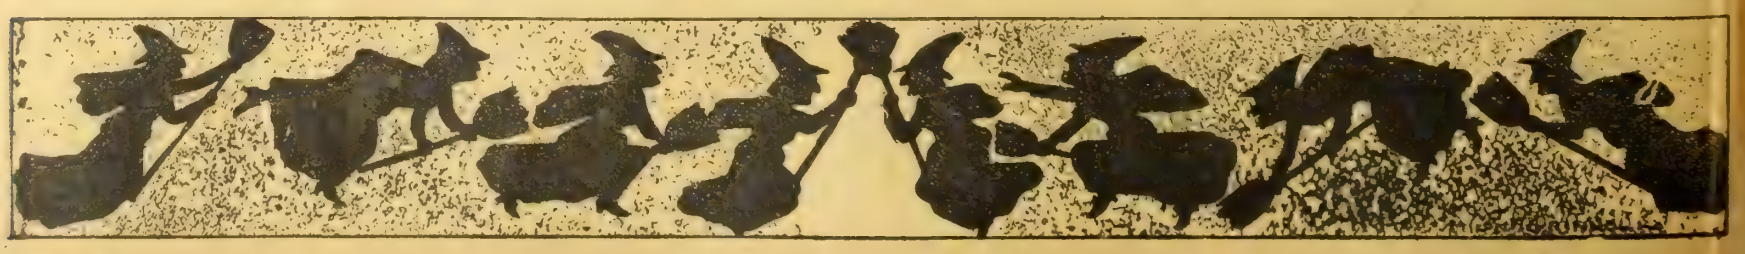
Challenging is one of the ways of preventing illegal voting, but crooked people sometimes try to put a good law to a bad use. Never neglect to swear in your vote. It takes only a moment to be sworn, and there is nothing humiliating in it, or of which you need be ashamed.

Should you change your residence between the date of registration and election day, obtain a transfer to the voting district to which you have removed. There is generally a printed form on which to do this, and which can be obtained of the proper official, usually the city clerk in the city or the township clerk in the country. In Detroit a precinct residence is acquired in 20 days; a county residence in three months; a state residence in six months.

"Colonizing"

It has been complained that short term residence requirement tempt parties and candidates to "colonize." That is, legal voters are moved from localities where their votes can be spared to places where a few extra votes may win an election.

To lengthen the time in which residence is acquired would often work hardship on honest citizens forced to change their residence shortly before an election. The best remedy thus far discovered against colonization schemes under forms of law, is publicity. Candidates will not resort to such a method if they fear it may be discovered; for what would be gained by the colonization of voters would be more than lost through right-minded voters declining to support a candidate who would be guilty of resorting to such a method of overcoming a political antagonist.



The Children's Hour

DEAR CHILDREN: Already the Christmas gifts are being shipped out. Last week Mildred Field of Bangor, Michigan, won a large box of paper dolls with dresses and Phoebe Dunlap of Lupton, secured the large size drawing book. You too can earn these lovely gifts if you will just get busy and secure a few subscribers to your favorite paper.

The first prize for the Hallowe'en drawing which appears elsewhere on this page was awarded to Emory Bowen, of Ionia, Michigan, so you see a whole lot of our little folks are busy.

And now I want you to write me a story of Thanksgiving and there will be prizes for the two best stories. Affectionately yours—Laddie.

Dear Laddie—I have never written to you before. I am ten years old and in the fifth grade at school. I live on a fruit farm. We have a Ford truck and a Reo passenger car. My father takes the M. B. F. and I like the Children's page very much. For pets I have two kittens.. I wish some of the boys and girls would write to me. Hoping to see my letter in print. Marjorie Meredith, Shelby, Mich.

Dear Laddie—This is the second time I have written to you. My mamma has 35 ducks, 30 geese and 35 turkeys and 200 chickens. We have 18 pigs. I had a pet lamb and sold it. I have a tory-cycle and ride it to school. I like the Children's page. My letter is getting long; hoping to see my letter in print. Gladys Gribbin, Marlette, Mich.

Dear Laddie—I have never written to you before. I am a girl, 11 years old and I am in the fourth grade. My brother takes the M. B. F. and I read the Children's letters and the Doo Dads. I found the puzzle and I pasted it together. It is an ostrich. I have five brothers, Henry is eight years old and in the first grade, L. B. is 16 years old and is in the 6th grade. Our teacher's name is Etta Haney. Ray and Elmer were in the war. Ray is 24 years old and Elmer is 27 years old. Willie is 29 years old. Ma is 52 years old and papa is 62 years old. My brother owns 120 acres of land. We have two horses and a dog. We have one cow and my brother has one cow. I hope to see this letter in the M. B. F. Daisy Timmon, Paw Paw, Mich.

Dear Laddie—As I have never written to you before I thought I would try my luck. I am a boy eleven years old. I am in the fifth grade. I have one mile and three-quarters. I have four brothers and two sisters. I had one brother die. We live on forty acres. We have two horses and two cows. We have two nice pigs. I have a little white dog. I have one brother married. I hope to see this letter in print. Yours truly, Anson H. Richardson, Auburn, Mich.

Dear Laddie—I wish you would tell me how to earn those Christmas presents. We did not get our paper until late so I did not know so I thought I would write. I am 12 years old and in the 8th grade. I hope I can earn some Christmas presents. We take the M. B. F. and papa thinks it the best farm paper there is. Mama also likes it. I think the Doo Dads are so funny. I guess I will stop. Yours truly, Lois Gilbert, Nunica, Michigan, R2.

Dear Laddie—I have never written to you and so would like particulars concerning the Christmas gifts. I am a girl fourteen years old and am in the eighth grade a school. I live on a 93 acre farm We have four milch cows and ten young cattle, about 60 chickens, two cats, four rabbits, and 11 ducks. I have five sisters and four brothers. My father takes the M. B. F. and likes it fine. I also enjoy reading the Children's Hour page and I like to look at the Doo Dads. They are comical little folks. Hoping to see my letter in print I will close. I have sent a little Hallowe'en drawing. I'm afraid it isn't much good.—Lucile Crosby, Clarkston, Mich., R 3.

Dear Laddie—I have never written to you before so will write now and hope to see my letter in print. I am ten years old and in the fourth grade. I live two miles from school. My teacher's name is Miss Murphy. I have a sister going to school. She is eight years old. Her name is Mary. We live on an eighty acre farm. I like farm life very much and expect to be a farmer when I grow up. We have five horses and three colts and six cows. For pets we have a little kitten and a canary bird. Our bird's name is Dicky. I must close and if my letter is in print I will write again. Arthur Sanderson, R 1, Blanchard, Mich.

Dear—Laddie. I received your Christmas offer yesterday and was glad to get it. I am going to try to get some subscribers, as I would like the prizes offered. I have written four or five other letters but have never seen them in print. Our school started September 2nd and I was glad of it. Iam in the 6th grade. Very truly, Miss Lucile Hubbs, Greenville, Mich., R. F. D. No. 1 Box 118

Dear Laddie—I have written once before and I thank you for the thrift sta you sent me for my story, and I am drawing a little duck so to win another prize. What kind of a prize are you going to give for the best drawing. I washed all the clothes today for mama and did not get them in for it rained and is raining yet. Will close, hoping to see all this in print. This is my pet duck. Mildred Farrells, Blanchard, Mich.

Dear Laddie—I wrote to you once before but did not see my letter in print. I thought I would write again. I am a girl eleven years old and live on a farm of eighty acres. We have ten head of cattle, two horses and one colt, and five pigs. Papa takes the M. B. F. and likes it very much. I like to read the Children's Hour. I have four sisters and one brother. I have about a mile to school. My teacher's name is Miss D. Day. I like her very much. I am in the 7th grade at school. I am going to draw a picture and see if I can win a prize on it. I hope my letter will not land in the waste paper basket. I hope my letter is not too long to be printed.—Hedwig Jungnitsch, Hemlock, Mich.

Dear Laddie—I have never writen to you before. I am a girl 10 years old and in the sixth grade. Papa takes M. B. F. and likes it very much. I like to read the Children's Hour and the Doo Dads. I am busy after school. We raised about 203 chickens during the summer. It was from March until September. I am going to write a story. It is about the boy and wolf. Here it is:

The Boy and the Wolf

Once upon a time a boy was sent by his father to tend the sheep.

His father and some other men were working in a field near by. Bye and bye the boy called, "wolf, wolf," and the men came to see if any wolf was there. There was no wolf. The boy was lying comfortably under a tree while the sheep were grazing quietly. The next day the while the boy was watching the sheep he called "wolf, wolf," again the men came but there was no wolf

The third day while the boy was watching the sheep a wolf came and the boy called "wolf, wolf." But the men did not come. Again he called but still they did not come. The poor little lambs were torn and eaten by the wolf. Who can believe a boy like that? Well I will close hoping to see my letter in print. Your friend, Esther Buser.

THE JUNIOR COOK

Bran Muffins

Put 1 tablespoonful of vegetable oil (lard may be used); 2 tablespoonsful sugar; 1 teaspoon salt, into a mixing bowl and beat well.

Add 1 and 1-2 cupsful of bran; 1 and 1-2 cupsful of flour sifted with 4 teaspoonsful baking powder; 1 cupful of milk.

Beat till well mixed. Drop by spoonsful into greased muffin tins and make for 20 minutes.

If raisins are liked 1-2 cupful may be added with the flour.

These muffins are not only very inexpensive and easy to make up but they are very wholesome.

SHOES
WHEN buying a car you don't only take into consideration the first cost, but the yearly cost, depreciation, up-keep, etc. You also consider the service and comfort.
Give the same consideration when you buy your shoes.
HIRTH-KRAUSE Rouge Rex Shoes made for the Man Who Works, give more service and comfort than just shoes, and the cost is less per year. Put on a pair and see how they wear. The looks and feel of them will make you a customer for Rouge Rex Shoes.

Tanners and Shoe Manufacturers
Grand Rapids - Michigan

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

Except for an occasioal upward spurt grain prices ruled quite evenly the past week, though the feeling was somewhat stronger at the close of the week than at the beginning. The rapid decline in grain prices, brought about largely by the agitation against the high cost of living has brought the farmers to their senses and many of them are refusing to sell at present low levels. Corn is too cheap in comparison with the prices of other grains and commodities, and the increasing disposition of farmers to hold to this crop is having a strengthening effect upon the market.

General industrial conditions still show their effect upon the grain markets. Capital does not like the attitude of the labor organization and is frankly afraid of what may happen. Many big dealers are simply marking time pending the outsome of the industrial conference at Washington. If capital and labor would only make concessions, patch up their differences and get down to business once more, the wave of uncertainty that is sweeping the country would soon disappear and people would again go about their accustomed tasks in the old accustomed way. At the present time the longshoremen of New York City are on strike and export movement is being greatly hampered thereby.

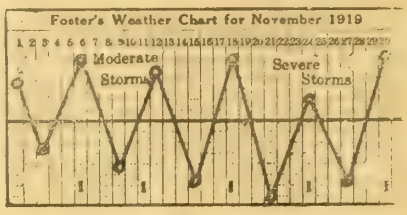
As stated in a recent issue it is our belief and held by many others in close touch with the grain trade that grain prices have reached their lowest level and that any future change must be upward.

WHEAT SITUATION GOOD

Less than three months ago predictions were made that the enormous crop of wheat then in prospect would flood the country as by a deluge, clogging up the avenues of transportation and upsetting all standards of values. This prediction has not come true. There is some congestion because of the early and rapid movement, and a car shortage that now threatens to become serious, but for the most part the demand has been able to take care of the accumulating supplies. In fact, it is asserted that were all government control now removed wheat would soon go to a much higher level. The writer had a long discussion of this matter with Congressman Young of the great wheat state of North Dakota who strongly favors the return of wheat to the basis of supply and demand. Most of the Michigan wheat is out of the farmers' hands so whatever may be done along this line will effect our Michigan wheat very little one way or another. The suggestion that the government extend its control and guaranteed price to cover the 1920 crop of wheat is fortunately meeting with the opposition of Julius Barnes, president of the Grain Corporation. Sooner or later the government must relinquish its control and the sooner the better.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



Warm waves will reach Vancouver about Oct. 28, Nov. 2 and 7 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of Oct. 29, Nov. 3 and 8; plains sections Oct. 30, Nov. 4 and 9; meridian 90, great lakes, middle Gulf States, Ohio-Tennessee valleys Oct. 31, Nov. 5 and 10; eastern sections, Nov. 1, 6 and 11, reaching vicinity of Newfoundland about Nov. 2, 7 and 12. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will dominate weather of North America from Oct. 28 to Nov. 12. Temperatures of these fifteen days will average near normal Following the severe storms near Oct. 25 quiet weather will prevail till near Nov. 9 when severe storms are again expected. These will include high temperatures, a cold wave, a blizzard and excessive precipitation, particularly in the cotton states. Rain south and snow north will be quite general.

End of November will close out the 165-day cropweather period and we will pass into another long period covering 165 days. These are the most important of all the various cropweather changes. When they are more completely understood we will know the kind of crops that will do best for each year and will thereby be able to avoid the loss of seed and labor that amount to millions every year. Enough is already known to make very considerable savings by following the weather laws that are now understood

BETTER TONE TO CORN

Grade	Detroit	Ch'go	Tol.
No. 2 Yellow	1.45	1.45	1.44
No. 3 Yellow	1.45		
No. 4 Yellow	1.43		

Following a sluggish week during which the bears played up the Argentine situation and the bulls took advantage of the revived export demand, the corn market opened up strong and defied all bearish conditions. Prices for the week are slightly higher and the tone of the market is the best for some time. We feel that it would be good business for farmers who must buy some corn to carry them through the winter to make their purchases now, and for farmers who have corn to sell not to be too anxious to get rid of it. Common sense tells us that the bottom has about been reached in corn deal.

OATS ARE HIGHER

Grade	Detroit	Ch'go	Tol.
Standard	.74	.74	.75
No. 3 White	.73	.72	

Oats are struggling upward in sympathy with corn, though we expect to see these two grains acting quite independently of each other by the first of the year. While the supply of corn is large and therefore there will be a reasonable limit beyond which the price cannot go, oats should reach a much higher level because of the scarcity. Speaking of oats, the Price Current Grain Reporter says: "Oats are selling around the cost of production and in some cases below. The country is not disposed to sell and at best has less grain than for some years past. The shortage in North Dakota and Montana will result in part of the South Dakota and Minnesota crop moving westward. Texas oats moved into the southeastern states in volume, but while the crop in the former section was rather large it was seriously damaged by rains and a revival in the southern call is expected before long."

POTATOES REACH LOW POINT

October 26, 1918 Prices	Detroit	Ch'go	N. Y.
Choice Sacked	2.10	1.70	2.70
White Bulk	2.00	1.65	2.60

October 22, 26, 1919 Prices	Detroit	Ch'go	N. Y.
White Sacked	2.40	2.35	2.50
White Bulk	2.30	2.25	2.40

Last week potatoes reached the lowest levels of the season, and, says the Chicago Packer, "operators were of the opinion that the low point in the season's market had been passed."

The October estimate places the yield at 350,070,000 bushels which is almost a hundred million bushels less than the 1917 crop, but 90,000,000 bushels greater than the 1916 crop which was the smallest since 1905. The low production for 1919 practically assures an advancing market throughout the balance of the season. One of the influences that has interfered with demand and kept prices down is the rot that has developed in many carloads of eastern potatoes, in transit. The advent of colder weather promises a remedy of this condition, and with better quality assured the demand for winter storage should make itself felt very soon.

Farmers in this state are marketing spuds rather freely with country prices ranging from 80 cents to $1 or more per bushel. We do not feel that under the conditions this price is higher and expect to see country points offering considerably more than that figure before another sixty days. It would be well, however, for farmers to distribute their marketing pretty well over the season.

It is reported to us that Michigan is now being discriminated against in her allotment of cars, and we have been asked to investigate and see if the situation can be remedied. Farmers who know of instances in which their local dealers or associations have been unable to secure cars for potato shipments should notify us at once of the fact and the circumstances.

BEAN MARKET LOOKS GOOD

Grade	Detroit	Ch'go	N.Y.
C. H. P.	7.00	8.00	8.00
Prime	6.75	7.50	7.50
Red Kidneys	11.50	12.00	13.75

The bears and the bulls in this state are engaged in a frantic struggle to get control of the bean market. There are a few, perhaps only three or four big jobbers who have sold short and are doing their level best to haul prices down to where they can "get out from under." Just as determinedly opposing these bears are certain jobbers who know that the Michigan bean grower surely cannot make a profit at less prices than now prevailing and that the future of the industry depends upon the maintenance of a fair price. There is a firm of jobbers in Grand Rapids which has presistently opposed this move to bring prices down below the cost of production, and its snappy news letters sent out each week to all the trade, no doubt have had an effect in helping to sustain the market. We quote one of their bulletins as follows:

"Four Michigan jobbers (our competition) thru their elevators and direct have offered to sell us beans in an effort to get us out of the market.

"Account of our competition refusing to quote the trade in further effort to bear the market, our business has been unusually large. Wholesale grocers have been active buyers the past ten days at prices ranging from $7.25 to $7.75 and inquiry has materially increased as the market advanced. Wholesalers will buy at reasonable prices. They are not asking for $7.00 beans.

"From present indications jobbers are short Octobers and will stop at nothing to break the market. In these wild speculative endeavors to get 'on easy street' they are wrecking your industry and ours.

"Elevators report light movement from farmers. Some sections reported today farmers are refusing to sell at $6.75 basis. Growers will, we think, be satisfied with $7.00 beans. The trade will take them on this basis.

"A great deal of stress has been placed on the Kotenashi beans, but if you have followed the market you will notice that they have followed the advance of Michigan beans until they are now 65c higher than on October first. This merely shows that Michigan is still the barometer of the bean market.

"California beans have also advanced materially and are being quoted today at prices ranging from $6.75 to $7.00 f. o. b. coast. Add 94 cents rate of freight and you find they are in line with Michigan. California further reports a 50 per cent crop.

"By all means do not be a party to the short scheme because it's long longer up than down and your chances are slim for the risk you take.

We do not entirely agree with their statement that Michigan is still the barometer of the bean market. How could it be when Michigan's available supplies this year are less than half of the California supplies, and probably but a drop in the bucket to the beans that Japan has available for export to this country. While we want to see this bean market main-

DISPERSAL SALE

OWOSSO, MICH., Nov. 12, 1919

20 Head of High Class Reg. Holsteins

Herd Sire, Traverse Laundry Ryma No. 252,616; 2 years old. His seven nearest dams average 28.61 lbs. of butter in 7 days. He is a splendid individual, a real show bull and will make some one a fine herd sire.

Eleven cows and heifers from 2 to 8 years old, will all be fresh by Jan. 10th from the above bull. A 23.85 lb. 4 year old, and her heifer calf. A 20.62 lb. 3 year old and two of her daughters. Three daughters of a 29 lb. cow, one of them from a 26 lb., one a 30 lb., and the other from a 35 lb. bull. Six daughters of a 29 lb. bull. This herd is on the ACCREDITED HERD LIST and are fine individuals. They have won more premiums in the show ring than any other herd in this part of the state. I have sold my farm and they must all be sold. This will be a rare opportunity to secure high class foundation stock from a clean herd. Sale will be held at the farm at 1:30 p. m. Electric cars from Lansing or Owosso stop in front of the house. Get off at Thomas Farm.

Auctioneers: Col. Ed. Bowers, South Whitley, Ind.; Col. E. E. Slye, Ionia, Mich.

WESLEY HILE, R- 6, Ionia, Mich.

tained and prices advanced at once to at least $7 or $7.50 per cwt., to the farmer, we must not blind our eyes to the menace of the Japanese competition. Jap beans CAN be sold so low in this country as to virtually destroy the immediate market for the domestic beans. But it will not help the situation any for American bean growers to rush in their beans on a declining market. If this thing happens that we fear may happen, all Michigan bean growers can do is to sit tight and wait until the flood is over. The minute the tariff goes into effect, it will be goodbye to the Jap bean and the market should rise immediately to a better level. Of course, our fears may be entirely unfounded. There may be no unusual influx of Jap beans, and if not we are going to see higher priced beans right away.

WHAT THE FARMERS THINK ABOUT BEANS

The above firm is making a postcard survey of bean conditions in Michigan and they report the result under date of Oct. 17th as follows:

"Average of 53 reports 13 bushels yield per acre and 53 make average available stock this season only 57 per cent. Just four elevators report 100 per cent, one of these says, 10 per cent are not yet under cover, another 15 per cent. No one has reported better than 100 per cent average. One elevator reports 50 per cent available stocks and 50 per cent of crop still in the fields. Another 90 per cent available stock and 30 per cent not under cover. 24 say all the crop is under cover. 7 report more than 25 per cent still in the fields and 25 range from 5 to 15 per cent still out.

"The question 'are farmers free sellers at this price?' brought 'no' from 40, two said 'fair' and 14 answered 'yes.' One of the latter group says 75 per cent of the crop has been marketed, three volunteer the information that 50 per cent of the crop has been shipped out. All join the majority report that farmers consider $7.00 to $8.50 basis is a reasonable paying price.

NEW YORK BUTTER UPSET

The strike of longshoremen and expressmen dislocated the market. Posted receipts were little less than the same time last week, but there was a shortage of fine butter and quotations were marked up 1c on firsts and higher grades, and ½c on lower grades. As a great deal of butter is arriving now by express the strike naturally upset the market and until the strikes are settled upset conditions may be expected.

Fresh creamery, top scores 69c to 70c; exs., 69c; 1sts, 58c to 68c; 2ds., 54c to 57c; unsalted 3c higher than salted; held, opt scores, 63c to 62½c; 1sts, 61½c to 69½c; 2ds, 56c to 60c; state dairy, 59c to 67c; ladles 46c to 50c; packing stock, 44c to 47½c.

DETROIT MARKETS

Apples—Michigan, small $1.25 to $1.50; best, $2.25 to $2.75 per bu.; Western, $3.50 to $4 per box.

Butter—Fresh creamery, firsts, 59-½c to 60c lb.; fresh creamery, in 1-lb. bricks, 62c to 63½c per lb.

Chestnuts—15c per lb.

Cabbage—Home grown, 75c to $1 per bu.

LOW COSTS MAKES JAP BEANS MENACE

(*Continued from page* 1)

are obliged to do, depletion of soil, depreciation on tools, equipment, buildings, etc., and supervision. A correspondent objected to filling out our cost blank because it did not contain these and other items. The reason why it did not contain them is because that no two farmers would estimate them alike, and we preferred to figure out these items ourselves. We mentioned only such items as farmers were most likely to have autheitic information upon. Prof. Graves, of the office of farm management of the M. A. C., has estimated the cost for Michigan to be $45 "or more" per acre. It is clear that were every item of cost entering into the production of a bushel of beans exactly figured the total ers figured a cost of less than half would be in excess of $50 per acre, although it must be said that many farm-that amount. The Ways and Means committee was given plainly to understand that the reports submitted by us were NOT inclusive of the items above mentioned.

From official figures, the bean delegation showed that the oriental bean industry was almost entirely supported by unskilled labor. Very little machinery is used. The beans are planted, pulled threshed and picked by hand, over fifty per cent of the labor being performed by women and children. The wage of a Japanese farm hand is about $30 per year if he is a good one. Otherwise, he is paid from $20 to $25 per year. The daily wage is from 15 to 18 cents. No argument was necessary to convince the committee that the American farmer was entitled to protection against such labor condition ass these.

Mr. Frank B. Dreese submitted to the committee some very interesting and significant figures showing the increased prices paid by farmers for tools and supplies, as follows:

Prices Paid by Farmers for Tools and Supplies

	1915	1919	Increase
Binders	$125.00	$240.00	% 92
Plows	14.00	30.00	%114
Plow points	.35	.85	%143
Team Harness	45.00	100.00	%122
Wagon	65.00	125.00	% 92
Bean Puller	24.00	45.00	% 88
Binder Twine, lb.	.09	.25	%180
All wool ingrain carpet per yd.	.75	1.75	%133
Men's Work Shoes, per pair	3.50	.50	% 89
Men's Wool Socks, pair	.85	.75	%130
Men's Cotton Socks, per pair	.12½	.30	%140
Men's Work Shirts	.50	1.25	%150
Men's Overalls	1.00	2.50	%150
Man Labor per day with board	2.00	3.50	% 75

VASVARY HOLSTEIN SALE

What promises to be one of the big attractive Holstein sales of the year is that to be held in Oct. 30th by Eugene W. Vasvary, at his farm near Merrill, Gratiot County. There will be sold 22 head of choice registered and 26 head of grade Holsteins, as well as 49 pure bred Duroc hogs, 10 horses, some sheep, poultry and all farm implements including a troctor. Sutherland and Parker will be the auctioneers and John D. Dufty, clerk of the sale.

Statement of the Ownership, Management, Circulation, Etc., Required by the Act of Congress, August 24, 1912.

of Michigan Business Farming, published at Mount Clemens, Mich., for Oct. 1, 1919.
State of Michigan, Count of Macomb. ss.

Before me, a Notary Public, in and for the state and county aforesaid, personally appeared Forrest Lord, who, having been duly sworn according to law, deposes and says that he is the editor of Michigan Business Farming and that the following is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, Rural Publishing Company Mount Clemens, Michigan.

Editor, Forrest Lord, Mount Clemens, Michigan.

Managing Editor, Verne Burnett, Mount Clemens, Michigan.

Business Manager, Geo. M. Slocum,, Mount Clemens, Michigan.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

Grant Slocum, R 4, Mt. Clemens, Mich.
Geo. M. Slocum, R 4, Mt. Clemens, Mich.
Forrest Lord, 224 North Gratiot, Mount Clemens, Michigan.
Estate of Chas. Hampton, Detroit, Mich.

3. That the known bondholders, mortgagees, and other security holders owning or holding bonds, mortgages or other securities are: (If there are none, so state.)

None.

4. That the two paragraphs next above giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than as a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

5. That the average number of copies of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is. (This information is required from daily publications only.)

FORREST LORD, Editor.

Sworn to and subscribed before me this 8th day of October, 1919.

BERT V. NUNNELLY
(My commission expires Sept. 5th, 1920.)

Good Cows–Good Feed

Wherever you find good cows, you will find that a majority of their owners have a strong preference for Unicorn Dairy Ration.

Good cows and Unicorn seem to pull together.

There is a reason for this. The dairyman or breeder who is capable of owning a herd of high-producing individuals is also capable of determining beyond doubt which dairy ration secures the most economical and best results.

Leading breeders, Agricultural Colleges and public institutions use and endorse this feed.

At the National Dairy Show, four owners of Grand Champions are Unicorn users. Two of the Guernsey judges and probably half the men in the ring, also.

If your letter requesting particulars so states, we will send you a list of breeders in your state who endorse Unicorn.

R. W. Chapin

What 15c will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 28th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends. The Pathfinder, Box , Washington, D.C.

Crop Reports

MONTCALM. (S)—The wheat and rye are in a fine condition now after receiving two weeks of wet weather and it is expected the grain will have a large growth before winter. Beans are being threshed at the present time which are not yielding very good, but the quality is fine as most of the beans were put in the barns when in a good condition, there being a small acreage this year. The digging of potatoes is now being done very rapidly and they are yielding at a medium average, but the majority is of a very nice quality and they are now being sold at $1.50 per hundredweight.—W. L.

ARENAC (E)—The weather has been very catchy and still there are some beans and peas out yet owing to the scarcity of labor. Beans are going to be disappointing in yield and we believe they will not average over 8 bushels per acre, although there are some fine fields through here, but that wet spell in the early part of the season caused the drop. Beans advanced 25 cents last week. Potatoes are being sold at the elevator at $1.05 per bushel. Poultry also took a big slump. Some farmers are plowing, filling silos, repairing and the like. Wheat was disappointing in yield and not much was sown here this fall. Beets are being delivered and promise just a fair yield as the lateness and the dry summer was the cause. Stock is still very low in price.—M. B. R.

MONROE (W)—The farmers are busy with their fall crops. Corn is about all cut, some have commenced husking. The corn crop is good. Not many potatoes dug yet. The crop will be a light one, early sown wheat is looking good; some wheat to be sown yet. The heavy rains has made the ground fine for seeding. The alfalfa meadows look fine. No frost to freeze them yet.—W .H. L.

PRESQU EISLE (W)—We are having lots of rain the last couple of weeks and it is too wet to do very much. We didn't have any killing frost until Oct. 6, so the potatoes are hardly fit to dig yet, except the early ones and they are very poor and the late ones won't be hardly half a crop. Most of our farmers have just finished threshing with a very poor yield. The most of the grain only about one third of a normal yield, the spring being too wet; then it turned so hot and dry. There is some fall wheat and rye sowed, which looks good. There is a lot of plowing being done and there are quite a few young cattle in the country with a fair enough feed to cary them through the winter.—D. D. S.

IONIA (W)—Farmers are very busy and help more scarce than ever. Most of the fall seeding is done, but it has been later than usual. Potatoes are turning out better than expected and selling at $1.65 per hundredweight at Saranac. The late rains are making wheat look fine. Lots of auction sales at this time of the year and men leaving the farms. Cows are selling high at sales, around $100 and over. First killing frost came Oct. 11.—A. W. G.

ANTRIM—Farmers husking corn and digging potatoes. Potatoes not very good. Average around 100 bu. per acre. Weather mostly raink and cold. No killing frosts yet. Soil in good condition for fall plowing. Some potatoes being sold through Co-operative Association. Lot of apples being sold. Some live stock being sold. Beef prices paid range from 3 1-2 cents to 6 cents. Hogs 13c. Sure is robbery, isn't it?—N. T. V.

JACKSON (N. E.)—Lately it has been wet and chilly. Farmers are husking and getting in rye. Wheat all sowed. Some potatoes have been dug and are of good quality but not yielding as heavy as in other years. Silos all filled. No bean threshing as qet. Only a few jobs to do this year. If a decent price is obtained a larger acreage may be planted another season.—A. F. W.

TUSCOLA (W)—Farmers are husking corn, digging potatoes and cutting clover seed. Potatoes are going from 75 to 200 bushels per acre and are nice. Potatoes bring at car from 90c to $1.00 per bushel, but farmers are trucking them to Flint and Bay City at $2.25.—R.R.C.

BOYHOOD IN A NEW COUNTRY

(By a Mich. Trapper, in Fur News)

It was woods, all woods on every side of us when we moved into the log house my father had built. Only an acre or two of the towering sugar maples and beech had been cut down and the ground had not yet been cleared of logs and brush. Not a very inviting place to locate with a view of making a living, you might reasonably say, but good for trapping.

But other new settlers all around us were starting in and establishing homes where not a stick of timber had been cut previous to their coming. To chop and clear this land of its heavy timber meant severe labor and then to break up the soil with a jumping plow where it would hook onto roots and throw the plowman headlong onto the heels of his team. Not many of the city reared boys would have the courage to tackle a wild 80 acres, clear it up, put up buildings, buy tools, make the ground produce crops and get out of debt. Some youngish men grew old and gray in their struggle before the farm was cleared and stumps out and they were able to pay up the last note or mortgage and stop the interest which is like a gnawing fox week days, nights and Sundays.

The early pioneers in timbered regions had no other recourse than to throw off their coats and carve out homes and subdue the soil for the producing of crops.

One of the regular roads which divides sections had been chopped through running north and south and we faced it towards the west. Part of the slashed timber had been burned or cut into lengths and hauled off to right or left in the adjacent standing timber. But the stumps were all there, and many logs and limbs, too. Wagon wheels must mount many obstructions and fall with a teeth-rattling bump.

The soil was a clay loam and in wet times, especially fall and spring, it was a common occurrence to see wagons with moderate loads stuck in the mud.

(To be continued)

Five Hundred Milk Producers in Annual Meet

Renew Pledges of Faith in Organization and Resolve to Stand Rigidly by Milk Commission

Denouncing Bolshevism, condemning the demands of organized labor, reiterating their faith in organization and pledging anew their support of the Detroit Milk Commission, the third annual meeting of the Michigan Milk Producers' Ass'n passed into history as the organization's most successful and harmonious convention. Between five and six hundred delegates and members were present representing every county within the Detroit area and many counties outside of the area. Prior to the convention there were rumors of discontent, and it was whispered about that some fireworks would be discharged, but nothing happened to disturb the peacefulness or harmony of the meeting. A new constitution and by-laws were adopted with practically no discussion, and the recommendations of the nominating committee that the old officers be re-elected met with unanimous approval from the members. There were some minor changes in the personnel of the board of directors, but these, too, satisfied the rank and file of the members.

The only friction which arose during the entire meeting was over a suggestion offered by the resolution committee that the association request the Detroit Milk Commission to fix the price per point of test over the 3.5 basis according to the current prices of butter fat. The request was made as a protection for the owners of breeds producing milk of a high butter fat content who claim that they are being discriminated against under the present arrangement. The suggestion precipitated considerable discussion and opposition from the Holstein people, who, predominating in numbers, defeated the proposal. Prices in the Detroit area are made on the 3.5 per cent butter fat basis, with a differential of 4c for each point above or below that test.

There was considerable discussion over the abuses existing between the producer and the condensaries. Scores of farmers voiced their complaints over the tests that had been made by the condensaries to which they sold. Farmers in all parts of the hall declared that they were being cheated on their test right along, and that there was no way they knew of by which they could secure a fair test. President N. P. Hull agreed that there were causes for complaint and promised that the matter would be gone into and a remedy sought.

The splendid address of President Hull who told what had been done and suggested what should be done will be found on the following page.

Milo Campbell with his characteristic punch and vigor, dwelt upon the necessity of greater organization among the farmers, and showed how the future of the dairy business depended to a large extent upon a large and influential business organization.

"The problems of the Michigan milk producers do not begin to compare with the problems of the producers of other states. You are getting more for your milk than any other milk producers' association north of the Mason-Dixon line. That didn't just happen. It means that some one has been doing something. But you appreciate this as much as I do, and I am grealty impressed with the loyalty so much manifested toward this organization.

"You must stay organized. When I read that a price-fixing committee is to be named to cut down the high cost of living, to begin at the ceiling and tell the consumer what he should pay for food products and then come down to the farmer and tell him what he must sell for, I begin to see more clearly than ever before why the farmer's only hope of justice lies in organization. Get into farm organizations. Encourage your organizations to unite with each other. There must be unity. The churches are getting together under one roof. Thank God for that. And the farmers can get together under one roof if they want to. The passage of daylight saving repeal over the president's veto shows the mighty power of organized farmers when working in unison.

"There is a tidal wave sweeping over the world. It is lapping at our shores. The steel strike is but one indication of the great unrest. Grant that labor has grievances; grant that labor has the right to strike, but remember that there are dead-lines which cannot be crossed. Union labor organizations are asking the unreasonable and the unjust. And farmers will suffer if these demands are granted.

"We want no confiscation or destruction of private property in this country. It was the farmers of Lexington who fell before the British general, Pitcairn, in the first blow struck for American independence. And it must be the farmers who will stand firm and true to defend their liberty and their rights to own private property from the hands of the Bolshevists and radical socialists. Stand fast for law and order, and you will put up an impenetrable defense against the despoilers of our independence."

Prof. Oscar Erf Tells Ohio's Troubles

Prof. Oscar Erf of the Columbus University, who has devoted the better part of his life to a study of the costs of producing milk and to securing a profitable market for the Ohio producers, told of the many trials and troubles encountered by the farmers of that state. It was in Ohio that the officers of a milk producers' association were dragged out of their beds in the dead of night and thrown into the Cleveland jail on a charge of violating the anti-trust laws. Prof. Erf played a more or less important part as a witness in the trial of the men. The fact that they were finally discharged does not remove (*Con't on next page*)

Is the Farmer a Profiteer? "No," Says Prof. Anderson, and Produces Figures to Prove his Statement

A MILLION TIMES that question has been asked, and a million times it has been answered, "NO." Ordinary common sense will make that answer, but before the court of public opinion and the court of legal inquiry, common sense must be backed up by indisputable evidence.

There is at least one man in Michigan today who has in his possession this evidence. He is Prof. Anderson of the Michigan Agricultural College, who has conducted investigations for a number of years into the cost of producing milk. Prof. Anderson says the milk producer is not a profiteer, and he has the figures to convince the most exacting jury that his statement is correct. Prof. Anderson presented some of these figures in an address before the Milk Producers' Convention at East Lansing last week. A survey in Livingston county showed a loss of $10.60 per cow from March 1, 1917 to February 28, 1918, and a loss of $20.54 per cow from March 1, 1919 to Feb. 28, 1919. The cows in question had an average annual record of 8,000 pounds of milk, which is considerably above the average for the Detroit area. The principal loss occurred during the months of March, April, May, August, September, October and November. The other months of the year showed a slight profit.

An analysis of costs, receipts and net profits or losses on ten other farms, conducted by Investigator Odell of the M. A. C., disclosed the following facts: Farms Nos. 1, 2, 6, 7 and 10 last money, varying from $261 on farm number 6, to $995 on farm number 7. The other farms showed a profit, ranging from $575 on farm number 5 to $1,175 on farm number 9. Subtracting the total losses from the total profits showed a gain of $960 on the ten farms. The total capital invested in these farms was $251,803, and the profit of $960 therefore represented a return of less than four-tenths of one per cent.

Prof. Anderson made it clear that milk producers of the Detroit area might be called upon to testify before a grand jury as to the cost of producing milk, and he submitted the above figures to show that there was authentic evidence at hand showing that the farmers were not profiteers.

"Look the world square in the face," said Prof. Anderson. "There is nothing to be ashamed of. You have performed a really patriotic service in producing food during the war under such conditions and receiving such small returns. In times that are to come you will receive your reward, if you will only be patient, conservative, considerate and fair."

New Associations to Join the Potato Exchange

By W. C. CRIBBS, Field Agent

AN ASSOCIATION for the shipment of potatoes was organized at Amble, in Montcalm County, in October. Amble is one of the heavy potato shipping towns of Montcalm County, and the farmers there are anxious to get into the co-operative marketing game on the same basis as the other associations of the Michigan Potato Growers Exchange. They have hired Mr. Rushmore for their manager. Mr. Rushmore is a farmer who has had several years experience in the potato handling business.

Another association, the Gladwin Elevator Company, at Gladwin, has been organized, with a membership of 400 members. They are preparing to handle everything which the farmers of that section have to market. They have joined the exchange and expect to get under operation in a short time.

An association also has been organized on the Old Mission Peninsula. They have been purchasing supplies for some time and recently took out a membership in the Potato Growers Exchange. On this peninsula the farmers sold 55,000 cases of cherries to the Case & Martin Pie Co., of Chicago, last summer. for $3.11 per crate. This sale was brought about through the co-operation of the farmers and their county agricultural agent. These farmers have several cars of apples and potatoes to market this fall.

Alpena County has a county-wide associatton which has united with the Exchange, and members are loading potatoes at five points in the county. The farmers of that county have several hundred cars of hay to sell this year, as well as large quantities of potatoes. Most of the produce and hay raised in this county will be marketed through the associations. All of these associations in Alpena county will be managed by one manager, who will be located in the city of Alpena and will have men in charge of the loading at the different points.

The town of Keystone in Grand Traverse County is the point where the farmers are now organizing another association for Grand Traverse County. After seeing the success of the association located in Traverse City, these farmers are planning to operate in the same manner.

Chief Pe-tos-key, the popular spud grown by members Michigan Potato Exchange.

The Marion Elevator Co-operative Company was organized at Marion, October 18, with a membership of 232, which is a big number to have lined up at the organization meeting. They have a good prospect of reaching a membership of between five and six hundred. They also are to join the Potato Growers' Exchange and are negotiating for the purchase of the only elevator in the town. Marion is one of the very large marketing centers of Osceola county and of Northern Michigan.

Thompsonville Farmer's Co-operative Association was organized recently with a membership of 48 and expects to start business right away, so it can get the benefit of co-operative marketing this fall. There are several good live associations in Benzie County, where the farmers are receiving more for their crops by marketing their produce in this way.

The large Farmer's Co-operative Association at Freemont has just recently joined the Central Exchange. This association is one of the most successful associations in the state and will do a business which will reach close to one million dollars this year.

Mr. Dorr D. Buell, president of the Potato Growers' Exchange, has just finished a schedule of conferences for the local associations in the different parts of the state.

Workers Plan on A-1 Quality

These were conferences of managers and directors of the locals and were held in smaller groups so there would be a larger per cent of the men present. The first conference was held in Big Rapids, where 60 took part in the discussions. The second conference was held at Cheboygan, October 10, with about 30 attending, from Cheboygan, Alpena and Presque Isle counties. October 11, the third conference was held in the library at Mancelona with 40 present from Antrim and Otsego counties. The fourth conference was held at Escanaba. attended by all of the managers of the association of the Upper Peninsula. Most of the directors and all of the county agents were present, numbering 64. These men took an active part in all discussions. The last conference was held October 17 in the court house in Traverse City, and was attended by 84 men from Antrim, Charlevoix, Grand Traverse, Kalkaska, Benzie, Wexford and Leelanau Counties.

At these conferences the propositions of standardization of the output of the locals was thoroughly discussed to the end that there could be a more uniform product put out by the different associations. Quality of product and pack of shipment so the consumer may get more value for his money and less waste in freight on produce that is nothing but a loss when it reaches the market, were some of the main items taken up. Quality pack is the watchword of the exchange, and the members never miss a chance to impress the importance of high class produce as the greatest asset of the associations, which will mean millions of dollars for the members of the exchange who number 15,000.

All managers of local associations are watchful in grading the produce which is packed by them, lest some inferior produce gets into the car, for they understand that the farmer is now doing his own marketing and anything which is not up to standard is a direct loss to the farmer and member of his association. As long as the farmer sold to a local buyer and did not care what kind of produce he sold or care what the buyer did with them after he got his money, there was no reputation to build which would pay him for better produce, but now the farmer understands that through these associations he is standing behind his produce and is in a position to build something valuable for the future.

Five Hundred Dairymen Attend Michigan Milk Producers' Most Harmonious Session

(*Con't from page* 1)

the sting of their imprisonment nor of the inhuman manner in which they were treated while prisoners of the law.

According to Prof. Erf, Ohio has tried the commission plan of arbitrating prices and differences between producer, distributor and consumer, with poor success. Prof. Erf claims the failure to sustain an arrangement of this kind was due to the personnel of the several commissions who have from time to time been appointed. In his opinion, the men selected were not inclined to play fair with the producer who as a result became dissatisfied with the arrangement.

Prof. Erf also told of the efforts of enemies to undermine the different Ohio associations. One such effort was the organization of a company which producers not members of the association were induced to support. The company eventually failed, owing the farmers over $50,000. Prof. Erf warned the Michigan producers against supporting any plan which would weaken the state association.

D. D. Aitken

D. D. Aitken of Flint usually handles his subject without gloves, and his address before the producers convention was in keeping with his blunt and forceful manner of speech.

"The dairy farmers are to blame for any condition that pays them no profit on their product," declared Mr. Aitken. "I never got into the habit of patting a farmer on the back, and I can't find any excuse for doing so in the present situation. The condition that exists today does not reflect much credit on the dairymen of this country.

"It takes no more brains to manufacture automobiles than it does to run a farm. Most of the big manufacturers of the cities came from the farms. But they use their brains. You've got as good or better brains than they. Why don't you use them? Who knows anything about this product of yours, I want to ask? You don't tell the people who buy your product anything about it. Why, then can you expect them to be eager to buy it and pay a good price for it? Over in Battle Creek they mix up chopped straw and grain, advertise it, and SELL it at two or three hundred per cent profit, but you go on in the same old rut and never say anything about your product. Use your head a little more, and spare your body so much hard work.

"Solve your problem mentally first. When you have a surplus what is the use of complaining. Get rid of it. Tell the consumers you have it for sale, and it will soon disappear. What do other manufacturers do when they have a surplus of goods. They put page advertisements in the newspapers; they tell the world about their wares, and it doesn't take them long to get rid of them.

The public will solve this problem of yours. If the public thinks little of your product, the public will buy little of it. If you educate the public to think highly of your product, and to want it, the public will buy largely of it. You have a great powerful organization here. There is nothing reasonable that you cannot do. Set aside one-half of one per cent of your returns to advertise your product, and you won't have any trouble with a surplus or the complaint of the women's clubs that the price of milk is too high. Why, if the public knew the truth about your product, you couldn't begin to fill the demand.

"Don't leave anything undone to create a good impression for your product among the consumers. Cast out of your organization the man who produces milk that is unfit. Insist on sanitary surroundings where the milk you are selling is produced. It is necessary for you to produce clean and pure milk in order to protect your name and business. For when an inspector discovers dirty milk produced in unsanitary surroundings and announces it to the public, you all suffer, because the public at once cuts down its consumption of your product."

Mr. Aitken made a plea against the migration of the country population to the city. He pointed out the superior advantages of rural life, showed how the high wages of the city were nothing but a snare and delusion, and described the social and financial benefits of an industrious and thrifty life upon the farm.

Will Hold Mid-Winter Meeting

The producers agreed to accept the invitation of the college to hold a mid-winter meeting in conjunction with Farmers' Week at the M. A. C. Prof. McCollum of Wisconsin, whose investigations into the food value have contributed the most valuable information the world now possesses upon that subject has agreed to address this mid-winter meeting.

Address by Pres. N. P. Hull

"What has been done, what should be done. Briefly, the thing that has been done, or the thing that we have been trying to do is to revolutionize the old industrial system as it applied to the farmer. That industrial system ever since you and I knew anything about industrial systems has pre-supposed that the farmer should work hard and someone else should determine the value of that labor by fixing the price his labor created. Just as long as this system goes on, the people who fix the price will take care of their own interests and the farmer will receive what is left regardless of whether he receives a fair recompense for his labor or not. It isn't right. Absolutely, it isn't right; isn't fair to the farmer, to his wife and children; and to the great industry of agriculture. Nor, for the best interests of this great nation of ours. Just as sure as the sun rises, unless some band of men with enough initiative, courage and loyalty to grapple with this situation and help revolutionize the present system, but one thing can result and that will be the discouragement and disintegration of agriculture. When agriculture is no longer the leading industry of this country, America will have come to its high point and must of necessity retrograde. The situation requires wise planning, careful executing, and the giving up of some individual notions, and the loyal working-together as great American citizens.

"Now what have we done? We organized here in this room about three years ago. At that time there was no question but that the price of manufactured milk products had been increasing by leaps and bounds, where the price to the producer of milk has advanced but little. No question but what men producing milk were getting less than the cost

What Farmers Should Know of Origin of Soils

By PROF. M. M. McCOOL

(This is the fourth of a series on soils, which a real soils expert, M. M. McCool, of the M. A. C., is writing for business farmers.)

ALTHOUGH SOILS have been formed in several different ways they may be placed in two groups according to origin, namely, sedentary, or those that lie near the original position of the parent rock, and transported, or those that have been removed in some manner and deposited in another locality. The groups may be subdivided as follows:

Sedentary—Residuary, Cumulose.

Transported—Colluvial, Alluvial, Moraine, Lacustrine, Glacial, Aoelian—Water deposits.

Residuary Soils

Residuary soils are formed on plateaus or on slopes so gentle that the run off water does not remove them. The nature of the residuary soils depends upon the character of the parent rock or rocks, and the nature of the climate under which they are formed. If they are formed from granite much of the more soluble material is removed in solution, and the more resistant material, such as quartz, remains, being rather coarse in texture. Loose, sandy soils result, as a rule, when sandstone is on the surface. Soils formed from limestone, in general, are fine in texture, being made up largely of the impurities that existed in the limestone. There are many impurities that existed in the limestone, much of the lime having been removed in the drainage waters during the process of weathering. Soils derived from other rocks as a rule are fine in texture.

The climate governs to a great extent the character or fertility of residuary soils. Where the rainfall and temperature are adequate for a rapid and extensive growth of natural vegetation the soils are rich in vegetable matter or humus and on the other hand if plants do not thrive the soil will be low in this substance. Thus it follows soils derived from the same rock formation may vary widely so far as productivity is concerned.

Cumulose Soils

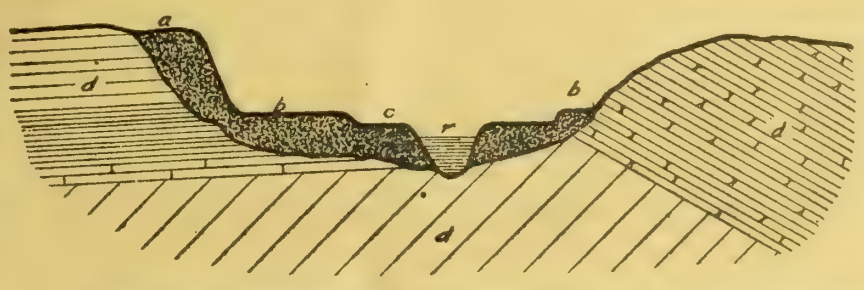
Soils that have been formed mainly by life processes are termed "cumulose soils." It is estimated that there are approximately 150 million acres in the northern and eastern parts of the United States. They include the peat and muck deposits and consist chiefly of decayed or partially decayed water plants that have grown up and fallen down and been covered by shallow water. They are therefore, low in mineral matter and respond to applications of potash and phosphorus. Some require lime, and others do not. If they have been formed in so-called "hard water," liming is usually unnecessary. The majority of these deposits need more or less drainage.

Along with the cumulose deposits it is fitting to consider marl beds. They are deposits of amorphous material composed largely of either carbonate of lime, magnesia, or both, that lie from a few inches to several feet below the surface of many of the muck and peat formations. They are made up in part of shells of the lower organisms.

Alluvial Soils

Alluvial soils are those that are deposited in the overflow areas of small streams and rivers, and are frequently spoken of as bottom lands. The deposits in the larger stream flood plains are for the most part fine in texture although they may vary somewhat in this respect. The variation is due mainly to the difference in the rate of the flow of the water. Swiftly flowing water moves larger particles than slowly moving water. Since the velocity of streams, subject to freshets, will vary greatly the soil laid down may lie in strata of different texture. In general the finest particles are deposited the farthest back from the bed of the stream where the movement of the water is slowest. Alluvial soils, especially the larger deposits, are proverbially fertile, inasmuch as conditions are favorable for the accumulation of vegetable matter, and in addition when the streams overflow their banks fresh material is laid down; however, the character of the material depends greatly upon the source.

Another formation that is especially important in Michigan is the river terrace. These deposits occur along all the larger streams in the glacial area and in many instances along belts where temporary streams ran during a part of the Glacial Period, when they cut valleys and deposited soils. As a rule the soils of these formations are rather sandy, generally a layer of gravel is found a few feet from the surface. In the northern portion of this state the deposits are less productive than those of the southern. As is to be expected the topography is level. Where limestone rock has been ground up, the soils differ from residuary deposits derived from limestone in that they contain large quantities of lime. With the exception of the old lake bed in eastern Michigan there are no large areas that contain carbonate of lime in the surface soils except as fragments. The parent rock or glacial material has weathered so much that the small particles have washed out.



Cross section of alluvial soil. (a) old stream terrace; (b) old flood plain terrace; (c) present flood plain or "bottom land;" (d) bed rock, river stream.

Wind-Formed Soils

Wind has been a potent factor in soil distribution. It has covered approximately the southern third of the glacial province with a thin layer of fine-textured surface, and still finer subsurface material, however, no distinctively clay soils are found. The color of the surface and sub-surface soils varies widely depending upon differences in drainage or other conditions. Most of the corn produced in the United States is grown in these soils.

Lake-Formed Soils

Soils that were deposited in lake beds are called lake formed. As the great mass of ice melted in the glaciated region enormous quantities of water were formed. Many temporary glacial lakes of widely different sized areas resulted. The most notable was Lake Agassiz, now the Red River basin, which covers upwards of 110,000 square miles. In addition the Great Lake Basin formerly comprised more extensive areas than at present. It is estimated there were 4,000 lakes in Connecticut just after the period of glaciation, while there now exist approximately 1,500 It is said there are 8,000 lakes in Minnesota, one half of which will be either drained or filled up with sediment within the next 50 years. Numerous extinct glacial lakes occur in Michigan, Wisconsin and New York.

The soils deposited in the larger lakes, on the whole, are uniformily fine in texture and fertile, but coarse material may lie near the farmer shore lines. The texture, and likewise the fertility of the soil deposited in the smaller lakes varies enormously. Many lake deposits need drainage for maximum crop production.

How Cleveland Aims to Curb High Cost Evils

AT THE MILK PRODUCERS' convention Mr. Milo Campbell discussed the absurdity of the mehodts employed by public agencies to discover and remove the causes of the high cost of living. "They begin at the ceiling," said Mr. Campbell, "and go down. They tell what the retailer must sell at, instead of pointing out what the producer must have and then following the cost in its logical sequence to the ultimate consumer."

* * *

THIS SEEMS to be the practice, all right. The consumer wants cheaper bread, cheaper potatoes, cheaper milk, etc., and philanthropic authorities assure them that these things shall come about. But they make the mistake of thinking that all that needs to be done to bring down the cost of living is to command those who produce and sell to lower their prices.

The city of Cleveland is doing a little investigating into the high cost of living. It is mixing brains with zeal. It early realized that sensational charges of profiteering, and prosecution of occasional offenders would not solve the problem of the high cost of living. It discovered that the solution if any, was at the "roots—cost—in the tree of food production and distribution."

The jury appointed to investigate the high cost of living soon made public the following statement:

While this jury has its own theory of the basic causes for the high and increased cost of food and living generally, yet we think that the public itself should find the cause; that they will be more certain that it is the true cause and will more quickly apply the real remedy.

We will, however, point a way by which the public can find the cause.

Should Consumer Know What it Costs to Produce?

A CLEVELAND grand jury investigating the high cost of living made this statement: "The public has the same right to know the cost of producing food as its price on the market place."

* * * *

Cleveland is right. The consumer should have the right to know what it costs to produce food. He should also know what it costs to make clothing, to build apartment houses, to operate transportation lines, to manufacture shoes, to operate theatres, to build automobiles. Cleveland should get the old-fashioned idea out of its head, though, that the farmer's business is any different than any other kind of business. It should know that farmers are manufacturing a commodity for sale to those who want to pay a fair price for it, but not for sale to those who want to buy it for less than cost of production. The same rules of ethics and economics that apply to industrial enterprises apply with equal force and justice to agricultural enterprises and vice versa. As a thing to be produced, sold and exchanged, food occupies no different position than any other commodity. The consumer is entitled to know the cost of producing food, not because it is food, but because it is simply one of the many commodities that the consumer purchases. Farmers will welcome a public investigation of their costs. It will show beyond a doubt that they are not getting what they should for their products. But if Cleveland is fair and insists on investigating the cost of producing all other commodities, we predict that there will not be any investigations. Imagine, if you can, the milk dealers, the shoe and clothing manufacturers, the theatre owners, and other producers and purveyors of commodities and service opening up their books to a grand jury and making public what it costs them to do business!

It is high time that the farming industry be viewed with a fresh industrial eye, one that is not obsessed with the present traditions of farming. Such a fresh eye might reveal why the farming industry has not been developed in proportion to other industries.

Price of food is well known. But the cost of producing food is absolutely unknown.

All previous food investigations have begun at the price to the consumer and have started toward the cost, but have ended in a tangled mass of leaves and twigs before even getting to the branches, to say nothing of the trunk and roots in the tree of production and distribution.

But the end exists to this complete cycle and can be found.

Why not go first to the roots—cost—in the tree of food production and distribution?

Cost finding is now an exact science in many industries. It is a system for finding detailed material and labor cost with a proper distribution of overhead or burden charges upon each operation and department of production.

It is our recommendation that the governor of the state appoint a special commission, made up of cost experts, not farmers, but selected preferably from the industry where the science of cost investigation has been most highly developed and that they be assigned to some small county in the state, say Morrow County, where the production is almost exclusively agricultural in the way of base food items, and where the operations are carried on under average conditions.

Let this commission be empowered to take testimony under oath, make observations and apply their science of cost finding to every operation and element that goes to make up cost—including labor, material, interest on investment and administrative charges. This investigation would not be for the purpose of exposing the farmer as a profiteer; it might be found by this commission that the farmer was not receiving enough profit. Let this investigation be entirely friendly to the farmer.

It is our suggestion that after these base costs of production are determined by this commission of cost experts, that a permanent cost commission be established in the state and to be known as a bureau of costs. This bureau should be empowered to make changes in these base costs as conditions may arise from time to time. These base costs should be posted in all market places and in any store where raw foods are offered for sale.

The public has the same just right to know the cost of producing the necessities of life in the commonwealth, as has the individual to know the cost of conducting his household.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL9

WILL HANDLE THOUSANDS OF SHEEP IN N. E. MICHIGAN

C. E. Burtless, a southern Michigan sheep breeder, who has been making use of the rich pasture lands of northeastern Michigan during the past three or four years for the pasturing of his herds during the summer months, has purchased the Anderson ranch of 2,360 acres, located not far from Prescott, and proposes to get into the game in northeastern Michigan on a scale heretofore not attempted by any one in the business in that section of the state.

By making use of other tracts which he will lease, Mr. Burtless intends to have flocks of 15,000 to 18,000 sheep in northeastern Michigan next summer and he intends, hereafter, to winter in the neighborhood of 10,000 ewes.

He says that 200 acres of land producing alfalfa and root crops will provide winter feeding for all the sheep that he can handle through the winter, so great is its fertility and its special adaptability to the raising of clover.

Mr. Burtless in the past few years has pastured sheep in ranches in Clare, Ogemaw, Iosco and other counties and he says that he now knows what can be done in a big way and he is going to do it.

This last season he had a large flock on cut over lands near Prescott and last week he shipped from that point an entire train load of "feeders." The shipment was so large, for this section of the country, that the Northeastern Michigan Development Bureau had moving pictures taken of the process of loading and shipping the animals and these pictures together with some others taken on northeastern Michigan ranches will soon be shown in some of the movie theatres of this and adjoining states.

"The use of moving pictures to advertise its farming possibilities has been carried on by the Canadian northwest for some time," said secretary Marston of the Development Bureau, "and our views are going to show a diversity of posibilities in farming and ranching which are impossible on great Canadian lands."

Emmet Organizes for Testing

The Emmet County Co-operative Cow Testing Association No.1 was organized in the office of the Emmet County Farm Bureau at Petoskey. for the year .

This association is the first of its kind in the upper part of the lower peninsula of Michigan and is a part of the Farm Bureau program.

The live stock industry in Emmet County is going largely to dairying, with the Holstein and Guernseys as the predominant breeds. Eight pure bred dairy bulls have been brought into the county this year, also a number of grade and pure bred cows.

The testing association has 24 men signed up with a number of others who will shortly do so.

The following men were elected as directors: H. H. Starmer, Clyde Morford, Paul Schnell, F. A. Zerby, Ed. Cetas and C. L. Hicks. K. K. Vining is County Agent.

Glen Armstrong, this young Fowlerville shepherd is shown with two prize winners at the Michigan State Fair. Armstrong Bros. are owners.

Pea Growers Meet

The Pea Growers for the W. R. Roach & Company canning factory at Kent City got together recently and formed a permanent organization to look after their interests. Guy W. R. Curtiss was elected president and Victor E. Peterson, secretary. David Neff, W. O. Holmes and Nels Anderson were elected on a committee to assist them in the work.

Pea growing was thoroughly discussed. It was found that it costs $28 to raise and harvest an acre of peas, counting the labor and use of the land only. To this must be added $12 for the cost of the seed. Nothing was charged for fertility removed from the soil by the crop or for depreciation of machinery, etc. Only the growers present received returns sufficient to pay the cost of production this year.

The growers were convinced that they could not raise peas at a profit for three cents per pound and agreed that they would not and could not grow any peas next season for less than four cents per pound with a $3 per bushel charge for the seed.

Grand Traverse Farmers Report Returns from Cucumber Crop

Michigan is a good cucumber state. Occasionally dry weather or early frost puts a crimp in the crop, but in the majority of years it is a good cash crop and pays a fair profit. The season of 1919 was an exceptionally good one and most of the farmers were satisfied with their returns. A Buckley correspondent writes us on the subject as follows: "I am sending you a list of our growers and would like to have you print it. Farmers did well here this season, in Wexford and Grand Traverse counties."

The report submitted shows that $2.839.58 was paid out to the farmers in the immediate vicinity of Buckley. The production per acre averaged from 50 to 100 bushels. The largest acreage per farm reported was four acres. Andrew Anderson received $247.09 from two acres; Mrs. W. H. Gaswell, $304.43 from one and three-fourths acres; Grill & Spencer, $513.44 from four acres; Anna Johnson, $100.21 from one acre; Mrs. Peter Paffhausen, $106.18 from one acre; Jerome Reamer, $187.68 from one acre; Zue Richard, $171.06 from two acres. These show the highest receipts per acre, but practically every grower in the section averaged better than $50 per acre, showing that in normal years this crop will return a fair profit.

Men Wanted for U. S. Campaign

The United States Grain Corporation desires to secure men with milling and grain experience to assist in the grain-dust explosion and fire-prevention campaign in the mills and elevators throughout the country, which is being conducted in co-operation with the United States Department of Agriculture. The appointments will be made at salaries ranging from $1,620 to $2,400, dependent on the training and experience of the applicant. Men with training or experience in one of the following lines will be eligible for appointment to this work.

1. Milling, mechanical, electrical, agricultural or chemical engineering education, training or experience.

2. Practical experience in grain mills and elevators in the handling, manufacture and production of flour feeds and grain products.

TWO HUNDRED AND SIXTY-ONE MILLIONS, LOAN TO FARMERS

During the month of September, 1919, an aggregate of $8,400,360 was loaned to 2,841 farmers of the United States by the Federal Land Banks on long time first mortgages according to the monthly statements made to the Farm Loan Board. The Federal Land Bank of Spokane leads in the amount of loans closed, the same being $1,056,750, with the Federal Land Bank of St. Paul running next in amount, $1,044,200. The other banks closed loans in September as follows: Houston, $922,235; Wichita, $763,800; Louisville, $718,700; St. Louis, $705,875; Omaha, $669,400; Baltimore, $577,900; Springfield, $542,200; Berkeley, $489,300; New Orleans, $462,225 and Columbia, $447,775.

On September 30, 1919, there were operating in the United States 3,830 Farm Loan Associations. The total mortgage loans made by the Federal Land Banks through these associations, September 30, 1919, to 100,412 farmer borrowers, amounted to $261,175,346. During September, 7,485 applications were received asking for $25,491,081. During the same period 5,174 loans were approved, amounting to $15,816,179. Altogether 219,205 farmers have applied for loans under this system, in the aggregate amount of $605,575,801.

The grand total of loans closed is distributed by Federal Land Bank Districts as follows:

Omaha	$35,390,290
Spokane	34,880,860
St. Paul	33,605,900
Houston	28,666,561
Wichita	23,311,800
St. Louis	20,895,940
New Orleans	18,192,505
Louisville	17,959,900
Berkeley	14,065,400
Columbia	13,891,045
Baltimore	10,401,600
Springfield	9,913,545

Up to September 30, 1919, interest and amortization payments due by borrowers to the banks amounted to $12,666,313.61. Of this amount all but $172,456.72 or 1-4 per cent had been paid, and of this sum $86,816.60 represents instalments which had become due during the month.

Dwight Farmers Organize a Union

Dwight Township (Huron County) farmers met on October 14 and organized a union with 63 charter members. At this meeting the following officers were elected: Pres., Frank Schott; Treas., Fred Moeller; Sec., Hugh J. Clark. The union will hold another meeting in the near future.

The minutes of the meeting were given mostly to the discussion of the principles of co-operation and political organization.

Scores of farmers of the Elk Rapids Co-operative Association appear here as the last of 1,500 loads of sand were dumped in their warehouse to make a floor level safe from floods. The farmer members gave their time and labor free.

A HORSE CAN TRAVEL WHERE AN AUTOMOBILE CANNOT GO

Often in the deep snows of winter an automobile cannot get through the drifts, but the horse can travel anywhere if he can secure footing.
There is just one thing will insure safe footing on any road anywhere any time, no matter how icy or slippery, and that is the

Neverslip Red Tip Horse Shoe Calk

Whatever the occasion; a hurried trip to the doctor, an important call to town, a load of produce to be delivered—your horse is ready when you are ready. The wise horse owner will go to his horse shoer early and have the safe, reliable RED TIP SHOES put on. Then he can laugh at the weather. No sleet storm, no sudden freeze will hold him back. His sharp, strong RED TIP CALKS can be adjusted in 20 minutes, and he is ready for the road.
Avoid substitutes. LOOK FOR THE RED TIP

MICHIGAN MILK PRODUCERS MEET IN ANNUAL SESSION

(*Con't from page 2*)

of production. Who was being wronged? Were we to stand that sort of thing? Was it good Americanism to make no protest? What was to be done about it? Supposing one of us who was a large contributor to a certain factory had said that it was no longer right, and he would not stand for it? What could he have done individually? Not one thing. Bear that in mind; for upon that rests the structure we are trying to build. The individual could do nothing because he did not contribute a sufficiently large per cent of the milk going to that factory. Shall we find fault with the buyer? Possibly. But he is in the business for profit; is looking out for his own interests. Selfishness is one of the things that we have to reckon with in this world. Conditions would remain the same unless we exert our influence to see to it that we get a square deal. Is there a man here who wants to accept less than a square deal? Or who thinks that we should do other than insist upon having a square deal? But you may say: 'Hull, we haven't had a square deal yet and we have been organized for three years.' When you take a great industrial system that has been in vogue for years and years, intrenched by immense wealth do not expect to upset it in three years. We can not expect to do it in three years, may go on for a decade and not have it done. No organization of the character of ours has accomplished more than have we in the same length of time. I have one strong plea to make to you today. Be absolutely loyal to this and other organizations of this kind. If everything does not go as each one of you thinks it ought to, do not forget the big purposes ahead. I am making only this one plea; only for unity of action. Let us consider everything we have to do wisely, determine carefully our line of action, then all pull together. Never until we farmers learn the lesson that we must be good enough citizens to abide by the will of the majority will we be able to accomplish for ourselves what we should. We must keep our eyes on the star ahead and work for it.

(Editor's note: Unfortunately lack of space prevents our publishing Pres. Hull's address in entirety in this issue. It will be concluded in the Nov. 8th issue.)

Sense and Nonsense

"Just as my hoss and his competitor came down the home stretch nose and nose and it seemed certain that it would be a dead heat," imparted the frazzled horseman, "a bee stung my skate right on the end of his nasal appendage, and I'll be gormed if he didn't win out by the swelling!"

A man who had purchased some currant buns at a bakery was distressed on starting to eat one to find it contained a fly. Returning to the bakery, he made an indignant complaint, demanding another bun in place of the inhabited one.

"I'm sorry sor," said the saleswoman, "I can't give you another bun, but if you will bring back the fly I will exchange it for a currant."

First Little Girl—Your papa and mama are not your real parents. They adopted you.

Second Little Girl—Well, that makes it all the more satisfactory. My parents picked me out and yours had to take you just as you came.

A school board member tried to be pleasant to a small boy. "What are you studying, my boy?" he asked.

"Arithmetic and geography," answered the boy.

"And what are you learning in arithmetic?"

The boy thought for a minute and then he replied: "Guzinta."

"Guzinta?" said the surprised official. "What's that?"

"Why, don't you know?" said the boy. "Two guzinta four, three guzinta six, four guzinta eight, five guzinta ten."

PRINCE ALBERT

the national joy smoke

Prince Albert is supplied in toppy red bags, tidy red tins, handsome pound and half pound tin humidors—and—in that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition.

PUT a pipe in your mouth that's filled brimful of Prince Albert, if you're after smoke peace! For, no matter how bad has been your pipe-past or your experience rolling your own, P. A. will hand you such tobacco joy you'll wish your job was to see how much P. A. you could get away with!

You can "carry on" with Prince Albert through thick and thin and no matter how hard you test it out you'll find it true to your taste and tongue. You'll be after laying down a smoke barrage that'll make the boys think of the days in France!

Prince Albert never tires your taste *because it has the quality!* P. A. is made by our exclusive patented process which cuts out bite and parch—assurance that you can make new smoke records without any comeback but real smoke joy every time you fire up!

R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

A Word to our Staunch Friends:

Is Business Farming entitled to YOUR help?

Have the past two years of its service to the farming business in Michigan proven its unflinching loyalty to the cause—

—is it striving for the right in every problem which confronts the farmer, whether milk-producer, bean raiser, potato grower or whatever his principal interest?

IF IT IS—

—then Business Farming IS entitled to YOUR help and you'll be glad to give it, as most of you have more than once since this paper was founded TO SERVE ALL the farmers of Michigan!

HOW YOU CAN HELP NOW!

1.—Look at the yellow address label on the front cover, if it is marked (G) or any date previous to (Nov. 19), send in your own renewal and if you can possibly spare two or three dollars make it for three or five years.
2.—Get a friend or neighbor to subscribe. every name you add multiplies our strength to help YOU.
3.—Do one or both of the above before a week from Saturday.

WILL YOU BE ONE TO ACT?

It takes only a few minutes to act on our requests. We have not bothered you during the months when you were planting, harvesting or welcoming the boys home—NOW WE NEED YOUR HELP—will you do it for

MICHIGAN BUSINESS FARMING.

Milk Producers Are Investigated

AS A RESULT of charges submitted by the Republican Club of Detroit, the attorney-general is investigating the methods of fixing milk prices in the Detroit area. The Republican Club accuses the Detroit Milk Commission of being partial to the producers and biased in its decisions. It declares that the distributors and producers are in a combination to fix and control the prices of milk without due regard to the interests of the consumer.

Anyone familiar with the personnel and decisions of the commission knows how utterly baseless these charges are. At no time since the commission was named has it increased the price to the producers without the most exacting proof that such increase was necessary to meet mounting costs of production. On several occasions the commission has, in fact, refused to grant the price asked by the producers because it meant raising the price of milk to the consumer. Because of the commission's rigid adherence to an equal consideration for each party concerned it has probably received more complaints from producers than from consumers. We are sure that the attorney-general's investigation will disclose plenty of evidence that there is "no cause for action."

Nevertheless, the complaint and the investigation shows that the position of the producers is not altogether secure. Any concerted opposition from the consumers of Detroit or dissatisfaction in the ranks of the producers themselves will topple the arrangement over and the producers may find themselves in a position where it is not so easy to maintain uniformity of action and price. Certainly no time should be lost at this crucial period in convincthe people of Detroit thru a publicity campaign that the producers are NOT getting the lion's share of their dollar and that they cannot accept lower prices under present conditions and produce the quantity and quality of milk needed by the people of Detroit. If the consumer cannot be convinced of the reasonableness of the producers' position, then the producers' association MUST fortify itself against the forces of disintegration which would forthwith be released.

The members of the Michigan Milk Producers' Ass'n hold very much the position of stockholders. They pay dues into the association and expect their officers to secure fair returns for their support. The stockholders and officers of every corporation certainly have the right and exercise it to determine the selling price of the commodity it manufactures. It matters not whether there be ten stockholders or a thousand. The law protects them in their rightful efforts to secure a fair return on their investment. Are they not in fact, if not in law, as much a combination for the purpose of fixing prices as any milk producers' association that fixes the price of its commodity? But the law differentiates. So it would be well for the milk producers to meet the requirements of the law by incorporating.

Why should not the Michigan Milk Producers' Ass'n incorporate for $50,000, and sell to each of its 10,000 members a $5 share of stock. This money could be invested in such tangible property as loading stations, cheese factories, or with still larger capital in a small milk plant in the city of Detroit. Then what would prevent the officers of this corporation fixing the price of the commodity that its stockholders manufacture, and either sell this commodity to the existing distributing company or direct to the consumer as it seems the wiser plan?

We submit that this is the most simple, practical and only permanent solution of the problem of marketing milk.

Has the Industrial Conference Failed?

LABOR HAS walked out of the industrial conference in a huff, and the first attempt to arbitrate national differences between national employer and employe and establish a satisfactory industrial policy has apparently met with failure.

Labor demanded the right of collective bargaining. It argued that the employer should agree to treat with representatives of organized labor whether these representatives were directly or indirectly the choice of the employes represented. The employers' group conceded the right of collective bargaining,—with limitations. It agreed to recognize the right of a group of laboring men in a certain factory to name their own spokesmen to lay their grievances before their employer, and held the employer morally bound to discuss these grievances with such spokesmen. It was unalterably opposed, however, to recognizing spokesmen other than the direct choice of the complaining employes.

Of course, organized labor could not accept such a proposal as this, for it meant in effect, the end of the powerful union labor organizations.

On the other hand, capital is not to be altogether blamed for refusing to put its head in the lion's jaws, for as surely as the sun rises and sets the adoption of a national policy recognizing the right of a labor organization to dictate the terms of employment in all the big industrial plants would virtually place all industry at the mercy of labor officials.

The employers have gone a long way to meet with labor. But they are not sure of their ground. The unreasonable demands of labor at a time when labor is receiving the best treatment in its history frightens capital. What are the ultimate aims of organized labor? Does organized labor really know what it wants? Has it a conception of what the ideal relations should be between employer and employe? Is it prepared to state the exact conditions of employment that it would be satisfied with?

These are sensible questions, and until labor knows and is prepared to describe the final goal it is seeking, there can be no honest co-operation between employer and employe. The more radical labor leaders have talked of the workers wresting the factories from the hands of capital. They have said, "There is nothing in common between employer and employe." Should we wonder then, or censure, when employers hesitate to grant ALL that organized labor asks?

The situation is bad, worse even than had no conference been held. Prior to the conference, employers had made no pronouncements as to a general labor policy. Labor did not know what to expect from capital. Consequently labor was in a poor way to formulate a policy of its own. But now, the employers' group in the industrial conference, presumably speaking for all employers has gone on record, and labor at last knows what it may and may not expect from capital. The solemn words of Samuel Gompers, as he left the conference, "Some day you will be glad of the chance to meet with us and talk collective bargaining" contains a threat that is not pleasant to think about. There are sorry days ahead unless a miracle happens to change the very natures of the men who employ and the men who are employed.

A Lesson in Politics

THE FARMERS of Ontario are in the saddle and from present indications will control the next legislature. The farmers' political movement in that province has been evolutionary rather than revolutionary. There have been no striking outward manifestations of their discontent or of political unity among them. In fact, it appears that they did not themselves suspect their real strength until it functioned at the election.

The result in Ontario is one of profound interest to the farmers of Michigan. The same leaven that has been working quietly in the minds of the Ontario farmers and slowly drawn them into political cohesion is busy in Michigan. There are no agreements between the farmers of Michigan of a political nature. There is no set rural policy upon state issues or candidates for state office. So far as outward indications point there is no wide spread unity of sentiment among the farmers of the state. But simply because there has been no occasion for the display of sentiment, as there was in North Dakota, does not prove that it does not exist. On the contrary it does exist, very widely. It crops out here and there every once in a while. It bubbles up at farmers' gatherings. It is the moving spirit back of the rapidly developing co-operative movement. It flared brightly when the legislature turned down the ware-house amendment.

There are some issues upon which the farmers of Michigan can and will unite if given the chance. There are other issues which would split their ranks asunder. The spirit of these farmers today is such that they could easily and almost unanimously unite upon a capable and well-principled man for governor. If he were a farmer so much the better, so much greater and active would be their interest. Farmers are wise to the deficiencies of the administration of state affairs the past several years. They do no countenance the recklessness and lavishness with which the people's money has been spent. They are ready for a change in the policies that govern state affairs. They are ready for an old-fashioned kind of an administration that plays politics a little less and attends to business a little more. They are just in the mood to support a man whose public utterances and record denote some conception of the needs of the people and a desire to administer the affairs of the state in a truly progressive and economical fashion. There are men in this state of that calibre. Keep your eyes open for them, and make no allegiances until the MAN you can support with all your heart, steps forward.

Ontario Goes Dry

ONCE MORE the drys have given John Barleycorn the merry ha-ha. The farmers of Ontario, true to form, turned out en masse last week Tuesday and changed a predicted victory for the wets into a complete triumph for the drys.

Was it not but a few months ago that dry leaders claimed they feared a reaction, a reversal of sentiment? That the end of the war would result in a greater desire for personal liberty and license? In fact, did we not ourselves confess such a fear? And was it not indignantly asserted by the paid agents of the booze interests that the United States and Canada had "put something over on the soldier boys" and that when they returned and were given a chance to vote upon the prohibition issue, they would kill it deader'n a doornail and hang its skeleton in the legislative morgue along with some of the unpopular issues of long ago? The Ontario election was the first important election in which these opinions were put to the acid test, and it has conclusively proved them all wrong.

If the Ontario election proved anything at all, it proved that the people of the province have profited by prohibition. But more important than that it proved the statements of the wets about the soldiers to be lies and libels. It has removed the stigma placed against the soldier and showed that he is still the defender of justice and righteousness and has no more use for the license of debauchery and drunkenness than for the license of militarism.

WHAT THE NEIGHBORS SAY

FROM PRODUCER TO CONSUMER

Seeing in your Sept. 27 issue the letter on the laborer's dollar and your comment, I thought I would add a word. With the motor truck now in use the consumer could make quite a saving and the farmer get nearer a living price for his product if the laborer or consumer would buy a lot of his supplies direct from the farmer instead of from a retailer who bought from a jobber who bought from a wholesaler who bought from a local buyer who bought from the producer. But here we have the city man electing to office men who make rules for the city, (we cannot call them laws) which prohibit farmers from selling their produce direct to the consumers, so there you are again. Another hold-up.—R. F. K., Newaygo, Mich.

I am sure I do not know of any state laws that prohibit farmers from selling direct to consumers if they desire. There are some city ordinances, it is true, which prohibit farmers from peddling their wares on the street without a license, but peddling farm products from house to house is never going to be the solution of the farmers' marketing problems. Many cities maintain public markets where farmers may display their wares and the consumers may purchase. The most notable of these in this state is the Adrian Community Market where several hundred thousand dollars worth of farm products are sold each year direct to the consumer. But at the most the community market provides an outlet for only a very small fraction of the farmers' total crops. I like your idea of using the motor truck for bridging the gap between producer and consumer. Ithink with the building of good roads the truck will become a mighty factor in rural transportation and assist the farmer in making a profitable connection with the retail merchants of his nearest city.—The Editor.

FARMER, NOT A FARMER

"Ram Lamb Farmer" in your Sept. 27 issue is certainly a good one. Let me say, however, that to turn out to the primaries and nominate the right man on the dominant party ticket is sometimes more "efficient" than "splitting a ticket." A good man in the majority party in the legislature can do much more than a better man can do if he is of the minority party. Let the "ram lamb" fellows "butt" but let us remember the day of the primary and be there for our candidate.

Now it is not always true that a farmer in the legislature represents the farmer best. I have in mind a farmer supervisor who is planning to go to the legislature. He is popular as a supervisor, but until he is properly educated he would make a very poor representative for farmers. Why? Because he never saw the inside of a Grange hall, a Gleaner Arbor or a farmers club. He never gave an hour's time or a pleasant look toward any co-operative business. In other words he is a "stand-patter from stand-patville."

Now would it be wise to allow a farmer of that type to be nominated for the legislature on the dominant party ticket in opposition to a progressive organization helper of some other vocation, even a lawyer? A "stand patter" of either party usually makes a good supervisor, but in the legislature they (often unwittingly) play into the hands of the "interests."

Beware of the farmer candidate who never did anything for farm organization or co-operation till a short time before running for office and one who is popular with the city folks. Cass and Allegan county farmers were badly represented in the last legislature by so-called farmers while Van Buren made a much better showing with a lawyer representative. Moral. Let us be sure our man has sympathy and is intelligent as to the needs of agriculture and not merely a popular farmer. Let us have farmers by all means in the legislature, other things being equal, but confound the stand-pat farmer of both parties. Turn them in with the "ram lambs and let them butt." —C. S., Lawrence, Mich.

One needed only to watch the vote of a large number of "farmer representatives" at the last session of the legislature to appreciate the force of your statement. They do not as a rule represent their agricultural constituents. If they did, they wouldn't be there. Don't you know that now-a-days if a man wants to get into the legislature or even be elected supervisor in a township that has a town vote, he must cater to the town vote, or in other words be "popular with the city folks." Hasn't experience taught him that he cannot depend upon the solid farmer vote? Doesn't he know that his neighbors are jealous, and wouldn't vote for him "if he was the last man on earth?" You bet he does. And while the ram lamb farmers frolic in the pasture lot, your farmer candidate ties up to the small town politicians who elect him to office and hold him to account thereafter. Then when the fight is over, and your "farmer representative" "plays into the hands of the interests," the ram lamb farmers bleat their disapproval and charge upon the offender. Now I ask you, man to man, whose fault is it that "farmer representatives" do not represent the farmers?—The Editor.

ARE THE BIG MANUFACTURERS PROFITEERING?

Your comment on the article in Business Farming of Sept. 27 on the laborer's dollar and asking for a remedy for the situation has certainly put a very large proposition up to your subscribers. In making a few observations it would appear to the writer one of the major causes for present dissatisfaction among those engaged in agriculture, is the meddling and obstructing of natural conditions by certain classes of people and political interests who all appear determined to ruin the business of farm producing. They do not recognize the fact that the farmers are their best customers and that he is compelled to sell his products at less than cost of production, and that it will only be a short time longer that he will have the means to buy necessary tools and equipment to run his business. There is scarcely a word said even by the farmer press in regard to the lowering of those things the farmer must buy. They are all urging him to equip his farm with the latest and most modern tools although it is well known that the manufacturers are piling up fabulous fortunes by profiteering to the limit on their wares, and are paying wages that no farm management can meet thus drawing the laboreres away from the farms, not just the boys but whole families leaving their farms and flocking to the already congested cities. There is nothing said about lowering the price on cotton, sugar, tobacco and other southern products. Oh. no, the colonels and majors would not stand for that a minute. Just those those things that the north and west depend on largely to pay their ever increasing expenses and taxes. Such as cattle, hogs, sheep, corn and almost every product that is grown north of the Ohio and west of the Mississippi rivers.

Now for the remedy. I do not believe that legislation or agitation will effect a cure, but there will come a time when automobiles and tractors will become a drug from the inability of the farmer to buy, when food will become so scarce that the city man or woman will not quibble at the price, when bread and soup lines will be longer than ever before, when men will no longer be arrested and imprisoned for asking enough for his farm products to insure a decent living.

Suggestions from subscriber at editor's request: Would it not be a good idea to have an investigation to find out how much profiteering there is in the manufacture of farm implements, automobiles, farm trucks, tractors, feeds, such as bran, cottonseed meal, shoes, raw cotton and clothing, sugar, railroad freight rates, telephone rates, official salaries from President down. Cut out a lot of red tape by reducing government and state committee and bureaus. This would compel profiteers to lower their wages thus compelling a return to the farms, reducing consumers and encouraging farm production and by this process eliminating the H. C. L.—Subscriber, Fife Lake.

Well, subscriber, you have said a mouthful, all right. Suppose we admit that there is profiteering in some lines of manufactories today. Suppose we have such an investigation as you suggest. How shall we then proceed to force the profiteers to desist from profiteering? Manufacturers are not as a rule paying higher wages because they are forced to. Manufacturers do not increase the prices of their commodities because of choice, but rather because of necessity. Every time the cost of production advances because of scarcity of raw material, wage increases, etc., naturally the price to the consumer must also be advanced. It is true that recent investigations show that it is common practice for manufacturers and dealers to increase their margin of profit the same time their costs are increased. But may we not partially excuse this practice? No matter what a man may produce, be it a tractor, an automobile, a manure spreader, a bushel of potatoes, a sheep or a cow, is he not entitled to a little larger profit per tractor, per cow, etc., if the increased selling price, based on an increased cost of production, lessens the demand for his product as it usually does? Where the real trouble lies is in the fact that the manufacturer has control over his selling price, and the farmer has not. Could the farmer today advance the prices of his crops at will so that at all times he could be assured of a fair profit, he would not, I am sure, make any complaint over the profits of others. And if under such an arrangement the farmer was obliged to increase the prices of his products to the consumer and consumption consequently dropped, would it be fair to accuse him of profiteering if he added a little higher profit to each unit of produce sold? Please do not misunderstand me. I know that there is profiteering [illegible] that capital is reaping un- [illegible] tificial means available for [illegible] that there is a better remedy than the one [illegible] is not a pleasant one, and if ever comes when the people of the cities are driven back to the realities and pangs of hunger, it will be a sorry day for agriculture. Are we not big enough to comprehend the larger aspect of the situation and strive to put this business of farming on the same sound economic basis upon which all other successful enterprises are built?—The Editor.

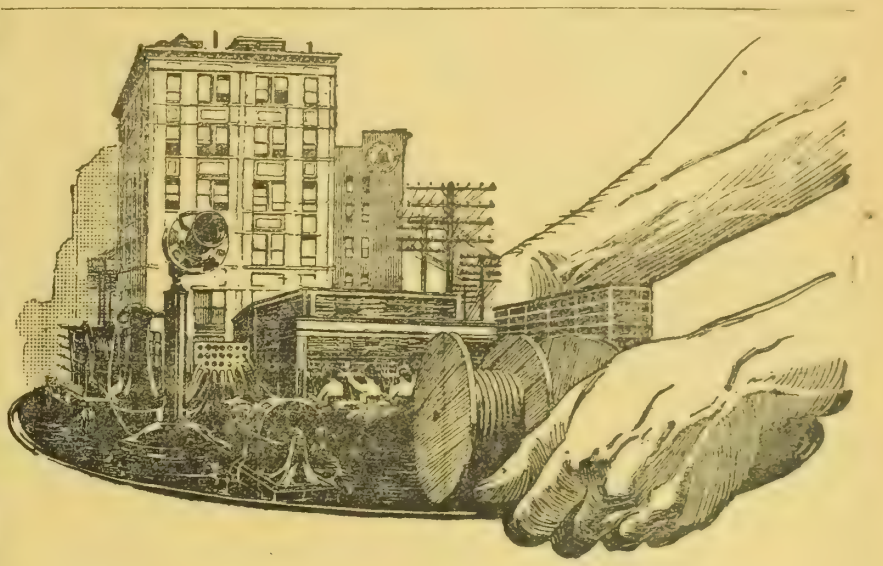
Fair Exchange

"Look here, waiter!" said Mr. Joyce, scowling deeply over his plate. "I ordered turtle soup. There is not even a morsel of turtle flavor in this." "Of course not," said the waiter. "What do you expect? If you ordered cottage pudding would you expect a cottage in it?"

Farm Visitor—I'd like to get a few hens.

Farmer—What kind?

Visitor—Good hens. The kind that says "Now I lay me" twice every day, if you've got 'em.



Every Time You Telephone

Every time you telephone you have at your ready command property worth over a billion dollars. Millions are actually used for the long distance call, and for your simplest message you have the sole, exclusive use of hundreds of dollars worth of property.

This vast telephone plant must be not only constructed and installed, but must be kept electrically alive to respond instantly to your convenience or emergency.

It is manned by a multitude of telephone workers day and night, not only to connect you with any one of ten million other subscribers, but also to maintain perfect pathways for that delicate telephone current started by your merest breath.

The cost of keeping this service, with its skilled operators, its sensitive apparatus, its long lines of communication up to maximum usefulness, is enormous.

Yet this vitalized and humanized organization is so capably managed that you command its service, at any time and in any place, for a few copper cents.

THE LUIKHART CHILDREN

WHERE IS the pessimist who said that this old world was growing worse every day, that men were all selfish and the milk of human kindness had run dry! The above theory has been refuted a thousand times very recently in the examples of human faith, love and kindness shown in the Luikhart children case.

Every mother in the state, yes and every father too, has skipped his favorite section of the daily paper to learn of the progress of this wonderful case. Surely the days of miracles are not past! It was thru no wrong doing of these little children that they were made to suffer, but rather because of the petty worries and selfishness of the mother who had brooded over her inability to satisfy her every wish and desire until her reason had become unbalanced.

There is a lesson for every mother as well as every woman of the land in the story of these children. It's the fretting over things which can't be helped, the false value placed on the material things of life; the dissatisfactions because of position and wealth which cause more misery and suffering than all the real hardships which man is heir to and which will eventually unbalance the human mind, if indulged in continually.

Perhaps the suffering of these little babes shall not have been in vain if we learn our lesson from the faith of the father and the doctor's good wife, who, in spite of every report to the contrary, still believed that these innocent little children would live. And what of the willing sacrifice of the man who gave of his life's pure, healthy red blood that new life might flow into the veins of these children and finally the generosity of the people who helped the father bear the burden imposed upon his finances through the hospital nurses and railroad bills. In all this the noted doctor gave of his best. The father was obliged to leave his position, pay expensive railway fares and hospital and nurses bills. Certain it is that within our hearts there should be kindled a new faith, a new love and a determination to meet our problems as they come from hour to hour; not looking backward or anticipating, but just taking each day's and each hour's tasks as they come.

"Any one can carry his burden, however heavy, till night fall. Any one can do his work, however hard, for one day. Any one can live sweetly, lovingly, purely, till the sun goes down. And that is all that life really means."

When the Fields Are Turning Brown

LOTS of folks have left the country,
They have hurried into town,
For the days are growin' shorter,
And the woods are turnin' brown.
They can't see no beauty in it;
Those town folks are blind's a bat
When they'd rather have the city
Than the woods, as look like that.

I just love them giant oak-trees
With their arms a-hangin' down,
And the acorns droppin', droppin'
As the woods are turnin' brown;
And the crows among the branches
Callin' out, from tree to tree,
Make me wonder if they're cawin'
To each other about me.

Now, here ain't no use a-sayin'
That all nature wears a frown,
Just because the grass is yeller,
And the trees are turnin' brown.
No such thing they're only smilin'
'Tis their way to sing a song,
'Cause they've kept the birds and flowers
In their shade all summer long.

I have walked through half the country,
But there's nothin' I have foun'
Quite so comfortin' and restful
As te woods a-turnin' brown.
I've grown old within their shadow,
Old, and purty nigh as gray,
But there's nothing that I know of
That's as dear to me as they.

OUR BEAUTY CORNER

INSTEAD OF giving you prescriptions for beauty lotions, etc., we contend that to be beautiful one must first be healthy, for a person who is not well is not happy, and if you are unhappy, your face will reflect your feelings. Therefore this series of articles will deal with "First Aid" measures, with a view of properly caring for our bodies so that we may retain our health which will do more for our good looks than all the beauty parlors ever started.

This week we will take a few minutes to study the teeth. Perhaps you are one who has always carefully brushed your teeth and know the value to your looks as well as your health, of well preserved teeth. Then it is to the children—the coming generation that we must direct our efforts that they too may realize the necessity of regular attention to this very important part of our bodies.

Decayed teeth are not only ugly to look at but they impair the health of their owner, as well as causing a very unpleasant breath, therefore besides the brushing night and morning, a dentist should be consulted once each year at least so that all cavities may be filled before they get large enough to do any damage. It is not only cheaper to have them cared for early, but less painful, and it is not too early to begin cleansing the teeth just as soon as they appear in an infant. A small pellet of cotton may be used first, soaked in a solution of boric acid. This will sweeten the child's mouth and cleanse the film from the teeth. As soon as the child is old enough, which is usually between two and three years of age, they will enjoy the fun of brushing their own teeth with a tiny brush, just like mother does, and it is not hard thus early in life to instill in the little mind the habit which will last through life.

If food lodges between the teeth and cannot be dislodged with the brush then dental floss should be used, or if this is not on hand, use a thread, never pins, as they are liable to injure the enamel.

In the city schools a regularly registered dentist examines the teeth of all pupils regularly, but in the rural schools where this service is not to be had, the parents must take extra care.

Toothache is due to decay and to food entering the cavity of a tooth where it decomposes and causes irritation and pain of the sensitive nerves. If the cavity can be reached, it should be cleaned out, afterwards putting in something to deaden the nerve until a dentist can be visited. To clean it out, twist a very small piece of cotton around a tooth pick and put in the hole of the tooth, twisting it around and around until the cavity is thoroughly cleansed. After the cavity has been cleansed out, a small application of oil of cloves on cotton placed well down into the cavity will usually stop the aching. If you haven't oil of cloves on hand, absorbent cotton soaked in spirits of camphor and placed in the cavity, while causing an intense burning will usually be effective in easing the pain. However these are only first aid measures and the tooth will quickly ache again unless it is properly filled.

WHAT WOMEN SHOULD KNOW ABOUT VOTING

IT IS gratifying indeed to us to receive such a large number of inquiries concerning this series of articles from Mr. Grenell's work on "What Women Should Know About Voting." It shows women are awake.

Women in Politics

By JUDSON GRENELL

"'Home Rule' is the law of Michigan in local and civic affairs. It is a good law; it enables each community to govern itself. Under it each locality makes its own rules and regulations as to the number, power and character of its officials, and concerning things which it wishes to do or leave undone. However, these local rules and regulations must conform to the state constitution and to state laws of general application to all communities of the same character.

Safeguarding the Home

"Each vote intelligently cast by a Michigan voting woman helps to defend and safeguard the home. Woman is by virtue of her motherhood the real guardian of home life in all civilized communities; and she is now, by virtue of her right to vote, an equal co-partner with man in regulating the civic affairs of the community in which she dwells. Thus her responsibilities and her influence have been greatly increased.

"Each fair-minded Michigan woman voter wants the local government to be 'good.' By local government is meant the county, as well as the city, village or township. To be really good, the government must at least be up to the average intelligence and the best moral standard of those composing the community. It cannot be any better than this, for the same reason that a stream cannot rise higher than its source. It is because our standards are so variable, between both individuals and communities that there is criticism of officials and methods.

"Wise criticism should not be ignored. It may hurt a community's pride to criticise its defects, to expose an official's blunders, but these aid in keeping local self government nearer the standard of what is right.

Economy

"Economy holds first place, as a civic virtue, in the public mind, even among those who pay no direct taxes. The reason for this is plain. The greater the sum total raised by taxation to be expended by community officials, the less there is left to those who earn it.

"Now the candidate who promises to expend the least in carrying on the activities of his office, may really be the most extravagant. For often there is more economy in spending than in refraining from spending. A low tax rate is very far from being any real evidence of an economical administration.

Highways

"The wise spending in civic government, is well illustrated in street paving, a matter entirely within the power of the community to regulate. The wise citizen knows that good roads, good highways, are necessary, both in the city and country; but it is also evident that a dirt road, sufficient to meet the needs of a thinly settled and therefor seldom traveled area, will never do for a trunk highway, with its never-ceasing heavy traffic. So there is real economy in spending thousands of dollars a mile for such a thoroughfare, for it would be real extravagance to try to keep up a dirt road under such traffic conditions. And it is also clear that it would be extravagance to build a concrete roadway where, from the very nature of the case, it will be seldom used.

"No intelligent woman will hesitate for a moment to cast her ballot for the candidate with adequate knowledge of the needs of the community in the matter of paving, as against one ignorant of highway building; or for the candidate or candidates who are reasonably sure to make selection of such a public servant, as against one who would make the office the football o fparty politics."

The Children's Hour

DEAR CHILDREN: With Christmas getting nearer every week, the air is just full of good things at our house. Last week we packed and sent to Dora Peterson, of Bitely, Michigan, and Leola Francis, of Bentley, each a lovely red pencil box containing three pencils, a pen holder and an eraser. We are sure that Dora and Leola will enjoy carrying their boxes to school with them and that if others could see them, they too would hustle out and get the one subscriber which entitles them to this gift.

Then Mildred Burton, of Mesick, chose as her gift a blue plaid hair ribbon. With hair ribbons so high, and plaid about the scarcest of all ribbons, we know that she will be a happy little girl when she wears her new ribbon to school.

And if the boys could only see the shipment of boy scout knives I have just received and have all ready to send to them, one to each boy who secures one new subscriber for our paper, I am sure that they would go right out and get one today. These knives are of highly tempered steel, ground to a sharp cutting edge. They are finished in gun metal and have two blades. One of these blades ends in a screw driver, and has at its base a bottle cap lifter. The other large blade has a belt punch point and a cutting blade. Then the knife is finished with a shackle and 15 inch chain and there is a three inch rule measured off on the outside of the knife. We don't believe there ever was such a wonderful knife as this one designed to meet all the needs of the boys who are engaged in scout work and good for any boy anywhere, in city or country.

And I'm wondering who will win the football which is being sent me this week from the manufacturer's. Of course it takes six subscribers to win this but then because it comes higher is all the more reason why it is worth working for.

I know several boys who are working for the radio wrist watches, just like the boys wore in the trenches. My, but wouldn't our fathers and mothers have been proud if they could have had the opportunity when they were youngsters to win such prizes!

I wish you would write and tell me which prize you are working for and how you are getting along. Perhaps I can help you. Affectionately yours, Laddie.

OUR BOYS AND GIRLS

Dear Laddie—I was very much surprised when I looked at the Children's Hour and saw my letter in print. We like the M. B. F. and I enjoy the Doo Dads and letters very much.

What I enjoyed most at the Isabella county fair was a dog and pony show. There were six ponies with bells on and six stands. The ponies ran under the stands. There were twelve dogs, one on the back of each pony and one on each stand. And the one on the back of the pony would jump onto the stand while the dog on the stand would jump onto the pany's back. There was a wire swing on which a man would place a dog and start the swing and when the swing stopped he would take the dog off. He had four wires stretched across the tent of about half an inch apart. He would put a dog on each end facing each other and when they met one would crouch to the wires while the other walked over him. Hoping this letter will be satisfactory and will appear in print. I remain yours truly, Harold Bronson.

Dear Laddie—Hello. I was glad to get your letter and tried to do what you told me, but all the people take it around here but two or three. I tried, but they would not. They said that perhaps next year. When they said they would not it made me feel bad because I wanted to get those paper dolls so bad. But perhaps when their paper expires perhaps I can get them to subscribe for it. But I hope I can get the dollies then. But I wish I could get them anyway. Goodbye, with love, Mirla Herrington, Petoskey, Mich., R. F. D. No. 3, Box 124.

CALUMET

—gives better bakings that go further. It strikes straight at the root of extravagance—waste—and reduces living cost in a sane, sensible, way. Calumet Baking Powder never fails to properly raise all bakings—produce the best results.

Makes Most Palatable and Sweetest of Foods

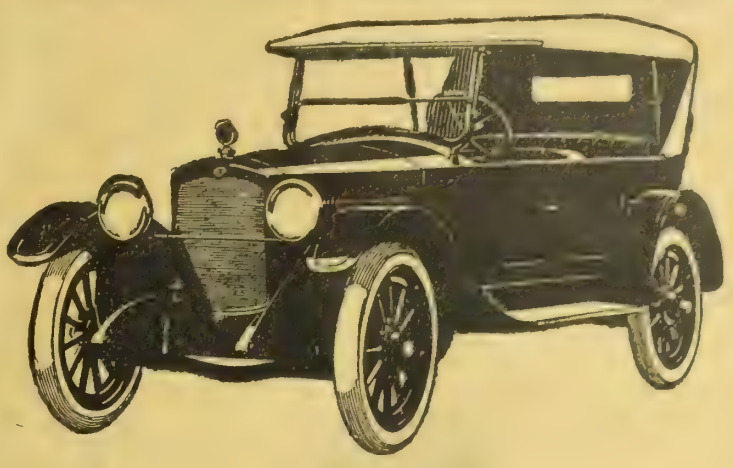
Calumet bakings *do* go further, because they are deliciously good, are never thrown away. *And* because they have greatest of keeping quality—stay moist, tender and oven-fresh for days. You save when you buy it—moderate in cost. You save when you use it—has more than the ordinary leavening strength—therefore you use less. You save materials it is used with—no failures.

Generations of good cooks have used Calumet—because it positively proves its superiority and economy. It comes to you from the largest, most sanitary Baking Powder Factory in the world—absolutely pure and as perfect in leavening power as the day it left the big Calumet Plant.

Contains only such ingredients as have been officially approved by United States Food Authorities. Sold by your grocer under a definite money-back guarantee, if it doesn't prove "best by test"—in your own kitchen, in *any* baking.

BEST BY TEST

FINER THAN EXPECTATIONS



The New

GRANT SIX

Those who read the announcement of the new Grant Six expected a great deal of the new car.

They said, that if it was as good as the description suggested it *must* be an unusually fine car.

Now the Grant Six has been seen and examined by thousands.

And the general opinion everywhere expressed is that it exceeds everything claimed for it.

They tell us it is even larger, handsomer and more powerful than they expected.

They say the finish, the trim, the upholstery are simply beyond comparison with anything offered for similar price.

They are particularly enthusiastic about the beautiful body design and the wonderfully sturdy chassis.

And always they comment on the infinite care and thoroughness expended in details ordinarily slighted.

Because we are building a car of character—a car of the utmost refinement, a car that reveals its quality instantly by its performance and construction it is only fair to say we greatly appreciate the splendid reception given this new model.

The demand for it is so great that we suggest that you place your order as far as possible in advance of your requirements.

MARKET FLASHES

WHEAT DEMAND BETTER

Demand for wheat is on the increase and prices rule slightly above the guaranteed minimum. The export demand is constantly picking up in spite of the enormously high rate of exchange. The public seems to have become reconciled to high-priced bread and there is not so much quibbling over a situation for which there is actually no remedy. The demand for flour is good and most of the mills in the country are doing an excellent business. Farmers need not be surprised under the circumstances to see higher prices for wheat long before another crop comes on.

CORN STANDS FIRM AND HIGHER

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.48	1.30	1.54
No. 3 Yelow	1.48		
No. 4 Yellow	1.46		

There is a striking disposition on the part of traders in nearly all leading grain markets to swing over to the bulls in the corn deal. This market has been strongly besieged by the bears for the past two months and the present low prices are due to no other cause than the determined efforts of the speculators to drive prices down. But the bottom has been reached, and they all know it. The corn market from now on we predict, will be in the control of the bulls, and if the farmers take things easy and are not too anxious to sell, prices should go up where they belong by the first of the year.

OATS STEADY

Grade	Detroit	Chicago	N. Y.
Standard	.74	.73	.82
No. 3 White	.73	.72	

Prices offered for oats this week are slightly in excess of last week's prices, varying from one-half to one cent per bushel. There isn't the strength in the market as we thought last week would prevail. We have never seen a more sensitive market than this. One day the slightest rumor of a bullish nature will stimulate buying and boost up the price. The next day the simplest kind of a bearish rumor will knock the props out and down it will come again. But we stand by our former assertion that oats will be higher before the first of the year. Farmers will not sell enough at present prices to fill the market's demands.

Weekly Market and Trade Review

AN EXAMINATION of the industrial and trade developments of the past week reveals some very encouraging features and some that are not so favorable. The failure of the industrial conference to arrive at a definite policy establishing the relations between employer and employe is the most depressing factor of the week. It has not as yet, however, affected the situation as strongly as was feared. The threat of the American Federation of Labor that a nation-wide strike is in the offing is not sustained by the actions of labor in general. As a matter of fact, present labor troubles seem to be confined to those regions over which the Federation of Labor exerts a ruling hand or in which it has recently interfered. The mass of labor appears to be fairly well content with existing wages and working conditions. The most alarming of all existing or impending labor disturbances is the strike of the soft-coal miners who have announced a firm decision to quit work the first of next week unless their demands for a six-hour day and a five day week are granted. All efforts to arbitrate the differences have to date proved futile. The miners realize that they hold a whip hand and have said they will accept nothing less than what they have asked for. Wild statements have appeared from official and semi-official sources that the government would use troops to force the miners to remain at their picks, but saner heads could permit of nothing like this being done, for it would only arouse labor to a frenzy of desperation and violence. A strike of the coal miners at this time would do more to cripple industry than almost any other conceivable cause and it is certainly to be hoped that the President and Congress will be able to placate the miners or induce the operators to grant their demands, or take such other legal steps that will keep the mines working at their full capacity.

Market conditions are on an increasingly encouraging scale. The onslaught made several months ago on farm products has reached the maximum point of its force, and the market is rapidly rallying to its former position, aided by the inexorable laws of supply and demand. The gamblers in foodstuffs realize that the farmers cannot sell at existing prices on many of their products, and are therefore changing their tactics. A very significant statement concerning their attitude appeared in a recent market review. The statement said: "Those who have recently turned from the bear to the bull side of the corn deal, and the number includes several heavy dealers in Chicago, say they are tired trying to break a market that refuses to go lower." And that's the situation in a nutshell. Unless the industrial situation becomes much graver than at present, higher prices on farm products should be seen in a very short time.

RYE STEADY; BARLEY ACTIVE

The rye market is a bit quiet and there is no change in prices. Detroit quotes $1.37 per bushel for No. 2 grade. Barley is in good demand and prices are higher. For No. 3 grade, $2.60@2.75 per cwt. is offered.

APPLES DULL

The demand for apples has let up a bit, and the condition of the market is described as "dull, demand and movement slow." Prices remain at about the same level as was established thirty days ago. Detroit jobbers are offering around $7.50 per barrel for Baldwins and Greenings. Chicago prices on Michigan stock run somewhat better, A No. 1 Baldwins bringing $8.50; Greenings $9; 20 oz. Pippins, $9.

HAY SUPPLIES LIGHT

	Light Mixed	Stan. Tim.	Tim.
Detroit	27.50@28.00	27.50@28	22@23
Chicago	28.00@30.00	25.00@27	@24
New York	31.00@31.50	28.00@29	
Pittsburg	29.00@29.50	27.00@28	24@25

	Light Mixed	Clov. Mix.	Clover
Detroit	24.00@25.00	24.00@25	
Chicago			20@27
New York			27@28
Pittsburg	28.00@28.50	26.00@27	25@28

Little change is to be found in the general condition of the hay markets of the country, supplies continuing to be light. Nevertheless there has been a slight increase of movement from country points to the city markets. Railroad and labor troubles have contributed to embarass the hay market for several weeks and greatly reduced the quantity of hay available at the terminals. Accordingly consumers have picked up in the amount they are buying. But unfortunately values have only been steadied and not materially increased.

BEANS TAKE A DROP

Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.75	7.75
Prime	6.50	7.50	7.00
Red Kidneys	11.50	12.00	13.75

The bean market is dull and lower. Some of our friends on the bull side are quite put out by the drop, and declare that there is no reason for it except the attacks of the bears who have sold short and must bring lower prices in order to get out from under. To us, however, the lower prices seem perfectly natural and much as we regret to say so, we expect to see further declines. Mr. Kimball and his cohorts are the busiest fellows in the land right now and are bringing in the oriental beans as fast as they can get the ships to move them. But the tariff against these invaders ought to be in force before another sixty days and that will cook the game of Messrs. Kimball, Kutner, et al. We are in receipt of a letter from Congressman Fordney in which he promises to follow the situation closely, and we think we can depend upon him to do as he promises. Mr. Fordney was greatly impressed with the arguments presented by Mr. Nathan F. Simpson, who acted as spokesman for the Michigan delegation at the hearing, and gave many convincing statements concerning the cost of bean production, the importance of the industry and the necessity for protection. And if the committee takes early action on this matter, much of the credit will be due to Mr. Simpson who so ably presented the case for Michigan.

POTATO PRICES CLIMB

SPUD PRICES PER CWT.	Detroit	Chicago
White Sacked	2.50	2.45
White Bulk	2.30	2.30

Greenville, Mich., quotes spuds at $1.90.

Practically every potato market of importance in the United States reports a good demand, increased activity and higher prices. The rot which appeared in many carloads of eastern potatoes and raised havoc with the market has almost entirely disappeared, and the trade shows a desire to stock up. Potato shipments are averaging close to a thousand cars a day now but the demand is such that the supply is readily absorbed. Nearly everyone is talking higher potato prices, and the fact that prices are advancing during the very crest of the marketing season would indicate that there are good reasons for believing that prices will be very much higher before spring.

CABBAGE WELL UNDER WAY

Michigan is shipping considerable cabbage just now. Market is steady to firm with few chances in prices. Detroit is a poor market just now, the city being fairly well supplied with home-grown stock. Jobbing prices average from $20@26 per ton for the domestic variety, and from $26@30 for the Holland Seed.

ONIONS

Due to the fact that New York growers and shippers with storage facilities are holding the balance of the crop for higher prices, the onion market is firm and there is an upward tendency to prices. Detroit jobbers are paying from $3.25 to $4.25 per 100-lb. sack, depending upon grade and variety.

DRESSED STOCK

Detroit market: Hogs; under 150 pounds, 19@21c; over 150 lbs, 18c. Colder weather should bring about better demand and prices in dressed hogs. Calves: Fancy country dressed, 26@27c; choice, 23@24c.

POULTRY EASY

Large offerings of poultry the past couple weeks have over-stocked the market and the present tone is easy, with no change in prices. There is some speculation as to the Thanksgiving trade this year, many believing that the market will be glutted and prices take a drop. On the other hand, it is argued that the poultry movement has been large this fall and that the marketable supplies back on the farm are not as large as usual. Better consult your commission agent at once for the best advice he has to offer on the Thanksgiving demand. Opening poultry prices for the week are: Spring chickens, large, 24@26c; small, 24@26c; hens, 28@30c; small hens, 20@22c; roosters, 18@20c; spring geese, 23@24c; ducks, 28@30c; turkeys, 34@35c per lb.

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.

——it tells you when and where to get the best prices for what you raise!

——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!

——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! ONE YEAR.....$1 THREE YEARS...$2 FIVE YEARS.....$3

Farmers' Union Adds $50 to Bean Fund

THE LATEST and most generous contributor to M. B. F.'s bean fund is the Farmers' Co-operative Union of Williams township, Bay County. In offering this contribution, Mr. Irving B. Davis, secretary and treasurer of the union, said: "This amount was donated from the treasury of our union. I am authorized to say that after the expenses of the delegates are paid and there is any part of this money left, you are to keep the balance and spend it for the betterment of farmers' interests in any way you see fit. Also remember that we, as farmers, are ready to stand back of these men, and I am almost sure that it will not cost any of them anything out of their own pockets. Don't think for a minute that the farmers are all broke if they did get the worst deal handed to them during the war. We all know it now, and it has opened their eyes. With a little more help from the men that the M. B. F. has got with them, we will forge ahead, slow but sure. The M. B. F. has our hearty support.

Does that letter warm our heart? You bet it does, and we want to thank the Co-Operative Union of Williams Township, for this splendid spirit of co-operation and support. This contribution brings the fund up to $110.60 This will not nearly cover the expense, but we rather expect to see more of the bean growers coming in with enough to make up the balance. If there is any left in the fund, we will hold it or return it as the majority of those who have contributed may decide. It may be that we shall have need of a little money when the bean tariff bill gets before Congress. Next week we will have additional contributions to publish.

LIVE STOCK STATUS PUZZLING

Inasmuch as the biggest live stock experts in the country have been unable to find a suitable reason for the remarkable decline in hog and cattle prices, it would be foolish for us to attempt to do so. They all tell us that the export demand has practically ceased temporarily. One authority assures us that an English commission sent here to purchase food products states that England has enough meat products in storage to last until the first of the year. Hence, we need not look for a revival in the export business for another sixty days at least.

Live stock critics in the Detroit markets are more hopeful than they have been for some time. Railroad conditions improved somewhat last week. Runs of hogs and sheep are expected to increase from now on. Cattle received were largely of a common order. Quotations are:

Best heavy steers, $12@13; best handy weight butcher steers, $9.50@10.50; mixed steers and heifers, $8.50@9.00; handy light butchers, $7.50@7.00; light butchers, $6.50@7; best cows, $8.50@8.00; butcher cows, $7.50@8; cutters, $5.50@5.75 canners, $5@5.25; best heavy bulls, $7.50; bologna bulls, $6.50@7; stock bulls, $6.25@6.50; feeders, $8.50@9.50; stockers, $7.00@8.75; milkers and springers, $75.00@150.00; best lambs, $14.25@14.50; fair lambs, $12.50@13.50; light to common lambs, $8.00@11.50; fair to good sheep, $6.50@7; culls and commons, $3.00@5.00.

The hog trade was a dull and dragsy affair from opening to close and slumped. This week opened 15 cents higher on mixed grades, bulk of sales for mixed being at $12.25 and pigs at $12.25 to $12.50, the market having declined $2 a hundred from the close week before last.

EAST BUFFALO—Cattle, slow. Calves, active; $2 lower, $7@20. Pigs, 75c higher; others 25c higher; heavy, $13.25@13.40; mixed, yorkers, light yorkers and pigs, $13.25; rough, $10.75@11; stags, $8@9.50.

CHICAGO—Hogs, strong, bulk, $12.25@13.25; top, $13.35; heavy, $12.75@13.25; medium, $12.65@13.25; light, $12.50@13.25; light light, $12.25@12.85; heavy packing sows, smooth, $12@12.60; packing sows, rough, $11.75@12; pigs, $12@12.75.

FARMERS' SERVICE BUREAU

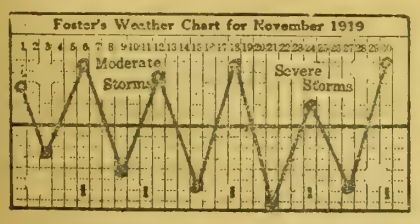
We regret that we have been obliged to omit from our columns the last two issues our service bureau. We can only ask the patience of our readers who have requested information from this department until the next issue of the paper when all questions will be answered in the order received.

LIVE STOCK SHIPPERS TO MEET

There will be a meeting of the managers of the local co-operative live stock associations of the state at Lansing, November 6 and 7, beginning at 10 o'clock, Thursday. All managers are requested to be present to assist in outlining the work for the coming year and establish a uniform system of business, writes E. E. Compson, manager, Michigan Live Stock Exchange.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Nov. 1, 1919. —Warm waves will reach Vancouver about Nov. 3, 9 and 15 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of Nov. 4, 10 and 16, plains sections 5, 11 and 17; meridian 90, great lakes, middle Gulf States, Ohio-Tennessee valleys 6, 12 and 18; eastern sections 7, 13 and 19, reaching vicinity of Newfoundland about Nov. 8, 14 and 20. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from Nov. 3 to 21. Temperatures will range from about to above normal east of Rockies crest and from about to below normal west of that line. Moisture will come from Gulf of Mexico to feed these storms as they come from northwestward and most precipitation will occur on southern long slopes of ridges or mountain ranges that run east and west. Most severe storms and most precipitation will occur during the five days centering on Nov. 10, but these storms will not be as severe as those that will come during the last half of November.

Trend of temperatures will be more downward than the season suggests from Nov. 1 to 21. A cold wave is expected in northern and cool wave in southern sections during the five days centering on Nov. 12. Cropweather will be fair and favorable to growth of winter grain.

Those who have my public and private forecasts of the coming winter will take notice that I do not now expect the winter to be so cold and severe as my forecasts have stated, but the location and amount of precipitation are still expected to be as heretofore stated. I believe I have given the correct dates for the most severe wather, amount and location of precipitation. I have made no change in expected sectional drouth for 1920.

When less than usual moisture is expected all crops should be planted and drilled deeper than usual and when excessive rains are expected the seed should be placed as high as may be. Much can be saved by planting and sowing on low ground for dry years and high for wet years. Next year will bring both extremes; too much rain in one half the country, drouth conditions in one-fourth and about right in one-fourth. These conditions can be met by deep, shallow and normal depth of placing the seeds and in selecting high or low lands to suit conditions. Corn and grasses require much moisture; wheat and some other crops much less.

The C. E. DePuy Co. Pontiac, Mich.

Crop Reports

MASON (W)—Potato harvest in full swing. Apples are still being harvested. Both potatoes and apples were good this year. Mild and cloudy as to weather. We have had two severe frosts. Soil in good condition for fall plowing. Potatoes are beginning to move to market. Price around one dollar. The supervisors voted against making an appropriation for county agent's salary, at the October session. But provision has been made to allow the people to vote on it again this spring. This will make the third time the people have voted on this issue and have turned it down twice.—B. M.

LAPEER (C)—Farmers busy digging potatoes and taking care of the corn, both are pretty good crops, not much of anything going to market except lambs and some hogs. The weather has been good for wheat and rye with rain and warm days it is making good growth.—E. A. B.

MASON (W)—Potato digging has begun in earnest. The yield in most cases is satisfactory. Weather showery. Soil pretty well soaked. Continued wet weather may cause some loss of potatoes through rot. Our county supervisors are to consider making an appropriation for the county agent's salary on Saturday, the 18th. Mr. Cook, our present agent, has been serving without salary since spring. Subscriptions have been solicited to partially reimburse him. He now has the Mason County Farm Bureau organized and in working order and will therefore withdraw unless invited by the supervisors to remain. It is to be hoped that Mr. Cook's loyalty to the county will receive practical recognition. —B. M.

ANTRIM (W)—Farmers husking corn and digging potatoes. Potatoes yielding around 100 bushels per acre. Weather variable, not much rain the past week. No killing frosts yet in this section. Soil in good condition. Farmers selling apples and potatoes. It is reported that members of the Co-operative Association realize 20c per hundred more for their potatoes than local buyers will pay. Thanks to our former County Agent, W. C. Cribbs (who I believe is now with the Bureau of Markets) our county is well organized with co-operative marketing associations.—N. T. V.

GENESEE (S)—The farmers are husking corn, picking apples, hauling sugar beets and beginning to dig potatoes. A few are still sowing wheat and rye. Silos are all filled and the bean harvest is over. The grain is nearly all threshed and bean threshing will commence before long. Apples are scarce and the price is good. Potatoes are not going to turn out very good. Nearly everybody has some cloverseed and it is threshing out good. Several auction sales are being held and prices received are good. There is not much being sold now to speak of, although apples and potatoes are moving slowly.—C. S.

KENT(W)—Farmers are getting things in shape for winter. Some building, painting, etc. being done. Soil for wheat is in fine shape, wheat although sowed late looking fine. Usual acreage sown, but few potatoes raised, hardly enough to supply the neighborhood. Can a farmer sell potatoes for $100 per bushel and pay $4.00 a day and board to dig them? A great many silos built through the country. Sparta condensary paying $3.60 per hundred for 4 per cent milk. A big drive on in Kent Co. in the grange to send as large a delegation as possible to the National Grange which meets in Grand Rapids November 12 to 21—F. E.

SHIAWASSEE (E)—Wheat all sowed. The dry weather during September seriously hindered seeding, but nearly all wheat is up from one to three inches. No beans are threshed as yet. Potatoes are being taken out, the yield and quality is generally good. Not more than half the percentage of the last year's acreage of rye is being sowed this year. Corn is an abundant crop this year and farmers were able to fill their silos full and have quite an amount of corn left for husking. on account of not being able to secure sufficient help. The sugar beet crops is very much reduced.—D. H. M.

AMERICA'S LEADING FUR HOUSE
Established 1853
TRAUGOTT SCHMIDT AND SONS
Cap. $1,750,000

WE PAY TOP PRICES

Ship to us for the BIG MONEY. We do not quote a "sliding scale" of prices. Instead we quote ONE DEPENDABLE PRICE for each size fur and we pay that price. You don't have to guess—you absolutely know just what your furs will bring. This policy has made us the leading fur house in America—the house thousands of trappers KNOW they can TRUST.

NO COMMISSION CHARGED

We charge no commission for handling your furs. You get every cent. We pay express and parcel post charges—so you save big money that way. Your money sent same day furs are received. No waiting—no delay. Your furs graded fairly and liberally, so you get the most possible money.

WRITE US TODAY

Let us send you "Successful Trapping"—a valuable book that tells how to get the furs and how to sell them for the most money. Also, dependable price-list, latest market news and shipping tags, all free. Write TODAY or use the coupon.

W. R. RUMBAUGH
397 S. W. Fifth St
Des Moines Iowa

CATCHING MUSKRATS

The way I catch muskrats—I take a barrel and cut it through the center and then I make a lid across the top of the barrel and fasten it to the middle of the lid so the l'd just balances on it; then I put the barrel into the water where it is just deep enough to come within about two inches of the top of the barrel, and I then stake it down and fill it about half full of water; I next put some carrots on the top of the lid for bait. When the muskrats jump up on top of the barrel and get on the lid, the lid tips and dumps them into the barrel, and the set is ready for the next rat that comes along.—A. M.

BOYHOOD IN A NEW COUNTRY

(A Michigan Trapper in Fur News.)

(Con't from last week)

It is not my purpose to relate all the dry details which confronted our elders, but to make mention of my early impressions, what the new country afforded of particular interest and concern to me and other boys with whom I became associated at school.

I was but five years old when we moved into the woods and in another year I was trudging two miles to school each day and return, except Sundays. Had I been old enough to wonder at the whys and wherefores as to nature's doings, I would have marveled at the thick growth of the bushes and briers which sprang up along the highway soon after the way had been cut and the sun could strike the ground.

Raspberries, both black and red, were abundant, as was the wild goose berry, which were so covered with sharp spines that it was a punishment to take hold of them in picking without gloves. Some choppings which lay for two or three years before being burned off became practically a solid patch of raspberries. Of course the new settlers had no fruit of some years until the trees could be grown and come into bearing.

They are both honest and competent men of standing in their lines in Michigan and they will represent any reader of this weekly at any sale, making bids and purchases. Write them in care of this paper. Their service is free to you. They will also help you arrange your sale, etc. They work exclusively in the interests of Michigan's OWN live-stock weekly!

FOR QUICK SALE

2 large type Poland China spring boars, grandsons of Gertsdale Jones. Good ones $50.00 each. C. E. Davis & Son, Ashley Mich.

LARGE TYPE P. C. SPRING BOARS and gilts now ready to ship. Also one Fall Yearling Boar and Fall Pigs. Clyde Fisher, St. Louis, Mich., R. R. 3.

WONDERLAND HERD—LARGE TYPE Poland Chinas. Some cracking good spring boars and a few June sow pigs at private treaty. Holding a few boars and all my early sows for my sale Nov. 11th and Col. Ed. Bowers, South Whitley, Ind., and Col. Porter Calstock, Eaton Rapids. Come and see the two greatest boars living. Free livery any time.
Wm. J. CLARKE
R No. 1 Eaton Rapids, Mich.

AUCTION SALE

—72 Head—
Medium Type Poland China Hogs
(52 sows and 20 boars)
November 12, 1919
STONY CREEK STOCK FARM
Pewamo, Mich
Write for Catalog

FOR SALE—LARGE TYPE POLAND China boars, April and May farrow. The farmer's kind at farmer's prices. F. M. Piggott & Son, Fowler, Mich.

SHOWING IN FIVE CLASSES AT Hillsdale Co. Fair where seventy eight head of Polands were exhibited I won seven premiums. A litter of eight under six months, sire Bob-o-Link, dam Titanic Hazel. Two shown in under year took 1st and 2nd. Two showing in six months class took 1st and 2nd. One 1st prize boar and two gilts of this litter left. Others by same sire also either sex by Michigan Buster.
O. L. WRIGHT, Jonesville, Mich.

A New Herd Boar
(his name) **Big Bob Mastodon**
sired by Caldwell Big Bob, champion of the world in 1917. His dam is Mastodon Josie; she is a daughter of A'S Mastodon the Grand Champion at Iowa State Fair in 1917. Ready to ship boars.
(Come and see him.)
C. E. GARNANT, Eaton Rapids, Mich.

LEONARD'S Big Type Poland China Boars, all ages. The kind that makes good. Call or write.
E. R. LEONARD, St. Louis, Mich.

DUROC

Duroc Opportunity

We are now booking orders for July and Sept. pigs cheap. Also March and April pigs of either sex. Shipped C. O. D.
EAGER, BROS., R 1 Howell, Mich.

PEACH HILL FARM

We are offering a few choice spring boars, of March and April farrow. They are of Protection and Col. breeding, out of prize winning stock. Prices reasonable. Write or come and see
INWOOD BROS., Romeo, Mich.

DUROC BOARS OF SIZE, QUALITY and breeding, including several State Fair winners. Newton Barnhart, St. Johns, Mich.

5 DUROC BOARS AND 4 SOWS Pigs from Austin's Wonder No. 125917 for delivery November 1. Write for pedigree and prices. Satisfaction guaranteed C. H. Stanley & Son, Paw Paw, Mich.

SPECIAL PRICES TO MOVE THEM QUICK. Eight big growthy spring boars will weigh 200 lbs. or better. Price $50
C. E. DAVIS & SON, Ashley, Mich.

DUROC BOARS FROM PRIZE WINNING STOCK ready for service. Geo. B. Smith, Addison, Mich.

DUROC JERSEY PIGS, BOTH SEXES. $25 at 8 weeks old. Will be ready Nov. 10. Quality and size guaranteed
W. E. CUMMINGS, Coleman, Mich

DUROC JERSEY BOAR PIGS. Grandsons of Brookwater Cherry King or Panama Special. $20 at 8 weeks. Registered. E. E. Calkins, Ann Arbor, Mich.

REG. DUROC HERD BOAR 18 MO. OLD, wt. 350 lbs. Sire Buskirk's Wonder 102809. Sure Breeder. Gentle. Litter 16. Has big bone, long body, smooth type kind we all want. $100 quick sale, crated, or will exchange for two good spring gilts equal breeding reg. Six choice boar pigs. Litter 10. Grandsons of Superba King 53253, $15.00 at 8 weeks, registered, delivered Dec. 1. Choice April gilts same breeding, litter 16, wt. 150 lbs., $50, reg., pigs and gilt above boar's get.
Honesty Our Motto
AUSTIN BROS., Bloomingdale, Mich.

"—for *all* the Farmers of Michigan!"

MICHIGAN BUSINESS FARMING

The only Independent Farmer's Weekly owned and Edited in Michigan

Business Principles Applied to Farming

THE TRUTH of the statement expressed years ago by a well-known Michigan farm leader that "farming is a business," was never more evident to farmers than it is today. The immediate and primary purpose of all agricultural exponents should be to convince the consuming public, the metropolitan press and the government that there must be brought about certain fundamental changes in the existing systems of cost-finding on the farm, of marketing and distribution that will enable the farmer to apply to his business substantially the same business principles that make for success in other lines of industry. It is fully as much to the interests of the consuming public by insuring an ample supply of food as it is to the interests of the producer of food for the farmer to be empowered and permitted to adjust his selling price according to the cost of production.

Shall Farmers Unite With Organized Labor?

An Important Question Which May Effect the Entire Future of American Agriculture

By FORREST LORD

IN THE FABLES of Aesop we find the following story: "The lion and the fox went hunting together. The lion, on the advice of the fox, sent a message to the ass, proposing an alliance between their two families. The ass came to the place of meeting overjoyed at the prospect of a royal alliance. But when he came there the lion simply pounced on the ass, and said to the fox, "Here is our dinner for today. Watch you here while I go and have a nap. Woe betide you if you touch my prey." The lion went away and the fox waited, but finding that his master did not return, ventured to take out the brains of the ass and ate them up. When the lion came back he soon noticed the absence of the brains, and asked the fox in a terrible voice, "What have you done with the brains?" "Brains, your majesty," replied the fox, "it had none, or it never would have fallen into your trap."

ABOUT A year ago, Gov. Lynn Frazier of North Dakota was invited to a conference in Chicago by John Fitzpatrick, president of the Chicago Federation of Labor. At that conference Fitzpatrick proposed an alliance between organized labor and the Non-Partisan League. Gov. Frazier, overjoyed at the prospect of fortifying the League by joining hands with a powerful labor organization, readily agreed that such an alliance would be a fine thing. Accordingly pledges were made and the public has been waiting, not without a certain amount of trembling and anxiety for this farmer-labor coalition to show its strength. But if the Non-Partisan League and the Chicago Federation of Labor have yet discovered that there is anything in common between them, there is no outward evidence of the fact.

Last week officials of the American Federation of Labor, who are largely responsible for the steel strike and other industrial disturbances, but who are now cowering the least bit before the storm of the public's disapproval sought to lend a specious respectability to their Prussian methods by extending an open invitation to farmers to embrace their "cause" and help enforce their unjust demands.

From Canada comes the boastful announcement of organized labor that it is firmly entrenched in the organized ranks of the Ontario farmers and that it is entitled to some of the credit for the election of the forty-one farmers to the legislature. No verification of this statement, however, has yet been made by the farmers who actually did the job.

Why Organized Labor Needs the Farmer

IT IS CLEAR that organized labor is doing its utmost to insinuate itself into the good graces of organized farmers. Labor finds that it is not powerful enough alone to dictate to the employers and the government. Labor has been tactless enough to disregard public sentiment. Its attitude has been of a notoriously public-be-dammed character. But labor now knows that public opinion is the greatest power on earth and that no cause can long prosper that does not meet with the public approval. Labor realizes too late that it has been indifferent to the public welfare and has thoughtlessly antagonized a great body of people who, if properly appealed to and their interest properly respected, would now present an irresistible force to back labor up in its reasonable efforts to secure better working conditions. The industrial conflict which was formerly a conflict between capital and [illegible] public [illegible] thing [illegible] labor [illegible] flic[illegible] wit[illegible] the [illegible] er capital is forced to temporarily acc[illegible] labor or vice versa. The public will decide [illegible] and the public [illegible]

Labor, then, does not stand in as favorable a position before the great arbiter of public opinon as formerly. Labor recognizes this fact. Hence, its great eagerness to line up the farmers and farm leaders. There is something about the dignified conservatism and the comparative prosperity of the farmers which appeals to organized labor and which labor believes might so elevate their cause in the eyes of the public as to remove much of the curse that has heretofore attached itself to some of their knock-'em-down-and-drag-'em-out methods.

Where do the Farmers Come In?

WHAT DOES labor propose to give to the farmers in exchange for their support? Nothing. Perhaps the labor leaders mean well, and a little later on after the farmers have helped them to get what they are after, will turn their attention to the farmers' problems. But this is doubtful. If the labor leaders haven't anything to offer to the farmers now when they need their assistance so badly, does it stand to reason they will have anything to offer when they no longer need the farmer?

Closed Shop Would Throttle Industry

ARE NOT many of the demands of organized labor at the present time diametrically opposed to the interests of the farmers? Let us see what organized labor wants, or rather what organized labor thinks it wants. For one thing, it wants the country to recognize the principle of the closed shop. What is the closed shop? The closed shop is the farm or factory which employs no labor except what union officials say it may employ. Is it as strong as that? In effect, yes. The closed shop is absolutely and always at the mercy of the labor organization to which the employes belong. If a workman is [illegible] discharged against [illegible] [illegible] [illegible]

Radical Labor Group Seeks Political Alliance

Would "Use" Farmers to Carry Out Program Dangerous to American Liberty

bosom. In an address before the national convention of Ice Cream Manufacturers, Mr. Campbell said:

"These striking workmen at the steel plants have left their jobs and are guarding the gates of the plants with a large army of pickets, mobbing and maiming those who take their places in the shops they have left. They intimidate free laborers, they commit open violence to property, they threaten destruction if the shops open again before their demands are complied with, they ignore law and order, they assault and defy the police and officers of the law. This is not an exception. It is but the last of the hundreds of like occurrences which have blackened our recent history as a nation.

"The leaders of organized labor deny that they countenance riot and bloodshed; and yet they do countenance the picket in every strike, and in every strike there is underneath the unwritten purpose to make it effective by preventing the employer from supplying their places with free labor.

"It is encouraging, however, to know that but a minority of the laboring men are in sympathy with this sort of treason, for it is nothing less.

"Federated labor has declared war upon the farmers of the country and upon their business. They have met both in National and state conventions for such declarations. A few days ago, in the state of Michigan, they unanimously demanded of the Governor of the State that he call a special session of the legislature for the purpose of creating a commission to fix the retail and wholesale price of food and other necessities. That sounded fine, but where in the program did it leave the farmer who grows the food?

* * *

"A few days ago, after months of strike, the carpenters won out and are now being paid in the city of Chicago $1 per hour for eight hours work, $1.50 per hour for overtime and $2 per hour for Sundays and holidays.

"The farmer is the greater expert of the two. It requires long years to learn his trade, while the carpenter can secure the above wages after two years' work and at the same time obtain good wages as an apprentice. This wage if allowed to the expert farmer (and every farmer has to be an expert) would give him for his twelve hours' work per day and for his Sunday chores, a monthly wage of $388. That is more than four times the amount received by the average farmer of the country as his entire compensation from crops and other farm productions for his labor.

* * *

"When labor proclaims that its hours must be shortened, its wages remain unimpaired or increased, the shop become unionized, and the cost of living including food must be reduced, the farmer begins to see the handwriting on the wall of his fate."

Even if you do become a party to his crime, can you trust him to divide the spoils?

Farmer-Labor Alliance Has Failed

ONE MORE quotation and I am done. It is from the Adrian Telegram, the editor of which **is Stuart Perry, one of Michigan's best and most capable citizens.** This newspaper says:

The Farmer's Position

"When the council of farm bureau's at Indianapolis this week demanded a ten-hour day in all productive industries, they showed a true insight into the situation of the nation and the world today. Nothing more clear-sighted and sane-headed has proceeded from any body of men in this whole period of turmoil. These men see the light. They know that the world's work cannot be done on half-time, and that there will be no prosperity if everybody's aim is simply to grab all he can and to see how little work he can do.

"The resolutions at Indianapolis reflect a full appreciation of two very important truths: first that short hours tend to raise all prosperity and to raise the cost of living to everybody; second, that the present attitude of radical labor is hostile to the interests of the farmers as a class, because it forces the farmer to assume new burdens without sharing any benefits. The labor radical says 'We propose to work half-time and draw full pay.' The farmer knows that agriculture cannot be conducted on a 30-hour week. He must do a real day's work, and he sees that if he has to work full time while the factory man works half-time, he has got to pay the cost of the latter's idleness .

"The question of hours is no longer discussed on its merits; it has become simply a game of grab—of how much labor shall demand and how far it can carry coercion and intimidation. It is this tendency that alarms all wise heads, and it was against this tendency that the farmers at Indianapolis protested.

* * * *

"In recent years there has been a shrewd and determined effort by radical leaders to form a working political alliance with the farmers. The radicals realized that they could not win alone, but if they could inveigle the farmers into such a combination, it would be a very powerful one.

* * * *

"This effort has failed because of the clear logic of facts and the inherent common sense of the farmers. They were suspicious of the proposition that 'the interests of agriculture and labor are one, and they made little response to the appeal of the labor radicals to unite in a joint war on business and capital. They listened to what the radicals had to say; they sometimes indicated a disposition to co-operate to a certain extent; but they did not commit themselves.

"It is easy to see now what sort of a trap had been set for them and how wise they were to keep clear of it. It has grown very plan that agriculture and radical organized labor are not allies whose interests should unite them in fighting business as a common enemy. On the contrary it is growing clearer every day that labor radicalism is the farmer's worst enemy, and that agriculture and business must stand together to combat it.

* * *

"The whole question of labor and industrial relations has changed greatly in recent years. The one outstanding fact today is that organized labor has passed to a very dangerous degree, under the power and leadership of a radical element whose aims and ideals are bolshevistic rather than American. That is the portentous fact that stares us in the face."

Farmer Makes Himself Known in Washington

A "Disinterested" View of the Farmers' Various Representatives at the National Capitol

SOMEONE sends us a copy of the October 15th issue of "Industry," "a semi-monthly interpretation of industrial progress," which contains an excellent ,if somewhat exaggerated description of the weaknesses of farm representation at the national capital. The author does not describe the varying opinions and tactics of the three farmers' national organizations that are now attempting to function in Washington as "weaknesses." That is our own own term, but after you have read the article, we think you will agree that there is need of existing farm organizations to organize if they are to faithfully represent the wishes of the farmers and leave a worth-while impress on national legislation.

The author is a bit cruel in his remarks about George P. Hampton and Benjamin Marsh of the Farmers' National Headquarters. We have never met Mr. Hampton but he has the record of being a very capable man, and regardless of former connections, if he can "deliver the goods" he's a good man for the job. We are acquainted, however, with Benjamin Marsh. Met him last spring when he gave a fine talk on farmers' problems at the Open Forum in the city of Detroit, and handled the shrewd inquiries of his audience in a manner that showed first-hand knowledge of the subject. Both Hampton and Marsh impress us as thinkers, and the part they are playing in behalf of the farmers is not to be despised. The writer has also met Mr. Chas. A. Lyman, who is the active Washington executive of the National Board of Farm Organizations. His ability and the ability of the farm leaders grouped about him can best be judged by the results they have obtained in securing recognition for the farmer before Congress.

The article, "The Farmer in Washington" follows:

"The position of the farmers in the Industrial Conference now in session in Washington has been greatly exaggerated. This conference was not called to consider farm problems, important as these problems are, and greatly as they need national attention; but the limelight has been focused on the farmers in the conference, and public attention has been called to a new force in American political and economic life.

"The exaggeration which was given in the opening days of the conference to organized agriculture is an indication of the place this force has already achieved, and the attention which is being paid to it by all other interests. It is well to understand its present representation in the National Capital.

"In the conference organized agriculture has five delegates, T. C. Atkeson, of the National Grange; J. N. Tittemore, of the American Society of Equity; C. S. Barrett, of the Farmers' Industrial and Co-operative Union; O. E. Bradfute, President of the Ohio State Federation of Farm Bureaus; and L. D. Sweet, of the American Potato Growers' Association, the last two being in the public group. E. T. Meredith, publisher of a farm paper at Des Moines, Iowa, is rated as in sympathy with the farmers.

"In Washington organized agriculture is represented by three separate and distinct "headquarters." Several other farmer organizations send occasional delegates or individuals here to "impress" their demands on Congress but the steady pressure is emanating from these three "headquarters." One is the National Grange, one is the National Farmers' Headquarters. The third is the National Board of Farm Organizations.

"At the National Grange office, Prof. T. C. Atkeson is in charge. Professor Atkeson is a life-long farmer who lives at Buffalo, W. Va. He is master of his state grange, has been active in the National Grange for a quarter of a century, and for about the same time dean of the Agricultural College of his state. But he is a "practical man" and not one of the "professoriat." He is thoroughly in touch with the farmers' movement and has a record of farmer legislative successes.

At the Farmers' National Headquarters, George P. Hampton, who calls himself the "managing director," is in charge, a keen, clever, urbane, experienced and successful follower of the game of getting things from Congress for his clients. Before Mr. Hampton worked for the farmers he worked for other people, notably those who wanted a law permitting them to make industrial alcohol and put the Standard Oil Company out of business. They got their law, but for some reason Standard Oil stock is still highly quoted on 'change, and Mr. Hampton is [illegible] well in Washington. If Mr. Hampton is a farmer it doesn't show on his boots. His assistant is Benjamin Marsh, a "student of economics"

(Continued on page 19)

More Wool, Less Shoddy and Better Goods

National Sheep and Wool Ass'n Announces Plan for increasing Demand for Pure Wool Garments

WHAT IS shoddy? The new Standard Dictionary defines it as follows: "Fiber manufactured of shredded rags of stockings, yarns, flannels, and other soft woolen fabrics." Very well, then, shoddy is wool. And we are assured on high authority that 80 per cent of the raw material used in manufactuing "all wool" clothing is shoddy. The public of course, doesn't know the difference. A few of the "old-timers" still love to tell about the garments they used to buy being all wool and a yard wide." Honest measure, honest goods, honest quality formerly went into the manufacture of clothing and it were "like iron." Nowadays, a strictly "pure wool" garment is an oddity. In fact, "there ain't no sech animal," or if it exists at all, it is a very rare specie. We suppose the popular supposition is that sheep aren't growing as good wool as formerly.

Just as good wool is obtainable today for the manufacture of clothing as ever. But the higher grades of pure wool are more expensive than they used to be, and manufacturers have found that there is more profit in using 'shoddy" under the guise of pure wool than the real article itself. And that is why despite its present high cost, clothing does not have the wearing qualities it formerly possessed.

What is to be done to undeceive the public and compel the clothing manufacturers to restore the quality to their goods? For one thing we must have more wool. That's easily solved. This country alone can support twice as many sheep as at present. But after we double our flocks will there be a market for the product? That's quite a practical question, you know, because we have had the experience before of being urged to increase production and after it was properly and plentifully increased found that there was no market for the surplus.

The National Sheep and Wood Association says it will supply a market by forcing the clothing manufacturers to desist from the use of shoddy in the better class of garments and use "all wool and pure wool" in its stead. This association claims that the present supply of wool is insufficient by far to meet the requirements of clothing manufacturers were they obliged to use the better grades of wool in the goods they make. BUSINESS FARMING is requested to advise our readers of the plan of this Association to increase the consumption of wool and we therefore publish the following statements from the Philadelphia Public Ledger:

"In former days wool meant wool. "All wool and a yard wide" was a term of some significance. A suit of clothes, an overcoat, or any garment of wool was expected to be of enduring worth. Today it is not. The reason is that so much shoddy is introduced into woolens that the strength of the cloth is impaired.

"What adds to the complicity of the affair is that a man who has handled woolens all his life has difficulty in telling a cloth that is virgin wool from one that is part wool and partly shoddy, or what proportion of the cloth is shoddy and what percentage wool. Only the maker of the fabric is competent to state.

"But there is one test that is infallible. That is the one of wear. Wool will wear "until the cows come home." Shoddy will show its bad features in short order.

Should Not be Sold as Wool

"Goods made largely of shoddy should not be sold as all wool, even if technically the term is correct. It is not in the technical sense the term should be determined, but in the effect. In effect the buyer is deceived, if not swindled. This does not apply to the retailer. Far from it. The retailer wants to know absolutely and unqualifiedly the character of the goods he buys. Where "reworked" wool is concerned he has to trust to the statement of the seller of the fabric. To a degree he is as helpless as the buying public.

"This is a queer state of affairs.

Champion Yearling Shropshire ram and pen of yearling ewes owned and exhibited at Michigan State Fair by Armstrong Bros., Fowlerville.

But it is not peculiar to America. The British have the same problem. They used to have a noble reputation for the excellence of their woolens. A man who bought a suit of clothes "made in Lunnon" was a proud individual, and not infrequently would boast the garment never would wear out. Incidentally he would make disparaging remarks about the poor quality of American goods.

"Now a man in London who buys "all wool" gets a major portion of shoddy, just as he does in America. It is said the British try to do better by their home trade than their export, for the reason that the British climate is rigorous and the people must have stout woolens or there would be much suffering, but with all their efforts shoddy is making rapid strides in the United Kingdom, and especially so since the war began in 1914 and the shortage of wool drove textile men to consider substitutes or makeshifts in order to meet the emergencies of the day.

"Technically, shoddy is wool, but it is wool that is second hand or third hand or fourth hand or fifth hand or sixth hand or seventh hand or eighth hand. It comes from the refuse pile of the woolen mill or from the old clothes dealer or the rag man, and by being "reworked" that is, shredded and cleansed and carbonized, it may be used again and again.

"In its pure state wool is wonderful in its wearing qualities. Any one who has worn real woolen garments appreciates this fact. But a lot of the stuff sold today as woolen goods is not so much wool as it is shoddy.

"Do not misunderstand the situation. There is not enough first-hand first-class wool in the world to meet the world's needs for wool. In America the annual wool clip is only 300,000,000 pounds. That is less than three pounds per capita. The cotton crop, figured on a basis of 13,000,000 bales would be 6,500,000,000 pounds, or forty-three times as much as the nation's production of wool. It must be understood, also, that all worsted goods are made of real wool first-hand wools and not of "re-worked" stuff, which is shoddy. Deducting the large amount of wool consumed in worsted leaves only a moderate total for woolen goods.

Weakened by Reworking

"In the first place, any one who declares that goods made of 80 per cent shoddy or 20 per cent real wool are not all wool would be stating an untruth. Shoddy is wool. There is no getting away from that fact. But it is revamped wool. It is wool that has lost strength through the reworking process to which it has been subjected and the more times it has been reworked the poorer in quality it has become.

More Sheep, More Wool

"There is not enough wool in the world today for all the needs of the people. There will be if the cultivation of sheep receives attention. That would help decidedly also in simplifying the meat problem. But whether the sheep crop is increased or not, shoddy should not be marketed as wool.

"To protect the public against fraud and safeguard the health of the nation Congress has passed the pure food law.

"Why not a pure goods law?

"There is a thousand times more fraud in the shoddy that is passed off as wool than there ever was in the misbranding of food.

"There is a use, a legitimate use, for shoddy, but shoddy should be sold as shoddy, and not as wool

"Rag Pile Millionaires"

"So many men have become rich through deceiving the public by means of shoddy that they have come to be classed as 'Ragpile Millionaires'. Recently, at the textile exhibition in New York, the shoddy people had booths displaying not only raw materials, but finished goods of shoddy. They did not call it shoddy. In fact, they protested against the term. They explained that shoddy was wool and a prejudice had developed and had broadened because of the name 'shoddy.' They had determined this should end. Therefore it was to be known henceforth as re-worked wool. And so it is known. And so it goes into garments. A suit of clothes may be shoddy, but it is "all wool" if you wish to say so. But the public understands 'all wool' to be wool that is honest wool, fresh, so to speak, from the sheep's back. Therefore shoddy is not 'all wool' and the public is deceived if not defrauded.

Want Shoddy Fraud Ended

"A great number of woolen mill men want to end this shoddy fraud.

"A great number of retail merchants want to stop the deception.

"So do various manufacturers.

"Why not put an end to it?

"In the schoolhouses throughout the land children at their writing exercises get sentences to write. One of the favorites for generations has been the axiom that "Honesty is the best policy."

"If it is the best policy, why dodge it?

"America is going after world trade.

"What will the customer of America who buys "all wool" garments from the American manufacturer think when the trousers go lumpy at the first sprinkle because the "all wool" from the ragpile has become lifeless from many carbonizations?

"Brand goods for what they are.

"Sell goods for what they are.

"If 'Honesty is the best policy' translate it into a fact in American trade at home and abroad."

The Sheep-Wool Society

WE ARE in frequent receipt of letters from readers wanting to know what has happened to the proposed Sheep-Wool Society which was discussed in these columns early last summer. The men who were back of the Society have been unable to secure the necessary financial backing. They are not discouraged, however, and we understand that an existing land company is expanding its facilities to take care of the very urgent demand in this state for the loan of sheep. We are quite sure that something big and practical will be done along this line before another summer. Production of wool can be safely increased, as the United States is still a large importer. For the season of 1917-18 we imported over 200,000 bales of wool from Argentina alone.

Co-Op. Live Stock Men to Meet in Chicago

MR. L. E. Willet of Lainsburg is the Michigan representative on the 'official committee" of the National Federation of Co-operative Livestock Shippers to arrange for a permanent organization meeting of co-operative livestock shippers to be held in Chicago December 3 to 4, (International Live stock show week) on the third floor of the Livestock Record Building, Union Stock Yards.

The pragram of the work to be recommended includes the following: LOCAL MARKETS: Plans of local organizations, local handling, feeding at home, yard facilities, local liabilities and insurance, scales, branding; TRANSPORTATION: car shortage, feeding in transit, rates, legislation for rates, claims, insurance, dirty cars, delays in transit; TERMINAL MARKETS: terminal switching, inspection, methods of handling at the terminal markets, feeding in the terminal yards, trouble man, switching, commission men problems, feed problems, yard facilities, pro-rating.

Terminal Market Short Course School

One of the most constructive and popular pieces of work to be attempted by the National Federation will be the holding of Short Course Schools at the leading terminal markets this winter for the benefit of shipping association managers and members, county agents, and all organizations interested in a better understanding of marketing conditions, greater profits, etc.

The following resolutions submitted by the committee on Terminal Short Course Schools will serve as a nucleus around which will be built a course that will serve our almost imperative need:

1. That short courses be held at the following central markets as soon as local conditions warrant: At St. Paul, Sioux City; Omaha, Kansas City, Denver, St. Louis, Chicago, Detroit, and any other points where conditions warrant.

2. That the Bureau of Markets be requested, if possible, to designate a representative to take direct charge of the short courses at the central markets above named in cooperation with state colleges, farmers' organizations and other interested men, organizations and agencies in the territory involved.

3. That the time of scheduling such courses be left to the judgment of those directly in charge at each local market as influenced by local conditions but that those in charge or arrangements keep in touch with the National Federation to the end that, insofar as possible, the dates of short courses, particularly adjacent points, shall not conflict.

4. That the program for each course be arranged by the local directors, as above designated. The committee suggests, however, that the following major duties be considered:

1. Market grading: (a) Grading on the hoof; (b) Follow up at packing house to observe how grades kill out; (c) Relation of grading to cooperative shipment. 2. Accounting: (a) Efficient uniform systems of accounting for association managers; (b) Actual practice in working out accounts of a shipment. 3. General lectures and resume of successful methods of handling shipments from producer to packer buyer: (a) Feeding for terminal market; (b) Loading and care enroute; (c) Care at commission yards.

How Various Soil Types Differ in Quality

Prof. McCool, in His Sixth Article, Discusses Some of the Physical Properties of Soils

AS WAS STATED in the introductory chapter, the physical characteristics, that is, the texture, water, temperature and air relations of soils are of tremendous importance in regulating their productivity. In view of this we are now to discuss soil texture, soil classification, porosity, weight, and the things that may bring about changes in soil structure.

The separates or the particles that make up the soil have well defined characteristics. Clay, which occurs in practically all formations, the amount may be very small or large, has a tremendous influence on the nature of the soil. Clay shrinks very much when it passes from the wet to the dry condition, having been observed to change as much as twenty per cent of its volume. This property accounts to a great extent for the formation of undesirable cracks in field soils. Clay possesses a very strong retentive power for several elements of plant food that are present in or added to soils. Usually crops suffer lost from drought when growing on soils high in clay. Thus it may be said that these properties of clay are of great importance to the productivity of the soil, and no constituent is more necessary in proper proportion or more undesirable in excess.

Silt or the particles that are next to clay in size possesses properties similar to it, but to a less degree and play a very important part in maintaining the proper water supply for crop production. Soils that carry rather large quantities of this component are not very "quick" either to start plant growth in the spring or to applications of fertilizers other than they are speedier than those that contain large amounts of clay. It should be borne in mind that they lose soluble elements of plant food by washing downward into the subsoil faster than the former and far less rapidly than those that contain smaller quantities of the fine particles.

The sands and the gravel, because of their sizes, function as separate particles. They exhibit very low plasticity and cohesion, and as a consequence are little influenced by changes in water content. Their water-holding capacity is low, and because of the large size of the spaces between each separate particle the passage of water is rapid. They therefore facilitate drainage and encourage good air movement. In all the grades of sand the separate particles are visible to the naked eye, a condition impossible with the silt and clay groups. Soils that contain

This soil is in excellent health. A well-prepared seed-bed, of course, reduces subsequent tillage operations.

large amounts of sands are inclined to be droughty and leachy. However, such are exceedingly responsive to fertilizers and good management, and also are very quick in the spring, properties very desirable in regions of short growing periods or in the production of crops that mature rapidly.

That soils very markedly in texture is well known, and such variations are recognized when descriptive terms such as sandy, loam and clay, or light and heavy, and others are employed when speaking of different kinds of soils. Inasmuch as the chemical or the total, as well as available amount of mineral plant food and the rate of decay of vegetable matter, and the physical nature of the weight of a given mass of soil, the water holding power, as well as the rate of drainage, the retention of fertilizers, and crop adaptation of soils depends largely upon the amount of the various separates that compose them, a knowledge of soil classification is essential for their most successful management. There are in nature, sand, loam and clay groups of soils as follows:

This field, being in poor physical condition, may require two or more years to have that condition rectified.

Sands—1. Coarse sandy soils. 2. Medium sandy soils. 3. Fine sandy soils.

Loams—1. Loam. 2. Sandy loam. 3. Fine sandy loam. 4. Silt loam. 5. Clay loam.

Clays—1. Sandy clay. 2. Silty clay. 3. Clay.

Broadly speaking, sandy soils are those havink a very high percent of sand with small amounts of silt and clay, loams are those having from 30 to 50 per cent of sand with much silt and some clay, and clay soils are those having 35 per cent or more clay, together with much silt and usually some sand.

Soils belonging to a given class may vary appreciably in composition and hence in their various properties. By way of illustration, let us take the results obtained from the mechanical analysis of several soils.

MECHANICAL ANALYSIS OF CERTAIN SOILS

Soil Number	Fine Gravel	Coarse Sand	Medium Sand	Fine Sand	Very Fine Sand	Silt	Clay
1	12.	31	19	20	6	7	5
2	3.	36	20	25	10	4	2
3	0.5	8	5	15	17	40	15
4	.0	4	8	18	25	45	10
5	0.	4	2	8	8	36	42
6	0.	2	4	9	10	45	30

It is well recognized that the ability to classify and judge soils under

(*Continued on page* 21)

Farmers Make Bad Guesses on Bean Costs

IF THERE was anything remarkable about the figures submitted by over three hundred farmers in Business Farming's recent investigation into the cost of growing beans it was the fact that no two estimates were alike. Let us take the given radius of ten or fifteen miles in any leading bean county of the state. On average farms in this area there should not be a variation in the costs of producing beans to exceed five per cent. Yet it is a fact that we received estimates from many such areas which varied as much as fifty per cent! When farmers are attempting to show a judicial body what it costs them to grow beans or any other crop, their cause is greatly weakened because of the difference in their estimates.

This matter of food production costs is going to be looked into very soon by the government. All the foolish investigations that are being held into the high cost of living will eventually lead to the question of cost—cost of producing, cost of marketing, cost of selling, etc. And since the farmer is the root of the tree his costs will be the very first to be examined. Suppose next week the federal government should order a court of inquiry to be instituted in every county in Michigan for the purpose of ascertaining from the statements of farmers what it costs to produce their various crops. What kind of a showing would our farmers make? From what we know of the average farmer's indifference to cost records and his general lack of knowledge of what it does actually cost to produce, we could safely predict that they would make a very poor showing before such a court, and by their testimony would convict themselves of the charge that has been entered against them, profiteering.

At least a score of our readers estimated that it cost them about $20 per acre to grow beans. As many more fixed the figure from $20 to $25. Quite a number thought that $30 per acre was the correct figure, and there were at least fifty whose cost items totalled less than $35 per acre. We suppose that these same farmers would deny our statement that the average cost of growing beans this year of 1919 was between $50 and $60 per acre, yet we could take their cost items and prove to them that their own costs were as high as that if not higher. Some farmers figured plowing at $3.50 per acres; some at $5.50. The popular land rental value of our correspondents was $4 per acre. Some rental! Interest on $100 land at 7 per cent is $7; taxes figure another $1; depletion of soil, equal what? Well, let's say $2. It's mighty low. Add up and you've got $10 rental value without figuring in the amount of depreciation on your buildings and a half dozen other items that should be apportioned against that piece of land. The farmers who estimated $4 as the rental value were losing at least $6 out of their pocket.

Then the figures for threshing crew board! If there are any farmers within a radius of fifty miles who will give board for double the price estimated by some of our correspondents, just drop us a line and the whole M. B. F. staff and their families will come and spend the winter. How can formers board threshermen for 25 cents a meal? The answer is "they can't," but that's all a lot of them figured in the cost of threshing.

So we might go on through the entire list of items that made up the cost blank used in the investigation, and practically every case we would find a wide discrepancy in the figures. The time has come when it is not safe for farmers to GUESS at their costs. The time has come when they must KNOW their costs. Prof. Anderson showed extremely good foresight when at the recent meeting of the milk producers he pointed out in great detail the cost of producing milk. It is entirely possible that before the present investigation into the high cost of living in this state is over, farmers will be called into court to testify, and it's a hundred to one shot that some of them will "spill the beans," and unknowingly falsify when they testify as to their production costs. The matter of costs is an extremely important matter and the true business farmer will lose no time in seeking the assistance of the agricultural college to assist him in keeping cost-finding records.

We show herewith a cost statement from California. Look it over carefully. Note that item of $2,000 per year for managerial ability. If anything, it's too low. Where is there a manufacturer employing as much capital as many of our bean growers have invested who does not pay himself from $2,500 to $5,000 a year salary for managing the business. Is the farmer entitled to less? Not on your life. That's an item that most farmers leave out. Please get it in. Start in tomorrow and pay yourself at the rate of $2,000 per year, and see where you get off at.

What it Costs in California

Statement of Cost of Production of Small White Beans grown by J. F. McCloskey, of Lompoc, California, during the season of 1918 on his farm 14 miles east of Lompoc, in the County of Santa Barbara, State of California.

Number of acres farmed to beans	100
Total number of 100 pound bags produced	1,200
Average 100 pound bags per acre	12
Fair value per acre of land farmed	$400.00
Items of Cost (Average for each acre)	
Interest on land investment at 7 per cent	$28.00
(Note: Interest is charged at the rate charged by Savings Banks in this vicinity upon real property mortgages.)	
Taxes	1.00
Plowing, 50 acres at $5.50 per acre	2.75
Harrowing, 100 acres once	2.50
Cyclone, 100 acres twice at $1.00 per acre	2.00
Discing, 100 acres twice at $1.50 per acre	3.00
Chiseling, 100 acres twice at $2.50 per acre	5.00
Dragging, 100 acres twice at $1.00 per acre	2.00
Ring rolling, 50 acres once at $1.50 per acre	.75
Spring tooth harrowing, 50 acres once at $1.50	.75
Fertilizing	.40
Filling ditches	2.00
Planting	.75
Seed, 15 pounds at 12 cents	1.80
Cultivating, 50 acres once at 75 cents per acre	.37
Hoeing	1.50
Cutting	2.50
Piling	2.75
Threshing, 12 bags at 65 cents	7.31
Sacks, 12 bags at 22 cents	2.64
Hauling, $3.50 per ton	2.10
Storage, at 50 cents per ton	.24
Rec[illegible]ning, at $1.70 per ton	1.00
[illegible]nal service in superintending 100 acres at $2,000 per yr.	20.00
TOTAL COST PER AVERAGE ACRE	$93.11
Cost of production of 100 pounds of beans	$ 7.75

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

FARMERS SCORE RADICALISM

Representative farmers and manufacturers have combined under the leadership of Milo D. Campbell, chairman of the national board of farm organizations and president of the National Milk Producers, to combat radicalism of all kinds and to help bring the nation back to a firm industrial basis by means of an educational campaign designed to eliminate class suspicion and distrust.

"I am working," said Mr. Campbell, "on the selection of a committee which is to be composed of representative farm organization heads, representative manufacturers and conservative labor men. Radicalism, the I. W. W. and its ideas are to be fought to a finish and the 12,000,000 farmers of the country, I believe are actively behind such a fight."

Tanners Lay High Retail Prices of Leather to Packers

"The packers did it," said a number of representatives of the tanning industry before Judge Wiest of Lansing, when asked the reason for the high prices of hides and leather. Glory be, this was one time when they didn't lay the crime up against the farmers' door.

The American tanners are altogether at the mercy of the packers, was the substance of the testimony offered by the tanners, and are obliged to pay the prices asked by the packers or go without hides. The packers control the South American hide market as completely as they control the North American market, it was stated, and there is no more variation in the prices charged for these imported hides than those shipped from Chicago. Charges of profiteering were laid to the retail shoe dealers.

If it is true that the Big Five packers control the hide output of the country, it is plain to be seen how little supply and demand can determine the prices to be paid farmers for hides.

Wixom Project Big Success

By marketing or buying of products in bulk, thousands of dollars have been saved for members of these associations, according to B. A. Holden, president of an organization at Wixom, Mich., that has been so successful in a general store, stock shipping and grain elevator project that it has not only returned thousands of dollars in profits to its members, but has been able to expand to include several other communities in that section of the state.

According to Holden, such associations are absolutely necessary if farming is to continue on a business basis. Department of agriculture stastitics gathered in Lenawee county, agriculturally the richest in Michigan, Holden says, show that farmers, marketing individually, have made practically nothing for years except in the natural increased valuation of lands.

Also, he contends, people in cities will be seriously affected if collective bargaining, through such community organizations, is not permitted and now prosecutions under the federal statutes are imperiling the life of these enterprises.

Unless farmers get cost of production plus a reasonable profit, which they cannot obtain now individually because of high costs of labor, transportation and marketing, according to Holden, food production is going to slump off alarmingly, naturally causing the "law of supply and demand" to force virtually prohibitive food prices in the cities.

The curtailment of production is threatening now. R. V. Tanner, Barry county agricultural agent, and other county agents in the state agree. Tanner says there are many instances in Michigan where farmers, discouraged by high farming costs, are reducing materially crop acreage and carrying over the winter fewer live stock than usual, which cannot but mean diminished food supplies in the country in years hence.

Farm Bureau Delegates to Chicago Chosen

Delegates from Michigan to assist in organizing the American Farm Bureau federation in Chicago November 12 and 13 were to be elected by the Michigan State Farm Bureau executive council at a special meeting October 30 in Grand Rapids. The American Farm Bureau federation is intended to have the same aims and objects in the national field as the state associations have in their territories, which are the correlating and strengthening of all farm organizations, especially the state farm bureaus, representing and protecting of the business and economic interests of agriculture. This program was adopted by a national farm bureau organization committee at Columbus, O., October 3.

The Michigan delegation to Chicago will consist of C. A. Bingham, state secretary of the Michigan Farm Bureau, as voting delegate; as advisory delegates, Ray Potts, of Washington; Roland Morrill, of Benton Harbor; James Nichol, of South Haven; Fred Cornair, Chesaning.

Although 23 states will be represented, only 10 will need to sign the proposed constitution in order to effect a national organization.

Oakland Backs Farm Bureau

Preliminary work for the Michigan State Farm Bureau membership campaign, which has succeeded in lining up the farmers of Oakland County, nearly 90 per cent strong, has started in Barry county. The drive there will be launched the second week in November.

Sentiment in Barry is strongly in favor of the farm bureau movement, according to J. P. Powers, publicity director and organizer for the state farm bureau, who is there assisting the county farm bureau officials in the work. He expects that Barry will break the remarkable membership record being set in Oakland county.

The campaign of the state farm bureau will reach Montcalm and Allegan counties next and then sweep into Lapeer, St. Clair, Genesee, Washtenaw, Kent, Clinton, Tuscola, Eaton and Van Buren immediately afterward.

The statewide enthusiasm greeting the farm bureau movement was the all-absorbing topic of the meeting of the executive committee of the Michigan County Agents' Association in Jackson two weegs ago, Agents Brody of St. Clair, Gregg of Wayne, McVittie of Tuscola, Nash of Branch, Sheep of Jackson, Olds of Kalamazoo, Hagerman of Ottawa, Tanner of Barry, and Carr of Kent, were at the meeting.

Michigan Delegate Reports Farm Congress

John C. Stafford, of Lawrence, Mich., was the only one of the several delegates appointed by Gov. Sleeper to represent Michigan at the 39th session of the Farmers' National Congress, to be present at that gathering which came to a close last Thursday night at Hagerstown, Maryland. Mr. Stafford kindly sends Michigan Business Farming and its readers the following story of the convention:

Dear Editor: At the 39th session of the so-called Farmers' National Congress, twenty-seven states were represented. Some were like Michigan with one delegate present. It came to a stormy end tonight. The main body of the congress was made up of people from Ohio and Maryland, Ohio having about 400 people present. A great many of these came in autos and were under the leadership of A. P. Sandells, moving spirit of the "Cornstalk Club," in the last Ohio legislature. The motto of "Buckeye" farmers is "elect farmers to the legislature, see that they get together when there and support agricultural measures irrespective of party affiliation." This looks like a winner; anyway the "buckeyers" made it win.

"The wildiness at the close of the congress was caused by the fight between two so-called farmers organizations in Washington. The National Board of Farm Organizations which the retiring secretary of the congress Mr. J. H. Patton, denounced as a "Wall St. concern" and the Farmers' National Council and affiliated organizations. The committee on resolutions refused to "affiliate" with the "Wall St." concern and Mr. Patton being marked as the man who could have put it over was attacked by a whispered campaign which came into my ear in such phrases as "he is in the pay of the labor leaders," a Socialist, a Bolshevist, etc. The facts are that Mr. Patten is a wealthy Carolina cotton grower who lives in Washington part of the time and is a very fine type of American citizen. But he was ousted from the secrtaryship of the congress by base methods which were unwittingly abetted by the enthusiasm of the "Buckeyes" for their leader in the last hour of the congress.

"I secured a resolution urging congress to support our efforts to put a duty on Japanese beans. Had quite a time in the committee on resolutions to get the cotton growers on the committee to see the need of a tariff on beans but they finally did see it.—*John C. Stafford.*

One of the farms visited in the recent agricultural tour of Calhoun county by over 150 farmers and high school students. The tour was conducted by the Farm Bureau under the guidance of County Agent Paul C. Jamieson. Many of Calhoun's largest and most successful farms were visited, including the Clyde Cronkite market garden farm, Lakewood Dairy Farm, Gilbert Nichols, Clyde Weaver, M. M. Sprague and Son, Geo. Fuller, E. S. Carr, Farley Bros., farms and Stuart Acres. The tour did much to open the eyes of the visitors to the advantages and opportunities of farm life.

WOOL AT LONDON AUCTIONS

American producers of wool should be interested in prices offered at the English woolen auctions which are being held in the city of London. Considerable of the wool sold at these auctions is bought by American manufacturers, at prices which seem relatively high compared to the prices that are being paid American producers. The report of one of these auctions by the United States Department of Agriculture says:

"At the wool auctions on October 2nd, 14,650 bales were offered. The best greasy merinos from Queensland brought $1.27, and the finest scoured merino combings from Sydney realized $1.76. There were also offered 30,000 bales of South African free wools, greasy merinos bringing 65 cents and scoured snow whites $1.23. The sixth series of London wool auctions closed on October 3rd, with catalogs of 8,860 bales. During the series it is estimated that about 80,000 bales have been purchased for Continental (European), 10,000 for America and 45,000 for home centers. The sales closed with a very firm tone, and prices at best point of the series. Compared with August sales merino wools showed a rise of 10 to 15 per cent; medium to fine crossbreds 10 per cent above above August prices; the best of the coarser grades 5 per cent higher. Inferior and shabby parcels showed no change."

Farmers Vote Support

Steadfast support to the federal government in combatting attempts of "certain radical elements to vitiate and destroy American institutions" was pledged in a resolution adopted at the opening session of the thirty-ninth annual meeting of the farmers' national congress, at Hagerstown, Md.

Asserting that the causes underlying a present industrial unrest have brought the country to the verge of a "crisis" the resolution declared the "conservatism of the American farmer must be eternally on guard to prevent the development and spread of radical theories which would subvert the fundamental principles of the American government."

Illinois Dairymen Accused

Chicago milk dealers are telling some rather incriminating things about the eight officials of the Illinois Milk Producers' Ass'n who were indicted because of the methods they used in getting fair prices for the members of their association. They claim that the milk association officials threatened them with the loss of their business if they did not pay the prices asked for by the farmers. Three farmers also testified in court that they had been forced to become members of the association against their will in order that they might have a market for their milk. They claimed that when they attempted to sell milk during the strike of 1916 that members of the association halted them on the outskirts of town, took their milk away from them and sold it for forty cents per cwt. less than the price they had been offered.

If the members of the association are proven guilty of employing such tactics they will be harshly judged if not convicted of an offense, notwithstanding the fact that organized labor "gets away" with its picketing threats and violence in order to keep workmen from taking the place of strikers. The menace of the strike lies in its abuse and when any class of people, be they laborers, farmers, capitalists or what not, attempt to coerce others into joining their strike, they are stepping over the line of both laws and morals. Farmers should take a lesson from the difficulties in which the Illinois producers now find themselves, and if ever they find it necessary to "strike," realize that their cause will never be furthered by threatening other farmers who don't to "jine."

JUST BETWEEN OURSELVES

I SAT at a little table in the dining room of the Dearborn street station, Chicago, impatiently awaiting the arrival of a bit of breakfast before boarding an outbound train. Just across the table sat a portly gentleman seemingly not at all satisfied with the figures which represented the total cost of his breakfast, politely presented by waiter No. 6. "There," he said as he handed me a copy of the "Morning Tribune," and pointed to the big head lines across the market page, "at last they have caught the profiteers in their own hog-wallows, right on their own farms." I read: "Hog run heavy; prices on the slide. Yesterday's best quotation $8.60 below July top." The well-fed gentleman smiled with satisfaction as he followed the porter who carried his grip to a parlor car headed west.

* * *

DURING the afternoon of the same day, I heard a young Indiana farmer tell of his experience. "I engaged in the hog business five years ago, and have been striving to make a go of it. I have kept an accurate account of all costs, have a good productive farm to back my operations, and have had a long experience in the business. During '16 and '17, I made a little money—that is, made it as farmers make money—I came out with something to the good for my labor. This year I had a good drove and they were coming fine. I figured correctly, and the hogs were finished off just as the last of my corn was fed. I had ordered cars, but a railroad strike delayed shipment for three weeks and I was obliged to buy high-priced corn to keep my hogs in trim. In the meantime "high cost of living" became the principal topic of conversation, and by the time my hogs reached Chicago, the packers were staying off the market—and to make a long story short I lost every dollar I had made in the two years; and all of my labor, work and worry for 1918 besides. I am through with the hog business."

* * *

FORTY-FIVE CENTS per pound was the price I paid for pork chops in a Detroit market the other day. "I thought the price of pork had tumbled?" "Well it has," said the market man; "pork on the hoof has gone down, but you see the packers have high-priced pork on hand, and we can't expect lower prices until they get their money out." An explanation, with an apology for the packers, if you please. The Indiana farmer had high-priced pork on the hoof. Mighty little consideration was given his interests when they pulled out the props, and destroyed the profits of three years of hard, grilling work. Many weeks have passed since "pork on the hoof took a tumble," and yet this drop has not as yet percolated down through the maze of transactions sufficiently to have affected the retail price of meats in the least. That this unexpected and unwarranted drop in the market will decrease production of hogs no one will question. Simply another instance of "lowering high cost of living," by discouraging production. And the corpulent gentleman is undoubtedly wallowing in his hog wallow on the ocean beach at Santa Monica.

* * *

CERTAIN INTERESTS have been much concerned of late, because of the fact that the farmers were getting together. Agitators have been drawing comfortable salaries right here in Michigan during the past two years, by securing contributions from large interests, who were told that there was grave danger of the Bolshevik doctrines spreading among the farmers of this state. It is somewhat refreshing, therefore, to read in Collier's Weekly, an editorial by Mark Sullivan, its editor, who has spent a considerable time right among the farmers of the middle-west.

"If you have nightmares about revolution in America, there is one thought you can always take to bed with you. Farmers don't engage in revolutions. I mean by that that farmers who own their farms don't engage in revolutions. Farmers who are mere serfs on large estates owned by absentee lords under a medieval system of land tenure—such farmers are the most determined of revolutionists and are the only successful ones. I have previously pointed out that the only thing that is going to be permanent in the Russian revolution is the dividing up of the land. As soon as the new owners begin to feel secure in their titles, and lose any fear of the grand dukes coming back and taking it away from them, then the Russian revolution will be over.) Farmers who own their farms don't engage in revolutions. And the largest single group in the population of America is the farmers. Those of us who spend most of our lives in the towns forget this, but the politicians don't forget it. In any presidential election in America the farmer and his sons contribute over a third, and close to a half, of the entire vote."

We are making progress toward better things, when the leading periodicals of the country take sufficient time and use sufficient space to turn the shield of discontent and note what is written on the other side.

* * *

THE "WOODS are full of stock-salesmen," writes a farmer friend; "and we don't know whether we should 'unloose the dog or invite them to dinner.'" Possibly the safest way would be to "unloose the dog," for the average stock salesman knows how to turn the trick, and before dinner was over, your name would be on the dotted line. Last week I met a bevy of sleek stock salesmen from Indiana, and they were finding good picking in the vicinity of Bay City and Saginaw selling coal mining stock to the farmers. One of the fellows told me that he cleaned up $250 that day through stock sold to farmers in the vicinity of Reese. Farmers should remember, that at best, they simply hold the bag in the stock game. The average salesman gets anywhere from fifteen to twenty-five dollars out of every one hundred dollars worth of stock sold; and in many instances the promoters are presented with a block of stock ranging from $25,000 to $100,000 for the use of their names. No doubt there are good stocks on the market, but we have found no stock peddled by salesmen, that is good enough to be advertised in the columns of this publication. Stock certificates, neatly engraved and printed in colors, look nice on the walls of an outbuilding—we are of the opinion however, that wall paper would be just as effective and cost much less.

* * *

WHEN THE WAR was on, and everybody doing double duty, we got accustomed to seeing women and children out in the fields doing men's work. We thought little of this innovation, for women were taking men's places in the factories and munition plants. Within ninety days after the armistice was signed the army of women workers in the cities was demobilized and they went back to their homes and shops. Not so on the farms of the middle west. During the past summer and fall, and right now in closing up the season's work, thousands of wives are aiding their husbands in the fields, and thousands of mere children are aiding in picking up potatoes and topping beets. When will free-wife and child labor on the farms be eliminated? All other classes of producers and laborers have so arranged their business affairs that women and children are no longer doing the harder tasks. Did you ever hear of the wives and children of lawyers, doctors, teachers, preachers, merchants, mechanics or laborers, grinding away at the hard muscular work in order to make a living? If this be true, why should the wives and children of the farmers be obliged to work in the fields?

I SAT in the sales-office of one of Detroit's large manufacturing plants the other afternoon, and was mightily interested in a series of maps occupying a prominent place on the walls. Every state in the union was there, and the peculiar things about these maps was that they were shaded here and there; some black, some yellow, others red. I asked for an explanation and was told that those maps represented crop conditions in the different states of the union. Here was something interesting crop statistics and conditions vividly set forth in the office of a manufacturing plant. Surely these fellows must own farms; they certainly show a keen interest in farming. "Yes," said my friend, "that dark-shaded section over there, covering a portion of South Dakota, shows where the drought raised havoc with the crop. And here we have a section where excessive rain-fall ruined the prospects and here, note that circle shading off from deep red to rose-colored. There is where the east caught a nine-inch rain-fall in thirteen days, and caused the loss of practically the entire wheat and oat crop." Interesting, indeed, but what have these conditions to do with selling automobiles?" "Well," said the master salesman, "you ought to know that when we are figuring on our output, we cannot depend upon selling automobiles where there is a crop failure and farmers are not prosperous." And yet that company manufactures automobiles, ninety per cent of which go into the cities and are purchased by business men. And again came ringing into my thoughts the words of Daniel Webster: "Farming is the foundation of the nation's progress and prosperity."

* * *

TARIFF REVISION is going on down in Washington, and there is no doubt but that the result will be a higher tariff. The question of tariffs is as old as the pyramids; therefore a discussion as to the merits and demerits of this plan of protecting infant industries is out of place at this time. But the whole idea seems to be to protect the American working man from the pauper labor of Europe; and incidentally of course, to get a little revenue money. But here is where the shoe pinches. Over in India the farmers, if such they may be called, hire labor at twelve cents a day. Russia went India one better, and before the war, paid laborers in the field six cents per day. Over in Manchuria the bean growers hire very "goode helpe, thanke-e," for twelve cents a day and a dish of rice and get an ocean freight rate on beans so low that San Francisco is just next door.

Before me is a special circular sent broadcast to dealers by a wholesale grocery house telling about the little "Brown Beans," from South America.

South American
BROWN BEANS
4 1-2c Per Pound
Githens Rexsamer & Co.
Philadelphia, Pa.

Possibly you would not call the kind of labor that works for six, eight or twelve cents per day "pauper labor." Probably agriculture being the oldest industry on earth is no longer classed as an infant. And yet we find industries." Why not give the farmers a chance at whiskers still protected as "infant industries." Why not give the farmers a chance at the "Protection Nipple?"

Primary Law in Danger

THE BOSS politicians of the state ought to feel very grateful to the Newberry bunch for spending a fortune in violation of the primary law. It gives them a plausible excuse for picking the law to pieces and almost proving that it encourages the very thing it was intended to destroy, namely, the purchasing of public office. The present investigation into the Newberry campaign expenses is going to be a trying period for the friends of the primary.

The Corrupt Practices Act, aimed to prevent abuses under the primary system is like any law that seeks to protect a principle—good when enforced; worse than useless when violated. A primary system that will let a rich man get away with some of the things Mr. Newberry got away with is worse than the most boss-controlled convention ever held in Michigan. Such a law enables the rich to sway public opinions, distort public judgment and turn the people's convictions upside down, by the profuse advertising of statements that too frequently are highly exaggerated if not altogether false. This method means, in effect, the buying of individual votes.

Senator Herbert F. Baker had a bill before the last session of the legislature to put poor men on the same footing with rich men by giving them an equal hearing before the public at an equal cost. The bill provided that the state should issue a pamphlet containing the announcements of all candidates, and that no candidate should be permitted to advertise in any other medium. Did the bill become a law? No. The legislature could hardly mar its record of consistent indifference to public welfare by entertaining such a proposition as that.

The corrupt practices act must be enforced. It would be cruel and unsportsmanlike for us to recommend that an example be made of Mr. Newberry and that gentleman be made to pay the penalty of an offense which was committed by others long before Mr. Newberry got into politics and which the public by its silence has condoned. Mr. Newberry is getting punishment enough. It must sear the soul of a man who has enjoyed the respect of other people to know that a federal court is making his name a by-word in his native state. The investigation will do good even [illegible] resolution. [illegible] from [illegible] under [illegible]

The primary law [illegible] Advocates of the old convention system are making use of the appeal. In a recent issue of the Detroit Saturday night several arguments were presented against it. The editor points to some of the rare and ridiculous exceptions that occur under the law which seem to prove that the law has weaknesses. But we hope the good people of Michigan will not let their common sense be swayed by the paltry omissions of the act described by Editor Niumo in the following comment:

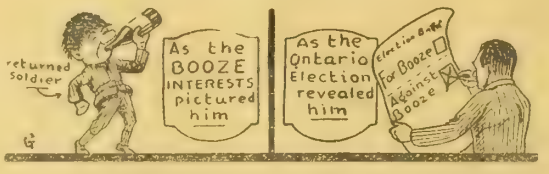
"Criticizing the sacrosanct primary election system in Michigan is something akin to high treason. Few of our political leaders will condemn it in public or endorse it in private. Legislators who have in safe places against its numerous revelations of asininity cannot bring themselves to demand its revision on the floor of either house. Not only does the Michigan primary permit a candidate for United States senator to run on both the Democrat and Republican tickets at the same time, but it blinded Detroit last year into nominating and electing for state representative, before the ink had well dried on his naturalization papers, a Russian whose Americanized name resembled that of a well known politician.

"Massachusetts has just come through a similar, though more unpleasant experience. State Treasurer Burrill was ineligible for re-election under the constitution, but an obscurity named Burrell ran for the nomination on the Republican ticket and won—apparently because of Burrill's reputation. *The Boston Herald* says the nominee "has served in the legislature, but in fitness for the office ranks far below the average member of that body;" which is evidently one of the meanest things *The Herald* could say. *The Herald* adds:

"'The first bill to go before the legislature should be the restoration of the convention system for the nomination of state officers. Scrap the popular primary!'

"Idaho has already done that. Michigan, in spite of all the political confusion the primary has created, has not yet been able to persuade itself that a party convention should have a voice in the selection of the party's candidate for governor, even with the primary preserved."

President and Prohibition



TO ATTEMPT to analyze the president's peculiar reasoning upon this matter of prohibition is to attempt the impossible. The president is a good politician. Even the Republicans will admit that. But the president isn't playing politics when he vetoes the bill to enforce war-time prohibition. Intelligent a gentleman as he is, he must know that any compromise with the liquor element or any easing of liquor control is dead against the wishes of the majority of American people.

He has tried to explain his veto by saying that the war is actually over and that it is not good policy or ethics for the government to longer enforce a measure which the people were promised was merely a war-time emergency measure,—or something to that effect. Fortunately Congress couldn't get his point of view and promptly passed the bill over his veto. So bid farewell, ye friends of booze, to any hopes you may have fondled that there might be a brief tilting of the lid.

There are at least four good reasons why the wheels of the brewery and distillery should remain silent and the doors of the saloon kept closed, and all the excuses, subterfuges and ethics of our ingenious president with respect to booze be dumped into the gutter. Here they are:

1. Shortage of sugar. It would be a criminal waste to divert a single pound of sugar into alcoholic beverages at this time.

3. Shortage of coal. The coal situation is [illegible] riculture is hampered and harrassed by lack of labor. They should not be further pressed by being forced to enter into competition with the brewery for the scant supply of available labor.

3. Shorage of coal. The coal situation is desperate. Breweries and distilleries consume enormous quantities of coal. Shall we give it to them?

[illegible] Labor disturbances. Labor sober is hard [illegible] labor drunk would be un[illegible]

[illegible] troubles enough now. Heaven [illegible] from any more. Let the lid stay put.

The Melancholy Fall

WHO WAS that long-faced mourner who said that fall was melancholy? I mean to start an argument with him. Fall may be melancholy,—up in Alaska, but not in Michigan. I started out last evening after the heavy wind-storm had stripped the trees and left them crying in nakedness. The wind was cold. it got down my collar. It crept up my pant-leg. It made me shiver and think of the pleasant warmth of my house I had just left. But I kept on and in five minutes had forgotten everything but the keen, bracing air and the sweet-smelling leaves that littered the ground.

Few adult people look forward with any degree of pleasure to the coming of fall and winter. Yet, I dare say that flowers and hot weather and ice cream cones and picnics would become monotonous if one had to put up with them three hundred and sixty-five days out of the year. At least they would to the sturdy and out-door loving people of Michigan. So let us be glad that fall and winter come to give us a change in the scenery and put a little pep into our torpid livers and make us hustle to keep warm.

The other day I received a letter from a very dear friend, a philosophical, God-fearing man who always sees the sunshine back of the clouds and the smiles behind the tears. He said: "What a lovely fall we have had. But this kind of weather cannot last much longer, and soon old Father Winter with his garments of mantled white will be stalking in our midst, and people will sit by the cozy fire and speculate on what fate has in store for them."

I sometimes wonder if God did not have the welfare of His people as well as the needs of Nature in mind when He created the seasons and gave us a period of enforced confinement to the indoors where we could sit by the fire and think over the experiences of the past and speculate upon the future without being called on to crank up the flivver or drive the cows out of the garden. Appreciation of the home and family and of the good things of life is never more keen than during those precious hours when man basks before the warmth of the fire and the smiles of his loved ones while the storm rages outside.

Pink Pills for Pale People

THE PRESIDENTIAL pill laboratory is busy. Candidates are preparing the pinkest and most seductive pills ever offered to a suffering public. They are guaranteed to cure this consuming money-grabbing and money-spending fever of the populace, and are deadly poison to the Bolsheviki bug.

Gov. Lowden of Illinois, offers the best-looking pills we have yet seen advertised. Put up in attractive boxes containing a complete,—oh, very complete,—description of their merits, these pills ought to find a ready sale. The governor, in announcing his candidacy for president, makes the following modest claims for his pills:—

1. Will reduce federal extravagance in appropriations.
2. Will reduce federal taxes.
3. Will reduce cost of living.
4. Will uproot Bolshevism.
5. Will develop an immediate constructive economic policy for the nation.

Give these wonder-pills to those who want them, but as for us we prefer a different kind of pill. It can be black and bitter as gall, but if it is labelled "common sense," we'll swallow it.

Waiting for the Right Man

SOME of the politicians scoff at the suggestion that farmers may take a hand in the coming campaign. They claim that all this talk about solidarity in the ranks of the farmers is all bosh. Well, we dunno about that. It kinda appears to us that the farmers are only waiting for the right man to come along. How about it, neighbor?

WHAT THE NEIGHBORS SAY

FARMERS-WORKERS PULL TOGETHER

Why is it that the city worker believes that the farmer is responsible for the high prices when he gets only a small part of what his products bring at wholesale. And what leads some farmers to think that the city workers are being overpaid for his tasks. Our old hide-bound newspapers are playing the game for all they are worth and even some of the agricultural papers are following the lead.

Just let the farmer and the laborer put a new ticket in the field and support it.

No unseen or omnipotent power is going to help the farmer or the laborer neither will the powers that be, step down until they are forced down. The power of the people is supreme if it is used in the right direction. We have just shaken off the yoke of military despotism and now while the shaking is good is the time to handle the profiteer and the monopolizer. The farmers and the laborers should control one large national daily paper free from every interest but that of the people. Some people believe that the only way to get reform is to vote for the principle but it has been proved that we can get legislation for the people by voting for the man. It has been proved by the Non-Partisans of North Dakota that each member pays $16.00. The Non-Partisans furnish the fund for their candidate to make the campaign for office and when he gets elected he represents the people but the old reactionary parties put their men in the field and aristocrats furnish the funds for campaigns and when elected represents special privileges. Only by keeping the farmer and city worker opposed to each other can the old gang stay in power. Let us all pull together in 1920.—*E. W., Gladwin, Mich.*

Whenever we hear a man arguing that the city workers and the land-owning farmers should unite for political harmony we feel like asking him these questions: "Are you a farmer?" "Do you own land?" "Have you formerly been a member of a labor union?" "Do you expect to benefit by such an alliance as you advocate?" The majority of them, if they spoke the truth, would probably reply as follows: "Yes, I am a farmer." "No, I own no land. I am a renter or I am a farm hand." "Yes, I have been a member of a labor union (or) "No. I have never been a member of a labor union, but worked in the city. "Yes, I have political ambitions and I would like to have the united support of the farmers and laboring men." I have no doubt but what there are honest-to-God land-owning and working farmers who THINK they can see an advantage to agriculture in general in a political union with organized labor. My acquaintance with farm leaders leads me to the conclusion, however, that the vast majority of land owning farmers are against such a plan, and I know that most of the farm leaders are, notwithstanding that some might benefit politically by such a coalition. Organized labor has everything to gain and nothing to lose by clasping hands with you. You have little to gain and much to lose. Would you like to be a party to the demands that organized labor is making at this moment? If the coal mines are closed down because the miners don't get a six-hour day and a five-day week, would you like to be considered by the public as being a silent sponsor for all the loss and suffering that would result. Do you think that the majority of the claims of organized labor are justified? Do you not suffer as much if not more than any other class of people by the arbitrary and exorbitant demands of a few visionary labor leaders? Think before you leap. What are the advantages you claim exist in a political union with labor? Who constitutes the "old gang" that is keeping farmers and laboring men apart? Don't you realize that the farmers and farm women of Michigan are strong enough numerically to control any state election, if they are so minded, without being subjected to the unjust whims of city labor bosses? If we farmers would lay off dreaming and visualizing and theorizing for a spell, and DO the things we say ought to be done, we'd have no need for the questionable support of the labor unions, in electing the right kind of men to represent us.—Editor.

OPPOSES VIOLENCE

I have been a very close reader of your paper ever since it has been in existence and have read many good things in it. But your article of this issue, (Oct. 19) under the heading of "What's the difference" rather surprised me. When any person or persons so far forget themselves that they resort to violence they are in the same class as I. W. W. and should not be lauded by anyone.—*F. P. N., Croswell, Mich.*

Agreed! We stand corrected and chastened. The main purpose of the editorial in question was to point out that the same freedom of speech should be allowed all classes, low as well as high, and that if the soap-box orator was hauled to jail for holding the government up to scorn the same treatment should be applied to the platform speaker. If in our zeal to denounce the denouncers of the President and the government of the United States of America we seemed to excuse the "egging" of Senator Reed, we beg to be forgiven.—Edjtor.

VIEWS OF AN UPPER PENINSULA FARMER

I thought when I told you to discontinue my paper that I did not need it, but I still derive much benefit from it, by comparing prices here with prices outside. I notice your quotations as low as 7 1-2c live weight beef (probably county correspondent's report.) That is what the buyers here offer, then charge from 20 to 30 cents per pound for boiling meat. I saw them buy potatoes from farmers at $2 per bushel and the same day sell them right across the street at 75 cents a peck. People coming from lower Michigan price fresh vegetables, such as tomatoes, cucumbers and such and find as high as twelve times the price of the same things in Detroit. I joined the timber workers unions here, hoping that in the near future we might start a store of our own as they have done in other towns, for instance, Munising. I was told they sell bacon at 28 cents which the merchants here ask 50 cents for. When first approached by the union I said "No, we have what is supposed to be the best government in the world. Why should the people take matters in their own hands, but after all this noise about extra profiteering and how the government was going to punish those who profiteered and then did nothing only arrest a few producers who were not at all to blame, as the example here in my own town shows then what good does it do to elect officers and high dozens of paper-collared fellows at thousands of dollars expense who do not try to get results. It would be better to save our money and each community paddle its own canoe if we get no protection through government lines.

The capitalists of today are taxing the poor as hard as the Britains did at the time of the Boston tea party, and only by the states standing firmly united could they overcome their oppressors. The same way only can the producer of farm products and those who produce the labor overcome the oppression of the trusts. United we stand, divided we fall. The monopolists of today are like the saloon-keepers, abusing their privileges until the people must rise up in a body and take away from them what they now have. I have always been strong on Americanism but the situation of today does not look like Americanism and must be handled accordingly.

From the beginning man was selfish as when Cain slew his brother Abel, and so on down through time. When the Puritans settled this country they depended for their very existence by uniting and helping one another, and thereby practiced the Golden Rule. But as people have grown richer in dollars they have grown poorer in the grace of God until the first thing they know this country will be in some such state as Russia or others of those less-enlightened nations.—*E. L. A., Newberry.*

Airvale, Mich., Nov. 1, 1919.

Dear Edytur:

What air we goin' to do with them airyplanes? Theyre makin' life hell for my cows who don't do nothin' during the day but keep their eyes on the horrison and their tails between their legs lookin' for them flyin' devils, an' my chickens air so scairt of the whirr of them engines that they drop their eggs wheresoever they may be when one of them machines flys over the farm. Mebbe you won't believe me when I tell you that Parson Peters was out to the farm the other day and got hit smack in the eye with an egg that one of them crazy hens laid just as she was passin' between the Parson's vision and one of them airyplanes in her frenzied effurts to find refooge. But that wasn't the worst of it. While the Parson was prancing around fishin' the egg out of his eye and tryin' to get a holt onto his temper, Old Barney busted his halter strap and came tearin' out of the barn. He'd oughter seen the Parson, but he didn't. He jest brushed past the Parson right where his coat tails parted and the Parson was percipitated square into the tub of water that stood by the pump. Dear me, I never was so mortfyd in my life and when I helped the Parson out of the tub I tried to make him see that it wasn't old Barney's fault and if it hadn't been for that goldarned airyplane it wouldn't have happened, only I spoke wuss than that but not as wuss as the Parson spoke when he came out of the tub. Anyway the water washed off the rest of the egg and the Parson clumb into his buggy in high dungeon and went home and Mirandy was horrorfied and said didn't I have no respect for the clergy? And that's why I'm askin' you, what air we going to do with them airyplanes? If you've got any suggeshun to make please do so and I will make it worth your while by renewin' my paper for another six months.

Yours in angziety.
JOHN JOHNSON JONES.

WHO GETS THE PROFITS?

I am enclosing a clipping and I think it of sufficient [illegible] wish you might [illegible] paper so that your [illegible] and I will every farmer in [illegible] and in the United States [illegible] matter might know the [illegible] stand. I am at present employed in the Buick Motor Company's plant. I see and know these things first hand. I also know that while manufacturing companies are paying the highest wages ever paid to [illegible] satisfied for when the laboring man goes out to spend his earnings he gets little in exchange for it. I saw a statement in the Grand Rapids News lately of earnings of General Motors Company. The net earnings for first six months of present year were in round numbers 48 millions of dollars on an investment of 300 millions. Every farmer should quit farming and go into the manufacturing game. It does not require so much ability as farming.

Unless conditions change North Michigan will be abandoned. Two good hands will earn a better living in Flint than most any North Michigan farm this year. It's dead wrong for farmers to flock to the cities but what shall we do? Live on Johnny cake and wear old clothes or get out. I for one propose to hold on to my farm for a life in the open is the best life in the world to lead, but nevertheless just now it will be necessary for thousands to leave northern Michigan or starve. They say, "You're no farmer or this year would be type." They tie and [illegible] not in them. All this [illegible] against the farmers is camouflage to cover up their own [illegible]. When a merchant sells an article for 10 or a 100 times what it cost he is a good business man, but if a farmer should [illegible] one of these rare years when [illegible] worse. The Germans were gentlemen beside many of our present [illegible] and destroy. They made no pretense of being anything else, but the modern business man tries to make you think he is your friend, but a highway robber is a gentlemen beside him. *Geo. A. M., Flint, Mich.*

You [illegible] pretty sweeping. Granting all that you say [illegible] its of [illegible] whose profiteering should undoubtedly be [illegible] manufacturing profits are large. The newspapers never tire of telling about the "gains," "profits," "melons" and other evidences of prosperity in the manufacturing business. The [illegible] appear to be in the manufacture of non-essentials. That is the reason why there is so little public outcry against them. I think you will find that the average business man, the grocer, the hardware merchant, the clothing dealer, the shoe man, etc. are [illegible] per unit of goods sold may appear to be exorbitant but the [illegible] large. Our observation shows us that the average merchant of the [illegible] city rarely becomes independently well off. The trouble is that there are too many in the business of selling, and too many in the business of [illegible] doing business and [illegible]

too long to be published in these columns, but we will later try to find space for portions of it. I am sure that our readers

costs to manufacture well-known articles and what the profits of the makers are reputed to be.—Editor.

I want to compliment you on your handling of public questions in your issue of October 25. You have vision—and courage. Too many newspapers—and especially agricultural publications, are afraid to have opinions for fear of offending subscribers.

In your page on "What the Neighbors say," I notice Mr. Martin's wonder at the farmer being called a "capitalist." Mr. Martin is right; the farmer is not a capitalist in the accepted understanding of that word. There are three factors in production—land, labor and capital. The ownership of land does not make the farmer a capitalist. The formula runs about as follows.

Labor applied to land produces wealth; wealth applied to the production of more wealth is called capital. Now the farmer is a land owner, a laborer and a capitalist, but his interest in the capital end of the program is so slight and his interest in the labor end is so great, that his capitalist interests are completely submerged by the labor interests.

The farmer is above all things a wealth producer. Of course he is compelled to exchange some of that wealth for plows, cultivators, etc., and these are actually capital—wealth used to help him produce more wealth; yet he is primarily concerned about labor, and it is economically wrong to put him in any other class. His interests and the interests of wage workers are identical, and the sooner they do "team work" the better it will be for the country.

I think you are wrong in advocating a tariff on beans. Granted the bean grower will be benefitted (though of this I am not sure,) it will be made an excuse for exploiting farmers generally to accept tariff duties on a hundred things they need and which make these articles much more expensive to them.

The few dollars some farmers will gain on beans will be taken away from farmers generally, twice over on the prices they will pay for tariff protected articles.

As a rule the tariff is simply a grab game. As heretofore worked in America, it has benefitted only a comparatively few manufacturers—never wealth producers whether in factories or on farms. Wages are lowest in "protected" industries, and the proportion of American workers in these tariff-protected industries is invariably also the lowest. Show me a tariff protected industry of any proportion, and I will show you working there every nation on earth (almost) except Americans. And they work the longest hours at the smallest pay, and live in the most unsanitary habitations.

Regarding "Public Ownership," which you advocate in the right spirit, my "formula" as to what is a public utility, and therefore ought to be public property is a little different from yours. I think monopolies ought to be publicly owned. But what is a monopoly? Well, anything that involves the use of public property for private profit. To be sure the line between what is public business and what is private enterprise is variable; it depends on circumstances. But surely there ought to be no difference of opinion regarding the danger of allowing our great highways to be privately owned and the public exploited. The same is true of water systems, postoffice business, light and heat.—*Judson Grenell, Ann Arbor, Mich., secretary Michigan Site-Value Tax League.*

Your complimentary remarks make me want to agree with all you have said, but I am afraid I cannot do so. How can the interest of the farmer and the wage-worker be identical with those of his employer, when all interests are common interests? As a matter of fact all interests are common. But until the majority of wage-earners, farmers and capitalists realize that injustice of any kind is a boomerang which always works its way around the circle and finally comes back to those who started it, it is not safe for a limited number in either class to be

himself. In that one respect the two are far apart. That the average farmer finds

between one hired man and another. The

work with and among their employes. Yet, you would not class the thousands

put the farmer in the capitalist class, if you accept the commonly accepted though incorrect interpretation of that phrase. But it is equally wrong to put him among the wage-earning class. As I pointed out in an article several weeks ago, the farmer is in the dual position of both a laborer and capitalist and should therefore be put in a class of his own. I think you will have a hard time convincing the average farmer that his interests and the interests of wage workers are identical.

So far as the tariff on beans is concerned, I might remind you that those who exploit the farmers need no further excuse for seeking tariffs on the things the farmer has to buy. They have been

the farmer has a chance to do a little soaking on his own account, so why discourage him? Isn't it going a bit far to theorize as to the effect of the bean tariff on other tariffs when virtual ruin stares the bean grower in the face as a result of the Japanese competition? If you've got any defense to offer against the competition of the cheap labor of the Orient, we'd be pleased to have you submit it.—Editor.

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' everyday troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

USE THIS DEPARTMENT

MICHIGAN Business Farming was one of the first farm papers in the United States to put in a "Service Department" through which subscribers might secure information upon any and all topics. The volume of questions submitted to this department shows us that our judgment was good. In this department we aim to be of personal service to individual subscribers, and questions from perplexed readers are welcomed. No question is too difficult for us to at least attempt to find an answer to. No matter what your difficulty, feel free to submit the case to us and our editorial staff will do its best to solve the problem.—Editor.

AN ABANDONED ROAD

A strip of road running north and south in Osceola county is about two rods east of line. Mr. O owns land along this road and there has been about $200 worth of work put on new road, but it is impassable yet. He claims he can build a fence along on each side of track on old road within six inches of wagon track, which would stop traffic and he claims he will arrest anyone that undertakes to do improvement work on the old road which is in a very bad condition. This road has been in use for over 30 years. Could this be done or not?—*A Reader, Osceola, County.*

Unless old road has been abandoned by lawful proceedure its use for that length of time would make a public highway and he would have no right to interfere with its use unless its use for the 30 years was merely permissive upon the part of the owner and no claim upon the part of the public that it was a highway.—*W. E. Brown, legal editor.*

PARTY REFUSES TO BUILD

A and B agree to build the line fence between them. A builds his share, but B does not. A cannot use the land for pasture till B gets his share built. Would it be necessary for A to give B any number of days' notice before A builds it for him? Will you please advise through your paper at your earliest convenience?—

ubscriber, Sherman, Mich.

The statute provides that if either party refuses or neglects to erect and maintain the part of any fence assigned to him the fence viewers may give him notice of reasonable time in which to build the fence and if he fails to build the same the other occupant of the adjoining land may build the same. By taking proper steps and serving proper notices the cost and expense may be assessed against the delinquent owner. It is quite a difficult procedure and should not be undertaken except with the assistance of competent advisor.—*W. E. Brown, legal editor.*

RAILROAD FAULT

Has a railroad any right to remove the cattle guards from crossing highway, without replacing them again? —*E. J. W., Cadillac.*

The statute concerning fencing of railroad tracks contains the following ing requirement: "* * ** * Such right of way fences shall be provided with suitable connecting fences and cattle guards AT ALL HIGHWAY AND STREET CROSSINGS, which shall at all times be kept in effective repair and sufficient to prevent stock of all kinds from passing upon the track of the railroad at such highway or street crossing." The Supreme Court has decided that "A railroad company is under obligation to provide and maintain cattle guards and connecting fences at the point where its fenced tracks leave its unfenced yard."—*W. E. Brown, legal editor.*

HIRED HAND BREAKS AGREEMENT

A hires B in the spring for eight months work. B is allowed a cow, wood, a house to live in and a garden spot but after five months work and being overpaid $30 B is dissatisfied and quits. He continues to live in A's house but is working by the day for neighboring farmers. A wants B to get out but the man will not go until his garden has been harvested. Can B stay?—*A Subscriber.*

If B makes a contract to work for eight months and quits work before the eight months are up, he is liable for damages to his employer. Such damages are usually estimated upon a basis of being all that it costs his employer to have the work completed for the contracted time less the amount he would have paid to B. If B simply had the house to live in while he worked for his employer and quits work he must quit house also or be liable to his employer for all damage, use and occupation for the unlawful detention of the house. —*W. E. Brown, Legal Editor.*

CAN HOLD CROP FOR DAMAGES

I have a little proposition that I would like to know the outcome of. A man put in three acres of oats using his manure on a piece of land not owned by him, doing the plowing, harrowing and drilling, now the party that owns the farm offers him $42.50 for his work on the three acres, but he said his work amounted to $89.75 which I think is ridiculous for three acres. Now if the owner of the land cut the oats, what would the outcome be, there being no agreement between the two parties.—*R. C. L.*

If the man who put in the crop was a mere trespasser in putting in the crops then he has no right to the crop himself but if it was merely understood that he might put in the crop then he has the right to harvest it and if the owner of the land cuts it without permission he is liable to damages for his acts of trespass. If the man lawfully put in the crop he can not be compelled to sell to the owner except upon his own price. If, however, he was a trespasser in putting in the crop but did no damage to the owner; and the owner refused to treat him as a tenant but appropriated the crop and thereby the work and labor and the manure furnished; then he would have to pay what the crop was reasonably worth.—*W. E. Brown, legal editor.*

DIVORCE SUIT AND SEPARATION

Can a husband sue his wife for a divorce and still stay in the same house with her and child? People tell me no, he cannot. Please let me know if you will.—*The Mother.*

A husband may sue his wife for divorce and still live in the same house with her. They must not, however, live together. The living together would terminate divorce proceedings. —*W. E. Brown, legal editor.*

A Wonderful Response

Michigan State Farm Bureau Goes "Over the Top"

Never before in history has agriculture displayed such keen endorsement as it has given the Michigan State Farm Bureau since the campaign for membership began.

As you already know, the campaign opened in Oakland County on October 15th.

Solicitors entered and canvassed one township at a time.

A Record

On October 28th, reports for the first twelve days of the campaign were telephoned and wired to the Secretary's office in Birmingham, Michigan. Here they are in brief:

Number of working days	12
Number of townships in Oakland County canvassed	10
Total number of farmers actually solicited	720
Total number of membership checks signed	634

Eighty-eight and one eighteenth per cent ($88^{1}/_{18}\%$) of all farmers visited joined.

What Happened in the First Township

The wonderful response that met the solicitors in the first township visited is just an example of the enthusiasm that the Michigan State Farm Bureau organization has awakened throughout the state.

Addison Township was first. Just about a year ago, C. B. Cook, Oakland County Agricultural Agent, travelled into this same township in the northeastern corner of the county to confer with a group of prominent farmers on the organization of a cooperative buying and selling association.

"Nothing doing," was the greeting Cook received. "Why you'll never get the farmers up here to back a proposition like that; they're the deadest crowd anywhere in the county."

However, knowing this territory was virtually solidly devoted to agriculture, it was decided by the Michigan State Farm Bureau Membership Campaign Organization that if the drive were started there it would show conclusively whether the farmers of Michigan are alive to the need of an organization to promote and protect their interests.

Six solicitors entered Addison Township in the morning.

When night came, ninety per cent (90%) of the farmers in Addison Township were members of the Michigan State Farm Bureau.

Some Examples

It is interesting to get down to specific examples and realize the enthusiastic reception that the Michigan State Farm Bureau solicitors received.

Some men approached wanted to pay, on the spot, for three years' dues. Others wanted to put $50 or $100 behind the Michigan State Farm Bureau movement, and when told that one $10 membership was all that a man could have, they took out memberships for different members of their family.

One farmer, 75 years old, who has lived all his life on the farm told the solicitor who visited him, "I am glad to see the farmers of the state waking up. It's time."

Some Were Missed—And Why

Canvassers report that a great number of farmers were not at home when they called. These men who were missed are now asking for the opportunity of joining. They will be given this opportunity at a later date by a local man in each community.

Response is State-Wide

Every mail coming to the Secretary's office at Birmingham is full of letters from various counties requesting that they be put on the canvass list immediately. Thirteen counties are now in line for the campaign and organization plans are being completed for them. At least a dozen others are asking for next place on the list.

Farmers from all over the state are writing in to the Secretary's office stating that they want a chance to assist in some way to help complete this great organization.

The Michigan State Farm Bureau expects to have, within two weeks, solicitors from the ranks of the farmers of the state which will enable them to complete the work in each county in at least two weeks' time.

From now on, the work will move rapidly. If your county is anxious to join in with this movement right from the start, it is none too early now to communicate with the Secretary of the Michigan State Farm Bureau and solicit his organization assistance for the earliest possible moment.

The success of the Michigan State Farm Bureau is an assured fact. The farmers are stirred up as they never were before. The great majority of the 200,000 farmers of the state will soon be "Organized for Business."

C. A. BINGHAM, *Secretary*

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

The condition of the grain markets continues to improve, and the predictions made in the last two issues of M. B. F. that markets would strengthen and prices range higher are being verified. The biggest present obstacle to a strong bull market is the acute industrial situation. Farmers ought to love their friends, the labor leaders, for bringing about such a chaos in industrial affairs as exists today.

The coal strike is of consuming importance to the entire country. Nearly half a million coal miners have left their work, and the nation's industry is slowly entering an era of paralysis which will shortly become complete unless the strike is settled. Present indications are that enough of the miners will go back to work in defiance of the strike order to destroy the effectiveness of the strike, in which case the crisis will soon be over. Untold suffering and financial loss will result if the strike is continued indefinitely. Excepting for the uncertainty that exists as a result of the strike general business, financial and market conditions are encouraging. It is said that foreign nations are arranging further banking credits with American bankers and will soon be in the market for enormous quantities of our commodities, of which food will form an important item. If normal business conditions prevail the next few months, we may reasonably expect great improvement in the markets for farm crops.

WHEAT TERMINALS CONGESTED

PRICES PER BUSHEL, NOV. 4, 1919

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.24	2.24	2.35
No. 2 White	2.22		
No. 2 Mixed			

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.22	2.21	2.34
No. 2 White	2.20	2.21	2.34
No. 2 Mixed	2.20	2.20	2.33

The car shortage which is now being felt in nearly every state has been the cause of much congestion at points where wheat is in storage for domestic re-shipment and export. The wheat market is showing increased strength and we look for higher prices within a short time.

We have a very indignant letter from Milo Campbell protesting vigorously against the policy pursued by the administration with reference to the wheat embargo. It seems that several months ago a secret export embargo was placed on wheat in order to "make the price cheaper to the American consumer," but now that the major part of the crop is in the hands of the elevators and jobbers it is proposed to lift the embargo. Foreign nations are very much in need of American wheat and it requires no foresight to see what would happen to the price if the embargo is removed and free exportation permitted. Here is one more mistake that may be added to the voluminous list made by the present administration simply because the farmers had no man as secretary of agriculture or to act in any other advisory capacity to the President to present their claims.

CORN GETS BOOST

CORN PRICES PER BU., NOV. 4, 1919

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.60	1.53	1.70
No. 3 Yellow	1.60		
No. 4 Yellow	1.58		

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.35	1.39	1.53
No. 3 Yellow	1.35	1.35	1.46
No. 4 Yellow	1.35	1.23	1.43

Wet weather, car shortage, improvement in the [illegible] in shipping [illegible] of farmers and improved [illegible] are the quintet of reasons given for the recent improvement in corn. Last week corn gained a total of 6c on the Detroit market and about 4c on the Chicago market. There are still [illegible] believers in lower corn prices but as a trade paper points out they are "in the minority." The trade generally and the farmers are talking of higher corn prices, and we believe the recent strength that has developed is only a starter. Export business has been greatly hampered by the strike of the longshoremen but we are assured that most of these have gone back to work and that the export movement will pick up soon.

LAST MINUTE WIRES

DETROIT, Nov. 6th.—Corn advanced 2c a bushel yesterday; oats, ½c; rye, 3½c. Buyers lay advance and scarcity of supplies to farmers who are unwilling to sell at present low levels. Beans little firmer, but trading dull. Cattle lower. Sheep steady. Hogs firm.

CHICAGO—Nov. 6th.—Greatest strength in grains in over month. Corn advanced 2c. Great activity all grains. Dealers unable to get enough to fill December contracts. Farmers blamed for scarcity. Hogs 20c higher, top price $15.10. Cattle and sheep firm.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

OATS QUOTED HIGHER

Oats did not show as much strength last week as corn, but nevertheless it advanced 1@2c per bushel on nearly all markets. Normally oats should be showing considerable strength as it is not only influenced by all the conditions that are stimulating the corn market, but in addition the crop is very short and dealers need not fear lower prices.

RYE AND BARLEY BOTH PICK UP

PRICES PER BUSHEL, NOV. 4, 1919

Grade	Detroit	Chicago	N. Y.
Standard	.77½	.74½	.82
No. 3 White	.76		
No. 4 White	.75		

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
Standard	.70	.69	.78
No. 3 White	.69½	.68	.77
No. 4 White	.68½	.67	.75

A little export business is being done in both rye and barley and higher prices are anticipated. We have repeatedly stated that rye was at an abnormally low figure in comparison with the price of wheat, but that lack of export demand was responsible. With the increased demand from foreign countries, we argued, rye should do very much better. Germany is a great rye bread eating country and is expected sooner or later to become a large purchaser of American grown rye. The crop is short and any large purchases for oversea shipment is bound to boost the price. Keep your eye on the rye market. Detroit prices: $1.36@1.38 No. 2 rye; $2.60@2.75 No. 3 barley.

BEANS STILL WEAK

BEAN PRICES PER CWT., NOV. 4, 1919

Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.75	7.75
Prime	6.50	7.25	7.25
Red Kidneys	11.50	13.00	13.50

Kotenashis are quoted at $6.75 in New York

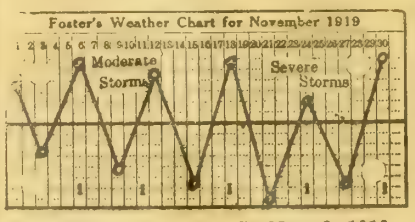
PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
C. H. P.	9.00	10.50	10.75
Prime	8.00	9.50	10.25
Red Kidneys	10.50	11.00	11.50

The bean market shows no improvement. Last week the Detroit market declined from $7 to $6.75 and as we go to press this week the market is without life. The different market prognosticators present various reasons for the decline. One firm that has been particularly insistent that beans would not go lower are blaming the "shorts" for the present condition, but if the "shorts" are at fault, they have plenty of ammunition to back them up. No matter how strong may be the bearish influence of firms that have sold short and must seek low-priced beans there comes a time when a greater influence, the law of supply and demand defeats their efforts. If it is true that there is a present demand for Michigan beans that will permit the elevators to pay farmers $7 per cwt., as claimed by some, that price should soon prevail. We are not so optimistic, however. Granting that the "shorts" are bearing the market and that the present price is unwarrantably low, we cannot see any hope for higher prices until after the first of the year. We hope we are mistaken in this. In any case, bean growers will do well to sit tight and watch developments. Today's price to the farmer is too low. Wait till the market strengthens before selling your crop.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Nov. 8, 1919. —Warm waves wil reach Vancouver about Nov. 9, 15 and 21 and temperatures will rise on all the Pecific Slope. They will cross crest of Rockies by close of 10, 16 and 22; plains sections 11, 17 and 23; meridian 90, great lakes, middle Gulf States, Ohio-Tennessee valleys 12, 18 and 24; eastern sections 13, 19 and 25, reaching vicinity of Newfoundland about Nov. 14, 20 and 26. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from near Nov. 9 to near Nov. 26. Near Nov. 9 the storm forces will be at their greatest intensity but no great storms are expected. Quiet weather is expected from 14 to 18 an dvery severe storms from 20 to 28. It requires four or five days for these storms to cross the continent from Pacific to Atlantic coast and the reader should take enough interest in the newspaper reports to know where these storms are every day; then these forecasts will be of much greater value.

Rain and snow fall on that side of the high and low nearest the place from whence comes the moisture. At time of the storms mentioned above the moisture that feeds them will be evaported in the Caribbean Sea and Gulf of Mexico and therefore the rain and snow will fall on the southeast sides of the highs and lows. The lows are the storm centers into which the cluods assemble, the warmest weather occurring in their southeast quadrants.

The highs bring the cool, clearing weather. Frosts are expected to extend southward following each of these storm periods and most precipitation is expected south of the high ridges that run east and west. Temperatures of this 17 day period expected to average a little warmer than usual east of the Rackies crest and a little cooler than usual west of that line. Average of cropweather for winter grain and for picking cotton and gathering corn will be fair. Keep your pickets alert for the bad storms Nov. 20 to 28.

These bulletins have long urged that the agricultural element more thoroughly organize. This necessity must be apparent to all close observers. The word capital, now so much in use in our public affairs, has particular reference to large wealth that extensively employs wage labor. These two elements are rocking the boat. They and their dependents may represent three million people, old and young. Those employed in agriculture number about forty millions and their wealth is at least as large as that of capital and labor combined. This leaves about fifty-four millions of people not directly interested in what are termed capital and labor, but very much interested in their products. I refer to the states only.

If the three million cannot agree and in their bitter struggle threaten to tear down the temple, the fall which would ruin the ninety-seven millions of people in the states can doubt what will happen? In this threatened destruction of our race, the agricultural elements, which include nearly all the people in agricultural sections, the farmer, planter and herder, will constitute a reserve force that may well be depended on. Nearly every country on Earth is much in the same condition as the states. Uncle Sam must lead the way again, and again he will rescue our race, as did in the great world war.

W. T. Foster

POTATOES STEADY

SPUD PRICES PER CWT., NOV. 4, 1919

	Sacked	Bulk
Detroit	2.65	2.55
Chicago	2.80	2.40
Pittsburg	2.65	2.50
New York	2.65	2.50

PRICES ONE YEAR AGO

Detroit	2.10	2.00
Chicago	1.75	1.70
Pittsburg	2.25	2.15
New York	2.50	2.40

There was very little doing last week in the potato deal. The movement was moderate, less than the previous week, and the demand was just fair. There were few price changes and those upward. Farmers in all states are free sellers, but the movement is somewhat handicapped by lack of cars. The present week opens with a stronger feeling. Prices to producers in Michigan have increased slightly over the previous week, western Michigan points reporting as high as $1.10@1.15 per bushel to the producer. We have every confidence in the world in this year's potato market, and we feel that this confidence is shared by both producers and shippers.

APPLES DECLINE

Extremely warm weather prevailed in the east last week and had a very bad effect upon the apple market. In addition, the strike of the longshoremen prevented the export shipment of quite a quantity which had to be sold in New York City causing a temporary flooding of the market. The present condition of the market can be expected to continue until the weather becomes colder and the export movement again picks up. Apples are selling at retail in the city of Mount Clemens for 10@15c a quart. Farmers are receiving not to exceed $2.50 per bushel, mostly $2. so it is plain that someone "in between" is taking the usual toll.

ONIONS FIRM

The onion market rules steady to firm. Prices in Detroit on the yellow varieties run about $3.50@3.75. Cleveland and Chicago markets report sales as high as $4.50 per 100 lb. sack.

GRAPE SEASON CLOSES

The grape season is rapidly coming to a close, practically all of the remaining supplies being held in the hands of dealers and speculators Prices have been on the upgrade of late. A number of sales of Concords were recently made in New York at $130 per ton. Catawbas are also being quoted at $125@130 per ton. It has been a good season for Michigan growers and the crop has netted them the biggest profit of years.

This Trade-Mark Is Your Assurance of Greater Motor Oil Satisfaction

En-ar-co National Motor Oil
The Scientific Lubricant

THE high quality of En-ar-co National Motor Oil never fluctuates. Year after year for every motor use, under every condition, it gives the same uniformly perfect results. Here is why:

We supply the best materials, the newest modern equipment, exact formulas, and most rigid tests.

En-ar-co is scientifically refined, insuring a uniformly perfect oil.

For All Types of Motors

Tractors, automobiles, aeroplanes, trucks, gas engines and motor boats give better service and last longer when lubricated with En-ar-co National Motor Oil.

It forms a soft, velvety cushion or film—strong and tenacious—that protects all moving parts. Thus is friction practically eliminated, and your motor is able to render its greatest strength and power.

Insist upon En-ar-co National Motor Oil and other En-ar-co products. If your dealer cannot supply you, write us.

National Refining Company
1955 Rose Building, Cleveland, Ohio
Branches in 89 Cities

All En-ar-co Products Excel

White Rose Gasoline for greater power.

National Light Oil for Tractor fuel. Also best for lamps, oil stoves and incubators.

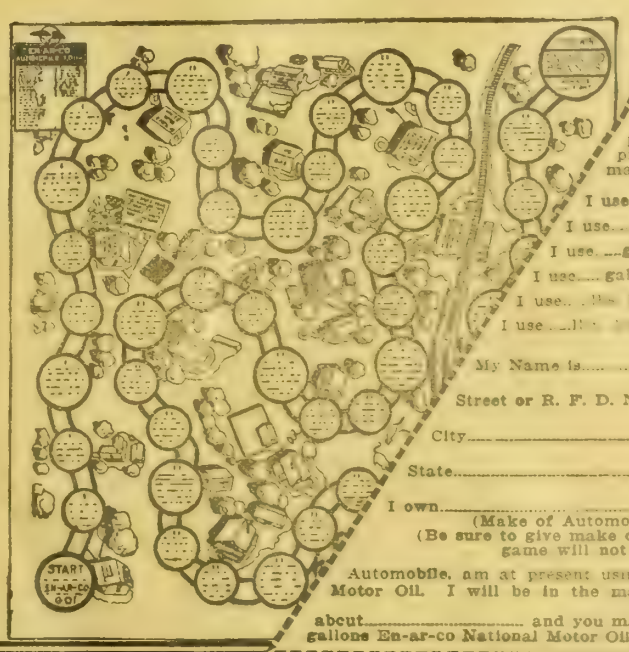
En-ar-co Motor Grease for every lubrication point around the motor car or tractor.

Black Beauty Axle Grease for wagons.

Always look for the En-ar-co trade-mark!

This Game Sent FREE

A fascinating game in which autos compete in a cross country race will be sent to all auto, tractor, motor boat or engine owners. Grown folks as well as children will be delighted with it. Just the thing for Fall and Winter evenings. Write for it NOW. It's FREE.



THE NATIONAL REFINING COMPANY,
1955 Rose Bldg.,
Cleveland, Ohio

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

A NEW VOCATION FOR WOMEN

WOMEN WHO are obliged to earn their own living and have a liking for the great out of doors, as well as those women of the farms who have a little spare time and are anxious to earn some money of their own, will find the work of a medicinal garden most fascinating.

Not until recently has it come to the attention of our people that medicinal plants, which have such a high value, could be successfully and profitably raised in Michigan. Since the industry started, the number of women engaging in this line of work has brought to the attention of men the fact that it was opening up a new way of earning a living for women.

The best grade of seeds must be secured so that a uniform quality of plants can be secured, and at first it will probably be better for the novice to attempt but one or two plants, such as peppermint which has been found to thrive in Kalamazoo county, and where the industry has attained importance.

Last year the University of Michigan made a special study test of these gardens and is now prepared to give advice to anyone wishing to undertake the work. They will tell you what plants are best suited to the soil and climate where you live and how to secure the seeds and where to market your product as well as giving expert advice on the cultivation and curing of the drug plants and preparing them for market.

YOUR PERSONAL REPRESENTATIVE

UNDER head of "Personal Service Shopping Bureau," the editor has attempted help you supply your needs. It is not our desire or intention to buy for you what your home merchant handles, but in every small town there is a multitude of little necessities which a woman finds need for as well as some of the little frills and fads which she would like that the small town merchant could not afford to stock up on. It is to fill this need that this service has been instituted. Remember there is nothing you may not need which cannot be secured, and the large city shops and department stores are replete with just the little things you would like for Christmas. Let me suggest a few of the things I have seen in the stores which would make excellent gifts and which I am sure your own merchant cannot supply you with, for the small sum of $1.

There's a wonderful rubberized apron which has a bib that extends well down to cover the skirt which comes in a check which can hardly be told from gingham. There are three colors to choose from blue and white, pink and white, and black and white. These are invaluable for wash day, and will save a pile of laundry work if worn all the time when doing the roughest of your household tasks. When soiled, you simply lay them flat on a table and wash them off with a cloth or sponge. Surely they will repay any housewife in time as well as energy. They are also a good, practical gift. Oh, and there are small child-size ones for only 50c which make a wonderful feeding apron as they almost cover the little tots.

Who is there who has enough handkerchiefs? Personally we buy only everyday handkerchiefs, knowing full well that when anyone is undecided what to give us they will know that they are perfectly safe in choosing a dainty handkerchief, and so we sort of hold off getting any pretty handkerchiefs until after Christmas. For the woman of quiet taste there are the dainty embroidered pure white ones or the fine ones with a tiny hemstitched border and the initial neatly embroidered in the corner. A very good value can be secured in these handkerchiefs, three for a dollar, all boxed in a pretty Christmas box. Then for the girls who "just adore" those brightly colored little "hankys" so much in vogue now which match the suits or lend their brilliance to another wise conservative outfit, an equal number can be secured for the same amount.

If you want something which will please small son or brother a flash light with batteries which can be replaced, will surely set him smiling on Christmas morn.

Another gift which is always a safe one to give when you are in doubt as to just what the recipient may desire, is a box of plain, good white stationery. Better the small-sized box with the good quality paper, than the fancy box for as sure as you indulge in the gayly decorated Christmas boxes, you will find that the quality of the paper is inferior.

However, the above are simply suggestions. You who are with the members of your family daily, hear them wishing for some little luxury they cannot afford and resolve to get it for them. Do not despair if you cannot find it in your own town. Just send on your commission to me—tell me what you want to pay and I will gladly do your shopping for you.

The Lone Tree

ALL SUMMER long it stood out there
A stripling tree, ill-shaped and poor.
The field that mothered it seemed bare
As any wind-blown Scottish moor.
I saw it first one sunny day
As I was passing in a train
And something in me seemed to says
"There stands a tree which grew in vain."

Behind it were the distant hills
On which were ranged majestic trees,
"Surely," thought I, "this weakling fills
No place in Nature's harmonies.
This is an outcast from its clan
Deserted by its fellow-kind,
Of little use to God or man."
And then I dropped it out of mind.

Then came a day in autumn, when
The woods with gold seemed all ablaze.
I passed along that way again
And turned upon the scene to gaze.
There stood the outcast, garbed in red,
Blending its scarlet with the green
And brown and purple richly spread,
No longer poor and gaunt and mean.

It seemed as if some Master Hand
Had rightly placed that lonely tree
Upon that stretch of barren land
Exactly where it ought to be.
The landscape with its splendors rare
An incompleted work had been
Without that stripling standing there
To splash its scarlet on the scene

Who knows when life's great tasks are done
But what the outcasts, mean and base,
Shall, in the scenes we look upon,
Find that they also fill a place?
Perhaps as lonely trees they stand,
Seemingly lost to God and man,
Yet spending their days on barren land
To serve the beauty of His plan.

By EDGAR A. GUEST.

OUR READERS' OWN COLUMN

IN THIS column from week to week we will publish helpful hints sent in by subscribers, questions you wish some other reader to answer, and in fact anything and everything which you may want. It's your column. What do you want to know?

The following inquiry has been received from a subscriber. Surely there are numberless readers who know just how to wash a Lamb's Wool blanket, who will be glad to share your knowledge with not only this reader but all others who read with interest from week to week, the helpful suggestions contained in this column.

Women's Department, MICHIGAN BUSINESS FARMING:

Could you, or anyone in this department tell a reader how to wash a lamb's wool comfort? I have one to wash and am of the opinion that I could wash it with water and a good wool soap, but don't like to plunge until I get some experience. I watch this department with interest for ideas and short cuts and hope to send in a few sometime.—*Mrs. W. M.*

Following the issue in which we made mention of the sugar shortage, one of our practical subscribers sends us the following very excellent suggestions as to the method of canning without sugar:

Fruit Canning When Sugar Is Short

Having noticed your editorial on the sugar shortage and the difficulty farm wives have in obtaining it for their canning, I must say a word. Of course if it is possible it is more convenient to use the sugar as you can your fruit, but I have canned many quarts without sugar, even when it was plentiful. When berries and summer fruits come on all at once, it takes considerable money to obtain sugar enough to care for it so I have made a practice of canning without used for pies are canned sour; the used for pies are canned sour;; the pie is finer in flavor, more like fresh pie, if sweetened when made. Much of the fruit intended for preserves is also canned sour and then during the winter when the sugar is more plentiful and the demands on my purse are not so many, I secure the sugar and make up my preserves. My jelly is made the same way. I cook and strain the fruit, heat the juice and can. It will keep indefinitely.—*B. E. M.*

Editor Woman's Dept. M. B. F.:

I am a reader of your farm paper and think the department for the women very helpful. Could you print a receipt in this department, for citron peel to be used in fruit cakes? I have a number of citron on hand that I would like to utilize in this way but have not been able to find out just how to make it.—*Mrs. H. S. C.*

The following recipe is one which is good for any fruit. You can use it for watermelon, orange and lemon peel as well as citron. Therefore we are sure that many of our readers will be glad to get it as citron peel is not only delicious in fruit cake, but is a wonderful improvement for mince pies.

Candied Fruit

The fruit to be candied should be washed, peeled or pared, if necessary, cut or sliced and dropped into boiling water; for two or three minutes. Drain well; cover with syrup made by boiling one pound of sugar for each pound of fruit with one cupful of water. Boil rapidly for fifteen minutes; remove from the fire and allow to stand over night. The next morning boil for ten or fifteen minutes again and repeat the heating and cooling for four to six days, according to how rapidly the water is drawn out and the syrup is absorbed. The fruit plumps slowly, and the gradual increase in the density of the syrup caused by the many cookings insures tender fruit which is filled with syrup. After the fruit is transparent and bright, lift it from the syrup and dry in the sun or in a cool oven.

DEAR LADDIE: We like the M. B. F. fine and are sending our renewal today. As you asked us to send helpful hints I thought I would send this little story, as most women enjoy a new recipe. Yours for the good of the farmer.—*Mrs. J. G. Van Luren, Durand, Mich., R. 1.*

"Those Who Waste Not, Want Not"

"Well, Aunt Anna, what are you doing now?" exclaimed the guest, pulling up a low, splint-bottom chair. "New potatoes on a winter night?" she quizzed curiously.

Aunt Anna nodded and smiled friendly-like. "They're a pretty good substitute for new potatoes," she said "and I cook 'em the same way; heat 'em up with cream and a bit of butter and season nice with pepper and salt and sometimes for a change a sprinkle of parsley out of my window box. In fact, pa and I like 'em better'n really new potatoes. Pa always takes the trouble when he digs 'em to pick up and sort out all the little potatoes. 'Waste not, want not,' pa always says; but I sometimes think it's because he likes the little ones best. You know they are of a much richer flavor, just a hice, good, rich bite in each one. The larger ones are coarse-grained, and sometimes hollow, and sometimes black at the center," said Aunt Anna.

"But aren't these perfectly awful to peel?" inquired the guest, "so small?"

"Oh, I take 'em when I have time," rejoined her hostess. "Now, this morning I was ironing and it wasn't a bit of trouble to cook enough of these small potatoes all sorted as they were, for several messes. They peel easier cold, so I just drained 'em when they were done, and set 'em aside; and now this afternoon when I'm sort of tired, it's a real rest to sit here in my sunny window and peel potatoes. What I don't want to warm up tonight I'll cover and set in a cool place. They'll keep nice for two or three days."

"And you cook them like new potatoes?" mused the guest.

"Oh no, not always," hastened Aunt Anna. "There's lots of ways to serve little potatoes. Sometimes I make a cream sauce and just heat 'em up so. And again, I pile 'em around a bit of butter if the meat is pretty lean and sprinkle 'em with pepper and salt and put in the oven to brown over. They're as nice fixed that way as baked potatoes, and that's as nice as anything ever gets to be," affirmed Aunt Anna positively. But sometimes on special occasions, I go to a little more trouble. I make a thin cream sauce; put a layer of it in a baking dish, then a layer of little potatoes salted and peppered, then a sprinkling of dried beef shredded real fine, and more cream sauce, and so on till my dish is two-thirds full. Over the top I sprinkle half a cup of grated cheese and flatten it down with a spoon. It doesn't take long to bake with a good fire, and it makes a supper dish that's real appetizing and nourishing," said Aunt Anna, "and most folks like it I notice."

"It sounds awfully good," sighed the week-end guest hungrily.

Aunt Anna glanced up with a whimsical little smile. "That's the way I was cal'lating to fix these for supper, now," she said.—*Aunt Jessica.*

DEAR CHILDREN: A large number of very good Thanksgiving pictures have been received, and I am sure that our artist is going to have a great task deciding which is the prize winner. However, the week of Thanksgiving you will see the prize picture published. Right here let me remind you again that, although the colored pictures are very pretty, they will not reproduce or show up in our paper as we use only a black and white print as you know, therefore when sending in drawings which you hope will win a prize, send them in black and white.

You know I told you in my little Christmas letter which so large a number of you have received, that if the prize you wanted for a Christmas present wasn't there to tell me what you most wanted and I would tell you how many subscribers you must get to earn it. One of our little readers got so anxious that he couldn't wait, but he seemed to know that if it was at all possible I would send him what he wanted so he sent on three subscribers and before this paper reaches you, Harold McDonald, of Evart, will have received the gift he most wanted, a flash light.

When we were packing Christmas gifts the other day, one of the ladies in the office wanted to buy a football for her small son, and was very disappointed when I told he that she would have to go to the stores for it, for the balls I had were only for the boys who won them—none are sold, so all stand an equal chance of winning just what they work for. Affectionately yours, LADDIE.

OUR BOYS AND GIRLS

Dear Laddie—This is the fifth time I have written to you and I like to write. Thanks to Anna Boudro and Katherine MacNaughton for writing to me. I will write a story of "In a Minute." Love to all the boys and girls. Your friend, as ever, Ruth McShea, Rosebud, Michigan.

In a Minute

Once upon a time there was a little girl about 10 years old and her name was Laura. She was always saying "in a minute." One day her bird got on the floor and the door was open as somebody is always doing. The cat came in the house and grabbed the bird and out the door he went. Laura's mother hollered to her to come and get the bird and she said "in a minute, as soon as I get this line of drawing done," and there was a wild chase on the lawn. She came in the house with the bird in her hand crying and her mother said, "there may be very many things that will happen in a minute," and it taught her a lesson. So she never forgot it and always came when she was spoken to.

Dear Laddie—This is the first time I have written to you. I am a little girl ten years old and in the fourth grade at school. I have hazel eyes and brown curly hair. I live on a farm of eighty acres. We have three cows, three calves. We have three horses. We have about 30 hens and about 40 young chickens. For pets I have 8 rabbits and two dogs and two kittens. I have three brothers, Clyde age 7 years, Warren, 3 years and Waive 17 months. I can cook, bake and do some parts of house work. There are 17 children in our school. I want to pick up potatoes to earn my own Christmas money. I think the Doo Dads are funny little things. I wish some of the girls of the M. B. F. would write to me. We take the M. B. F. and like it very much. I am sending a picture for Hallowe'en. Will close, hoping to see my letter in print. Thelma Woodard, McBride, Mich.

Dear Laddie—I am a girl 11 years old. My birthday is the 6th of May. I am in the 7th grade at school. I like to go to school quite well. I started to school when I was 5 years old and have not missed a grade yet. I have written to you before but my letter was not in print. I like to read the Doo Dads, letters and stories very much. I live in town. We own a 160 acre farm the first house out of the corporation. I have two brothers, Roy and Clarence and one sister, Minnie. My school teacher's name is Miss Rourke. We live right across the road from the station. We used to have a Ford car but we sold it the first of June and expect to have another one. I hope to see my letter in print. Well my letter is getting long so will close. Ezaliah Sherman.

Dear Laddie—This is the first time I have written to you. I am in the seventh grade. We live on an 80 acre farm. We had three horses but we sold one and now we have only two. We have three milking cows two heifers, five calves and nine sheep. I have four brothers and seven sisters, my brothers' names are August, Alfred, Rudolph and John. My sisters' names are Anna, Teresa, Marie, Pauline, Edna, Mildred and Minnie. I also have one pet, her name is Mizzie and one dog; his name is Dewey. My father takes the M. B. F.. I like the Doo Dads very much. The puzzle which was in the M. B. F. was an ostrich. Am hoping my letters will be in print. Ida Schleben, Rogers, Mich., R. F. D. No. 1.

Dear Laddie—My father takes the M. B. F. and he likes it very well. I like to read the letters from the girls and boys and I would like to hear from them. I am 11 years old and in the sixth grade. I like my teacher very well, her name is Miss Kreutzer. We are having vacation now. We have three cats. We have not had the paper for a long time. When I was trying to win the contest of the great men and the next week the paper didn't come. I would like to see this letter in the paper next week. Goodby, from Dorothy Briggs, Blanchard, Mich.

Dear Laddie—I wrote to you once and was going to write again but I lost your address and just found it. I am going to send in a little drawing bye and bye for Thanksgiiving, see if I can't get a prize too. In the M. B. F. we got this week I saw a story in it and the title of it was "Marjorie Daw" and it made me think of my little baby sister, her name is Marjorie. I would like very much to become a member of the Christmas Club. Please tell me all about it. From Miss Violet Grover, Wiscrosset, Mich.

Dear Laddie—I am a girl 14 years old. I am through the eighth grade. I have four brothers, they all go to school except one. We live on an eighty acre farm. We have eleven cows and five calves, also four horses. I also wish to join the Christmas Club. Please send me a list of prizes and rules of the Club. Find enclosed a drawing for the Thanksgiving contest. Hope I get a prize. Yours truly, Irma McCormick, Lansing, Mich., R 3.

Dear Laddie—I am a girl 11 years old and have written to you once before. I am in the 7th grade at school. My teacher is my sister. I like her fine. I have two brothers and one sister. My brothers' names are Lloyd and Clarence. My sister's name is Donna. I live on an 80 acre farm. We have four horses and two colts. For pets I have a dog and two cats. Will close, hoping to see some of my unknown friends sometime. Your friend, Miss Lena Bearss, Memphis, Mich.

Dear Laddie—This is the first time I have written to you. I am a girl 10 years old in the sixth grade. My teacher's name is Miss Marie Williams. I have two sisters and two brothers. For pets I have a dog, cat and goat. We have a cow and a calf. We live in the county. I wish some of the girls would write to me. Hoping to see my letter in print. Velma McEwan, Alpine, Mich.

WHAT CAN A LITTLE CHAP DO?

By John Ovenham

What can a little chap do
For his country and for you?
What can a little chap do?

* * * *

He can shun all that's mean,
He can keep himself clean,
Both without and within—
That's one good thing he can do.

His soul he can brace
Against everything base,
And the trace will be seen
All his life in his face—
That's a very fine thing he can do.

He can look to the Light,
He can keep his thought white,
He can fight the great fight,
He can do with his might
What is good in God's sight—
Those are excellent things he can do.

Though his years be but few,
He can march in the queue
Of the Good and the Great,
Who battle with fate
And won through—
That's a wonderful thing he can do.

And—in each little thing
He can follow the King;
Yes, in each smallest thing
He can follow the King—
He can follow the Christ, the King.

—From Princess Mary's Gift Book.

MASCULINE NAME PUZZLE

1. Behead and curtail a man's name and find an untruth.
2. Behead and curtail a man's name and find an article of furniture.
3. Behead and curtail a man's name and find a tiresome person.
4. Behead and curtail a man's name and find a girl's name.
5. Behead and curtail a man's name and find to tear.

1. Felix-Lie. 2. Richard-Chair. 3. Robert-Bore. 4. Arthur-Ruth. 5. Andrew-Rend.

Nuts to Crack

1. What kind of cake should a jeweler eat?
   Answer: Gold and silver cake.
2. What holds all the snuff in the world?
   Answer: No one knows (nose.)
3. Why is a coachman like the clouds?
   Answer: They both hold the reins.
4. What is it that if you name it you break it?
   Answer: Silence.
5. When is it easy to read in the woods?
   Answer: When autoumn turns the leaves.
6. If you throw a white stone into the Red Sea, what will it become?
   Answer: Wet.
7. Why doesn't Sweden send her cattle abroad?
   Answer: Because she keeps her Stockholm.
8. What is the best material for kites?
   Answer: Flypaper.

Lily White

"The Flour the Best Cooks Use"

As pure as the lilies of the field; possessing a wonderfully delicious flavor—thoroughly nutritious and wholesome.

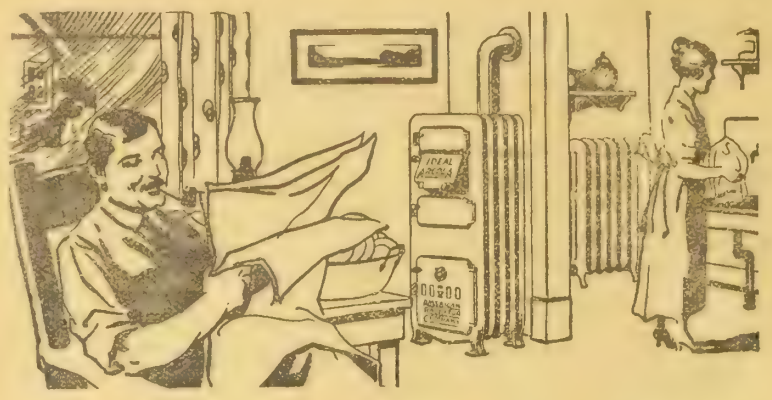
LILY WHITE is more than just flour. It is the best part of the choicest wheat carefully and scientifically milled into the very best flour it is possible to produce.

Thirty-five years' experience in successful milling on a million dollar investment makes LILY WHITE "The flour the best cooks use.."

Our guarantee protects you.

VALLEY CITY MILLING CO.,
Grand Rapids, Mich.

Winter is Coming!



Get Radiator Ready NOW!

Even the smallest farm cottage can now have Hot Water Radiator heating. With the invention of the IDEAL-Arcola Radiator-Boiler the farmer can enjoy utmost fuel saving and have the greatest comfort all winter long.

The IDEAL-Arcola is a water-jacketed Radiator-Boiler and circulates its heat to adjoining rooms thru pipe-connected AMERICAN Radiators—making a complete, safe, and permanent heating plant. Your dealer can supply you with a complete outfit of just the proper size for warming your home—and at a very reasonable figure! *Send for special booklet on the IDEAL-Arcola!*

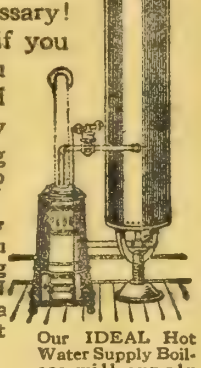
AMERICAN & IDEAL RADIATORS BOILERS

Best heat for farm home because it gives greatest comfort at least cost, better health, and less labor.

IDEAL Boilers will supply ample heat on *one charging of coal* for 8 to 24 hours, depending on severity of weather. Every ounce of fuel is made to yield utmost results.

No cellar or water supply necessary! You get back the first cost even if you sell or lease, and you get big yearly fuel savings; so why delay on a sure, high-paying investment like this?

Call up your dealer today and ask him to give you an estimate for installing IDEAL-AMERICAN heating this week. It can be done in a few days in any kind of building without disturbing the family.



Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season. Temperature kept just right by *Sylphon* Regulator. Write for booklet.

Send for our Free Heating Book

We want you to have a copy of "Ideal Heating." It tells you things you ought to know about heating your home. Puts you under no obligation to buy. Ask for booklet on "IDEAL-Arcola" if interested.

Sold by all dealers. No exclusive agents

AMERICAN RADIATOR COMPANY

Write to Department F-33 Chicago

POULTRY IN BETTER DEMAND

The live chicken market which has been rather dull for the last several weeks [illegible] last, although there were no changes in prices. Nothing but the best was in demand, however. The following prices prevailed: Spring chickens, large, 23@24c; small, 21@23c; hens 24@25c; small hens, 18@20c; roosters, 18@19c; spring geese, 24@25c; ducks, 28@30c; turkeys [illegible] per pound.

FRESH EGGS IN GOOD SUPPLY

There are plenty of eggs on the Detroit market of both the fresh and packed brands. The late fall has enabled farmers to keep the market pretty well supplied, but with the coming of colder weather eggs are expected to advance rapidly. Fresh eggs are quoted by jobbers at 60@63c per dozen.

BUTTER

The supply of butter on the Detroit market is ample to meet all demands. Buying is active. Prices paid at the opening of the week are: Fresh creamery, firsts, 60@62c; fresh creamery, in 1-lb. prints, 62@64c per lb.

CHEESE PRICES

New York firsts, June, 34c; Michigan flats, June, 33 1-2c; Michigan flats, new make, 31 1-2c; brick, 33c; [illegible] horn, 32 1-4c; Michigan single daisies, 32c; Wisconsin twins, 31 1c; Wisconsin double daisies, 32c; limburger, [illegible] 34c; domestic block Swiss, 35@40c; domestic wheel [illegible] 40@42c per lb.

DRESSED STOCK

Dressed calves are in fairly good demand this week on the Detroit market, but hogs are dull. The recent strength in the market on live hogs had not affected the dressed hog market up to the time of going to press. Prices quoted are: Dressed calves, 21@24c; dressed hogs, 16@20c, according to weight and quality.

CLOVERSEED HIGHER

Last week saw another advance in cloverseed. Demand is good but the supply is at times very scarce. $30 per bushel was the price paid on the Detroit market last Saturday. Alsike was quoted at $29.25 and timothy, $5.50.

Live Stock Markets Gain Strength

The reaction in the live stock market from a weak, declining condition to a stronger and advancing trend has come somewhat sooner than expected. The change is very noticeable in the hog market, and is largely accounted for by the sudden drop in receipts. The total of hogs marketed in Chicago last week was only about two-thirds of the total for the previous week showing either that farmers have their choice stock pretty well cleaned up or that they are willing to feed longer rather than sell at the present low prices. Prime hogs topped the Chicago market last week at $14.15 which is somewhat higher than prices of the preceding month. The export business is still dull, but there is talk of buyers again entering the market upon a liberal scale. With the revival of the export business hogs will climb again, sure as preaching.

$19.50 was the top price offered in Chicago last week for prime steers. This is the best price that has been paid for nearly three months. The market is very slow, however, for medium grades, and there is a lot of it coming into the market at this season of the year. One of the largest and most reliable commission houses in Chicago offers the following advice to live stock feeders: "We do not advocate the holding of any stock that is in finished condition nor do we see any advantage to be gained in holding stock that is not putting on beef as well as it might.

DETROIT, Nov. 4.—Cattle: closed 25 to 50c lower and dull at the decline; quality common; best heavy steers, $12@$13; best handy weight butcher steers, $9@$10; mixed steers and heifers, $8@$9;; handy light butchers, $7@$7.50; light butchers, $5.50@$6.50; best cows, $8@$8.75; butcher cows, $7@$7.50; cutters, $5.50; canners, $5@$5.25; best heavy bulls, $7. Veal calves: Market opened steady, closing dull; best, $18@$19; fair to good, $14@$16; culls, $10@$13 heavy grassers, $6@$7. Sheep and lambs: Lambs 25 to 50c lower; sheep steady; quality common; best lambs, $13.50@$14; fair lambs, $12@$12.50; light to common lambs, $8.50@$10.50; fair to good sheep, $6.50@$7; culls and common, $3@$4.50. Hogs: Market steady; pigs, $14.25; mixed hogs $15

CHICAGO, Nov. 4.—Hogs: 50 to 60 cents higher; bulk, $14.50@$15.10; top, $15.25; heavy, $14.65@$15.09; medium, $14.65@$15.25; light, $14.60@$15.15; light lights $14.25@$14.85; heavy packing sows smooth, $14@$14.50; packing sows [illegible] $13.75@14; pigs, $13.75

BOSTON WOOL QUOTATIONS

Michigan and New York Fleece: Fine unwashed, 63@64c; Delaine unwashed, 78@82c; 1-2 blood, unwashed, 75@78c; 3-8 blood, unwashed, 66@67c; 1-4 blood, unwashed 65@66c; 1-2, 3-8, 1-4 clothing, 5[illegible]@57c; common and braid, 41@42c

FREE! SCHOOL OUTFIT TO ANY BOY OR GIRL

This dandy outfit is just the thing you need, it contains 8 Pencils, 1 Pen Holder, 1 Combination Pen and Pencil, 12 Pen Points and Holder, 1 Pencil Sharpener, 1 Ink and Pencil Eraser, 1 Aluminum Collapsible Drinking Cup, all packed in a beautiful box.

Yours for a Little Extra Work!

All we ask you to do is to call on two of your friends and get them to subscribe to Michigan Business Farming for one year at $1.00 each. Have them sign their names and address on the blank below, mail it to us and the OUTFIT will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

In consideration of your offer to give the boy or girl whose name appears below a School Outfit for two new yearly subscriptions, I hereby subscribe to Michigan Business Farming for one year.

Supervisors Endorse Tariff on Jap Beans

At least two boards of supervisors in Michigan have passed resolutions endorsing the efforts of the Michigan bean growers and jobbers to secure an import duty on Japanese beans. The Kent county board passed the following resolution at its meeting on October 18th:

"Whereas, the Michigan Bean Growers and Michigan Bean Jobbers' Associations are using their best efforts to secure a sufficient tariff rate on foreign beans imported into this country, that the Michigan farmers may compete on at least equal terms with the cheap labor of the Oriental bean-producing countries.

"And whereas, the County of Kent is the second most populous county in the state.

"And whereas, the supervisors of the County of Kent in regular session assembled, believing in the efforts of the Michigan Bean Growers' and Michigan Bean Jobbers' Association

"Be it Resolved, that the Board of Supervisors so assembled endorse said efforts and a copy of these resolutions be forwarded to Hon. Joseph W. Fordney, chairman, committee on ways and means requesting him to use his best efforts to have the necessary legislation passed to bring about the desired protection."

We understand that the board of supervisors of Shiawassee county passed a resolution of similar import.

MICHIGAN BUSINESS FARMING is particularly impressed with the active co-operation accorded by some of the wide-awake country newspapers in the bean district. Mr. G. E. English, of the *Huron County Tribune*, gave over a half-page of his paper to the announcement that appears at the bottom of this article and we understand that other newspapers were as prompt to call the attention of the bean growers to the urgent demands of the situation.

Bean Fund Grows

The bean fund is growing very slowly. Total contributions to date amount to $147.10, which will permit about $49 being applied on the expenses of each delegate. This will help very materially, and while we would like additional support, we are sure that the delegates will appreciate this much assistance from the farmers. The following have contributed since our last announcement:

Total acknowledged, Nov. 1st issue	$110.60
Edgar Burk, St. Johns	.50
R. B. Reynolds, Bendon	1.00
Geo. Wakefield, Elkton	1.00
J. T. McCullum, Breckenridge	1.00
Hugh McMillan, Freeland	1.00
Jas. Miller, Chesaning	1.00
H. F. Nelson, McBride	1.50
Farmers' Co-operative Union, Pinconning, C. Kitchen, sec'y	5.00
Harley Morgan, Bad Axe	.50
W J. Strother, Lake Odessa	1.00
Herman Harms, Reese	1.00
Clarence Schwanebeck, Fenton	1.00
J. Fred Smith, Byron	1.00
Arnott Wood, Flushing	2.00
Henry and O. C. Hanel, Williamsburg	1.00

Bert Smith, Montrose	1.00
J. Beemer, Flushing	.50
Jas. C. Bell, Stanton	1.00

THE HURON COUNTY TRIBUNE

To the Bean Growers *of* Huron County

We wish to call your attention to the following article from Michigan Business Farming, of September 27 last. NOW is the time to act if you wish to raise beans at a profit:

Bean Growers Should Take Quick Action

The tariff schedule is being rearranged and readjusted at Washington. Manufacturers are asking for protection, commercial lines are seeking aid to prevent after war competition, but so far no step has been taken to protect the farmer from the produce grown by the cheap labor of the Orient.

When Kimball of the Bean Division, of the Food Administration, advertised the use of Patois and Kolenashis at government expense, the doors were thrown open, and these substitutes for real beans have been entering this country by the ship load tariff free.

Five million pounds of kolenashis reached San Francisco last week and have been thrown on the market in direct competition with beans grown in this country. The bean crop here is light, and the quality excellent, therefor there will be a demand sufficient to care for every Michigan bean at profitable prices.

However, these constant importations from the Orient, give the "beans" their opportunity and they use this additional weapon to lower the opening market. It will take years to undo the work of the Kimball administration. You well remember how these beans were advertised as not only cheaper, but superior to our beans.

A substantial protective tariff, enacted at once will stabilize the market and give Michigan growers a reasonable profit on the crop. The California Bean Growers ask Michigan Growers, through M. B. F., to aid in getting a tariff law enacted at once—our Farmers can not compete with the cheap labor of the Orient.

Will YOU write Congressman Fordney today, asking him to get busy on a special tariff bill for the protection of the Bean Growers of the United States. We must not wait for a special tarif bill, covering the whole list of protected industries—we want a tariff on beans, and to be of any use that bill should be rushed through Congress within thirty days.

At a meeting held at the Meade Township Hall, October 7 68 voters and taxpayers signed petitions to Hon. Joseph Fordney and Hon. Louis C. Cramton, asking them to use their utmost endeavor to have a suitable tariff placed on foreign beans, in order to increase the acreage of Michigan beans and to enable the growers to raise them at a fair profit.

Committees were appointed and the township is being thoroughly canvassed to the end that every voter and every taxpayer will have a chance to put his or her name where we trust it will do some good.

If every township in the bean growing districts send in petitions there is little doubt of a protective tariff being enacted.

Let every township act at once and keep Huron County where it always has been, at the front.

MEADE TOWNSHIP BEAN GROWERS

Potato Exchange Adds New Associations

Associations which have been organized within the last week and have joined the Michigan Potato Growers Exchange are the Howard City Market Ass'n., the Gowen Market Ass'n., both of Montcalm County and the Sand Lake Co-operative Ass'n of Kent County.

All of these associations have ordered their supplies of the Central Exchange and are getting ready to load potatoes and other farm produce to sell for the farmer members through the Exchange.

The new association at Amble, Montcalm County, is getting ready to build a fine warehouse this winter and are preparing to handle all business for the members. They have begun to ship potatoes and have been compelled to refuse to let any more farmers join their association on account of not being able to handle all of the produce which a large membership would offer. Until they get their new warehouse ready they will have to confine their membership to the present number.

The [illegible] Marion Elevator Company has taken over the local elevator and is ready to do business. The Sand Lake Association has purchased a warehouse and is loading out potatoes at the present time.

The Rose City and West Branch associations of Ogemaw County are doing a large amount of business and are keeping a cream tester busy all of the time besides several warehouse men and the managers. They have been able to get the farmers much higher prices for their eggs and cream as well as for other products. They have been the means of raising the price of cream several cents to the farmers and in one instance obtained 20 cents more for their eggs than the farmers had been receiving.

The business of the Exchange has increased to such an extent this season that they had to put on another salesman to help in the handling of that department. The new salesman is a brother of Mr. G. E. Prater, Jr., who has been our salesman for the past year. W. A. Prater the new salesman has been with the North American Fruit Exchange for a number of years handling some of their large accounts as salesman and the Potato Growers' Exchange is very fortunate in being able to have his able assistance for their regular salesman.

The [illegible] Potato Exchange is [illegible] and is being well received in the market. In such good conditions, but the buying trade is recognizing the better values in it than in the produce of the ordinary buyer.

The movement of apples through the Exchange has been very large this season and the prices which the Exchange has been able to return to the growers has been very satisfactory.—*W. C. Cribbs, Field Extension Agent.*

How Does Your Present Separator Compare with the SHARPLES?

HAS your present separator from 20 to 40 troublesome "discs," each of which must be washed after every using? There are no discs in the Sharples tubular bowl—only one small piece—washed in a jiffy!

Has your present separator a knee-low supply tank that eliminates lifting and backstrain? Has it an automatic once-a-month oiling system? Sharples is the only separator that has.

Most important of all—

Can you, with your present separator, turn slow if you're hot and tired, or fast if you're in a hurry, and still get *all the butterfat*—butterfat of *always-even* density?

You cannot answer one or all of these questions without proving positively the mechanical superiority of the

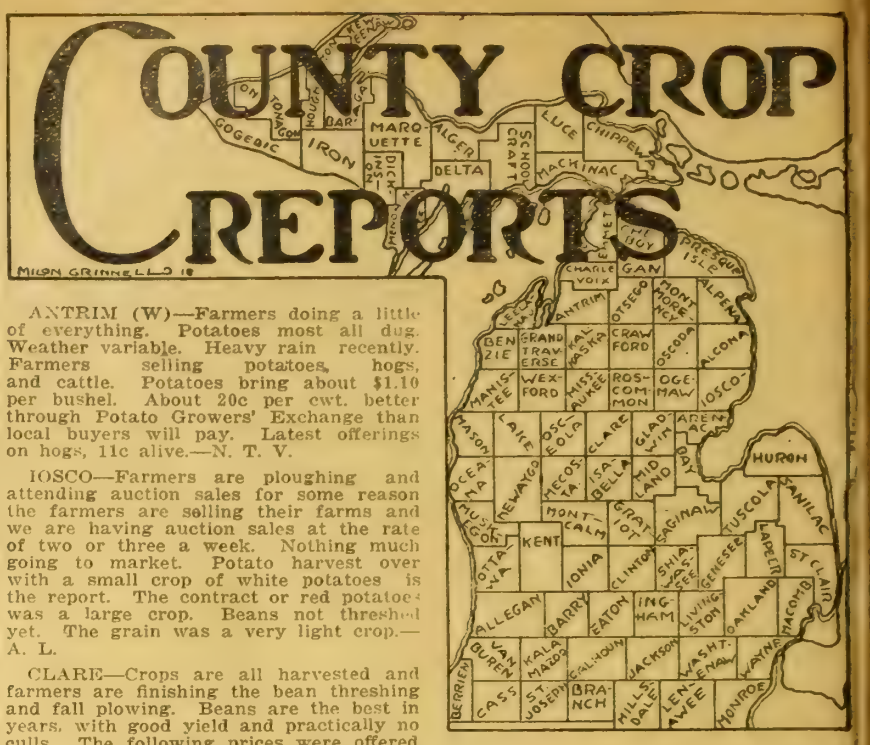
CONSTANTINE, MICH
Price of the Wade $165. F. O. B. Constantine.

COUNTY CROP REPORTS



ANTRIM (W)—Farmers doing a little of everything. Potatoes most all dug. Weather variable. Heavy rain recently. Farmers selling potatoes, hogs, and cattle. Potatoes bring about $1.10 per bushel. About 20c per cwt. better through Potato Growers' Exchange than local buyers will pay. Latest offerings on hogs, 11c alive.—N. T. V.

IOSCO—Farmers are ploughing and attending auction sales for some reason the farmers are selling their farms and we are having auction sales at the rate of two or three a week. Nothing much going to market. Potato harvest over with a small crop of white potatoes is the report. The contract or red potatoes was a large crop. Beans not threshed yet. The grain was a very light crop.—A. L.

CLARE—Crops are all harvested and farmers are finishing the bean threshing and fall plowing. Beans are the best in years, with good yield and practically no culls. The following prices were offered at Harrison last week: Wheat, $2.00 oats, 70c; rye, $1.20; No. 1 light mixed, $25; rye straw, $10; beans(C. H. P. Pea) $5.85; potatoes, $1.75 cwt.; hens, 18c; springers, 18c; butter, 52c; butterfat, 64c; hogs, 12c.—V. W.

MONROE (W. C.)—We are having some wet weather last week. It is bad for husking and digging potatoes. Some farmers are through husking, and have started fall plowing. Wheat is looking fine. Some is getting quite a heavy top. Auctions are coming thick these days, and farm stuff moves at a fair figure, especially cows are going high, from $75 to $200. Farms are still changing hands and the price is still going up.—W. H. L.

MECOSTA—Potato digging is nearly over. Some are husking corn and some are plowing beans. Threshing is nearly done. We have had plenty of rain lately. Some are selling potatoes and beans. Others are holding their crop. The following prices were offered at Hersey: Wheat, $2.07; corn, $1.20; oats, 64c, rye, $1.20; No. 1 timothy, $25; No. 1 light mixed, $22; beans (C. H. P. Pea) $6; red kidney $7.; potatoes, $1.75 cwt.; butterfat, 64c; eggs, 50c.—L. M.

SAGINAW (S. W.)—The beans are about all threshed. They were better than most of the farmers expected and the quality is fine. We are having good roads and weather for harvesting sugar beets. They are turning a good tonnage to the acre. There is a lot of fall plowing being done. The following prices were offered at St. Charles: Wheat, $2.05; oats 65c; No. 1 timothy, $19; No. 1 light mixed, $18; beans (C. H. P. Pea) $6; hens, 20c; springers, 20c; butter, 60c; butterfat, 60c; eggs, 56c.—G. L.

CALHOUN—Farmers have their seeding done. Potatoes dug and are husking corn. Potatoes are not a large crop but are very nice. They are worth $1.25 per bushel. There is some very good corn. The weather is fine, lots of rain. Grain is looking fine. The prices paid in Battle Creek are: wheat, $2.13@2.15; oats, 75c; rye, $1.25; No. 1 timothy, $28; potatoes, $1.25; hens, 20c; springers, 20c; butter, 60cffi eggs, 66c; lmsb, 10@14c; hogs, 12c; lambs, 10@14c; beef cows, 5@7c; veal calves, 10@13c.—C. E. B.

TUSCOLA—Farmers husking corn and ulowing. Lots of rain now. Soil is too wet to work on clay land. Farmers are selling potatoes at Mayville, the only place they are buying just now. We are getting $1.05 a bushel. One man took in 200 bushel in one day and did the same for three whole days running with a 14 mile haul, that is, with a Ford truck. The following prices were offered at Caro November 1: Wheat, $2.05; corn, $1.70; oats, 63c; rye, $1.13; No. 1 timothy, $15; beans (C. H. P. Pea) $6.25; potatoes, $1.00; onions, $2; cabbage, 1 and one-half cents per lb.—H. B. C.

LAPEER—Farmers are busy finishing fall plowing and corn husking. The weather has been very good until the last few days when we have had some rain which will help the wheat and rye. Some lambs and hogs going to market. Not many cattle being sold now. Hay is at a standstill. The following prices were offered at Imlay City on Nov. 1: Wheat, $2.10; Oats, 60c; rye, $1.20; hay, No. 1 timothy, $18; No. 1 light mixed, $16; straw, rye, $6; potatoes, $1.15; onions, $2; hens, 18c; springers, $18@20c; butter, 60c; butterfat, 64c; eggs, 60c; sheep, $5@6; lambs, $10@12; hogs, $12; beef steers, $8; beef cows, $5@6; veal calves $15@17.—C. A. B.

MISSAUKEE—Farmers are trying to finish their rye sowing but it is so wet most of them cannot get on the ground. What rye that is up is looking good and the same with wheat. Potatoes nearly all dug and turned out better than expected. What corn that was not put in silos is in the field yet and is being damaged by the rains. There was a threshing machine Co. formed at Stittsville recently. They purchased a grain separtractor, engine and tank. The officers are Chas. Bickel, pres.; H. E. Nowlin, sec., and Leon Sherman, Treas. The following prices were offered at Lake City: No. 1 light mixed, $30; potatoes, $1.90 per bu.; hens, 16c; springers, 16c; turkeys, 28c; butter, 50c; butterfat, 66c; eggs, 50c.—H. E. Nowlin.

MONROE (N. E.)—We have been having finest kind of fall weather, some have finished husking corn, lots of corn to husk yet, it is a good quality, all hard but does not yield as good as expected, ears are short. Having a good rain today. Wheat looks fine, acreage small, very few potatoes raised here, some shipped in, they cost $1.55 per bushel at Newport off the car. Lots of farms for sale also a great number of auction sales, poor attendance and not selling good at all within 40 per cent of two months ago. There is no regular price for anything, buyers are buying as cheap as they can, not much moving, pretty well sold out.—G. L. S.

LAPEER—Farmers beginning to sell their surplus hay and beginning to fall plow. Stock looks good also fall wheat and rye. Rains during the last month are helping late pastures. Many farmers selling stock on account of shortage of feed owing to the dry summer. Many farmers are selling out by auction sales on account of scarcity of farm labor and high wages in the cities. The following prices are being paid for farm produce at Lapeer: wheat, No. 1 red, $2.10; corn, $1.30; oats, 70c; rye, $1.25; No. 1 timothy, $22; No. 1 light mixed, $21; rye straw, $8; wheat-oat straw, $8; beans, (C. H. P. Pea) $6 cwt.; potatoes, $1.05; onions, $2; springers, 16@19c; butter, 65c; butterfat, 66c; eggs, 55c; sheep, 6c; lambs, 10c; hogs, 11c; veal calves, live, 14@17c; wool, 60c; apples, $2@2.50.—H. E. R.

MASON—Farmers are digging potatoes, picking apples, husking corn and getting their root crops into winter quarters. Frequent rains keep the soil wet but not enough to hinder fall plowing except in the low places perhaps. Crops generally have moved to market. Not much has been held. Chas. G. Pedersen of Amber has a fine crop of potatoes averaging around 18 to 19 salable potatoes to a hill. One hill contained 42 potatoes of which 22 were salable. He has not yet finished digging so the yield per acre is not known. The Mason County Farm Bureau met at Scottville, Saturday, October 25, at which time membership dues were fixed at $5 for the county and $5 for the state. A membership drive is to be put on soon. The following prices were offered at Scottville recently: Potatoes, $1.05@1.08 per bushel; hens, 18c; springers, 18c; butterfat, 67c; eggs, 55c.—B. M.

SHIAWASSEE—Farmers are securing their corn crop. Bean threshing is nearly all done, many are holding theirs on account of uncertain market. Wheat in ground is showing well. Weather conditions being very favorable for its growth the past two weeks. Very little, if any, wheat was sown in this section until after October 1, owing to the dry fall, but the rains of the past few days have been very favorable for the late planted wheat. The following prices were offered at Corunna on November 1: Wheat, red, $2.10; white, $2.08; corn, 80c@$1; oats, 67c; rye, $1.20; No. 1 timothy, $20; No. 1 light mixed, $18; straw, rye, $7; wheat-oat $6; beans (C. H. P. Pea) $5; potatoes, firsts, $1.10; culls, 40c; onions, $1.20; cabbage, 3c per lb.; hens, 21c; springers, 22@24c; ducks, 18c; butter, 62c; eggs, 58c; sheep, $6.50@7.00; milch cows, $125@150; veal calves, 18@20c; wool, 72c; apples, $2; grapes, 8c per lb.—D. H. M.

MANISTEE—The fall crops are about all gathered except corn and the most of that is in silos. Some are thinking of shredding the stalks if it will stop raining long enough to let the corn dry. Potatoes are nice but light crop. Beans the same in these parts. Some farmers are putting up silos others are letting theirs stand empty. There is nothing selling here except apples and they are about all gone. Hogs took a drop here so don't have much about them. There are lots of auction sales but there don't seem to be anxious to buy, all want to sell. Feeding cattle is at a standstill as feed is too high. The following prices were offered here recently: Wheat, $1; corn, $1.20; oats, 92c; rye, $1.20; No. 1 timothy, $40; No. 1 light mixed, $35; rye, $12; wheat oat $16; beans (C. H. P. Pea) $6 per cwt.; potatoes, $1; hens, 16, springers, 18c; butter, 60c; butterfat, 62c; hogs 12c; beef steers, 6c; beef cows, 5c; apples, $1.50@2.50.—C. H. S.

rmer Makes Himself Known in Washington

(*Continued from page 3*)

eclared modestly, at a hearing re a Congressional committee. ays he once worked on a farm. then he has continued to study omics from the vantage point of p box before a lower East Side d in New York, while talking alism to them, and while read- the persuasive literature of the e tax propagandists and the ful sayings of the Plumb Plan ateurs, and others who profess elieve that social ownership of st everything is the great cure- or the great dissatisfied.

t the National Board of Farm nizations, the chairman of the d is Milo Campbell, an able law- who owns a dairy in Michigan is the secretary of an active, ef- t organization known as the Na- l Milk Producers. But Mr. pbell does not spend much time ashington. In charge of the of- s Charles A. Lyman, secretary. wns a farm in Wisconsin and it "absent treatment," creat- the callouses on his hands by ing a stenographer, a press t, stencil cutter, duplicating ma- e and an addressing machine ov- ne and very efficiently. But Mr. an is handicapped in his efforts eep his board before as wide a ic as Professor Atkeson and Mr. pton can reach, because each of has an honest-to-goodness print- organ," and Mr. Lyman's effort eep up by using a duplicator tly interferes with his successful ts to secure legislation.

o much for the personnel. Now what they really represent. The nal Grange only represents it- It is composed of thirty-three granges, some weak and some strong, totalling, they say in literature, "more than seven sand subordinate granges, and r seven hundred thousand active gers." It is a secret society with words and initiations and regal- nt it is more than fifty years' old has been active in securing a part of the legislation to help ers during most of that period.

he Farmers' National Head- ters claims to represent a num- of separate groups of farmers. ysis seems to indicate that it sents just the radical groups, radical parts of other groups. ence and credentials fail to show it actually represents the Non-Partisan League, but that it claims to do so on occasion indicates the wish. The radical state granges in Washington, Oregon and Colorado are affiliated with Hampton's headquarters instead of their own. Certain state units of the Farmers' Union are found foregathering here. Mr. Hampton, when he wishes to function with great force, organizes a "National Committee" and now has one on transportation which is for government ownership of everything in sight; one on packing plants, also for government ownership; one on each of such other topics as is capable of being twisted into a policy of radicalism.

"In the National Board of Farm Organizations is found a group of mutual admiration associations, with a fine showing on paper; and an organization so loose and elastic that at any semi-annual meeting any one organization which seriously wished to do so, could without difficulty, capture the whole board and all its assets and liabilities. It includes one State Grange which flocks by itself, Pennsylvania; the national officers of the Farmers' Union (while the state officers of its two biggest state Unions are with Mr. Hampton); the president of the Farmers' National Congress (whose constituents refused by a three to one vote to join); the National Agricultural Organization Society which now has at least a dozen members; the National Council of Co-operative Associations, another overhead association; the Pennsylvania Rural Progress Association, which exists only in Gifford Pinchot's office desk; the American Association for Agricultural Legislation, all college professors, the Jewish Farmers' Federation, not represented at the last meeting; and finally, the various dairymen's organizations, real farmers, with a real reason for federation, real members and real officers.

"The weakness of this board was shown in its September session where less than twenty men representing national agriculture other than those from the nearby states, were in attendance. If, for example, the Pennsylvania State Grange had wished to do so, it could have easily put enough men in the gathering to have elected its own program. The fact that no one does this is the best indication of the importance of this organization."

Farm Loan Question Box

o many inquiries are received at office relative to the federal farm system that we have decided to gurate a question and answers mn. The information presented w is taken from a bulletin issued he Federal Land Bank at St. Paul covers most of the questions we received. Any reader desiring rmation not given below is re- ted to write us.)

hat is a Federal Farm Loan?—It loan made to farmers through the ral Farm Loan System, by a Fed- Land Bank, upon real estate gage security. This system was olished by Act of Congress, known he Federal Farm Loan Act which me a law July 17, 1916. The Fed- Land Bank of this district (No. s located in St. Paul, Minnesota, is chartered to do business in consin, Minnesota and North Da-

a Federal Farm Loan different a simple interest loan? If so, in t respects?—Yes, a Federal Farm differs in many particulars a simple interest loan. The important advantages of a Fed- Farm Loan are:

Low rate of interest.
Long term of loan.
Amortization plan of repayment an.

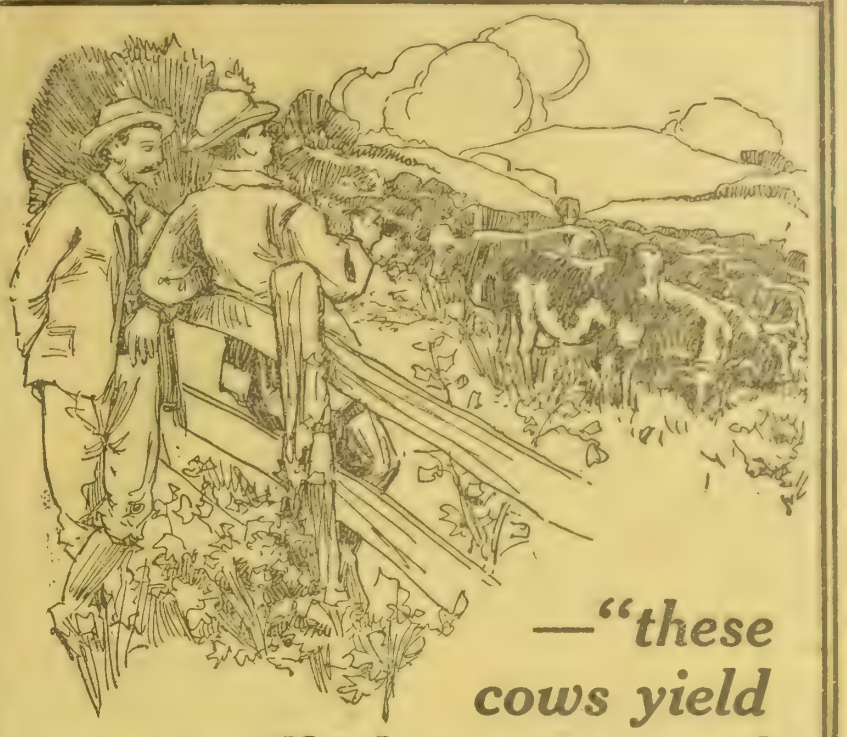
e rate of interest at this time is which rate is uniform through- the United States.

deral Farm Loans run for a per- of 34½ years, but can be repaid art or in full at any interest date five years from date of loan.

l Federal Farm Loans are made he Amortization Plan. The mort- never falls due, thus relieving the farmer from any anxiety about its renewal; the semi-annual payment of $32.50 on each $1,000 is all that ever falls due.

Give an example of an Amortized loan—A farmer who borrows $1,000 through the Federal Farm Loan System pays $65 a year in semi-annual payments of $32.50 each, until the loan is discharged. This is of course 6½% of the sum borrowed. We commonly say that he is paying 5½% interest and 1% on the principal. But the way it works out is this: His first payment is applied as follows: $27.50 on interest and $5.00 on principal. The interest on the next payment is figured at 5½% on the reduced amount of principal of $995.00 (because of his first payment on principal of $5.00) and is applied as follows: $27.36 on interest and $5.14 on the principal. He continues making payments of $32.50 each six months during the 34½ years, but the interest payment is constantly growing smaller and the payment on the principal is steadily growing larger, so that at the end of the thirty-four years, he is paying $1.71 interest and $30.79 on the principal. By means of his small payments his principal is reduced little by little so that at the end of 34½ years it is completely wiped out.

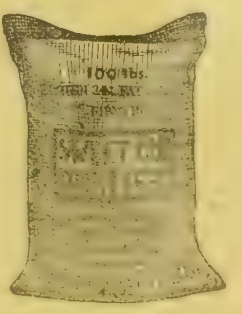
In what amounts and on what basis are Federal Farm Loans made?—Federal Farm Loans are made in amounts from $100 to $10,000. The maximum amount that can be loaned on any farm is 50% or one-half of the appraised value of the land plus 20% or one-fifth of the appraised value of the permanent insured improvements.



—"these cows yield more milk than yours and I never force them—"

Krause Dairy Feed contains nine high grade ingredients but no alfalfa nor molasses. Cows like it. A complete analysis of this and all other Krause and Badger Feeds is published in convenient booklet form. It will be sent to you free upon request.

Badger Monopoly Feed is milled from cleansed whole corn, barley and oats by our individual process. It furnishes an ideal carbohydrate portion of the cow's ration because it is bulky, sweet and easily digested—and supplies the necessary energy to turn feed into milk. Cows like it.



Badger Sweet Cud is a scientific mixture of alfalfa meal, cotton seed meal, gluten feed, brewers grains, malt sprouts and a small percentage of molasses which adds palatability and aroma and induces cows to drink their needed quantity of water. Cows like it.

You cannot govern the fat percentage of milk and you cannot force the cow to yield *more* than a healthy normal supply without ruining the cow. Therefore, the obvious course is to bring up the body endurance, health and strength to the very highest point. When we effect this, we secure the *greatest* milk yield and the richest milk that nature intended that particular breed of cow to produce without forcing.

Badger Monopoly Feed is the only carbohydrate feed of its kind; no other feed can provide such body-strength and energy. On the other hand either Badger Sweet Cud or Krause Dairy Feed will supply the extra protein which is so needed for high milk-production.

When used in combination these are the perfect, balanced *safe* ration for cows.

Consult us about your feeding problems; for fifteen years we have been milling the finest and most carefully prepared dairy feeds. We are able to advise you how to maintain the health of your cows and how to keep your milk supply up to its fullest extent without forcing and ruining your herd.

The best Feed Dealer in your locality sells Krause and Badger Feeds.

If he cannot supply you with exactly what you wish, send us his name and you will be supplied promptly.

Write for our free folder on increasing milk yield.

SOME TRAPPING TRICKS FOR BOYS ON THE FARM

The trapping season will soon be at hand, and it is high time for farm boys to get out the traps and prepare for a profitable catch of fur. There was never a time in history when the pelts of our common fur-bearers were so much in demand or so valuable as at present—not even those days just following the Civil War. Furs are fashionable and milady has the money to buy, hence prices are high. Who ever heard of a two dollar muskrat or a twenty-dollar red fox until the last few seasons? There is a golden opportunity just now open for the man or boy who has a little spare time to devote to the trap line.

In the first place, no trapping should be done until the pelts are prime. The old idea that trapping is permissable during the months that contain an "r" in the spelling has long since been discarded. Most states now protect the fur-bearers, allowing trapping during the cool months only. In the Middle Atlantic states the first of November is quite early enough to think of putting out the traps, while in the latitude of Virginia one will do better to wait until later. December and January are the best months for the business, although the traps may be left out during February unless an overabundance of snow makes the work impractical. This is not likely to occur from the middle states southward but is quite likely to happen in northern New York. However, professional trappers continue to trap right through the winter with good success.

It is well to get ready to begin business the first of November, unless the laws of your state expressly forbid it. This brings up the subject of looking up the law, so the first thing to be done is to get a copy of the game laws of your state. This may be done by addressing the commissioner of fish and game at your state capital. Some states make it necessary that a trapper obtain written permission to set traps before it may be done on another person's land. This can usually be obtained without difficulty. Some states require that the trapper's name shall be stamped upon the trap. This is a small preliminary that should be attended to before the trapping season opens. Whether the state law requires this or not, I believe it is a good precaution to take. The name may be stamped with a small steel die, made for the purpose, upon the spring of the trap. Should someone bent on thieving find the trap, he is quite likely to leave it if it has your name on. It is practically useless to him, as the name cannot readily be removed.

Some weeks before the opening of the trapping season it is well to go over the territory where one intends to trap, and look up the locations for the sets. It is assumed that the farm boy will use steel traps, as it is not practical in these days to use home-made contrivances. When the season opens, the skillful trapper is all ready to put out the traps. Steel traps will be set upon logs across streams, in banks or rivers, and in the dens of the fur-bearers. Look up these spots some time beforehand.

If you wish to trap for mink, take a trip along the woodland brook, if there is one in your territory, and prepare the spots to make the sets. All kinds of wild animals are more or less wary of changes made in their accustomed haunts. By making these changes some time before the traps are set, the creatures become accustomed to the new order of things, hence when the traps are put in, less caution becomes necessary. I like to look up spring holes and dig them out, leaving a body of shallow water two or more feet across. The use of such holes will be explained later. If you can find a hollow log near the river, move it down on the bank, leaving it lying partly submerged or lengthwise of the current close to the water. Such a place is very attractive to the mink. Build a few small stone enclosures, leaving a small doorway at one side, where the trap will be placed later. Methods of making these suggested sets will be given in other articles.

Skunks are among the easiest of

Blissfield, Mich.

e fur-bearers to capture, and the kins are becoming more valuable ch year. No less a one ich skunks and sell the pelts for m 25 cents to $1 each. It was a ghty good one that would bring e latter figure. Now the pelts worth considerably more than a llar. As this animal is found al- ost everywhere and in some localiies very abundantly, it will to nsider the low-priced skunk. Traps for unks are usually set in dens, hence sure you know where all the unks in your neighborhood dwell. e dens are usually found along the les of rocky ravines or in oak oodlands. Look them up beforend. It is easy to tell if a den is cupied. This may be ascertained observing the entrance. Should u find a long black or white hair, is pretty certain that you have und the den of a skunk. Often it ll be fonud that quite a number well in the same den.

The matter of baits should be conidered some time in advance of apping operations. One can purhase a scent, many kinds of which e offered for sale by advertisers. In me ways the commercial scents are aluable, but the trapper cannot deend upon them wholly. A bait that valuable for minks, racoons and xes, also for otters, skunks and xes, is fish oil. This should be ade some time before the traps are be set. Procure a quantity of fish, mething like small shiners, chubs pickerel. Any soft-scaled fish will , and the more fat they contain the etter. Chop these, and put in a ass preserved jar. Put on the cov- , and fasten, but do not put any ubber under the top. Set this in e sun, and allow it to rot for a few eeks. When the oil rises to the p, strain out the refuse material, nd you will have a substance that ill attract many of the wild creatres. Old meat that is well rotted very attractive to foxes. It is well procure something of this sort and ave it "ripening" for Brother Reynard.—*By C. H. C., in The Practical Farmer.*

Some Differences in Soil

(Continued from page 5)

field conditions is highly desirable for the prospective buyer, as well as the farm owner and manager. It is undoubtedly true that many possess a general knowledge along these lines, especially with respect to the soils of the immediate vicinity in which they live, but on the other hand, those who are sufficiently well informed to be able to accurately judge soils conditions in another, or unfamiliar section or state are fewer in number. If one has sufficient interest, and application to obtain samples of soil, the composition of which is known, and become so familiar with them by comparing each with the other in the wet and dry condition that he can distinguish one class from the other and then take samples from fields and make comparisons with the former, a thorough knowledge of soil classification may be acquired in a relatively short time.

The ability to judge the productivity soils, however, is the result of broader experience, and certainly such conditions as the kind and character of the predominating vegetation or plant growth, the color of the subsoil, the climatic conditions, and others mentioned later on must be taken into consideration.

The above classification refers to so-called "mineral soils" or those in which the mineral matter makes up by far the larger portion of the soil mass and the vegetable matter relatively little. Inasmuch as formations in which the vegetable matter is in the ascendency are of frequent occurrence, the scheme of classification of such generally in use should be given at this time. Owing to the great influence that the presence of vegetable matter has upon various properties of soils, those that contain more than 25 per cent of this material to a depth of 8 inches or deeper are generally classified as vegetable or peat and muck soils. Such deposits in the Pacific Northwest Coast region are popularly spoken of as "beaver dam" soils.

Jury Upholds Farmers in Price Fixing

Acquittal of Chicago Milk Producers a Victory for Collective Bargaining

THE OFFICIALS of the Chicago Milk Producers' Ass'n who have been on trial since September 16, on the charge of conspiring to fix the price of milk in Cook County, have been acquitted. The verdict is of far-reaching consequence and will be received with great satisfaction by millions of farmers all over the United States who have placed their hope of future profits in their recognized authority to bargain collectively and fix the selling prices of their products.

The Chicago trial grew out of a long series of clashes between producers and distributors of milk in the former's efforts to secure a fair, living price. These troubles had their real beginning back in 1916 when the producers "struck," and a few hot-headed farmers attempted to prevent other farmers from selling milk in Chicago below the price agreed upon. That action aroused the state and city officials; an investigation was made, and the year following the pinions of the law invaded the Chicago offices of the producers' association, confiscated its literature and files and prepared the charge upon which the officials of the association were later brought to trial.

From the beginning of the investigation, it was plain that the peoples' attorneys were determined to "get" something on the officials, send them to prison and destroy for all time the organized efforts of the farmers. Law and justice were thrown to the winds and the prejudices of the Chicago milk consumers and press were appealed to in order, as it seemed, to create such a public venom against the producers that no jury would dare to acquit them. The tactics employed to secure a conviction were about on a par with those which have made justice a by-word in some of the western states and more recently in the city of Cleveland where officers of the law have given farmers treatment that might be accorded to convicted murderers. Efforts of the Chicago producers to secure a change of venue that the trial might take place in some city where the sentiment was not quite so one-sided met with failure. The prosecutors had determined that the trial should be held in Chicago and the jury be entirely composed of citizens of the city, and they had their way. Every man on the jury, who to the surprise and chagrin of the prosecutors returned a verdict of "not guilty," was born and reared in the city and had no knowledge of farming conditions.

"Colossal ignorance appeared thruout in the arguments for the state," says the Prairie Farmer. "The attorneys for the state depended more on inflammatory appeals to the prejudices of the jury than to logical presentation of the facts of the case. These attorneys attempted to convey the idea to the jury of city consumers that a conviction would mean a lowering of milk prices and much time was spent in denouncing the farmers as profiteers and criminals."

Former Governor Deneen, of Illinois, was attorney for the producers and tore the arguments of the state to shreds. He pointed out how the Illinois collective bargaining law permitted the farmers to do the very thing for which they were being tried. He also showed that the Chicago milk price was fixed by the distributors and not the farmers, and declared that the "below-cost-of-production" prices paid by milk dealers were driving farmers to the wall and that they were forced to defend themselves by fixing prices based on cost of production.

"State's Attorney Hoyne is quoted as saying that 'the verdict is incomprehensible,'" concludes Prairie Farmer. "Convicting these men would have been one of the severest blows that could have been delivered to Chicago for it would have meant that farmers could no longer continue to produce milk."

What is Needed in Michigan

THERE IS much similarity between the case just closed in Chicago and that which came to light a few months ago in the city of Ludington, Mich., except in the latter instance the prosecuting officials were more charitable and let the farmers off with a warning. The farmers supplying Ludington with milk formed an association and voted in open meeting to charge the consumer a price based on the cost of production. When the price of milk was raised as a result of this agreement there was a great hub-bub, and the power of the law came down on the backs of the unsuspecting farmers like a ton of brick. The prosecuting attorney, loath to proceed against the farmers, asked the attorney-general what to do, and Mr. Groesbeck cited the law and recommended that the association be dissolved with a warning "never to do so again." Referring to the statute we find that both the prosecuting attorney of Mason county and Attorney-General Groesbeck acted in strict compliance with the law which for the information of our readers is published below:

"It shall hereafter be unlawful for two or more persons, firms, partnerships, corporations or associations of persons, or of any two or more of them, to make or enter into or execute or carry out any contracts, obligations or agreements of any kind or description, by which they shall bind or have bound themselves not to sell, dispose of or transport any article or any commodity or any article of trade, use, merchandise, commerce or consumption below a common standard figure or fixed value, or by which they shall agree in any manner to keep the price of such article, commodity or transportation at a fixed or graduated figure, or by which they shall in any manner establish or settle the price of any article, commodity or transportation between them or themselves and others, so as to directly or indirectly preclude a free and unrestricted competition among themselves, or any purchasers or consumers in the sale or transportation of any such article or commodity, or by which they shall agree to pool, combine or directly unite any interests that they may have connected with the sale or transportation of any such article or commodity that its price might in any manner be affected. Every such trust as is defined herein is declared to be unlawful, against public policy and void."

It is plainly the duty of the business farmers of this state to elect men to the legislature who will so amend this law as to permit them to engage in collective bargaining, and be placed upon an equal footing with farmers of other states.

The Relation of Soil Texture to Soil Fertility

An Explanation of Why it is That Sandy Soil is Less Fertile Than Loam or Clay

By M. M. McCOOL
Professor of Soils, M. A. C.

SOIL TEXTURE refers to the number of particles in a given amount of soil, has an important bearing on the composition, and largely governs the porosity and the weight of soils.

The number of particles in a given weight of different classes of soils, such as a pound or a cubic foot, for example, varies tremendously with the size of the particles or texture.

One can readily appreciate how the reduction of the diameter of the soil grains enormously increases the number in a given mass, if he will consider that a stone one inch in diameter will just fit into a cube one inch on a side, yet about 1,000 stones of 1-10 of an inch in diameter, or amout one million stones 1 1-00 of an inch in diameter will be required to fill the cubic inch.

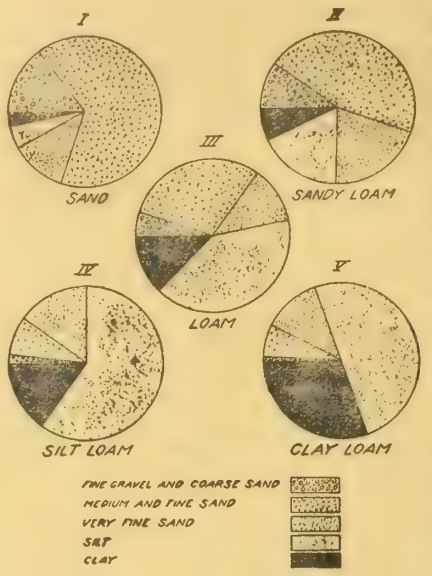
* * * *

Of what practical importance is the number of particles present in a given weight of different soils? One important consideration is the surface exposed, or the number of points of attack by carbon dioxide charged water, and other substances in solution, as well as plant roots, to supply the crop with plant food. It is well known that the finer a given substance is divided, or pulverized, the more readily it will dissolve or go into solution when placed in water. A lump of sugar, for example, dissolves far less readily than it does if in the powdered state.

* * * *

Inasmuch as one kind of mineral wears down to a small particle more easily than does another the indications are that there is a greater proportion of the more easily decomposed minerals among the fine particles and more of those that are resistant among the coarse ones. This has been found to be the case with a number of soils. However, it does not necessarily follow that soils that carry large amounts of sand are unproductive. The original material from which they were derived as well as their "age" govern this to a great extent.

The sand silt and clay were separated from each of several soils and the amount of phosphoric, potash and lime was determined by chemical means. The phosphoric acid content of the silt was about twice as large as that of the sands while the clay was about six times greater. In case of the potash, the silt carried about one-third more than the sand, while the content of the clay was about twice as great as that of the sand. The silt contained slightly more lime than the sand and the clay more than twice as much.



Classification of soils

It is well known that appreciable amounts of sand or other material composed of small particles may be added to a bushel of potatoes, due to the numerous large spaces between the points of contact. The space that the sand occupies may be termed "the pore space." It is also true that more sand, or other fine textured material is required to fill the pores in a bushel of small potatoes than those in a bushel of large ones, or in other words, in the former case the spaces are smaller, more numerous, and therefore, greater in the aggregate than in the latter.

The same principles apply to the soil, that is to say, the soil is not a solid mass, but there are present innumerable pores of widely different sizes and shapes, depending upon the texture as well as the arrangment of the soil particles and the degree of compaction. The pore space in field soils is filled in part by air and in part by water, if the water content is high the amount of air present in the space is low, and if the water content is low the amount of air present is high. The pore space of a dry sandy soil is about 30 per cent, of a loam 40 per cent and a clay soil 50 per cent of the mass or volume. The pore space of surface soils especially may change from one season to another. It may be decreased by compacting or firming the soil, or it may be increased by loosening the soil mass. In practice this is accomplished mainly by tillage operations and cropping systems. The pore space in the finer textured soils may be changed to a far greater extent than that of the coarse textured ones, as shown by results obtained by advanced students in our laboratories. The soils in question were studied in a loose or unpacked, and in a compact state.

Soil	Percent pore space	
	Loose	Compact
Sandy	32	28
Loam	48	38
Clay	59	46

As will be shown in another chapter, the pore space in soils may influence to a remarkable degree several conditions that affect crop production, such as soil ventilation, the amount of water, as well as its movements through the soil, root penetration, etc.

Inasmuch as texture controls to a large extent the pore space in soils, it follows that the weight of a given mass of a dry soil is mainly dependent upon this property. The following table shows the weight of different classes of soils:

One cubic foot of water weighs, 62 1-2 pounds; one cubic foot of sand weighs 90 to 100 pounds; one cubic foot of silt loam weighs, 75 to 80 pounds; one cubic foot of clay loam weighs, 65 to 75 pounds; one cubic foot of peat or muck weighs, 25 to 40 pounds; one cubic foot of compost weighs, 40 to 50 pounds.

It should be borne in mind that any condition or set of conditions that change the pore space and the vegetable matter content in the soil likewise changes the weight of a given volume. The weight of soils under field conditions may be determined by driving an iron cylinder of known volume or capacity into the soil and the same carefully removed, dried and weighed. The weight of soils is often expressed in acre feet, that is, the weight of soil over one acre to a depth of one foot. In calculating the amount of plant food, or the water content in an acre foot of mineral soils, four million pounds is taken as their weight, and for the peat and muck soils one half this amount is used.

National Grange in Session at Grand Rapids

AS WE GO to press trains from the north, the south, the east and west are pouring delegates into the city of Grand Rapids to attend the fifty-third annual convention of the National Grange. It is exected that delegates will be present from thirty-three states in addition to several thousand members of the Michigan State Grange.

The session began Wednesday, Nov. 12th, at the Armory and will continue through until Friday, Nov. 21st at the meetings from Monday, Nov. 17th, being scheduled to be held at the Pantlind hotel which will also be the headquarters.

Interest in this session of the National Grange, is unusually keen because of the tremendously big economic questions that the farmers are now facing. Whatever action the National Grange may take concerning any of the present day conditions or issues is apt to have a large effect upon their solution.

Those who will have charge of the arrangements and the speakers at the various sessions will be big men and women in every respect and it will be worth the time of every granger in the state to attend these sessions and hear the discussions. Every effort is being made by the state officers of the Grange to provide accommodations for all visitors and every county in the state where there is Grange is expected to be represented.

One of the features in connection with the Grange convention will be exhibits by various farmers' marketing organizations of the state. The Michigan Potato Exchange, West Michigan Development Bureau and others will stage exhibits of Michigan's agricultural products.

Realizing the importance of the National Grange as a farmers' organization MICHIGAN BUSINESS FARMING will have a representation at such of the sessions as are open to the public and has been promised the active co-operation of the State Grange officials in presenting to our thousands of Grange readers a complete account of what transpires.

City Folks are Naming their Choice for Governor; Let the Farmer do Likewise

FOR A number of weeks the Michigan Manufacturer and Financial Record of Detroit has been conducting a straw vote contest to determine the choice of its readers for Governor of Michigan in 1920. gested by the Financial Record and The following names are those sugused in its canvass; Edwin Denby, Alex J. Groesbeck, Luren D. Dickinson, Herbert F. Baker, Col. Fred Green, Horatio S. Earle, Chase S. Osborn, W. N. Ferris, Dudley E. Waters. Out of sympathy for Herb Baker and the other farmer candidates suggested by our readers, who would have about as much chance with the readers of the Record as a snowball in Honolulu, we are reprinting the Record slate and adding to it and we ask our readers to express their choice. The final result of this test will be sent to the Record with the request that it be published in their columns.

There is outspoken sentiment among the farmers in favor of a candidate who if not a practical farmer has at least an understanding of their business. The men who have announced their candidacies or whose friends have spoken in their behalf represent, for the most part, the best type of citizenship in Michigan. From this list it ought to be easy for the farmers and farm women to select a candidate who will give the state an administration to be proud of.

There are some who say that the farmers will not vote as a unite. But they are the ones who have not realized the full significance of the western farmers' movement or the farmers' control of Ontario, or the leaven that is slowly and quietly working in this state to bring the farmers together upon state issues. We believe that the farmers of Michigan will cast aside partisanship, jealousies and everything else that hampers judgment and throw their strength to the man who finally enters the race as the "farmers candidate."

The farm women of Michigan have already shown their voting strength on the liquor question. Let us hope that they will profit by this experience and show an equal interest in the next political compaign. A farmer candidate can easily win with the support of the farm women. Without their support he might lose.

It is not a bit too early for the people of the farms to turn attention to coming campaign and decide whom they want for Governor. It is a matter that should be taken up at every lodge, arbor, grange, club or farmers' union meeting and thoroughly discussed. The past record of every candidate should be looked into, and MICHIGAN BUSINESS FARMING will be glad to give a brief biography of the life and deeds of any candidate, if so requested.

The results of the straw vote may signify nothing. On the contrary it may be the means of showing the trend of the sentiment. We hope our readers will respond to this appeal and send in their ballots. This can be enclosed with your subscription or separately as you desire. The ballot, of course, need not be signed. Please help us to make this straw vote a success by sending in YOUR ballot. We will appreciate your assistance very much.

Pick Your Candidate

EVERY GOOD citizen should be interested in politics. Every good citizen should know something about the qualifications of the men who aspire to public office. And every good citizen should do his or her part to speak a good word and vote for the man or woman who in his or her judgment will make the best public servant.

There is any amount of good timber at hand from which to pick the next governor of Michigan. Let there be no mistake. Below is a list of those who have been suggested as candidates. Look it over carefully and decide which one YOU would like to see elected governor. Then place a cross after your choice, clip out the coupon and mail it to Editor Michigan Business Farming, Mount Clemens, Mich.

Herbert F. Baker ... ☐	Horatio S. Earle ... ☐	Nathan P. Hull ..... ☐
Milo D. Campbell ... ☐	W. N. Ferris ..... ☐	Chase S. Osborn .... ☐
A. B. Cook ..... ☐	Fred Green ..... ☐	Nathan F. Simpson .. ☐
Edwin Denby ..... ☐	Alex J. Groesbeck ... ☐	Dudley E. Waters ... ☐
Luren D. Dickinson .. ☐	Jas. Helme ..... ☐	L. Whitney Watkins . ☐

M .....

If your candidate is not listed above write in name.

Wool Associations Rise to Defense of Industry

Threatened Invasion of Domestic Market by Foreign Wool Makes Outlook Discouraging

THE IRREGULARITIES in the handling of the 1918 wool clip by the government which Milo Campbell claims resulted in a loss of more than $50,000,000 to the wool growers of the United States were as nothing compared to the losses that threaten the farmer as a result of the policy recently announced favoring the importation of foreign wool into this country. The Ohio Sheep & Wool Growers' Ass'n has announced that the National Ass'n of Wool Manufacturers have prevailed upon the United States government to permit the British government to sell at auction in this country 17,000,000 pounds of the 1919 clip of Australia and New Zealand and this is taken as an indication of what may be the future policy with respect to the importation of wool.

The Ohio Assn' makes the following statement:

"This importation means first: British government will be permitted to sell wool in the United States at a handsome profit, free from import duties, or in other words, taxes which are imposed on American wool dealers and growers. Second, it will have a decided influence on the prices of the 1920 clip to the grower and will be used as a measure to reduce prices. It is extremely necessary therefore, that we present our case to Congress in no uncertain manner."

The price the wool grower is receiving for his 1919 clip is not excessive. In fact, it must be greater if the American farmer is to be encouraged to develop the industry sufficiently to meet all the domestic requirements for wool. The United States is normally a large importer of wools but the 1919 clip will come the nearest to meeting the requirements than any other clip placed on the market. Large sums of money were invested in grazing lands and flocks during the war and the farmers are prepared to increase production enough to fill all domestic demands providing the government will see to it that their market is not exploited and destroyed by the cheaper wools from other countries. Growers are talking of $1 wool and point out that this price would mean in an all new suit of clothes not to exceed $7 to the consumer, or at present value less than 10 per cent of the ultimate cost of a suit of clothes.

Truth in Fabric Law

A bill to be known as the "Truth in Fabric" bill will be presented to Congress in December providing that clothing manufacturers shall use better grades of wool in so-called "all-wool clothing." As explained in a recent issue of M. B. F., 80 per cent of the wool now being used in the manufacture of clothing is shoddy. The public is, therefore, being deceived and defrauded and the grower is deprived of a large market for his pure wool. Speaking of the measure aimed to overcome this evil, Mr. L. F. Malany, secretary of the National Sheep & Wool Bureau, says:

"The Truth in Fabric Law is an economic measure which will eventually reduce the price of clothing.

"All the propaganda in the world will not increase the production of wool is sheep raising is not made profitable for the grower.

"There can be no real objection to legislation that will benefit the producer of raw material and the consumer of the manufactured product, and at the same time affords that protection to the manufacturer who has not been practicing deceit or profiteering, which will enable him to rid himself of the competition of manufacturers who trade on the other fellow's reputation.

"Such a law will cause no tremendous upheaval. There will be changed conditions perhaps, but they will only be temporary. When the oleomargarine bill was passed, people raised similar objections, but they soon proved groundless. Naturally, the first effect was to send the price of butter up and the price of oleomargarine down; then gradually the two products sought their basic levels on the basis of their intrinsic value and this condition was remodeled.

"Soon business in both these products resumed a substantial condition. The manufacturer of oleomargarine became a progressive business man. His business was promoted to a higher level, because no stigma of counterfeiting was attached to it. Large butter and egg houses took up the manufacture of the product and it was so improved that prices of the oleomargarine began to go up and, while on the other hand, the whole dairy industry took a greater step forward.

"Business men in both the butter and oleo lines found conditions in a healthier state because the two products were sold for exactly what they were. The competition of the imitation was not such as to distract from the competition of the real article. Each had its own field, and the oleomargarine business as a result was improved.

"Reworked wool men can have no real objection to this bill because it does not in any way restrict the use of reworked wool in fabrics. It simply asks that the manufacturer of a fabric tell the public exactly what it is. There can be no objection to legislation that will benefit the producer of a raw material and the consumer of the manufactured product, and which at the same time will give that protection to the manufacturer who has not been practicing deceit or profiteering, which will enable him to rid himself of the competition of manufacturers who trade on the other fellow's reputation.

"The clothiers' relation to the Truth in Fabric law is simply this: The manufacturer of clothing puts his label in the clothing. He is proud of this label and in his advertising he emphasizes the style, fit and durability of the garment bearing this label. Durability is no doubt the vital feature. The manufacturer stands back of his product. Similarly, the retailer, when he puts his label in the garment he sells, tells the public that if the suits bearing his label do not wear well, they can be returned. He also stands back of the merchandise he sells.

"Under such a law, the public will get exactly what it pays for. The ultimate result will be to reduce the price of clothing. The profits of the fabric manufacturer, the clothing manufacturer, and clothing retailer will not suffer. With any reduction in price of the fabrics will come a larger volume of buying of these fabrics and the wider consumption will compensate.

"With the increased demand for virgin wool fabrics will come a better demand for wool, a better market for wool, and increased sheep production. With increased sheep production will come a greater supply of wool for the mills, and in consequence a greater supply of clothing to the public at a lower price, while more profits will accrue to the manufacturer and distributor.

"No one will suffer. There is no provision in the bill that says people must wear virgin wool clothes. It simply will provide a sliding scale of values for the consumer to consider when making his purchase. When he buys his clothing on that basis, he is buying with his eyes open.

"He knows what he is getting when he pays his money for the suit, and there is no come back. He has no kick coming. Today the man who buys a garment and finds that after some wear that it is not durable is justified in making a camplaint because he was not informed as to the texture of the cloth when he bought it. Retailers and manufacturers (and they are not to blame) have plenty of such complaints at present.

"Recent events have brought out more forcibly that the success or prosperity of one nation or one group of trades is dependent upon that of others. They are all correlated. It therefore, behooves the clothing manufacturers to invince greater interest in this law. It will enable them to get at the root of the matter and see where troubles with materials lie.

"This law will prove a boon to all the inter-allied industries. It does not contain a single vicious provision. It is written with utmost fairness to all, simply an effort to bring about right principles, truth and honest dealing in industry.

"People who cannot afford to buy butter all the time will buy oleomargarine all the time will buy oleomargarine people will buy the mixed fabrics, but the point is that they will know exactly what they are getting and this will enable them to spread their income so as to make the best possible use of their money."

In conclusion, Mr. Malany emphasized that "all the propaganda in the world will not stimulate the production of sheep and wool if the business is not profitable, and we do not want to be dependent upon foreign nations for half of our wool supply."

Why Michigan is Interested in Wool Measures

MICHIGAN is not generally considered an important sheep-raising state. But the majority of her 210,000 farmers graze from a half dozen to several thousand head of sheep and the total of the wool produced is large. At no time has the future of the wool industry looked brighter than a few months ago. Interest in the industry among the farmers of this state has increased by leaps and bounds in the past year and a half and thousands have invested money in lands and flocks for engaging in the business upon a large scale. But the future does not look quite so secure as it did. The domestic market is threatened by an invasion of foreign wool which is certain to send prices of American wool to a ruinously low level. It is the intention of M. B. F. and should be the duty of every farmer to prevent this if possible. Read this article carefully and then write your representatives at Washington to protect your interests.—Editor.

Dr. Frank Crane Defends Plumb Rail Plan

THE FOLLOWING article by Dr. Frank Crane was published in a recent issue of the *Detroit News*. Dr. Crane is one of the clearest thinkers and ablest writers of the day, and his views upon the Plumb Plan are of great value.

"Say what you please of Glenn E. Plumb, author of organized labor's plan for control of the railroads, he stated his aims before the Congressional Interstate Commerce Committee, in two theses which are sound. He said that the purpose of the railroad unions is (1) "to eliminate the motive of operation for profit and substitute the motive of operation for service." This goes to the root of the matter. When editors say that the unions want to operate the railroads for themselves, and hence are no better than the Wall Street gentlemen who manipulated the roads for themselves, it is hardly fair, and seems like hitting below the belt. Labor is not wholly self-seeking, any more than all capitalists are robbers. Some in each class doubtless are sordid, unconscientious and greedy, but the mass of men are fair, in the directors' room as well as in the switchyards.

"And there is no doubt that in the end transportation, which is the very veins and arteries of public life, must be removed from the hands of any group smaller than the Whole People. Just as no king, however good, can be trusted with absolute political power, so no man, or limited class of men, whether capitalists or laborers can safely be trusted with the railways, which are vital to the common good. Some way, some time, we the Whole People, must shoulder the responsibility of the ownership and control of, and the responsibility for, this so great and public a business.

"Only we must do it by law and reason, by co-operation and in good nature, like Americans, and not by violence and class hate, like Bolsheviks.

"The other statement Mr. Plumb made, is that his purpose is democracy in industry, without which democracy in politics is a mere shell and sham.' And democracy means two things: first, that the people get what they want, and second, that they get this in an orderly and constructive way, by representative government, and without violence and destruction.

No class legislation is democracy. If the labor unions want class favors they are not democratic, and are just as bad as junkers and bureaucrats. Through Mr. Plumb they assert they do not want class privilege. Let us believe them. We shall get nowhere if we continually believe all men are liars.

Where Does Bureau Stand on State Issues?

E. B. FOLLETT, of Hale, Mich., who is president of the Iosco County Farm Bureau has submitted to us the following series of questions addressed to Mr. C. A. Bingham, secretary of the Michigan State Farm Bureau, with the request that we publish them together with Mr. Bingham's reply. The questions are published below. Mr. Bingham's reply will appear in a later issue.

Editor MICHIGAN BUSINESS FARMING: I wish you would get Mr. A. C. Bingham to answer the following: I notice by an advertisement in the BUSINESS FARMER under date of Oct. 18th, 1919, that the Farm Bureau maintained a committee at Lansing during the last session of the legislature.

(1.) Who were the members of this committee? In this advertisement you state this committee succeeded in passing at the last session every bill of which they approved.

(2) I would like to have a list of the bills approved.

(3) A list of all bills to which objection was made. I attended the meeting of the State Farm Bureau at Lansing last winter, representing Iosco county as I am chairman of our county farm bureau. If my memory serves me right, Hon. Arlie Hopkins, a member of the last legislature was appointed chairman of the legislative committee of the State Farm Bureau. The legislative record shows Mr. Hopkins as being opposed to the terminal warehouse proposition (or one of the members that is afraid to trust the people to vote on this proposition.)

From this advertisement of Oct. 18th, it would seem that the terminal warehouse proposition did not meet with the approval of the legislative committee.

(4) Give the reason for opposing this measure if they did, or how the committee stood on same.—*E. B. Follett, President Iosco County Farm Bureau, Hale, Mich.*

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL9

Ogemaw County Forges Ahead

Last spring some of the more progressive farmers of Ogemaw County saw the necessity of more co-operation. They got together to form a County Farm Bureau. A membership of about 300 was obtained in a short time. The board of supervisors from both the towns and country united in appropriating a sum of money to help the organization along. An organization was formed and a county agent hired to go on the job in the middle of June.

Since that time the work of organization of the county has gone on with much rapidity and results. June 17 a co-operative consignment of 20,000 lbs. of wool was placed with a commission house for selling. The advance on this wool was approximately the same and in some cases more than the producers could get at home. This advance will be approximately three fourths of the selling price of the wool.

Two marketing associations have been organized one at West Branch and one at Rose City, both of which have given pleasing results. At West Branch the association bought the elevator and has been operating under excellent management. The organization has grown from the original 50, who first organized, to more than 150 and members are coming in every day. Rose City has a smaller but very lively organization which means business and has done some very excellent work. These two organizations have been instrumental in holding the price of potatoes up to the dollar mark at all times this fall when the surrounding towns they were selling for 75 and 80 cents, thus saving the producers of the county in the neighborhood of from five to six thousand dollars on potatoes alone this season thus far.

The cream business resulted in dividends of from four to six cents per lb. of butter fat over the general Michigan price after the costs of handling was taken out. With the bulk of cream in this county this will amount to a considerable sum in the course of a year.

Potato Chip Plant for Bay City

The Phœnix Brewery at Bay City has passed into the hands of J. L. Mossner who will convert it into a cold storage plant and butter and cheese factory. He also plans erecting a large plant for the manufacture of potato chips. He recently purchased the rights for that section of Michigan of the Durnell process of potato chip manufacture which will be used in the new plant. At present the only large potato chip manufactory is located at Cadillac, but the market for this product has now become so large that it is felt a second plant can be supported in this state. The Bay City plant will furnish an outlet for large quantities of small potatoes from Northeastern Michigan.

Trunk Line Contracts Let

One of the largest contracts let by the State Highway Department under the new state road law is for the construction of several miles of road in Bagley and Otsego Lake townships, Otsego County, and in Frederic and Grayling townships, Crawford County. This will close up a considerable gap between Gaylord and Grayling and is a part of the surveyed route of the "Over the Top" trunk-line which will connect Bay City with Mackinaw city along the general route of the Michigan Central.

Farmers' Co-operative Unions

The Farmers' Co-operative Union movement, which was started in Bay County early last spring, is spreading rapidly. Ten townships in Bay County have been organized, and reports come that isolated townships in other counties have embraced the Union's principles. Upon the request of the Bay County Union, M. B. F. will publish regularly the dates of the meetings of the several unions. Until further notice the following unions will hold regular meetings every two weeks beginning Saturday, November 15th: Monitor, Kawkawlin, Williams Monitor, Frankenmuth, Beaver, Merritt, Mt. Forrest, Hampton, Portsmouth. Every member of the above unions is urgently requested to meet at the regular place and hour of meeting on Saturday, Nov. 15th.

Annual Meeting of Farmers' Clubs

The annual meeting of Michigan State Association of Farmers' Clubs will be held in Senate Chamber, Capitol Building, Lansing, Tuesday and Wednesday, Dec. 2 and 3, 1919.

Every farmers' club in the state is invited to be represented at this meeting and everyone interested in promoting agricultural interests.

Speakers of national reputation will be present to present subjects of vital importance to the farmer and the entire program will be of the greatest profit and interest to all who attend. A full program will appear later.—*Mrs. I. R. Johnson, Sec.*

Hillsdale Duroc Association

The Hillsdale County Duroc Breeders' Ass'n has just been organized with twenty charter members. Hillsdale is a big Duroc county and it is the purpose of the association to popularize that breed. The following were elected officers: President, Frank Smith, Jonesville; vice president, H. F. Crampton, Osseo; secretary-treasurer, H. M. Abbaduska Waldron; executive committee, E. C. Shaneour, Pittsford; R. W. Bates, Hillsdale; G. A. Lamb, Wheatland. Another meeting of the association will be held at the Hillsdale court house at 1 o'clock Saturday, November 22nd. All Duroc breeders are requested to attend.

Howell Holsteins Sell High

The Holstein sale recently conducted by the Howell Sales Company, at Howell, Michigan, was a great success. Eighty-one head were sold for $244,315, an average of $300.18. The sales included several calves and young bulls, but not an animal brought less than $100. The following breeders consigned stock to the sale: Burr Allen, Fowlerville; Geo. Barnes, Howell; Earl R. Cornell, Howell; C. A. Daniels, Okemos; A. Ralph Eastman, Howell; Wm. R. Griffin, Howell; W. B. Jones and J. F. Lutz, Deerfield; W. B. Miller, Howell; Musloff Bros., South Lyons; Wm. Myers, Fowlerville; Albin F. Pfau, Howell; Fred Pless, Howell; Malachy Roche, Fowlerville; A. L. Smith, Howell; Floyd J. Smith, Fowlerville; Jay B. Tooley, Howell; Henry J. Gehringer, Howell; H. Chris Hansen, Howell; Guy Wakefield, Fowlerville.

Minnesota Potato Car Situation Bad

There has been a better tone in the potato market this week. A good demand has been evident and operators are shipping all cars available. The movement, however, has been limited on account of the scarcity of refrigerator cars. Some were shipping in box cars lined with weatherproof paper, but if it should turn colder this protection would not be complete.

The car situation has developed into a really serious matter in regard to the shipment of potatoes. The weather is such that it is not safe to use ordinary box cars without danger of having frozen potatoes. Regarding refrigerators, W. C. Watrous, Superintendent of Transportation for the Great Northern Railroad, said this week that there were none available and he could not say when there would be any. With such a situation here the shipment of potatoes has become a problem. Then, too, there are some operators who have hundreds of bushels in temporary warehouses that are not frost-proof and used only through the fall months.

Michigan Fruit Growers Convene at Detroit

The annual meeting of the Michigan State Horticultural Society will be held at the Statler in Detroit Dec. 2, 3 and 4.

The subject of freight rates will be dealt with very minutely throughout the convention. Rates within Michigan are not on an equal basis and other states are getting lower rates into Michigan than Michigan rate is to them. This discrimination is adding hundreds of thousands of dollars to the fruit costs which in the end is paid by the consumer. Mr. Coombs, secretary of the Michigan Traffic League, will tell of the results already obtained and give outline of the future plans. Decision in favor of shippers has just been rendered in the "South Bend Case."

The subject of Spraying has many new phases and surprising results have been obtained. Mr. Dutton of M. A. C. has had active charge of the experiments carried on by the college and is well qualified to speak on this subject. The best talent from several other states has been secured and this meeting will be the most important one from a growers' and shippers' standpoint ever held.

All available space has been allotted the manufacturers of insecticides, spraying machinery, etc. Many reservations are being received by hotels daily and a large attendance is assured.

Average Milk Production of Michigan Dairy Cows--By H. M. Norton, M. A. C.

FOUR thousand five hundred pounds of milk per year is commonly answered to this problem which is a very difficult one to answer with any degree of accuracy. At best only an estimate could be given as it is difficult to get figures upon which to base such a calculation. The only figures available are those from the 13th United States census which shows that on April 1, 1910, there were 767,083 dairy cows here and for the year ending December 31, 1909, the total milk reported as produced in the state was 283,387,201 gallons. On this basis, allowing 8.4 pounds per gal., the average yearly milk production in Michigan was a trifle over 3,100 pounds per cow in 1909. It may be readily appreciated, however, that these figures are only approximations and it is impossible to tell how close they come to the actual production. Many of these so-called dairy cows are not worthy of the name and are simply classed as such because they give milk. Then too, the figures as reported to the census takers are often far from accurate as very few of the farmers keep records and many report only milk sold instead of total production. The work on cost of milk production disclosed the fact that only 75% to 80% of the milk produced in some of the condensary and market milk-producing sections is sold, the balance being used on the farm. The great increase in the use of pure bred sires as well as better methods of care and feeding have exerted a marked influence on the average production per cow, so that there should be a steady rise in the figures during the past ten years, as will, no doubt, be shown in the census of 1920.

A summary of the records of eight Michigan Cow Testing Associations for a period of one year each shows that: 2,116 cows, the total number included, had an average production of 6,721 pounds of milk per year. Similarly from records obtained in the work on the cost of milk production which has been under way for several years, by the Dairy Husbandry Department of the Michigan Agricultural College, the yearly production of more than 3,000 cows averaged 6,686 pounds per cow. Of course these records, especially the records from the cow-testing associations, are considerably above the average, for, as a rule, the better class of dairymen of the community join these organizations. Moreover these figures come principally from market milk-producing or condensary districts where dairying is an important if not the main issue with the farmer and in the outlying districts where dairying is practiced less intensively and in more haphazard fashion, the average production would be far below these figures.

An examination of the three years' work in cost of production in the Howell territory shows that the average production per cow during all that time was 7,311 pounds of milk per year.

On the farms under investigation during this time, 13 herds, including 222 cows, fell below 6,000 pounds per year on an average; 37 herds, including 633 cows, averaged between 6,000 and 8,000 pounds in annual production; 21 herds, including 347 cows, produced between 8,000 and 10,000 pounds per cow annually and four herds, representing 48 cows, produced above 10,000 pounds milk per cow annually.

These figures will give some idea of the great variation in average production of herds and show what a tremendous opportunity there is for advancement in dairy production by better methods of care and feeding and by improvement through selection and breeding.—*By H. W. Norton, Assistant Director, M. A. C. Experi-*

Test Your Cows

THE 1910 CENSUS shows that the average annual production of milk per cow in Michigan was 3,100 pounds. Since then the average production has increased enormously. Back in 1910 very few farmers knew the difference between the "boarder" and the producer. Many cows were fed along for milk production that might better have gone to slaughter. But thanks to our agricultural colleges and extension deparments, the milk test has been introduced into nearly every important dairy county of the state and many farmers are learning for the first time the difference between a cow that merely looks good and one that is good. The short test has accomplished wonders along this line. This test which is now under the fire of a few theorists is defended by D. D. Aitken in a letter to Business Farming, which will be published in an early issue. The short test is a long ways head of no test at all, and farmers who are still running their dairy herds by guess should get in touch with the college and learn how to run them by test.—Editor.

HOW TO MAKE AN APPEAL ON DEALERS' WHEAT TEST

If a farmer is convinced in his own mind that he is being short-changed both in the test and the weight of the grain he sells at an elevator, what is the best way to go at it to forcibly show the elevator man the error of his ways?

Take the grain the thresher blows over in the stack and the short test, short weight and short price we get for our grain at the market, makes quite an item to the profit and loss account of the man who feeds the world.—*C. G., Ionia County.*

Effective immediately, the United States Department of Agriculture will handle all wheat appeals from licensed inspectors' grades on intrastate as well as interstate transactions. Formerly, under the grain standards act, wheat was required to be shipped or delivered for shipment across state lines before an appeal could be taken to the government.

The new arrangement has been made by the secretary at the urgent request of Julius H. Barnes, United States wheat director, and is effective under authority and during the continuation of the Food Control Act, the Wheat Guaranty Act, and the executive order of May 14, 1919. Mr. Barnes stated that it was necessary to have the appeal privilege on all wheat whether interstate or intrastate in order to make the guarantee good to the producer of wheat everywhere in the United States.

Pursuant to this agreement Federal grain supervisors in all the large markets of the United States have been instructed to entertain all wheat appeals.

Farmers of this state may appeal to the following inspectors:

(1) W. W. Recker, chief inspector, Board of Trade, Chamber of Commerce building, Detroit. (2) D. R. McEachorn, Association of Commerce Building, Grand Rapids. (3) H. L. Peters, Chamber of Commerce, Port Huron.

How to Seed Rosen Rye

Will you please tell me the proper amount of seeding of rosen rye for good results?—*F. B., Milford, Mich.*

Soil and climatic conditions vary so greatly in this state that it is difficult to give a standard rate of seeding for all conditions. However, on the average good sandy loam soil, to which Rosen Rye is best adapted, three (3) pecks of Rosen Rye per acre up to September 20th is about the right amount. At this date one should sow one and one-half bushels per acre, as the rye will not stool so well now.—*J. W. Nicholson, M. A. C.*

Litchfield, the Pioneer

What was the first live stock shipping association organization to be formed in Michigan?—*Reader.*

Mr. Raviller has given the information that the first live stock shipping association was organized in Litchfield in 1910-11. It was the first organized as a creamery, later as a live stock shipping association. You could address a communication to this association as follows. Live Stock Shipping Association, Litchfield, Mich.—*R. Baldwin, M. A. C.*

Beet Tops for Silage

Could you give me an answer if sugar beet tops can be put in a silo and how to put them in?—*A Subscriber, Minden City, Mich.*

Beet leaves and beet waste have been ensiled in pits in the ground in European countries for many years. The putting of beet tops in the silo has been practiced in this country to a limited extent for some time. The beet tops may be put through an ensilage cutter or ensiled whole. The former plan is to be recommended as they pack better, mix with the other roughage more evenly and keep in a better condition.

The silo may be filled with beet tops alone but it is recommended that at least an equal weight of corn fodder be included and well mixed with the beet tops. If the corn fodder is very dry, sufficient water should be added to make the mixture pack well. A more satisfactory feed is provided when the corn fodder is added as large quantities of beet tops fed to livestock is liable to cause kidney trouble.—*W. E. Edwards, M. A. C.*

FARMERS SERVICE BUREAU

INVESTMENTS—WISE AND OTHERWISE

MICHIGAN BUSINESS FARMING will add another new department; one which we feel will be of interest a nd service to our readers. The State is filled with solicitors for stocks and bonds and are raking the country, as with a fine tooth-comb, for investors. Some of the bonds and stocks offered are all right, and will prove safe and possibly profitable invesments; but such are the exception to the rule. We find that many farmers are placing altogether too much faith in the statements of these agents that the securities or stocks they have to offer have been approved by the Michigan Securities Commission. This commission, mind you, does not pass upon the merits of the stocks offered; they simply require that the formalities of the law be complied with—before stock can be offered for sale—and that is as far as the commission can go. The farmers of this state have invested in stock upon which they will never receive one cent; and in which they would not have invested could they have learned the true condition of such organizations and have known something of the men behind the enterprise. We have religiously excluded all stock-selling schemes from the columns of Michigan Business Farming, and thus excluded thousands of dollars of revenue from advertising. However, this is of but little use, as long as our readers are being roped in by the sleek, smooth-tongued salesmen. We are going to go further and will give any reader full information as to any stocks or bonds offered for sale. Remember we do not propose to even suggest whether they buy or not; our information will simply go a step further than the Security Commission can go, and we will tell you about the stock offered and let you know the character of the men behind the enterprises. It will take at least ten days to get accurate reports on Michigan stocks, and a longer period from those outside of the state. No doubt the agents will tell you that: "The Hour has struck; the last chance expires tomorrow at sundown." Better wait—you might better wait until the last hour has struck; rather than get "stuck." Mr. Grant Slocum will conduct this department.

Must Go Fifty-Fifty

A rents a farm of B for three years each furnishing half, and each to get half of profits and stock increase. In settling up, who has first choice of young stock if they agree to settle by each choosing a head. Kindly answer in your next issue if possible.—*A Tenant, Bradley.*

There is no first choice. If it is intended to divide animals or property they must be divided equally. It is frequently arranged that one divides into two parts and the other has choice of parts.—*W. E. Brown, legal editor.*

Lumps on Hens' Eyes

Can some of our readers tell what those lumps are which grow on hens eyes and what I can do to cure them? —*Subscriber.*

"Horse Nettle"

Can any reader advise me what to do to get rid of a weed known in this locality at "horse nettle?"—*T. R., Bloomingdale.*

Studebaker

THE 50-H. P. LIGHT-SIX

Judge It by Its Performance

THIS Studebaker LIGHT-SIX proves its splendid design and quality on the road. Even when speeding at 50 miles an hour there is no discomfort or unpleasant vibration; it drives steadily and hangs smoothly to the road.

Add to this the responsive motor, its economy and flexibility; the sterling high-quality throughout and the beautiful, clean-cut design of the whole car—both mechanically and in outward appearance—and you will know why enthusiastic owners call it "The Ideal Five-Passenger Six."

THE LIGHT-SIX $1685 THE BIG-SIX $2135

All prices f. o. b. Detroit

Farmers and the Railroads

THE PRESENT attitude of the farmers toward the railroads is that "they don't give a hang what becomes of them." It is hardly a logical attitude for a class of people who pay the biggest share of the freight bills and are taxed on everything they sell as well as everything they buy. The present special session of Congress will come to an end in four weeks' time and it is almost certain that it will take some action for the disposal of the railroads before its adjournment.

There are two bills which are receiving the serious attention of the country. One of them is the Plumb plan which provides for a semi-government-owned and public-operated system. This plan proposes that eventually the workers shall own the railroads but that the public shall have a voice in the management and will retain the power to regulate rates. The National Grange is opposed to the Plumb plan on the ground that it puts the transportation of the country in the control of the workers. Inasmuch as the workers now have virtual control of transportation and will always have something to say about wages, working conditions, etc., the objection of the Grange is not well-founded. The question is whether it is better for the transportation system to be in the unregulated control of the workers or whether or not the country should agree to some arrangement with the railmen which will give the government legal power to prevent the workers from abusing their control. Some opponents of the Plumb plan put it down as Socialistic and let it go at that. They refuse to discuss at all its many merits. The plan has not met with the enthusiastic support from the public which its proponents expected and it is quite apparent that the country is not quite ready for that kind of rail control.

The other bill which has the backing of the holders of rail securities and other powerful financial interests is the Cummins bill which is receiving rather favorable attention from members of Congress. It authorizes the immediate return of the railroads to the private owners and would increase rates enough to guarantee the companies six per cent dividends on their claimed capital. Opponents of this bill assert that several billion dollars of the money which the companies claim to have invested represents watered stock, and have produced pretty fair evidence to bear out this contention. They protest against the public paying further dividends on watered stock and argue that the roads could be run with pre-war efficiency and profit, providing wasteful competition and watered stock were eliminated, without an increase in rates.

The Farmers' National Council says of the Cummins bill:

"It will result in a tremendous increase in freight rates. The railroad executives and stockholders' associations admit they expect freight rates to be increased at least 15 per cent on most lines and 25 to 30 per cent on many. The increase will probably be much larger involving a total increase in revenue of close to half a billion dollars to pay high dividends and dividends on watered stock, and to encourage inefficiency and waste. Can the farmers who pay the freight both ways stand for that? The return of the railroads also means that the old discrimination against farmers will start again. Can the farmers stand for that?"

The Cummins bill practically insures the companies a six per cent dividend regardless of the extravagances practised in operating. As a matter of fact it actually encourages extravagant management. The higher the expense of operating the greater will be the profits. The bill provides for a government commission which is supposed to scrutinize such practices as this, but its ability to discover and prevent them is open to question. No one can deny that such a scheme would be of great value to holders of railroad securities. But there is another party who must be taken into consideration. That is the public which pays the bills.

The country is not prepared to accept either of these two measures as a satisfactory solution to the rail problem. The alternative is to continue government operation for another two years. Then we shall know better what to do.

"The Old Man"

I ONCE heard a strapping young farmer refer to his father as "the old man." I took one look at him and beat it. I had no desire to hear him talk about "the old woman." One can scarcely believe his ears when he occasionally hears the words that come from the lips of children, many of whom are old enough to know better, about the mother who struggled with death that they might live and the father who stood by in anguish as the crisis came and passed. Every day boys and girls are coming into manhood and womanhood and leaving the old home. Some of them are glad to go. Home was a hard place after all. Mother was always scolding and father was a hard master. Yet, I say that no mother or father has said goodbye to their departing offspring without a heartache. Their thoughts go back over the years to the night when the son or daughter came, and the hard realities of life which callous many a kind heart fade away for the moment before happier recollections. But parents are not the only ones to think of other days. The son and daughter go out into the world. Dreams and ambitions are soon replaced by actualities and the cold necessity of making a living. For the first time they learn to know the meaning of responsibility. They may learn the meaning of hunger. In time they may know what it means to rear and care for a family. Then in nearly every case their thoughts wander back to childhood days and it all seems clear to them why father was sometimes moody and cross and why mother, weary with a burden they did not then understand, was fretful and found fault. But often this complete understanding does not come until after father and mother are laid away under the sod. Then it is too late to do anything but repent for harsh thoughts and words. As compared with the total span of life the period of years in which parents and their children may have each other's association is all too short and they ought to use great care that no discord enters to mar the beauty of the companionship. What is more pleasing in the eyes of God or man than a happy family circle where parents rule their children with love and tenderness and children love, respect and obey their parents. Out of such a circle as this there are born no vain regrets which follow others to the verge of the grave.

Exit Wisdom

ADDRESSING himself to the Corinthians the apostle, Paul, said: "Where is wise? Where is scribe? Where is the disputer of the world? Hath not God made foolish the wisdom of the world?"

In these days of trouble when the world's greatest men quibble over seemingly trivial problems like children at play, one is prone to ask with Paul, "Where is wise? Hath not God made foolish the wisdom of the world," and to agree with Paul that God has made the wisdom of the world appear very foolish indeed.

Man thought himself wise and powerful before the Great War. He knows better now. The war humbled his pride. He saw his institutions crumble before its consuming breath, and he was powerless to save them. He saw nations trembling in fear of utter devastation and he was powerless to reassure them. Even as he cowered before the mighty menace he told himself that if only some unseen power would put an end to the monster he would clean up after the job and set everything back in apple pie order.

Man's efforts at reconstruction have resulted in a sorry mess. Over a year has elapsed since the armistice was signed and the country is in far greater chaos and danger than it ever was at any period of the war. Yet men who pulled together on the oars during the critical war period are countering and arguing while the good ship of state wanders in rock-infested sea.

With all his wisdom man is not wise. He proved himself incapable of preventing the Great War. He flounders helplessly before the great problems that confront him at the present time. Man's wisdom is not impaired. He knows as much today as yesterday, possibly a little more, but he is not really wise else he would be able to solve the new and greater problems that are ever presenting themselves. All generations have seen man's wisdom pale into the merest atom of intelligence before the glowing light of God's wisdom, but we doubt if any generation has seen a better example of wisdom made foolish than is everywhere in evidence today.

What Happens When You Sell the Farm

MANY FARMS are changing hands in Michigan this year. Farmers who have grown tired of hard work and bucking up against obstacles are going to try a whirl of it in the city. A considerable number of farmers who have come in contact with the giddy life of the city have soon lost their money in poor investments or speculations and find themselves without friends, funds or home.

All sorts of troubles are ahead of the farmer who sells the old home and begins to take life "easy." The first thing that happens now which didn't happen before the war, the federal tax collector steps up and pockets a goodly share of the proceeds of the sale. Did you ever think about that? For instance: Back in 1913 your farm was worth, say $10,000. Your improvements and the natural increase in land values make its present worth $15,000. Suppose you sell it. Will you have $15,000 to salt away or invest? Oh, no-o! $5,000, or the increase in value over 1913 is "income." Moreover, it is net income, and the chances are that every penny of it is subject to the federal income tax. So if you sell the farm, make up your mind that you must divide part of your proceeds with Uncle Sam.

Bonus to Soldiers

CONGRESSMAN J. M. C. Smith of Michigan, has introduced a bill to pay a bonus to soldiers in the form of Liberty bonds. The danger to our financial structure attendant upon the issuance of five billions of bonds which would be put into immediate circulation, has already been discussed in these columns. The purpose of the congressman's bill is laudable. Some further compensation should be paid to soldiers for the time they put in the service. The government cannot at this time appropriate such a huge sum of money from the national treasury. It is not safe to issue more bonds or otherwise greatly increase the circulating media at this time. The only alternative is a pension running over a period of five or ten years. This pension could be paid without visibly increasing taxes or the cost of living. Under all circumstances it is to be preferred to a lump sum bonus.

Samuel Gompers blames prohibition for the unrest among the workers. Maybe Father Gompers can fool himself into believing this but he cannot fool the people. They know perfectly well that the source of all the trouble is at the door of the radical labor leaders who for personal gain have magnified the grievances of labor and exhorted it to strike.

WHAT THE NEIGHBORS SAY

MORE ORGANIZATION

I have read with pleasure your editorials in behalf of the farmer and would like to ask you if something more couldn't be done thru your paper to try and get farmers to organize in every county and township in the state. I am a firm believer in organization. I have talked to a good many and about one half say "Oh, the farmers won't stick together," and it does look so but I believe the time is close when they will see that they will have to or leave the farm. I have had every appointment in this township, where they wanted a man to go out and work free gratis for all charities and am willing to take one more to help organize a farmers union so we could have something to say about the price of what we produce. I find the greatest trouble with co-operative elevators is that there is so much jealousy. It don't do for one family to try to run everything among themselves and it is not the way things should be divided up, but my opinion is farmers should have a say as to the price of their produce, without having to own an elevator, but I think we will have to get into politics and stick together if we ever get there. We in this district elected a man on the Rep. ticket, one Will McGillveray, and you know how he stuck by the farmer. I have not heard as to whether he has his hat in the ring again or not. In conclusion would say anything in the way of a suggestion you could offer I would be one that would help push it.—*Wm. R. S., Sterling, Mich.*

It is this same kind of spirit that has been the means of building such farm organizations as we have today. Weak and divided as they are they have done great things for the farmer. It would be impossible to say what the condition of the farmers would be today had it not been for the work of these organizations. We would like to see every farmer in Michigan belong to some live farmers' organization. At the present time there are four farmers' organizations in this state, the Grange, Gleaners, Farmers' Club and Farmers Co-operative Union. The latter organization had its birth in Bay County early last spring and now not only embraces the majority of farmers of Bay, but has spread into adjoining counties as well. The other organizations are too well known to need any description. All are trying in their way to better the condition of the farmers. If any of our readers desire to become affiliated with one of the existing organizations, we suggest that they write to the following: John C. Ketchum, master state Grange, Hastings, Mich.; Grant H. Slocum, supreme secretary of Gleaners, Detroit, Mich.; Edgar Burk, president State Ass'n of Farmers' Clubs; president Farmers' Co-operative Union of Bay county. If the farmers are to take an effective hand in the coming campaign all these organizations should unite their forces and present a solid front. If they are not equal to the task it behooves the farmers to get busy and form a separate organization that can bring the others into the fold.—Editor.

L. WHITNEY WATKINS FOR GOVERNOR

There is, as you know, a public sentiment demanding that Michigan's next governor shall be selected from the practical farmer of our state. In view of the great importance that agriculture possesses in the welfare of our citizens it seems but just that from its ranks a man should be selected for the important duties of governor. My personal acquaintance with Hon. L. Whitney Watkins of Manchester, Jackson county, leads me to believe that he is the right man to be the next governor of Michigan. Hon. Milo D. Campbell assures me that Mr. Watkins is the right man for Governor and that he will aid in securing his election. I trust that "Business Farming" will advocate the selection of Mr. Watkins who, with his father, conducts a farm of 2,000 acres and is therefore a practical farmer.—*J. T. D., St. Johns, Mich.*

Business Farming cannot advocate the selection of a particular individual till after the nominations are made. Several farmer candidates have been "nominated" by our readers, among them: Milo Campbell, Herbert F. Baker, Grant Slocum, Nathan F. Simpson, A. B. Cook, James Helme, N. F. Hull and Mr. Watkins. Grant Slocum tells me that under no circumstances would he become a candidate so that narrows the choice down to seven. The Michigan Manufacturer and Financial Record has been taking a straw vote on governor but the only farmer's name they have in the bunch is that of Herb Baker. At an informal gathering of farm leaders at Lansing last spring Milo D. Campbell received considerable mention as a possible candidate. It is quite evident that the farmers are pretty well divided in their present opinions, but we are sure they will support practically unanimously any man who by the process of elimination becomes the "farmers candidate." The farmers' choice will be our choice.—Editor.

SENATOR GORE'S DAIRY FEED BILL

I beg to acknowledge receipt of your letter of late date concerning a bill introduced by me some time ago to prevent adulteration of live stock feeds.

I am obliged to you for calling this matter to my attention and I will renew my activities in its behalf.

The league of nations has been holding the board to the exclusion of everything else. It may be that we do not devote too much time or too much thought to the boundaries between Servia and Greece. Poland and Bulgaria, Czecho-Slovakia and Jugo-Slovakia, but I sometimes feel that we devote too little time to matters of vital domestic concern.—*T. P. Gore.*

The above letter was received from Sen. Gore in response to an inquiry we recently sent him relative to the bill he introduced in the last session to prevent the mixing of sweepings, etc., in dairy feeds. The bill died with the session, and we are sure that our dairy readers will be pleased to know that the senator will endeavor now to secure its passage.—Editor.

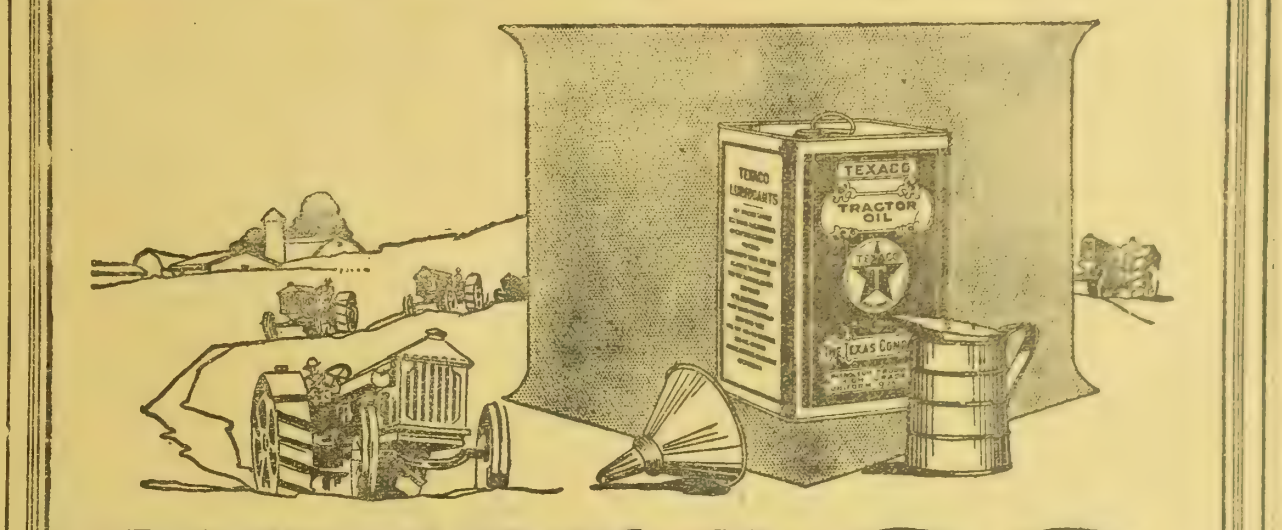
IT IS TIME TO AWAKE

How much longer shall we continue to let agricultural folk pay the bills for political extravagance, labor strikes, short industrial hours, and dainty, effeminate living? Thus to needlessly, unjustly overburden and penalize our great farming industry is just what ancient Rome once did. Rome with all her strength and splendor fell—"and great was the fall thereof."

Is it not high time the sober voices of honest farm folks were heeded in this great nation's plans? The rising tide of lust for money and pleasure must be stemmed.

Powers and influence far more subtle to deal with than aroused the farmers of Concord and Lexington to action are arrayed against the common people whom Jesus of Nazareth and Abraham Lincoln loved so well. Proverbs 14:34: Honest man of America, cease from slumber. It is time to awake.—*R. F., Litchfield, Mich.*

Yes, it is high time the honest farm folks who have to make a living by the sweat of their brows took a hand in quieting the maelstrom of unrest, and removing the causes. A plan of action, good leaders and loyalty in the ranks are all we need. Forward, march.—Editor.



TEXACO

TRACTOR OIL

All Are Coming to this Quality Oil

Texaco Motor Oil

THE UNIFORM oil that keeps your motor active. One of the family of quality petroleum products. Some others are:

Texaco [illegible] Grease
Texaco [illegible] Compound
Texaco Cup Grease
Texaco Gas Engine Oil
Texaco Harvester Oil
Texaco Home Lubricant
Texaco Separator Oil
Texaco Thuban Compound
Texwax

That is sold under the mark of the red Star and Green T

ONE farmer writes, "We have plowed more than a thousand acres of good, heavy soil, and plowed it deep, too—about seven inches. We have run the tractor weeks on end, day and night, during the busy plowing and disking season. We have disked hundreds of acres, baled hundreds of acres of hay, pulled grain drills, sawed wood, ground feed, and even hauled grain to market. In fact, we have used our tractor for almost every kind of farm work where power is required, and it has given a good account of itself in every position. So it certainly deserves the best oil I can get, one that is absolutely uniform and specially durable. I, like my neighbors, have therefore come to Texaco Tractor Oil. There's nothing like it for keeping the tractor in condition to save man power. Besides, it's easy to buy. All you have to look for is the red Star and green T." For friction reduction, for dependable lubrication, for economy, you too should come to this quality oil. If you try it once, you'll use it thereafter. Supplied in wooden barrels and half barrels; 15, 33, and 55 gallon steel drums, and one and five gallon cans.

MICHIGAN BUSINESS FARMING,
MT. CLEMENS, MICH.

"One who claims that he knows about it
Tells me that the earth is a vale of sin;
But I and the bees and the birds, we doubt it,
And think it a world worth living in."

EVERY HOUR, yes every minute somewhere in our land someone slips quietly into the great beyond. The few intimate friends and relatives shed a tear at the passing and treasure the memory of a loved one, but the community at large soon forgets. Only those persons who during their life time, did some work well for humanity at large erect a monument more lasting than granite. Such a one was Ella Wheeler Wilcox, who cheered the whole world with her optimistic heart songs of the every day folks. In the end, she too made the divine sacrifice, just as surely as any of her soldier boys, for the nervous breakdown which was the cause of her death was brought on by the strenuous war relief work in which she engaged.

Probably her best known poem is "Laugh and the World Laughs with You." This poem has been translated into every language and circulated and read throughout the world. The first stanza is of course most quoted:

"Laugh and the world laughs with you;
Weep and you weep alone;
For this brave old earth must borrow its mirth,
And has troubles enough of its own.

Another almost as well known is entitled "Worth While."

"It is easy enough to be pleasant
When life flows along like a song,
But the man worth while is the man who can smile
When everything goes dead wrong.
For the test of the heart is trouble,
And it always comes with the years
And the smile that is worth the praises of earth
Is the smile that shines through tears."

Some there are who may have read these stanzas when their own clouds were hanging low and thought that Mrs. Wilcox could not have written such lines had she known real sorrow. And yet, although recognition of her work came to Mrs. Wilcox because of her love sonnets before her marriage, it was not until after she had lost the little son who had been longed and prayed for, and with devoted and loving husband also taken that her best work was done. Torn by her own grief, she demonstrated that one can rise above it all and, in cheering others, forget her own grief.

With countless of thousands we pause a moment in the round of our daily duties to pay tribute to the woman who, by her wonderful gift, has helped us to see the silver lining.

"COLD PACK METHOD NOT TO BLAME FOR DETROIT DEATHS"

UNDER the above heading the Department of Agriculture, Washington, D. C., has sent out a bulletin stating that decayed products and not the cold pack method of canning are responsible for the recent death of five persons in Detroit who ate ripe olives. The bulletin further states that if people would throw away or refuse to eat food that smells spoiled they would be insured against poisoning by the organism in canned food which causes its decay, as all decayed food is evil smelling.

It is poor economy to eat food at any time which has begun to spoil or rot. Let your nose be your guide and discard food with a putrid odor, warns the department. Suspected foodstuffs should not even be tasted.

In fruit which you have canned and of which you are suspicious, cooking it would appear to be the practical method of eliminating the danger, especially in the case of corn canned by the cold pack method. Heat destroys the toxin and if the jar, top and contents are heated until the contents to the very center of the jar are at the boiling point, there will be very little danger, especially if, after this process has been used and the can is opened, the vegetables smell perfectly fresh and sweet.

Women in Politics

By Judson Grenell

THIS SERIES of articles from the pen of Judson Grenell, which we are publishing in an effort to get better acquainted with our new duties as citizens with a voice, is supposed to be of especial interest to women, as it is presumed that men know all about the subject, but we were pleased the other day when a Thumb editor who was in our office remarked: "Do you know I read your page as well as the rest of M. B. F." Asked what he was particularly interested, he confessed it was in this series of articles. If an editor can learn from it, surely we are indeed wise in giving out attention to this very important question.

Grafting

"No one, except a grafter, desires to be governed by a grafting official. Grafting is extravagance personified. A grafter robs the public purse—robs poverty as well as wealth. The grafter may graft in any one of many ways, or he may at one time graft in several ways. Taking advantage of the law, one grafter will allot to himself a higher compensation than his services are worth; or he will mislead those who fix the salary in believing that the services rendered are of greater value than is the case. This is the common way.

"Another, and more crooked fashion, is for the grafting official to make contracts for material or labor at prices which allow the contractors to give "presents" to the grafting official.

"A third and less usual way is to falsify accounts; common thievery. An official without honor, and having ingenuity in this direction, can always invent some way to rob the public. Of course there are laws to safeguard society from being robbed in this manner; their enforcement is a matter of an aroused public conscience.

"One of the best guards against grafting officials, lies in the selection only of officials with the best of reputations. Just as one should have knowledge of an individual's parents and even grandparents back several generations, to actually know all of the individual's inherited peculiarities (heredity) so the Michigan woman voter must thoroughly inform herself on a candidate's reputation for probity, fair dealing, honorable conduct, and as well fitness for the duties of the office desired.

Party "Labels"

"In these respects party "labels" do not greatly county. As a rule, a party "label" in local affairs, gives the voter no information as to the candidate's fitness. Casting a ballot for a candidate for mayor for example, or for a justice of the peace, because he is a "protectionist," or a "free trader," or because he favors an aeroplane mail route across the continent or around the world, is as silly as voting for him because he happens to be a member of some society or religious association having nothing to do with efficient local government. However, in selecting a congressman, the principles involved in tariff protection, or in mail service, will have bearing as to his fitness as well as connection with an office to which he aspires.

Things a Candidate Should Know

"What is needed in a candidate for a local office relates to his knowledge of economic, social and moral problems—roads, sewers, paving, water, transportation, the social evil, health, etc.—things closely connected with the duties of the office he seeks, and with the business, social and industrial life of the community. Wtihout having this knowledge, or at least without being receptive to knowledge of this kind, he will, if elected, make a poor and inefficient official, notwithstanding party affiliations or social standing. It takes knowledge, ability, experiences, character and mental and physical alertness to make the ideal candidate.

"The voting woman living in a thickly populated district must necessarily depend more on the general reputation of candidates when marking her ballot, than need voting women in more thinly populated areas. For in the latter there come opportunities for personal acquaintance that are denied her sister in the city. Therefore, voting in the country for a notoriously unfit candidate carries with it the greater shame.

"Now this information as to fitness for the position to which a candidate aspires is not so difficult to find as may at first blush appear. Observe:

1. What does the candidate know about the duties of the office?
2. What is the candidate's usual environment?
3. Who are the candidate's usual associates?
4. What is the candidate's reputation?
5. Does the candidate believe in having public services performed for profit, or does he want the public served at cost?

"No candidate can live in a community any length of time without information concerning most of these points being matters of general knowledge. Of course there is misinformation floating around as well as the facts. But, notwithstanding this, public opinion in the mass (not the opinion of a class) arrives at a pretty accurate estimate of about what kind of a person the candidate is, as a family man, as a citizen, as an able, intelligent and discriminating human being.

"It is only necessary for the voting woman to raise her eyes and enlarge her mental horizon to be able to know who's who and what's what. Nor should she absolutely discard party "labels," or social standing. These do have some weight. Little, to be sure, yet weighable. But outside of these "straws," which show "which way the wind blows," there is a pre-eminent source of information open to all women voters."

TURN TO PAGE TWO

Women readers of M. B. F. are taking so great an interest in Mr. Grenell's series on the part women should play in politics that we expect them to be a power in the state election in 1920. A question that is now being asked is, "whom shall we have for Governor?" M. B. F. is trying to record the sentiments of its readers on this subject, and you are urged to turn to page two of this issue, vote for the candidate you prefer and mail in your ballot.

"However, the Battle"

HOWEVER the battle is ended,
Though proudly the victor comes
With fluttering flags and prancing nags
And echoing roll of drums,
Still truth proclaims this motto
In letters of living light—
"No question is ever settled
Until it is settled right."

Let those who have failed take courage,
Though the enemy seemed to have won,
Though his rank be strong, if he be in the wrong,
The battle is not yet done.
For sure as the morning follows
The darkest hour of night,
No question is ever settled
Until it is settled right.

O man bowed down with labor;
O woman young, yet old;
O heart oppressed in the toiler's brest,
And crushed by the power of gold;
Keep on with your weary battle
Against triumphant night;
No question is ever settled,
Until it is settled right.

—Ella Wheeler Wilcox.

The Children's Hour

DEAR CHILDREN: At last we were obliged to close our Thanksgiving drawing contest and award the prizes, and our artist has awarded first prize to Vera Camfield, of Buchanan, Mich. She has drawn a very life-like turkey, but we cannot reproduce it in our paper as it is in colors and as I have explained to you before if you want the drawing published, they will have to be all in black and white. We will however, publish Vera's letter which accompanied her drawing. For a prize we have sent her a Christmas package containing cards, tags, labels, stickers, etc. Next week we will tell you who won the prize for the best Thanksgiving story.

Another one of those Christmas packages was sent out this week to Grace Groh who won it by securing a subscriber to our paper. George Flanders of Fife Lake won a Trip Around-the-World in picture postal cards and Lester Walstow won the large red leather covered pencil box containing three pencils, a pencil sharpener, a pen holder with a holder for pen points containing three pen points and an eraser. This last was won by securing two subscribers. We are anxious to send out more of these Christmas presents and are sure that if you just make up your mind you can easily win one yet. Affectionately yours, LADDIE.

OUR BOYS AND GIRLS

Dear Laddie—This is the first time I have written to you. I am a little cripple girl. I have infantile paralysis in my feet. I am ten years old and will be eleven the twelfth of January. I am in the fourth grade at school. My teacher's name is Miss B. Whalen. I like the Doo Dads very much. We have an Overland car. I have five sisters and three brothers. We all like the M. B. F., hoping to see my letter in print. I am going to write a story. Josephine Bott, Remus, Mich.

A Good Time

Said good grandfather Gay,
On a Thanksgiving day,
If you want a good time, give something away,
So he sent a fat turkey to shoemaker Price
And the shoemaker said, "What a big bird! How nice!
And with such a good dinner I ought to give Widow Lee the small chicken I bought."
"This fine chicken—Oh see!" said the pleased Mrs. Lee; "And the kindness that sent it how precious to me!
I would like to make someone as happy as I, so I'll give Mrs. Murphy my big pumpkin pie."
"And oh sure!" poor Mrs. Murphy said, 'Tis the queen of pies!
Just to look at its yellow face gladdens my eyes, now it's my turn I think,
So a sweet ginger cake for the the Finnigan children—Rose, Danny and Hugh,
"It smells sweet and of spice and we'll carry a slice for little lame Jake who has nothing nice."
"Oh, I thank you and thank you," said little lame Jake.
"Oh, what a beautiful, beautiful cake!
And oh, such a big slice I'll save all the crumbs, and will give them to each little sparrow that come."

Dear Laddie—I always saw that the other boys and girls were writing letters so I thought I would drop a few lines too. We live on a farm of 140 acres. We have five horses, 7 cows and about seventy-five chickens. We have a large barn, it was filled to the top at the harvest time. I am thirteen years old and in the eighth grade. I hope to see this letter in print. I have very much interest to see the Doo Dads working and playing and like to read the boys and girls letters. This is the first letter that I saw that was written from our place. There are eleven girls and three boys in the eighth grade. We have a good teacher. Her name is Sister Achatia. She came from Rome in New York. Five of us go to the Catholic school and one goes to the public school. We live one and three-fourths mile from Westphalia. Our school opened on the 8th of September and I was glad to go to school again, and our vacation started at the 20th of June. Well, my letter is getting quite long so I will stop for this time. Maybe I will write again. I don't know yet. Mary Bengel, Fowler, Mich.

Dear Laddie—This is the first time I have written to you. Papa takes the M. B. F. We like it real well. I like to read the letters from the boys and girls on the Children's page. I am a farmer's girl, 11 years old. Will soon be 12. I am in the 8th grade. I like to go to school. I have three pets, a dog, an old cat and a kitten. I have five brothers, one sister. I hope to see my letter in the next paper. I wish some of the boys and girls would write to me. Yours truly, Miss Myrtle Newman, Glennie, Mich.

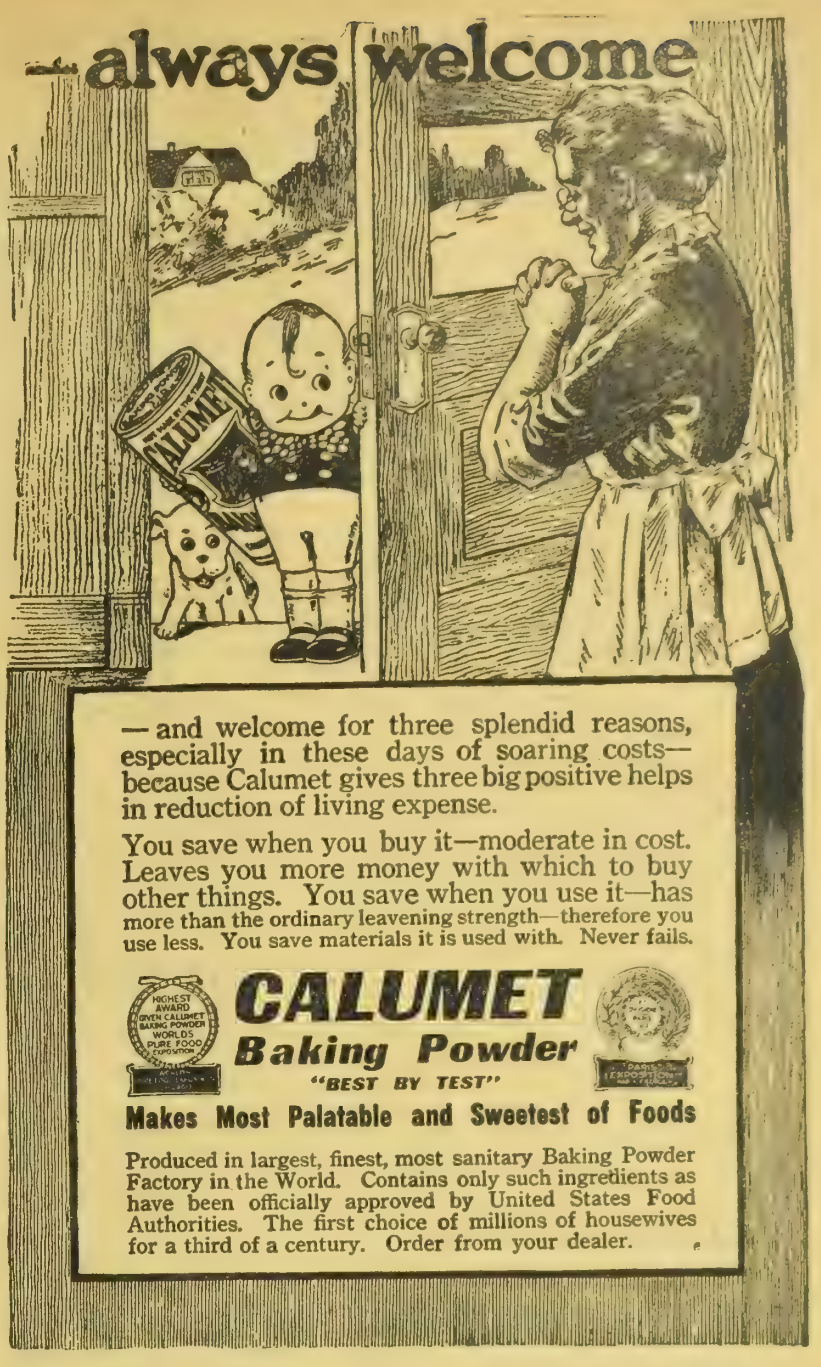
Dear Laddie—This is the first time I have written to you. I go to school. I have gone to school for three years. This makes the fourth year without missing a day or beginning late a morning. I am in the fourth grade and my brother is in the fifth grade. For pets I have a rabbit and my brother has a rabbit too. I have a dog too. Well my letter is getting long so I will close so as to make room for some one else. I hope to see my letter in print. Freeda Teufel, Lake City, Mich.

Dear Laddie—I am going to write you. I am 11 years old and live on a farm of 37 acres, the railroad takes up three acres of it. It is nutting time and I have lots of fun. I have one sister, her name is Lolta and she is 6 years old. We have three kittens and an old cat. I am sending some Hallowe'en pictures. I will close, hoping to see my pictures and letter in print. Myrtie Luce, Flushing, Mich., R 1.

Dear Laddie—My mother is a reader of the Michigan Business Farming so I have been reading how you are going to give prizes on drawing and how the children could earn Christmas presents. So I am sending you a Hallowe'en drawing. Please send me a list of Christmas gifts and how to earn them. I am eleven years old. Harold Grams, Brenckenridge, Mich., R 2.

Dear Laddie—When I was reading the paper I saw that you were offering a prize for a Thanksgiving drawing and so I got busy and made one of the same kind for my drawing teacher for exhibit. This turkey is quite patriotic but not perfect. Vera Camfield, Buchanan, Mich.

Dear Laddie—I am a girl 7 years old. I like school very much. My teacher's name is Arthur Bowman. We have four cows, 9 pigs and 5 horses. We have 180 acre farm. I have two birds for pets, also a dog. From, Beryl Jane Sweet, North Branch, Mich.



—and welcome for three splendid reasons, especially in these days of soaring costs—because Calumet gives three big positive helps in reduction of living expense.

You save when you buy it—moderate in cost. Leaves you more money with which to buy other things. You save when you use it—has more than the ordinary leavening strength—therefore you use less. You save materials it is used with. Never fails.

HIGHEST AWARD GIVEN CALUMET BAKING POWDER WORLDS PURE FOOD EXPOSITION

CALUMET
Baking Powder
"BEST BY TEST"

Makes Most Palatable and Sweetest of Foods

Produced in largest, finest, most sanitary Baking Powder Factory in the World. Contains only such ingredients as have been officially approved by United States Food Authorities. The first choice of millions of housewives for a third of a century. Order from your dealer.

Only $2 DOWN and One Year To Pay

For any Size—Direct from Factory

You can now get one of these splendid money-making, labor-saving machines on a plan whereby it will earn its own cost and more before you pay. You won't feel the cost at all.

New BUTTERFLY Separator

$38 No. 2½ Junior—a light-running, easy-cleaning, close-skimming, durable, fully guaranteed separator. Skims 120 quarts per hour. We also make four other sizes up to our big 800 lb. capacity machine shown here—all sold at similar low prices and on our liberal terms of **only $2 down and a year to pay.**

EASY TO CLEAN

30 DAYS' FREE TRIAL! GUARANTEED A LIFETIME
Against Defects In Material and Workmanship

You can have 30 days' free trial and see for yourself how easily one of these splendid machines will earn its own cost and more before you pay. Try it alongside of any separator you wish. Keep it if pleased. If not, you can return it at our expense and we will refund your $2 deposit and pay the freight charges both ways. You won't be out one penny. You take no risk. Postal brings Free Catalog Folder and direct-from-factory offer. Buy from the manufacturers and save money. Write TODAY.

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

Business is marking time. The coal strike which was calculated to strike terror to the hearts of all industry is still on but industry continues to go the even tenor of its way. The steel strike has had little effect upon that industry. Most of the mills are in operation and where coal cannot be secured coke is being used. Demand for steel is unusually good which indicates that there is to be no cessation of manufacturing activities because of labor's threatening attitude. The condition of industry nearly always reflects itself upon the markets which with few exceptions are firm and have many encouraging aspects. Grains are holding the advances gained the fore part of last week, beans are in a better position, potatoes have advanced, and the live stock market is generally in a healthful condition. Examine present market conditions as closely as you may and you cannot find much reason for pessimism.

WHEAT SUFFERS SLUMP

PRICES PER BUSHEL, NOV. 11, 1919

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.24	2.24	2.35
No. 2 White	2.22		
No. 2 Mixed			

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.22	2.21	2.34
No. 2 White	2.20	2.21	2.34
No. 2 Mixed	2.20	2.20	2.33

Wheat suffered a setback in many markets due to the announcement of the United States Grain Corporation that it would sell surplus wheat at cost plus the carrying charge. Western markets were the chief sufferers where No. 1 dark northern had reached a price around $3. There was a slump of 10 cents in that figure due to Mr. Barnes' announcement. One of the most interesting factors in the wheat business this week is the removal of the permit system as related to country shipments. This permit system removed Monday of this week, was greatly complained of by the local dealers.

The coal strike and the rail shortage have had some effect on wheat, though far less than on the corn market which was considerably boosted because of lack of cars. Detroit markets remain the same as last week for No. 2 red and white wheat, the prices being $2.24 and $2.22 respectively.

FREER CORN MOVEMENT

CORN PRICES PER BU., NOV. 11, 1919

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.60	1.51	1.66
No. 3 Yellow	1.60		
No. 4 Yellow	1.58		

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.47	1.35	1.51
No. 3 Yellow	1.45	1.30	1.45
No. 4 Yellow	1.36	1.23	1.42

Bearish indications of freer corn movement have cut down the advances made by corn in the last several days. An acute shortage of cars for shipments of corn had been prevailing for a number of days, boosting the price of corn day by day. But announcement came last Saturday and again the first part of this week that the Railroad Administration was releasing more cars for the shipments of corn.

Coupled with this announcement is the news from various sections of the Corn Belt that farmers show a willingness to get rid of their surplus corn. Buyers showed a tendency to hold off in the Chicago markets thus aiding the bearish trend of affairs. Many traders sold in the belief that car movements would knock down the price.

Chicago's market dropped more than Detroit's where prices are reported at the same figure as last week's.

Nothwithstanding the slump, the general opinion seems to be that corn will not revert to its former low level.

LAST MINUTE WIRES

DETROIT—Wet weather causes another advance in grains. Potatoes firm and higher. Beans in better demand. Poultry firm. Scarcity of eggs. Live stock generally higher.

CHICAGO—Bad weather and export business has helped gains on this market this week. Sentiment is for higher prices. Live stock firm and higher. Tone of most markets favorable.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

Cattle and Hogs Make Further Advance

A sharp decline in Chicago hogs the fore part of last week was followed by a quick upturn and as we go to press the market tops around $15.50 for best grades. Rumor has it that the British government has let contracts for December hogs at $14.00, which means that the market will have to be forced lower or someone will get their fingers burned. Receipts of hogs are expected to increase soon and lower prices are anticipated. The hog trade is expected to run on a more even keel from now on, however, and price changes will not be great.

Cattle topped the Chicago market last week at $19.80, then slumped a bit, but the current week opens with a firmer tone and higher prices. The quality of sheep arriving on the markets now is generally poor, and naturally discourages trade. Despite this fact, however, the market is steady to firm and prices hold their own.

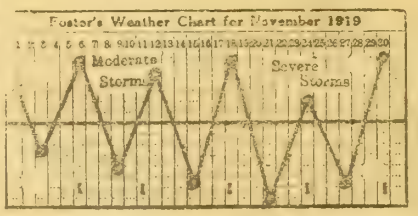
LIVE STOCK HIGHER

Detroit, Nov. 11.—Cattle: market steady to strong at last week's close; best heavy steers, $12@13; best handy weight butcher steers and heifers, $8.50@9; handy light butchers, $7.50@8; light butchers, $6@7; best cows, $7.50@8; butcher cows $6.50@7; cutters, $5.50@6; canners, 5@5.25; best heavy bulls, $7@7.50; bologna bulls, $6@7; stock bulls, $5@5.50; feeders, $9@10; stockers, $7@8.50; milkers and springers, $6@160. Veal calves; market strong and $1@1.50 higher than last week's close; best $18@19; others, $7@16. Sheep and lambs: market steady; best lambs, $14; fair lambs, $11.50@12.50; light to common lambs, $5@10; fair to good sheep, $6.50@7; culls and common, $3@4. Hogs: market steady; pgis, $14.75; mixed hogs, $15.25.

Chicago, Nov. 11.—Hogs: steady to 15c higher; bulk, $14.90@15.40; top, $15.50; heavy, $15.10@15.40; medium, $15.10@15.50; light, $15.10@15.40; light light, $14.85@15.25; heavy packing sows, smooth, $14.75@15; packing sows, rough, $14.40@14.75; pigs, $14.65@15.10. Cattle: firm; beef steers, medium and heavy weight; choice and prime, $17.75@17.90; medium and good, $10.85@17.85; common, $8.65@10.85; light weight, good and choice, $14.25@19.75; common and medium, $7.75@14.25; butcher cattle, heifers, $6.60@14.50; cows, $6.50@13; canners and cutters, $5.50@6.50; veal calves, $17.50@18.50; feeder steers, $7@13; stocker steers, $6@10.25; western range steers, $7.50@15.25; cows and heifers, $6.50@12.50. Sheep: unsettled, lambs, $12@14.60; culls and common, $8.50@11.75; ewes, medium, good and choice, $6.75@8.25; culls and common, $3@6.50; breeding, $6.50@11.75.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Nov. 15, 1919—Warm waves will reach Vancouver about Nov. 15, 21, 26 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 16, 22 and 27; plains sections, 17, 23 and 28; meridian 90, great lakes, middle Gulf States, Ohio-Tennessee valleys 18, 24 and 29; eastern sections 19, 25 and 30, reaching vicinity of Newfoundland about Nov. 20, 26 and Dec. 2. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from near Nov. 16 to 30. High temperatures will reach meridian 90 about Nov. 18 and 30 and low temperatures will prevail from near 21 to near 27. The most severe storms of the month are expected during the five days centering on Nov. 25. Heaviest precipitation of the monthis expected from these severe storms, but these storms are not expected to be so severe as those of last part of December. Locations of precipitation will be about the same as for past two months.

These severe storms will wind up the 165-day cropweather period and establish a new one that will continue about six months, running to near end of May and will have much to do with the 1920 crops. Precipitation of that period fill go to extremes. One-third of the crop sections will be too dry, one-third about right and one-third too wet. In the dry sections the seed should be planted deeper than usual, grain drilled deeply. Grass and corn should be put on the low and flat lands in the wet sections and seeds planted shallow.

For hundreds of miles on that side of high ridges and mountain ranges, in the direction of where the ocean waters are evaporated to furnish the moisture, excessive rains are expected up to end of May and the opposite slopes will not get enough rain. But the greatest drouth will be where the mountain ranges have nothing to do with it.

I expect the total crops of 1920 to be about an average of the past few years. Indications point to good prices and the farmers who watch closely all conditions, will, on an average, be well repaid.

There is a lot of fool talk about farmers cutting down their hours of labor. None but city chaps who are ignorant about farm life will indulge in such foolish tongue exercise. All the people who depend on agricultural industries should thoroughly ogranize for their own protection and pull together, but of course they can not adopt all the rules and methods of other organizations.

I am not dealing in grain nor cotton. I could not give good advice to farmers and local dealers if I had money invested in these products of the soil. I can not publish such advice through the newspapers because that would only benefit the profiteers. I stand for the producers and local dealers, want them to work together and get all that is coming to them against great millionaire speculators at the big centers. For the purpose of benefitting agriculture my whole time is given to weatherology and the business relations of agricultural products to the Americas and of Europe.

OATS REMAIN FIRM

PRICES PER BUSHEL, NOV. 11, 1919

Grade	Detroit	Chicago	N. Y.
Standard	.76½	.73½	.80
No. 3 White	.75½		
No. 4 White	.74½		

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.
Standard	.72	.72	79
No. 3 White	.71	.71	.78
No. 4 White	.70	.70	.76

Oats maintained a firm market for the last several days, despite the dropping condition of the corn sector. Although oats fell four cents last Saturday, they stopped the decline and firmed up, although corn continued to slide downward. The visible supply of oats has increased somewhat, although improvement of port conditions in New York is expected to readjust that condition. A much better demand has been reported from various parts of Europe and higher prices prevail there. This is one of the sustaining features in the oats market. The European crops of oats were poor and loans have been contracted in Europe for the purchase of American grains. This factor is one of the strong bulls in the oat market.

Detroit quotes oats as hovering around 76 cents for No. 2 white at the early part of this week, foreign export demand being pointed out as the reason.

RYE AND BARLEY

Barley showed much of the strength of the oat markets in the almost general slump in opening markets this week. The export demand is the bull in the barley section as well as in oats. Barley raised five cents per cwt. for cash No. 3, the present quotation being $2.70@2.80. Rye markets have little news stirring. Rye is reported steady with cash No. 2 quoted at $1.38.

BEANS PICK UP

BEAN PRICES PER CWT., NOV. 11, 1919

There is a slight activity in beans and the price is up 15 cents per cwt. on the Detroit market. We caution our readers against putting much faith in this slight advance. The Detroit market has never been a criterion of the actual condition of the bean trade. Speculators manipulating that market to suit their will and we have noticed frequent changes in that market which were scarcely warranted by actual conditions.

The majority of the bean jobbers in the state have taken a bullish attitude on beans and are discouraging any attempts to force lower prices. At an informal meeting of the bean jobbers held at Saginaw, Frank B. Drees, secretary of the association, warned against the flooding of the market at the present low prices. He urged members to discourage farmers from unloading their crop when the market is in such poor condition. Mr. Drees is quoted as saying: "Farmers should hold their beans until conditions are right. Beans are already the cheapest food on the market in proportion to their food alue. They are entirely too cheap." We can only repeat Mr. Drees' assertion and hope our readers will take the sensible view of the situation and market their beans only as they need the money. Dumping beans into the elevators at this time is quite liable to put the market in such shape as will destroy immediate future rospects of a better price.

One of the strong bullish sentiments, which is soaking into the bean trade, is the report from the Orient

(Continued on page 12)

BUSINESS FARMERS' EXCHANGE

O. M. SCOTT & SONS CO.
No. 2 Main St. Marysville, O.

DAIRY MARKET ACTIVE

The dairy markets are thriving these days in several lines notably butter. Buyers are getting busy again. Fresh eggs are very scarce and firm. Storage eggs also show activity. Detroit quotations on dairy and miscellaneous markets follow:

Butter—Fresh cream., firsts, 60½ to 63½c lb.; fresh creamery, in 1-lb. bricks, 62 to 64½c per lb.

Cheese—New York flats, June, 34c.; Michigan flats, June, 33½c; Michigan flats, new make, 31½c; brick, 33c; long horn, 32¼c.; single daisies, 32c; Wisconsin twins, 31 1-4c.; Wisconsin double daisies, 32c; limburger, 33 to 34c; domestic block Swiss, 35 to 40c; domestic wheel Swiss, 40 to 42c per lb.

Dressed hogs—Choice country dressed. Under 150 lbs., 20 to 22c.; over 150 lbs., 18 to 19c per lb.

Dressed calves—Fancy country dressed, 25 to 25c; choice 22 to 23c per lb.

Eggs—Fresh eggs, 62 to 66c. per doz., as to quality.

Nuts—Walnuts, new, 35 to 36c.; almonds, 38c.; No. 2 almonds, 30c.; pecans, 17 to 18c.; filberts, 26c.; Brazils, 32 to 35c. per lb.; peanuts, fancy roasted, 14c.; jumbo, 18c. per lb. Nut meats—Five-pound cartons, almonds, 60c.; walnuts, 85c.; pecans, $1.35 lb.

BOSTON WOOL MARKET BULLISH

There has been more business in the Boston wool market during the past week, demand being keen for wools, down to and including half-bloods, with a fair trade in three-eighth wools and moderate inquiry for quarter bloods. Prices are firm and the tendency is slightly upward. The foreign markets are firm and tending higher. The manufacturing situation is strong.

Quote: Michigan and New York fleeces—fine unwashed, 63c. to 64c; Delaine unwashed, 78 to 82c; 3-4 blood unwashed, 66 to 67c.

POULTRY MARKET HIGHER

The poultry market is higher in some lines and generally firm. The demand is heavy for fat hens and best chickens, while supply is low in big market centers. Turkeys seem to be out of the running, awaiting the Thanksgiving rush, turkeys now being easy as to price and uneasy as to outlook. Ducks are higher. Detroit quotes live poultry, spring chickens large, 25@26 cents per pound; small, 21@23c; hens, 26@27; roosters, 18@19c; spring geese, 24@25; ducks, 29@31; turkeys, 33@24c per lb.

TOO MANY APPLES

Despite the shortage of apples, it seems that producers are dumping them on the markets in the big cities. In general the fruit markets are inactive. Grapes have disappeared entirely from the stalls, except for the California varieties. Apples and quinces being so plentiful in supply do not command the high prices many expected to pay at this time. Small Michigan are bringing around $1.25 in Detroit, and the bests are getting $2@2.50 per bushel.

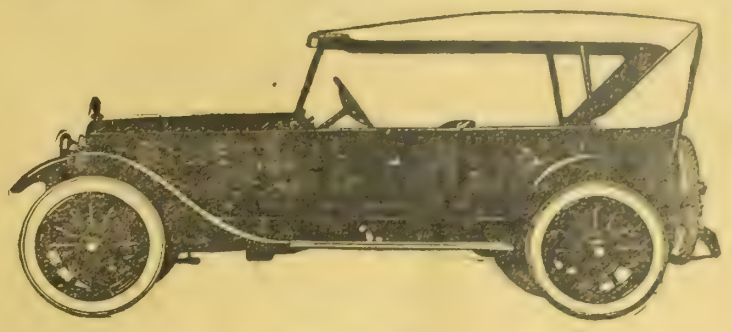
DETROIT PRODUCE FIRM

Produce markets in general are firm at present. Home grown cabbage sells in Detroit at around one dollar per bushel. Michigan celery brings 25@50 cents per dozen. Cranberries bring $10 per bbl. Popcorn shelled, 12c per lb.; quinces, $2.

DID YOU PLANT KIDNEY BEANS?

Do you remember the advice given in Michigan Business Farming early last spring with reference to Red Kidney Beans? That advice was given after a careful survey had been made of the holdings in dealer's hands; quantity in the stocks held by wholesale grocers, and the domestic and export demand for this particular variety. You were advised to plant Red Kidneys; and it was suggested that over production was quite impossible. Well if you heeded our advice today's market quotations must look mighty good to you. If you did not follow our suggestion then it would be well to remember that M. B. F. is searching for information that will aid you, Mr. Farmer, and while we do not expect to always hit the nail on the head, this you may be assured of: "If we hit your thumb instead of the nail, it will result through no lack of thorough investigation on our part."

HAVE YOU SEEN IT?



The New

GRANT SIX

If by any chance you have not yet seen the *new* Grant Six, we suggest that you make a special effort *now* to see this car.

It has taken the country by storm. The factory has been literally flooded with orders since its announcement.

Recognition of the new Grant as a truly fine car, a car much better, much larger, much more powerful—and far more beautiful than people looked for at its price, was instantaneous.

Each mail brings new stories of appreciation. The long low lines of the New Grant Six body with sport model smartness and touring car roominess pleases everybody.

The quick, responsive motor which takes the car as fast as most men dare to go satisfies—thoroughly.

The beautiful body trim and complete equipment exceeds expectations.

The easy handling of the car, its short turning radius and its easy riding qualities over all kinds of roads always provoke favorable comment.

So does the clean cut sturdy chassis with its extra deep frame, its high grade transmission, its big, smooth operating clutch and its large strong axles of highest quality.

Thousands *have* seen it, but, if *you* haven't seen the new Grant Six plan to inspect it at your earliest opportunity.

You will than understand the keen enthusiasm of others for this car.

You will then understand why it is important for you to get your order in months ahead of your actual delivery requirements.

(*Continued from page* 10)

of widespread crop disasters, chiefly beans. Continued dry weather during the summer in Manchuria has said to have caused dire havoc in the Oriental bean output. Only half a bean crop is the estimate for the leased Kwantung territory.

POTATO PRICES CLIMB

SPUD PRICES PER CWT., NOV. 11, 1919	Sacked	Bulk
Detroit	2.80	2.70
Chicago	2.60	2.65
Pittsburg	2.80	2.65
New York	2.65	2.50
PRICES ONE YEAR AGO		
Detroit	2.00	1.80
Chicago	1.75	1.60
Pittsburg	2.20	2.10
New York	2.40	2.25

Potato prices climbed somewhat in Detroit markets since last week's issue. There is not so very much activity, but such action as there is indicates firmness and improved price conditions. The great shortage of cars between the big markets and the big potato belts is to blame for much of the condition. The jobbing price in Detroit for 150-lb. sacks is $4.25. Local dealers are still paying farmers around $1 up for bushel but producers' prices should begin to advance very soon.

There continues the same old story in the big hay markets for the past several weeks. Loadings in the country are light, a fact which might bring the price up to a better level, were it not for the inactive demand by the consumers. Low grades show an easier feeling. The sustaining feature of the market, however, is the high grades which are quite scarce.

Crop Reports

JACKSON (N. E.)—The weather has been more or less disagreeable the past week, thus interfering with the balance of the fall work. Farmers are husking, drawing corn and stalks, also shredding. Silos are filled. Winter grains look fine. The farmers working out their road work in many districts. Good roads work progressing rapidly. Hog market improving but all too low for satisfactory returns with a profit for the farmer.—A. F. W.

MANISTEE—The farmers are husking corn and hauling same, getting cider ground, hauling cider apples. There being a scarcity of cars caused the people to wait to sell their crops. They now have a few more cars here. Weather is cold, it rains about every other day, sometimes for half a day or longer. Been snowing some and raining today. Soil is wet. Farmers are not selling much, only auction sales. There does not seem to be much market now. Hope later to report buying started of all crops, grain especially.—H. A.

MIDLAND—The people in this locality are busy doing their fall work. Some are doing some fall plowing. A new tractor has been purchased by J. W. Cron. There were quite a few potatoes this year. They are of a good quality and also quantity. Our two nearest neighbors were about the only people that had a good supply out. The people in town are glad to see a farmer come to town with a good load of poatoes weighing from 1-2 to three or four pounds. Quite a few people are husking corn and hauling it in for winter feed. It has snowed here already. The following prices were offered at Midland on Nov. 7, 1919: Wheat, spring, $1.20; fall, $2.05; oats, 68c; rye, $1.18; No. 1 timothy, $18.20; apples, $1.50@2.00.—J. H. M.

A HORSE CAN TRAVEL WHERE AN AUTOMOBILE CANNOT GO

Often in the deep snows of winter an automobile cannot get through the drifts, but the horse can travel anywhere if he can secure footing. There is just one thing will insure safe footing on any road anywhere any time, no matter how icy or slippery, and that is the

Neverslip Red Tip Horse Shoe Calk

Whatever the occasion; a hurried trip to the doctor, an important call to town, a load of produce to be delivered—your horse is ready when you are ready. TRAPPING IN "YE OLDEN DAYS"

Trapping is among the oldest callings of mankind. Way back in the days before men wrote history or even carved pictures, they devised means to secure meat and skins for food, clothes and shelter.

Ugh, the cave man, would throw his stone axe over his shoulder, call his dog-wolf and go out and dig deep pits, cover them with twigs and grass put out an attractive bait and catch sabre-toothed tigers or other great beasts of pre-historic days; or perhaps he would rig up a dead-fall to take some smaller animal whose fur was soft and silken, to please the "missus," for woman's love for fine furs is older than civilization itself.

Trapping is a Calling Venerable

With the dawn of history, we find the old patriarchs dressing in skins and living in skin tents, and the sport of the chase and trapping at one time was the pastime of kings and many of them became more famous as hunters than as rulers. The taking of elephants, used in warfare by ancient conquerors, was a great industry in remote times.

The first organized fur trade was the "Skinners' Company of London." Little is known of its origin but as far back as 1327 King Edward III gave this company a charter and they had laws passed against the selling old furs for new, showing that even in those days efforts were made to keep the fur trade out of the hands of the unscrupulous.

In the middle ages all the fur was caught locally, most of the best skins coming from Russia, but after the discovery of America, all eyes turned to the Western Hemisphere. The French established trading posts in Canada as early at 1535 and the Russians traded in Alaska in 1553. In New England, the Plymouth Company and the West Indies Company shared the monopoly on shipping beaver to Europe. It is interesting to note that the emblem of the City of New York originally showed two beavers on account if their importance in the fur trade.

VETERINARY DEPARTMENT

Could you give me information or advise me where I could get informed of the following questions. What is the standard for the Duroc Jersey hogs, and what should I look for, in them, in regard to in selection of a sow and boar for breeding purposes? To what family or strain do the Michigan Champions belong to? And what advantages do they claim for them over the O. I. C. hogs and the Poland Chinas? Are the Duroc Jerseys and the Jersey Red, both one and the same breed. Am thinking of investing in some pure bred Durocs, and any information in regard to them would be appreciated. Yours respectfully.—*J. McC., Branch Co.*

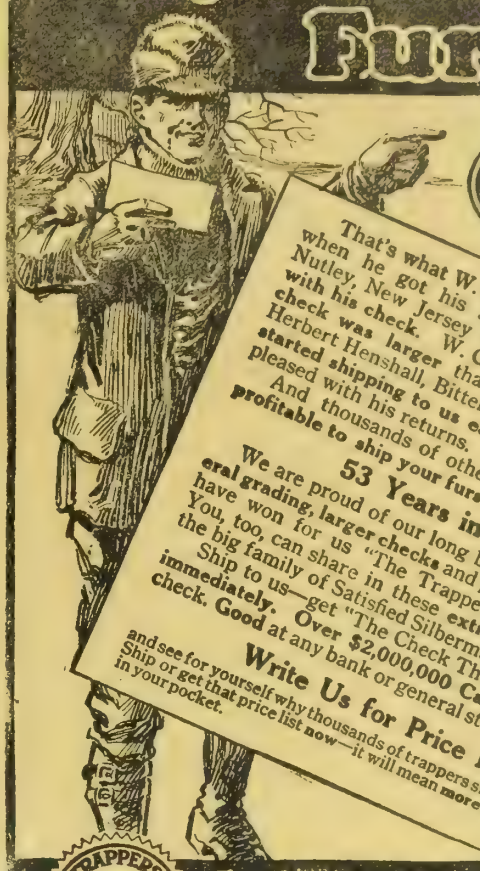
I would suggest that you correspond with either or both the American Duroc-Jersey Swine Breeders Association, whose secretary is Robert Evans, Union Stock Yards, Chicago, Ill., or the National Duroc-Jersey Swine Breeders Association whose secretary is J I Tfander Peoria Ill. The Duroc-Jersey have two large associations and the secretary of either of these associations would be able to give you the desired information

The Duroc-Jersey and the Jersey-Red are one and the same hog. The type most approved by the breeders is that of a very compact hog exceedingly smooth in all parts and very close to the ground; the most popular color for this breed is a deep cherry red without any markings. The head should be fine, the ear light and pendent, neck short and thick, the shoulder full yet smooth with the body, the neck slightly arching, wide and strong. The hips should be deep and the hind quarters very plump and full with meat yet somewhat short, the legs are very short and straight allowing the frame to approach very close to the ground.

WANTED—Copies of M. B. F.

In making up our permanent files we find we are short several copies of the Feb. 1st, 15th and 22nd., 1919 issues. We will give a year's subscription to the first five subscribers who send us copies of these issues.—The Publisher.

No One Else Would Pay So Much For Furs



S. Silberman and SONS

THE HOUSE WITH A MILLION FRIENDS

That's what W. F. Kumm, Shawano, Wis., wrote us when he got his Silberman check. R. E. DeVries, Nutley, New Jersey wrote he was very much pleased with his check. W. C. James, Florence, Colo., says his check was larger than from any other fur house. Herbert Henshall, Bitter Creek, Wyo., wishes he had started shipping to us earlier, as he was very much pleased with his returns. And thousands of others say it is safe, wise and profitable to ship your furs to S. Silberman & Son.

53 Years in Business

We are proud of our long business record—our liberal grading, larger checks and prompt returns—which have won for us "The Trapper's Seal of Approval." American Farm Bureau Federation is Organized

Delegates From All Over United States Take Part in Forming Great Farmer Society

J. L. HOWARD
President American Farm Bureau Federation

By JOSEPH M. CARROLL
(Special Correspondent Michigan Business Farming)

THE GREATEST conference in the history of American agriculture held at Chicago perfected the organization of what is now known as the American Federation of Farm Bureaus.

Before the meeting was called to order the exact purpose of the session was known but not until every delegate in the hall argued and urged point after point was the proposition made a reality.

At each session about 500 were in attendance. Thirty-four states were represented by voting delegates. Representation of states by individuals varied. Illinois having the largest representation with about 200 farmers and advisors present during the sessions. Delegates came from all sections of the country, Massachusetts on the east. California on the west. Texas on the south and Dakota on the north, taking in all corners of the nation and making the conference truly national in its scope.

The conference was opened by an address of welcome by Harvey L. Sconce, president of the Illinois Agricultural Association. He spoke for half an hour in which he emphasized that the permanent organization should stand for pure Americanism. This remark was followed by vigorous applause, also when he said it should be the policy of the final organization not to align in any way with destructive, radical movements at this time. He added that the organization should see that farmers are fully represented where they have interests at stake. If the government hoped to get a permanent solution for the difficulties of the times it must give farmers real representation.

Mr. Sconce closed by remarking, farmers must be prepared to sell their labor as other classes do. Farmers must have intelligent and accurate information on the world's food production. Find what the world wants and produce it, rather than farm the soil to the limit. Above all farmers must keep control of their products till they get nearer the consumer than now, he added.

A response for the eastern farmers was made by S. L. Strivings of New York, president of the farm bureau of that state. He spoke for sane, intelligent policies, free from radicalism. He said a practical, workable plan must be adopted if it was to have the whole support of the rank and file of farmers. There was a wide range of conditions in the different states and it would have to be a give and take proposition if a strong, effective organization was to be formed. One of the big things the organization can do, he said was to give the nation the benefit of the concentrated loyalty and sanity of farmers. They talk it around the farms and village, but it is not expressed in a united voice which must be done to get results.

J. R. Howard, president of the Iowa federation, responded to the eastern farmers and stated, "the trouble with farmers in the past is that we have not had time to look over our line fences. The farm bureaus helped us to get a little broader view of our business and its relations to other lines. The state federations came and helped now we have met together on a nation-wide basis. We now sell in the markets of the world and in world terms."

The speaker said he hoped the final organization would succeed in breaking down those forces which are antagonistic to the best interests of the nation, and that farmers could go ahead on a sane basis, exerting the influence they should at this and all times.

In the height of the discussion by delegates from various states, Milo Campbell, of Coldwater, Mich., president of the National Milk Producers' Association made a plea for unity saying, "I hope you can get together and organize something that will take in all agriculture. In the last two years because of the lack of organization of this kind, my organization has been fighting for everyone. I will say that this is the most promising child of agriculture the country has ever had." Vigorous applause followed these remarks.

The convention was harmonious in spite of differences of opinion. Reports that delegates, alleged to be radicals, would attempt to start something proved false. There was no outbreak of any kind on the red order although several times there were bits of spicy repartee between delegates, but it was good natured.

• • • •

Article 2 was practically remade and the revised wording gave the object of the federation as follows: The objects of the American Federation of Farm Bureaus are to correlate and strengthen the farm bureaus of the several states, and to promote, protect and represent the business, social, economic and educational interests of the farmers of the nation.

There was quite a row started over the question of representation on the board of directors. E. B. Cornwall of Vermont literally threw a bomb into the meeting when he suggested that each state have only one director and one vote in the national body.

The original draft of the constitution called for a vote from each state with an additional vote for each membership of 10,000. The article was revamped to make the membership read 20,000 as a means of arbitration.

Discussion lasted more than an hour and practically every delegate in the room voiced his opinion on the subject. C. A. Bingham, secretary of the state organization of Michigan spoke strongly in favor of the 20,000 member plan and considerable talk was heard that his remarks carried considerable weight in changing the attitude that had been formed against it.

The proposition carried by a close margin. After the battle had been won by the central western states, who were strongest for the membership proposition, the eastern states spoke in favor of the proposition, declaring it the best basis of representation after all.

S. L. STRIVINGS
Vice. Pres. American Farm Bureau Federation

American Farm Bureau Federation

Officers.
Pres.—J. R. Howard, Iowa; Vice-Pres.—S. L. Strivings, New York.

Resolutions

Outstanding among the twenty-eight resolutions adopted by the American Farm Bureau Federation are those opposing a farmer-labor alliance, opposing government ownership of utilities, favoring the early return of the railroads, favoring regulation of the packers, denouncing radicalism and Bolshevism. The resolutions breathed the spirit of Americanism that is bubbling up from all quarters of the country. The resolutions which we think our readers will be most interested in are as follows:

I.—We declare our independence of affiliation with any commercial, labor or industrial organization, but maintain a co-operative attitude toward all movements promoting the welfare of American institutions.

IV.—We desire to point out that a large factor in the high cost of living is the curtailing of production through shorter hours, lessened efficiency of labor, and strikes.

V.—We approve the Federal Land Banks and request that the maximum individual loan be changed from $10,000 to $25,000.

VI.—We recognize that land ownership is stewardship, that ownership does not give the right to soil depletion and we deplore the system of tenantry that encourages a rapid reduction of soil fertility.

X.—When State or Federal Government grants corporate rights to any organization it is incumbent on that Government to protect the public through such regulating legislation as will best prevent favoritism, stimulate initiative and guarantee adequate public service.

XI.—We urge that as rapidly as possible all corporations doing business to be under Federal Charter and all other corporations to be incorporated under the laws of the state in which their principal business is located.

XII.—We are opposed to Government ownership of public utilities. We demand the early return of the railroads to private control, under such conditions and regulations as will render adequate service at just and equitable rates. We particularly demand immediate attention to restoring the efficiency of live stock and other perishable transportation, both in car equipment and train schedules.

XIII.—Recognizing the economic law that impels the consolidation of business we proclaim that relief from the extortion of monopoly in manufacture and commerce is to be found in co-operation, in enforced publicity of business records, and a just graduated income tax rather thru interference with the economic law upon which great industries are founded.

XIV—We recommend such regulation of all purveyors of foodstuffs, including packers, wholesale grocers, commission men and all similar industries in such manner as will be just and fair to producers and consumers as well as to the industries.

XVIII—We deny statements of some congressmen that farmers demand free seed distribution and condemn the practice.

XIX—With few exceptions in the past 40 years, the farmers' sole profit has come from unrestored fertility taken from the soil and from long hours of work and unpaid labor of women and children. We insist that these are legitimate factors in cost of food productions and must be so recognized by the commercial and general public.

XX—We assert the farmer is entitled to a just profit on a cost of production on all products with these items properly accounted for, with due consideration to the hazardous risks he encounters and with a wage allowance for his own labor and ability commensurate to that received in other occupations.

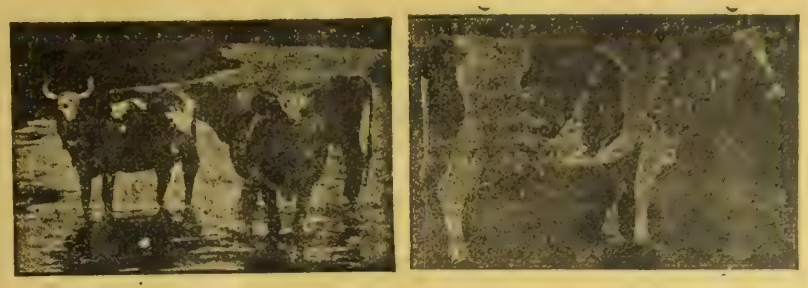
Short Test Has Made Dairying Better Business

It Has Shown Thousands of Small Dairymen the Way to Bigger Profits

By D. D. AITKEN



The short test has weeded out the "boarders" and made room for the high producer.

THE HOLSTEIN-FRIESIAN Association has had another assault made upon it and following so closely after the one made by Charles Cole, it makes one almost wonder whether the second was in anticipation of finding the Holstein-Friesian Association in a weakened condition because of the Cole episode. The second assault is contained in the following action:

"Resolved, That we the American Dairy Science Association, petition the American Association of Agricultural Colleges and Experiment Stations, to request that the Colleges be relieved of all advanced registry testing work for periods of less than 300 days on and after October 1, 1920."

While it may be denied, and probably will be by interested breeders of other cattle that this is not an assault on the Holstein-Friesian breed, it may be argued and probably will be by some of the selfglorified professors and their adherents, that it is not an assault upon the Holstein-Friesian cattle, but the fact remains that no other cattle are being tested in short term tests, no other cow but the black and white has ever, to any considerable extent, been tested for 7 and 30 days, and the fact that some of those at this meeting said they proposed to put it over the Holstein-Friesian cow before and after the adoption of this resolution, is a self-evident fact that the whole plan is one to injure the Holstein-Friesian breed, and is the outgrowth of jealousy and spleen on the part of others interested.

There are just two motives for this conduct. One is, those prejudiced against the Holstein-Friesian breed, some of whom are in the open, others behind them egging them on the main excuse being that the Holstein-Friesian cow is becoming too popular and something must be done to give the other breeds a chance; and the other is, these American Dairy Science Association members have not the time to answer the great number of inquiries that come to their departments from those interested in these short time tests and do not want to be bothered and annoyed by what they term useless contact with farmers and dairymen who want to get information from the professors of dairy husbandry, because, try as we may and argue as we will, this short time test has become a source of tremendous work to the agricultural college of the United State. I venture the assertion that for the last ten years there has been more inquiry made of dairy husbandry in the agricultural colleges of the dairy states by people who want to make short time tests, than all other correspondence combined; that there are more people interested in making short time tests who milk their own cows many times over than all other interests combined. I make the assertion that there are more persons taking the short course in the colleges of the dairy states because of the interest that was awakened by this nursery of the Holstein-Friesian cow than all other reasons. I can remember years ago (having always been interested in the Agricultural College of Michigan) how hard it was to get in touch with the farmer. He had a feeling of spleen against the Agricultural College and did not like the idea of the college professor assuming to tell him how to run his farm, but things have changed. In the dairy states today there are thousands of young men from the agricultural colleges boarding in the homes of the farmers who own black and white cows who are anxious to find out what those cows can do, and they are testing them for seven days, but the Agricultural College has a representative in the home. If he is a bright young man, as a great many of them are, he carries tidings to that home of what the college has accomplished. He tells them about how John Henry Jones fed his cows and how he got the best results. He is a source of great information to that home which has been isolated all these years, and the boys and girls of that farm home near him tell of the accomplishments of the college, and all the time that farmer himself is paying the cost; he is boarding that young man; he is paying that young man his wage for coming there and testing his black and white cows, and telling him and the boys and girls about what they do at the Agricultural College. In the meantime that same college is spending hundreds of thousands of dollars trying in some other additional way to get in touch with other farm homes. That same supervisor oftimes tells the farmer about the Horticultural Department of the college, and what that has accomplished; in fact if there is anything worth while around te college that is unusual that a bright young man would naturally find out, he imparts it to the farmers, the men who support the agricultural colleges and for whose benefit the agricultural colleges are maintained.

But these gentlemen representing other interests under the name of The American Dairy Science Association, etc., want you to discontinue letting these farmers have these young men from your institutions even though the farmer pays all the expenses. Why they want to deny the farmers this right I am unable to understand.

I do not want anyone to imagine that I prefer the 7-day test, or I believe in it over the semi-official. I think the breeding in my own herd is the best reply to that. My senior herd sire has a dam and grand-dam that made better than 1,200 lbs. of butter in a year. My junior herd sire has a dam and grand-dam that average better than 1,200 lbs. of butter in a year, and every animal on my farm as she freshens now goes into the long time test, because for the first time I have been able to get men whom I felt would stay on the job and work out this problem of developing these cows under this long test system. I thoroughly believe in it, but I am not unmindful that the great bulk of the owners of Holstein-Friesian cattle cannot make successfully this long time test. It is too expensive and he just now is not able to accomplish it. Between 40 and 50 per cent of all the men who test Holstein-Friesian cattle milk their own cows. Now imagine, if you please, the average farmer with not sufficient help to operate his farm, attempting to milk [illegible] four times a day and then three times a day to get the best result. Imagine that farmer in the harvest time cutting green stuff and drawing it to the cow, getting beets where he has [illegible] to keep them buried so they would not wilt—he wants to keep them crisp and fresh—and spending practically all his time looking after four or five cows. It is simply idle for us to assume that the average farmer generally will be able to go into the [illegible]ly or 300 day test.

Listen to what that grand old warrior at Delavan says, the man who knows more about official testing and its effect upon the breed, than all of us:

"I have always regarded the short time test as the very best preparatory school for the long time test. I have styled it the nursery or kindergarten. My reason for this is that up to the present time not 2% of those who take up the long time testing are beginners in testing, as almost all of those who take up the long time test have had their preparatory testing in the short time work."

During the last fiscal year we had about 1,750 breeders making short time tests of which about 150 breeders were also making long time tests. There were only one or two breeders making long time tests who had not previously made short time tests, and I find it very difficult, indeed, at the present time to induce men to begin testing with the long time test. Last year there were some 800 cows on long time tests while now there are over 1,500 cows on long time test. Within a few weeks we shall have increased the number on test by 100%. In the short time testing the increase to the present time is 50% over last year, while the applications for permission to test are fairly pouring in upon us. We are hard put to it to handle the work and considerably behind, but we are breaking in new clerks as fast as possible.

I realize the great difficulty many of the colleges labor under in providing supervisors, for it is a fact that under normal conditions the state that requires most supervisors can obtain those supervisors easiest.

(To be continued)

The International Live Stock Show--German Exports--1920 Census

When the International Live Stock Exposition was held last year, the European war had just been terminated by an armistice; this year peace has been firmly established as far as the United States is concerned, all uncertainty having been removed. The country has been thru a period of readjustment from which it is emerging on a safe, sane and substantial democratic basis.

Fitting therefore is the dual celebration planned at Chicago the first week of December. Victory being no longer in doubt, the great live stock industry disturbed by war's uncertainty will move forward to even greater success. Fitting also will be the reunion of live stock raisers who during the past twenty years have participated in these annual expositions, together with such alternate prosperity and vicissitude as the industry has encountered. A victory and twentieth anniversary observance will attract the largest concourse of live stock raisers and others ever seen within an International Live Stock Exposition arena. For good measure we will have a show of grains and grasses on a scale without parallel or precedent, both as to variety and quality.

When the Census Taker Comes

A question to be determined in the 1920 census, soon to begin is how important does an agricultural enterprise have to be in order to secure recognition in the census as a farm? A small vegetable garden or a chicken yard accommodating a few busy hens will not be allowed to qualify as a "farm" in the census no matter with what pardonable pride and satisfaction the proprietor may view his agricultural enterprise.

But if the garden or chicken yard expands until it covers not less than three acres of ground, or until it requires for its care the continuous services of at least one person, or yields products annually to the value of $250 or more, it comes within the census definition of a farm and will be recognized as such and counted.

The agriculture schedule contains many questions regarding farm values, expenses and live stock as well as the acreage and quantity of crops raised in the year 1919. Census bureau officials are urging farmers everywhere to prepare for the census enumerator by looking over their books and records so that accurate answers may be furnished to questions.

In this connection the Bureau of the Census emphasizes the fact that the information furnished to census takers is absolutely confidential, made so by Act of Congress and that under no circumstances can any such information be used as a basis for taxation.

Top Prices for Iosco County Cattle

Just what raising the right kind of cattle on the right kind of range will bring the stockman was exemplified on the Miller ranch, in Iosco county, a few days ago, when L. W. Oviatt paid 12 1-4 cents a pound for a carload of Hereford's directly off the range, which he shipped to his son's farm near Bay City for winter feeding.

With thousands of cattle hitting the Chicago and Buffalo markets at this season of the year and at prices as low as 6 cents for feeders, the Oviatt purchase shows what Northwestern Michigan range will do for first class stock and the money it will put into the pockets of the man who runs his ranch intelligently. The difference between the 6 cents paid at Buffalo and Chicago for the poorer grades of cattle and the price paid on the ranch by Mr. Oviatt for high grade stuff is so marked as to make one wonder why farmers and others who bother with the cheaper stuff, which costs just as much to feed as the high grade animals, and also to wonder why more men, both those already settled in Northeastern Michigan and those who are farming and raising stock on $200 to $400 per acre land elsewhere, don't wake up to what can be done with the comparatively cheap grazing lands to be found in this part of Michigan.

German Exports Not Encouraging

Reports as to actual conditions in Germany conflict so often that authentic information is of value to the American producer or agricultural products if it indicates the state of Germany's manufacturing activities and need for raw materials. The following statement of the President of the British Board of Trade to British manufacturers, taken in connection with the supercargo reports published in reports on foreign markets No. 31 and 32 probably indicate the true state of affairs:

"Germany has only small stocks of goods accumulated for export; there is no great manufacturing activity; the costs of production are enormous; Germany cannot compete for a long time.

"The Board of Trade were watching carefully the movement of goods into this country. They saw no sign of devasting torrent of imports.

"Whatever fears you have and whatever temporary spurt of goods may come from Germany in the immediate future, all the information we get from Germany is absolutely contrary to that which you have been giving,—and our information is from better sources.

"There is no great manufacturing activity in Germany. Industry is not moving, but is very stagnant. They are short of raw material, and their state is pitiful with regard to coal."

National Grange Convention Honors Michigan

Delegates from all Corners of Country at Grand Rapids in one of Grange's most Important Sessions!

S. J. Lowell of New York elected National Master

THE RADICAL west met the conservative east at the National Grange convention at Grand Rapids last week and locked horns over several great national issues. Thirty-one of the thirty-three Grange states were represented. The delegates arrived in the Furniture City on Tuesday last by special train and established headquarters at the Pantlind Hotel. Ohio, Indiana and Pennsylvania representatives were accompanied by large delegations of Grangers and on Friday Michigan Grangers began to pour into the city from all sections of the state, swelling the attendance to well over 3,000.

The principal sessions were held in the Armory which was beautifully decorated under the guidance of Kent county Pomona Grange. Here National Worthy Master Oliver Wilson delivered his annual address. It was a brief but very forceful document and bristled with pointed truths. Mr. Wilson has been connected with the order for thirty-four years and has just concluded his eighth and last year as national worthy master. In his address he briefly reviewed the work of the order, commenting upon its substantial growth and accomplishments. He cited the following legislative matters in which the Grange has played an important part: Direct election of U. S. senators, federal land bank law, parcels post by zone system, repeal of oleo tax law defeated, Smith Lever bill, federal aid for roads, non-partisan tariff commission, official grain standads act established, woman suffrage amendment adopted, national prohibition amendment adopted, daylight savings law repealed twice after being twice vetoed by the president.

National Master Pleads for Protection of Property

Delving in the future activities of the Grange, Mr. Wilson said: "The greatest need of American agriculture from now on is neither subsidies, patronizing, nor uplifting; not further campaigns of investigation, literature or other superficial or useless camouflaging, all costing great sums of money, employing an army of non-producers at the expense of the public treasury, and all getting us nowhere. The time has come to simply classify agriculture as one of the great industries that make up our economic structure, and to treat it as one of the vital parts of that structure. This means such an adjustment of prices for our farm products, such a recognition of production costs, such a scale of the hours and wages as shall enable the farmer to run his business exactly as does the manufacturer of every other commodity—selling prices to be based upon the cost of production, plus such reasonable margin as shall provide for depreciation of equipment, for interest on investment and for a fair profit over all. When agriculture is thus classified and thus rewarded, there will be no shortage of farm investors or farm workers, no scarcity either by the government or by any one else, to "popularize agriculture", no subsidies of any kind, no Lane reclamaton schemes, nor other fictitious "inducements" to insure an adequate food supply for America and for the world, for one year or for any year. If all the money spent the last twenty-five years in the United States for popaganda work, in the name of agriculture had been devoted to building good roads between the farm and its market town; to extending rural mail service to thousands or more farm homes; to substituting a system of reliable crop reports for the present worthless and misleading guess-work; to create efficient marketing bureaus that do more than simply theorize on the great problem of economical and business-like distribution of food from producer to consumer, and had saved enough of the propaganada money to educate consumers on what costs enter into the raising of food. If this had been done, we might have gotten somewhere on "the high cost of living" problem, so-called, of advantage alike to producer and consumer. To start right in interpreting the food problem of the times by getting to the very bottom of the facts, is one of the country's most imperative needs."

Mr. Wilson made a strong plea against "the wild orgy of radicalism, nationalization and anarchy which is sweeping the land and theatening to destroy every industry, every farm and every home." He emphasized the "sacred rights of property" saying, "a home-owning nation is a strong nation, but unless individual property rights are eternally safeguarded, no home will be safe". Thrift and frugality, said Mr. Wilson, are still essential to the growth of posperous people, and reminded his audience that the Grange Declaration of purposes discountenances "every system tending to prodigality and bankruptcy".

Oppose Farmer-Labor Alliance

In none of the public session of the Grange was there anything but the most harmonious sentiment in evidence. But among the little groups of Grangers which formed occasionally in an ante room or in the lobbies of the hotels red-hot discussions were indulged in over the several resolutons which it became known had been introduced. The topic which excited the most interest and comment was a letter written by Samuel Gompers to National Morthy Master Wilson inviting the Grange to participate in th labor conference in Washington on Dec. 23rd. Although up to the time of our going to press no action had been taken on the proposition,, It was the general opinion that the invitation would not be accepted. Antedating the receipt of this invitation Milo Campbell who is prominent in Grange circles, made public a letter he had written to Mr. Gompers in which he voiced a strong objection to an alliance between labor and agriculture, and it was generally felt that Mr. Campbell expressed the sentiment of the majority of the delegates.

Interest in the matter was pitched to the highest point when Gifford Pinchot, former chief forester of the U. S. Department of Agriculture, arried at Grand Rapids to take issue with Campbell, and use his influence to win the Grange over to the laborites. Both Pinchot and Campbell are active leaders in the National Board of Farm Organizatoons which, it is understood, would like to parley with labor. But Campbell is unequivocally opposed to such a union, and because of the popularity and strength of the two men in national Grange circles a bit of tussle was expected. grange divided on railroads

Grange Divided on Railroads

Conservative Grangers were quite shocked by the recommendations of State Master John Morris of Colorado who declared emphatically for government ownership and a general non-partisan league program, including state banking and insurance. Another strong advocate of government control was William Bouck, master of the Washington State Grange, who wanted the Grange to oppose the return of the railroads to the private owners until after a better plan for their future control and operation had been worked out. While it is unlikely that the Grange voting delegates will come out for government ownership, it was thought that the Grange might take some action along the line suggested by Mr. Bouck.

Wm. Alden Injects Politics

At the Friday forenoon public session, former Senator Huntley Russell led the great gathering in a songfest that made the Armory ring from corner to corner. Brief remarks were made by former State Master George B. Horton of Michigan; Mrs. Dora H. Stockman, state lecturer; Miss Jennie I, Buell, state secretary; and others. Former Sen. Wm. Alden Smith gave a fine talk on Americanism and received frequent applause, but in the ardor of the occasion quite forgot where he was and launched forth into a tirade against Pres. Wilson and the League of Nations. Later in the business sessions the delegates passed strong resolutions favoring the League of Nations, with reservations that would preserve the honor and integrity of the United States.

Before adjourning the Grangers expected to take some action on the Townsend highway bill which aims to place all main highways under the supervision of the federal government to be built and maintained wholly at federal expense leaving the states to bear the total expense of the minor highways.

Degrees Are Conferred

A large class of candidates were given the fourth and fifth degrees on Friday last, and in the evening a class of 1600 assembled at Powers' theater where the seventh degree, "the High Priest of Demeter", which is the highest degree of the order, was conferred under the direction of Chas M. Gardner of Springfield, Mass.

The general sessions closed on Saturday and the current week has been occupied in business sessions at which only the official delegates were presee-nt.

Grand Rapids did itself proud in welcoming and entertaining the visitors. Many of the store windows were handsomely dressed for the occasion, and such a friendly, get-together spirit pervaded the city that those who had come as delegates from far states were made to feel entirely at home. Michigan Grangers showed their loyalty to the order by turning out in large numbers to greet the visitors from other states and assist in the ceremonies. Some counties sent over a hundred delegates and there was no county in the state where the Grange is active that did not send a goodly number of members to take part in the convention.

Lowell of New York Elected National Worthy Master

At the election of officers held Tuesday forenoon, Nov. 18th, Mr. S. J. Lowell, Master of the New York State Grange and chairman of the National executive committee was elected National Worthy Master to succeed Oliver Wilson. Prior to the election it was quite generally rumored that John Ketcham would be the choice for National Master, but Mr. Ketcham was not a candidate and made no solicitations to secure the office. Mr. Ketcham was unanimously re-elected lecturer of the National Grange. A picture of Mr. Lowell, the new National master will be found on the following page. He is the central figure in the group of the three gentlemen just above the panoramic scene.

It is impossible for one to mingle in a crowd of farm folks such as attended the Grange convention without feeling that security and contentment which comes to one when he knows he is among friends. All thought of the dangers that threaten the national life disappears for something tells a man that there can be no insecurity in a country where dwell such great numbers of honest intelligent, level-headed men and women.

MICHIGAN BUSINESS FARMING is gratified that Michigan has done so well in receiving the National Grange and showing its respect for that great order. It is the hope of this publication that the Grange may continue to grow and prosper and perform its allotted duties in the agricultural communities. The aim of all human endeavor should be helpfulness and co-operation, and these we understand are some of the motivating influences of the Grange. There are vost numbers of farmers who belong to no organization and it should be the purpose of the Grange and the other farm organizations to gather them in under their wings and show them the way to the right kind of organized effort. But before that can be done, the Grange, the Gleaners, the Clubs, the Unions, the Farm Bureaus and all other existing farmers' organizations should attempt to find a common ground and work in harmony and union. We shall count no day in agriculture greater than the day on which it shall become known that the common tie which must certainly exist between all farmers has been found and will be used to cement all who labor in the name of agricul ure in a great national co-operative federation.

They Differ on Farmer-Labor Alliance

MILO CAMPBELL

GIFFORD PINCHOT

"Farmers and wage earners have nothing in common," said Milo Campbell in politely declining Pres. Gompers invitation to affiliate the National Federation of Milk Producers with the American Federation of Labor.

"The interests of farmers and wage earners are identical." retorted Gifford Pinchot, in recommending that the Grange unite with organized labor.

And there you are.

The National Grange is deep in the discussion of the matter as we go to press.

Grange Notables at Grand Rapids

No. 1—Three Generations of Grangers who took the Seventh Degree together. Miss Etta Parks, Mrs. Daisy Parks and Mrs. Sarah Lord of Berlin (Marne), Mich.

2—George B. Horton, Past Master Michigan State Grange.

3—Mrs. Dora Stockman, lecturer, and Miss Jennie I. Buell, Secretary Michigan State Grange. Mrs. Stockman is also a member of the State Board of Agriculture.

4—Leslie R. Smith, Master Massachusetts State Grange.

5—T. C. Atkeson, Washington representative National Grange; S. T. Lowell, chairman national executive committee; Oliver Wilson, Master National Grange.

6—Mrs. Oliva J. C. Woodman, for twelve years Chaplain Michigan State Grange.

7—Class of 1600 candidates who took the seventh degree, "The High Priest of Demeter."

8—State Master and Mrs. Walter R. Havens, New Jersey State Grange.

9—State Master and Mrs. B. Needham, Kansas State Grange.

10—State Master and Mrs. T. W. Williams of North Dakota State Grange.

11—Peter A Kleas, gatekeeper Michigan State Grange.

12—T. E. Niles, steward and A. E. Ilenden, in charge of arrangements, Michigan State Grange.

13—Sen. Jas. McNaughton, Michigan State Grange leader, author of Farmers' Warehouse Bill.

MARKET FLASHES

BUSINESS AND TRADE

Shortage of crops used to be the factor which would most likely boost prices in the market centers of the United States, but today a different set of causes most often furnishes "kick" in the markets. One of the chief things now affecting prices, mostly upward, is COAL.

Coal miners for the most part seem to be going back to work, but the production still is below what it has been, and the losses through the coal strike in Mich. alone result in loss of more than 50,000 tons of coal and the great coal states have lost hundreds of thousands of tons. All this has done much to hold up industry and railroad movements. The shortage of cars made much more acute by the lack of coal has been the bullish factor in Chicago, Detroit and other markets for a considerable while. In spite of bearish news of every description the first days of this week, grains gained because of the coal situation.

From New York an encouraging bit of news tells of the resumption of export trading, now that the longshoremen's strike seems to be completely healed. The European crops turned out short and authentic sources state that their exports will be far less than have been expected.

A slight disturbance in the stock exchange has been roused by the government mix-up with the Southern Pacific. But the big government news of interest to the markets is just over the horizon—the senate and presidential action on the Peace Treaty which is bound to break soon. The president threatens to throw over the entire treaty unless the reservations which "cut the heart out of the treaty" are omitted. With the treaty question out of the way a great deal of the present uncertainty in business ought to vanish.

WHEAT CLIMBS HIGHER

WHEAT PRICES PER BU., NOV. 18, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.24	2.24	2.35
No. 2 White	2.22		
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.22	2.21	2.34
No. 2 White	2.20	2.21	2.34
No. 2 Mixed	2.20	2.20	2.33

Several days ago various high grades of wheat took a hard tumble when the United States Grain Corporation announced that it was going to help "relieve" the high cost of living by reselling some of its stocks of wheat in order to keep the prices from going too high. No. 1 dark northern wheat was selling at some points for $3 at that time and the news brought about a drop of 15 cents. In the last few days, however, the grain public has come to believe that the Grain Corporation has only a limited supply which it may resell and that it is especially short on spring wheat. Accordingly the higher grades of wheat have soared to higher levels and Chicago quotes No. 1 dark northern at $3.16 per bushel with the demand good.

Of course, few farmers have such high quality wheat to sell, but the general effect on the wheat market is strengthening. The Detroit warehouses are known to have stocks of 77,000 bushels against 23,000 bushels last year at this time, and the receipts are somewhat smaller than a year ago. Shipments were also smaller. Nevertheless the Detroit wheat market is strong in keeping with the general tendency. Chicago wheat markets appear especially strong at this time and the demand is good.

ONIONS SCARCE AND FIRM

Onions, due to car shortage coupled with small production, are very scarce and firm in all lines in Detroit and other big produce markets. The crop of onions this year for the United States is estimated as only about two thirds of the average yield for the last few years. There is far more of a demand than the supply can satisfy. Detroit quotes: $4.50 per 100 lb. sack.

LAST MINUTE WIRES

DETROIT, Nov. 19.—Shortage of coal and cars drives all grains to a higher level.

Produce of all kinds short and demand strong. Fresh eggs, butter and best chickens in demand; turkeys rather quiet.

CHICAGO, Nov. 19. — Live stock business more active with prices fluctuating with an upward tendency. Sheep not in demand. Good demand for heavy horses and mules.

Grains of all sorts boosted by car and coal shortage. Good butter and eggs in demand. Top wheat price at $3.16.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

R. R. Administration Explains Car Shortage

FROM A number of sources we have received complaints of a shortage of cars, and the charge has several times been made that the railway administration was discriminating against Michigan in the allotment of cars. One correspondent pointed out that the smaller number of shipments of potatoes out of Michigan as shown in comparison with those of other states by the Bureau of Markets reports was evidence enough of discrimination. Investigating this claim, however, we found that the potato movement had not been materially delayed because of a lack of cars, and that the smaller shipments were accounted for by the fact that the farmers were not selling their potatoes as freely as in other states.

Nothwithstanding that newspaper reports show that all sections of the country are suffering from a car shortage, we wrote to the car service section of the Railroad Administration asking the reason for the shortage and when some relief might be afforded, particularly here in Michigan. We received the following reply:

"In a general way permit me to say traffic generally throughout the country is very heavy, principally due to the fact that during the first six months of the year there was practically no business moving and now business in all lines is trying to make up for the deficiency o fthe first part of the year. You may be assured that everything possible is being done to meet the enormous demands of all classes of traffic, but you must also bear in mind that the railroad transportation machine's ability to handle traffic is limited. Railroads today are quite generally handling traffic much in excess of even last year which was an exceptionally heavy year, and a number of things are militating against the railroads at this time which under war conditions they did not have to contend with. I refer now particularly to the heavy loading of freight equipment. Under the stress of war conditions shippers were generally co-operating and loading all cars to their maximum capacity. This permitted of burdening industrial centers and terminals with a minimum number of cars, allowing traffic to flow freely through the congested centers of traffic. With the war over shippers have fallen back in to the old practice of lightly loading cars, putting no more in them than the minimum allowed under the tariff and still give them the benefit of carload rates. This results in requiring three cars to do the work of two, and in numerous instances two cars doing the work of one. You will appreciate the effect this has on the movement of traffic. Congested terminals and industrial centers slows up traffic, and the light loading of equipment ties up a lot of cars doing one half or one third of the work they ought to be doing, besides taking up valuable terminal trackage space. (*Concluded on page* 17)

Apple Harvest Exceeds All Expectations

There has been too much dumping of apples into the markets to keep apace with the demand, and the result is a dull condition with prices down to as low as $1.25 per bushel in Detroit, although the best quality bring as high as $2.50 per bushel. The government crop report has been pretty bearish inasmuch as 1,239,000 barrels increase has been reported over the total for the month before the present statistics were gathered.

The commercial apple crop of the as of November 1, and shows an increase of 1,239,000 barrels as compared to the October estimate of 23,- United States is now estimated by the government at 24,416,000 barrels. This estimate is based on conditions 177,000 barrels, or a decrease of 308,000 barrels from the 1918 crop. The salient feature of this report is the large increase in the crop thruout the west, notwithstanding a severe freeze the latter part of October in Washington and Oregon, which reduced the total tonnage by approximately 1,000 cars. The production for all the Western States with the exception of Utah, is far exceeding all former estimates. It is now estimated that these states will produce an increase of 2,943,000 boxes over the October estimate. The barrel apple states show an increase of 258,000 barrels over the October report, and are now estimated at 13,590,000 barrels. Slight increases are noted in New England states, New York, Virginia, Missouri and a decided increase in Arkansas, the Arkansas crop being the largest in the history of commercial apple growing in that state.

Excellent yields are reported in Oceana, Mason, Manistee, Benzie, Gd. Traverse and adjoining counties in Michigan. Quality, color and size reported good to excellent in this region. In southern and eastern counties of Oakland, Livingston, Ingham and adjoining couties the crop was light, quality fair to poor. Considerable codling moth damage reported. A large part of the production in this territory is trucked to local markets. Berrien, Van Buren and Allegan counties are estimated at 34 per cent crop as compared to 65 per cent in 1918. Considerable damage from codling moth is reported in these counties. The use of the bushel basket as an apple package was more general throughout Michigan this year than ever before.

State	Condition November 1919	Final 1918	Comm'l Crop November 1919	Comm'l Crop Final 1918
Ohio	21	52	364,000	902,000
Indiana	19	27	187,000	266,000
Illinois	26	29	750,000	837,000

Wisconsin	43	44	121,000	114,000

CORN

CORN PRICES PER BU., NOV. 18, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.52	1.54	1.97
No. 3 Yellow	1.58		
No. 4 Yellow	1.56		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.47	1.47	1.64
No. 3 Yellow	1.45	1.45	1.61
No. 4 Yellow	1.40	1.40	1.58

Corn is temporarily easier and prices eased off a bit at the close of last week. We rather expect to see this easier condition continue for the major part of the current week, as the weather is fair all over the corn belt, cars are to be had in greater quantities and farmers who have been holding back part of their crop are showing a disposition to sell. We do not anticipate any appreciable drop in price, however, and we want to again remind our readers who must buy corn that the present is the time to make their purchases. Those who acted upon our advice when the corn market reached its lowest point several weeks ago now see where they saved considerable money by so doing. The following statement from the Rosenbaum Review is of interest to farmers:

"We shall remember that the surplus producing corn states yielded this year, just an average crop; probably a total yield in all states of 2,- 900,000 bushels. Texas has outcorned herself this year but the surplus is not available for big feeders in the Mississippi Valley. Farmers who own surplus corn are in most instances not disposed to sell at prevailing prices. Our oats crop is over 300,000,000 short of last year, and our barley crop is more than 50,000,- 000 short. Country bankers tell us that farmers have never had so much money as now. There may be speculators who know just exactly what the farmers are going to do, but the farmer himself has not advertised it. These and other facts lead us to suggest that we may expect to see May corn reach $1.50 per bushel."

Oats have crept up since last week and made an additional gain of one half to one cent on the opening days this week. Shortage of coal and resulting lack of cars in the face of good demand was perhaps the most bullish factor this week, and the upward move of corn reflected its trend as usual upon oats. The export demand for heavy weight oats continues strong, while light weight oats have been selling at a discount under the December. The demand in America for oats has been holding up remarkably well due to the shortage of the oat crop. When the Peace Treaty is settled it is believed that foreign credits will be extended which will make the oat market even more bullish. A threatened rail strike has also made the buying pretty eager.

RYE AND BARLEY STRONGER

Rye jumped upward as much as two cents in the markets the opening days of this week, but even this gain did not bring it back to the level it had attained a week before. The gain this week was partly due to a general boost in the grain markets due to rail and coal difficulties. Rye in Detroit is quoted: Cash No. 2. $1.36. Barley also showed firm this week and is quoted the same as a week ago in Detroit, while Chicago reports a gain of 3 cents, with a strong demand from maltsters in evidence. Detroit quotes barley at $2.70@2.80 for cash No. 3.

"THE use of Goodyear Cord Pneumatic Truck Tires on my truck has saved me a great deal of time and money. They are an economy all around in general farm work and livestock hauling—especially over farm land and rough, slippery country roads."—Mr. W. H. Duley, Livestock Farmer, Starks, Maine

THE photograph above was taken January 3rd, 1919, on the livestock farm of W. H. Duley, ten miles from Starks, Maine.

At that time Mr. Duley told us that he had been hauling on Goodyear Cord Pneumatic Truck Tires during weather that had stopped local solid-tired trucks.

The tractive Goodyear Cords had enabled his truck to overcome fierce road conditions and, in addition, to pull solid-tired trucks out of mire and up stiff grades.

The easy-rolling Goodyear Cords had enabled his truck to average three and four trips to town per day, an amount of hauling which would have required three teams.

The cushioning Goodyear Cords had enabled his truck to deliver decidedly good mileage on gasoline and oil and to remain in excellent mechanical order despite the bad going.

On top of all this, the tough Goodyear Cords had outlasted neighbors' solid tires which wore down rapidly due to spinning in the gravel on the steep hills.

This latter performance particularly reflects that long pioneering work with which Goodyear has developed Goodyear Cord Pneumatic Truck Tires for very severe hauling duty.

Michigan's Trapping Season Now in Full Swing

New Laws Put into Effect at Opening of Hunters' and Trappers' Season; Fur Farming Booms

By VERNE E. BURNETT

TRAPPING and hunting are now well under way in Michigan and other states famed for the game in their forests. With the opening of the season this fall, every fan of the great sport of trapping and hunting is aware of the fact that there was never before so great a demand for furs as at present. The farmer and his sons may be seen in almost any section these days planning ahead for the sport and paying business of outwitting the crafty inhabitants of the wild nooks and crannies of the country.

Just to show the interest which the public and the public servants show in regard to game, forty-one of the forty-four states holding legislative sessions this year passed legal regulations concerning game. Twenty-nine states enacted laws relative to fur-bearing animals. It is well that every trapper or hunter in the state, no matter how little he goes into the business, know just what the laws are.

Farmer Smith might make a lot of money from selling beaver which he traps this month, inasmuch as the season opens November 1 for beaver and continues until April 15, the close of the beaver season. Smith's neighbor may be so pleased with the idea that he too goes to work trapping beaver. But he doesn't get a license, which the law requires; and presto, he is all out of luck, just because he was ignorant of the state law. And, of course, ignorance is no excuse before the law.

The dates just mentioned for the limits of the beaver season were among the new regulations passed by the Michigan Legislature. The season on otter, mink, fisher and marten is shortened one month, by closing February 15 instead of March 15. October 15 to December 31 is prescribed as the open season on racoons, under the new laws in Michigan.

Anyone who wishes to go into trapping to any considerable extent would be on the safe side if he would write to the Commissioner, Game, Fish and Forest Fire Department, at Lansing, Michigan. From the Commissioner's office any special information would be furnished to trappers. In certain cases the trapper should furnish himself with a range map, as in the following instances.

The new game laws of Michigan include the provision that the open season for muskrats, one of the best known of all the trapper's acquaintances, shall be October 16 to April 14 north of Range 20, and December 16 to March 31 south of Range 21. Up until this year, trappers may recall, the open season for the state as a whole had been fixed at November 16 to March 14.

Just a word of caution in regard to trappers living near a city which has a big woodland park. According to the new regulations, badger, beaver and muskrat are not to be meddled with at any place within two miles of any city public park containing over 200 acres of which 50 acres or more are woodland.

That Valuable Little License

STATE officials have authority to be pretty harsh with offenders against the state laws. So the trapper finds it a mighty important thing not to get trapped himself by a game warden. One of the most important things, of course, is that every trapper go forth armed with a state license as well as a trusty set of traps or a regular gun, or both.

The precious little life-saver in a secure trapping business, otherwise known as the license, costs various amounts according to the kind. If you are out after big game, namely bear, the trapping or hunting license required is only $1, provided you are a resident of the state. If you are a non-resident, the license costs $10.

To be a licensed beaver trapper, the law requires a payment of $10 by residents of the state. This beaver license permits one to take 15 beavers during the season but not more than four may be taken from any one colony. The idea, of course, is to prevent the beaver from being destroyed completely. It is unlawful to destroy beaver dams or houses or to have the carcass or skin in your possession without the license seal attached. Inasmuch as the beaver fur is of great value, it is important that the trapper keep within the law and reap some real financial harvest out of his labor.

The raccoon is harder to trap than the skunk. Sets ought to be made in water whenever possible. Coons have a keen sense of smell. However, when sets are made for the 'coon, it must be remembered that nothing smaller than No. 1 1-2 traps ought be employed. So far as possible, avoid stakes for fastenings. Instead, wire the chains to logs or rocks weighing about twenty pounds. Such fastenings do not permit a pull on the jaws as fixed ones do. Therefore, there is less chance of the raccoon getting out. The raccoon likes timber. Small streams, shallow lakes, ponds and marshes are good places to look for signs. The tracks of the 'coon resemble the imprints of a baby's foot and once seen are never forgotten.

Large hollow logs furnish good places for sets when anchored in shallow water, close to shore. Traps ought to be placed near the entrance. If too deep, make bases out of mud, sticks or sod if too shallow, scoop out excavations for the sets. Have the jaws under about three inches of water. Eradicate, so far as possible, boot tracks and other signs of man. Dash water over everything with which the hands may have come in contact to destroy human odor. After this, sprinkle bait on the log so it will not be washed away.

The Stone Age is Gone

ANYONE WHO visited the State Fair this fall could get some idea of the odd variety of weapons used in killing fur-bearing animals in Michigan. The display which might remind one of the crude implements devised way back in the stone age when it was "everybody for himself" and so on. In the stone age, they say, animals were often killed just from habit or for the fun of it, without regard to the maintaining of a wild game supply for our children and for our great grandchildren.

But the stone age is gone, even in the trapping sections, where law and order is spreading out their tentacles. The law in Michigan forbids the use of spears, for instance.

Along with the stone age, the terribleness of modern warfare methods are also tabooed. Explosives and chemicals are declared unlawful when used to molest dens of fur-bearers. You are no longer allowed to use smokers to drive animals from their dens, says the law. It is unlawful to destroy the dens or homes of beaver, muskrat or skunk.

It goes without say that one is not supposed to have in his possession a carcass or pelt of an animal killed in a closed season. But here is a regulation which many trappers probably do not know. It is unlawful to set a trap within six feet of the home of a muskrat. You are allowed, of course, to shoot a beaver which is destroying your property.

Skunks are not hard to trap and may be taken in almost any kind of a set. Skunks prime first in fall and for this reason the beginner will find them profitable to catch. Skunks generally stay close together. Often as many as ten of twelve may be found in a single den. The burrows are not hard to find and often may be discovered under old houses, near sheds, around straw piles, in weed patches. Good sets may be arranged in territory which the animals frequent, at the mouths of small dry culverts under roads.

Good bait is a necessity to the skunk trapper. It will lure the fur bearers to sets long distances.

Traps may be placed near entrances of dens. No decoy is necessary. However, if this method is employed, only one skunk can be expected from the hole during a night. For this reason, pen sets are generally preferred by the pelt hunters.

Money from Bounties and Farming

NOW AND THEN a trapper may stumble into a streak of luck by getting a bounty. The state provides a bounty of $35 for a wolf, and certain localities give a big additional bounty. Then by finding the den you get an additional bounty of $15 for each wolf cub, and local bounties are sometimes given in addition. Of course, the fur business is too lucrative just now to make the state bounties mean much in case of several of the rich fur animals. But the bounties are interesting to know: coyote, same bounty as wolf; wildcat or lynx, $5; fox, $1; weasel, woodchuck, howk or owl, 50 cents, paid by the county and half refunded by the state.

The laws of Michigan and many other states have recognized a very important phase of the trapping business, or rather, the fur business. Fox farms, deer farms, and many shapes and descriptions of fur farming are springing up in America, notably in Michigan. The West and all the North of the State is known to have here and there, the various sorts of fur farms. Species of fox, for example, which possess great fur value, are penned up often on large tracts with the natural environment maintained. There are risks in the business, to be sure, but sometimes one season has been known to bring a fortune to breeders of silver fox, for example.

In order to raise fur-bearing animals lawfully, a fur farmer is required to pay an annual license fee of $5 to the state. Another requirement is that all live animals and skins of animals raised in capitivity must be tagged. There is a fee of five cents for each of these tags. The purpose is said to be protection of animals raised in captivity.

The business of fur farming is increasing so rapidly that there must be many just entering the business who will be benefitted by the following booklets furnished by the government. By writing to the United State Department of Agriculture, Washington, D. C., you can obtain free: Raising Belgian Hares and other Rabbits. (Farmers' Bulletin 496.) The Common Mole of Eastern United States. (Farmers' Bulletin 583.) Economic Value of North American Skunks. (Farmers' Bulletin 587.) The Domesticated Silver Fox. (Farmers' Bulletin 795.) Trapping Moles and Utilizing Their Skin. (Farmers' Bulletin 832.) The Muskrat as a Fur Bearer. (Farmers' Bulletin 869.) Fur Farming as a Side Line. (Yearbook Separate 693.) Annual Report of the Governor of Alaska on the Alaska Game Law. 1918. (Biological Survey Document 110.) Directory of Officials and Organizations Concerned with the Protection of Birds and Game, 1919. (Department Circular 63.)

The following are for sale by the Superintendent of Documents, government printing office, Washington, D. C.: Deer Farming in the United States. (Farmers' Bulletin 330.) Animals in the U. S., price 15 cents. Price 5 cents.

The interesting subject of fur farming, its laws and possibilities, will be left for later issues. But here let it be said that it can be just as much a regular business as any other form of farming. In fact, fur farming is already a highly developed business. The writer is acquainted with men with excellent business training who have gone into fur farming as one of the most practical of business ventures and they are succeeding.

In the limited space allotted here for the subject of laws on trapping and fur farming, it has been possible to furnish only the most limited survey. But anyone who is interested in any special part of the regulations regarding the subject is invited to write to Business Farming, and answers will be obtained for all queries. Not only questions but also comments and stories about your trapping adventures are sought because of the great interest among many thousands of our readers during the trapping season. In fact now is the day of days in the fur business, and the real fur business farmer is now in the entrance of what looks like the greatest, best, richest fur season.

More trappers take the muskrat than all the other fur bearers put together. The animal is widely distributed and seems able to adapt itself to encroaching civilization where others have become almost extinct. The Indian name is "musquash." No great skill is required to get the pelts, especially if good bait is employed. Shallow water is the best spot to look for signs—in sluggish streams, marshes and lakes. In these places the muskrat generally builds houses and where there is a comparatively swift current, excavates dens in banks. However, houses are sometimes seen in rivers and creeks; burrows in banks along lakes and ponds. This by the way, is the exception rather than the rule and accounts for the belief that there are two different species of the fur bearers.

Sets for muskrat ought to be under water from two and a half to three inches. When this is done, the animals are taken by their longer and stronger hind legs rather than by the shorter and weaker front ones. Consequently, more furs are caught instead of feet. The pelt hunter will want to remember this when after the musquash; also that chains ought to be fastened in deep water so the animals will drown. As the metalic jaws close, the animals seek to rid themselves of the steel by diving and if permitted to do so, usually tangle the chains and are not able to reach shore.

VREELAND FUR CO.

H. F. BLAKE

Let Michigan's Best Known Fur Buyers Handle Your Furs

All the old Trappers and Dealers Know Will Vreeland and Harry Blake

Will Vreeland was born in Rockwood, Mich. He has trapped and shot every fur animal in Michigan and he knows the Trappers' troubles. Harry Blake was born in Harrisonville, Ohio, and he, too, has been a Trapper.

Both have bought furs in Michigan—Vreeland for 30 years and Blake for 16 years and they have a host of friends among the Trappers and Dealers because of their square deal policy.

LAST YEAR WE BOUGHT

$702,603.63

MICHIGAN'S BIGGEST FUR BUSINESS

During the 1918-1919 season we bought raw furs for which we paid Trappers and Dealers a total of $702,-603.63.

That's the biggest fur business in Michigan and, what's most important to you, everybody that dealt with us was satisfied.

We'll make it our business to see that you are satisfied when you send your furs here this season.

Trappers:

Every fur you send us will be examined and priced by Will Vreeland or Harry Blake PERSONALLY. You'll get personal service just the same as if we could call on you.

Dealers:

Drop in to see us, if you're near Detroit—we'd like to talk over with you the prospects for this season's business. If you can't get in, write, and we'll try to see you later in the year.

If you haven't dealt with the Vreeland Fur Company before, ask someone who has. If others say they've had a square deal, you'll get a square deal, too.

Send your furs this year to

VREELAND FUR COMPANY

41 JEFFERSON AVE., DETROIT, MICH.

"You'll Be Satisfied"

Canadian Farmers are Bucking the Milk Trust

Michigan Dairymen May Learn a Lesson From Canadian Farmers' Efforts to Market Their Own Milk

The following article is a story of the successful efforts of the milk producers in the vicinity of Vancouver, B. C., to sell their milk direct to the consumer. It was written by Mr. H. Higginbotham of Vancouver and was published in a recent issue of the Grain Growers' Guide. —Editor.

IN THE two and a half years that the Fraser Valley Milk Producers' Association has been at work it is estimated that the association has saved its 1,400 members just $1,000,000 which would otherwise have gone into the pockets of the middleman, or have been wasted by inefficient methods and overlapping distribution.

What this association has done for the dairyman in the fertile bottom lands of the Fraser Valley, lying between Chiliwack and Vancouver, is one of the most striking examples of successful co-operation among farmers that can be found in Canada today. During the past summer, to the producers, the association has brought just 25 cents per pound butterfat more than they could have got had the association not been in existence. In 1918 more than 2,000,000 lbs. of butter fat were handled through the association, and this year's total will be considerably larger.

Wonderful Progress

The progress made by the association in the last 30 months is nothing short of wonderful. Discussing the present status of this lusty young organization, H. W. Vanderhoof, a member of the executive committee said:

"Our association at the present time controls the local manufacture of butter and cheese practically entirely, while we have now 65 per cent of the retail milk business of Vancouver in our hands. We have displaced the capital of the middleman with our own capital, and we are able to give to the consuming public of Vancouver their milk at **a price which is considerably less than any other coast city.** Not only that, we have progressed in a sane way. Our distributing plant in Vancouver is being remodeled, and in a short time it will have sufficient capacity to handle practically the whole of the retail business in the city. In the first few months' operations in Vancouver, we have, besides writing off a considerable amount for depreciation, been able to make a substantial profit which will go towards retiring the investment. And as time goes on we will be able to further narrow the margin between the price paid to the producer and the price paid by the consumer. That has been our goal from the start and still is. So far as the middlemen still in business are concerned it is just a question as to how long they will be able to stand the margin being constantly reduced.

"Of course our association has had to face a good deal of misrepresentation at the hands of our enemies and some of this misrepresentation was believed by the public. However, the public had to be educated just in the same way that our own producers had to be educated at the start. In the way our association is handling the product, we are able to divert any surplus over night into a new market, thus eliminating waste and maintaining the price to the producer. Our milk, of course, has the following markets: whole milk, condensed milk, ice cream, butter and cheese. We are now the main factor in all the markets with the exception of the condensed milk, which we have not been able to enter as yet owing to the fact that condensaries involve a very heavy investment of capital and we have been able to get a fairly commensurate price from the condensaries because we control the supply. However, the price at the condensaries is not yet what it should be, mainly because Ontario is not organized and Ontario, being a large producing province, and having several condensaries, really sets the price on condensed milk in Canada. The price that we are able to get from the condensaries at the coast is therefore based on the price of condensing milk in Ontario plus half the freight rate from Ontario to the Pacific.

"In twelve months time we will probably be handling 90 per cent of the city milk distribution in Vancouver. By that time we hope to have a utility plant just outside the city where we can handle by-products, such as skim milk, to the best advantage."

Organization Was Not Easy

This association grew out of a Milk and Cream Shippers' Association, which was carrying on work along the same line as the U. F. A. Milk and Cream Committee is doing in Alberta at the present time. The agitation for improved conditions among the dairymen supplying the Vancouver market began to take definite shape in 1912, and in 1913 a charter was secured from the provincial government to incorporate the Fraser Valley Milk Producers' Association. At that time Vancouver was not going very far afield for milk, and Chiliwack was not supplying any milk to the Vancouver market. The electric railway which placed Chiliwack within three hours of Vancouver made a very great difference and immediately placed the producers at Chiliwack, 75 miles away, in competition with those around Vancouver. This brought home to the producers near Vancouver very forcibly the fact that they could not expect to hold the high milk market for themselves unless they were willing to meet the competition of men who were able to ship from a distance.

Attempts to complete the organization were not very successful, and after a short time the promoters decided that the majority of producers were not quite ready for such an organization. It was necessary to "let the shoe pinch" a little more, before the farmers were ready to organize. In 1916 a second attempt was made to get the organization on its feet, and this time with not much better success than the first time. Finally, in the spring of 19171, a third attempt was made and this time the conditions were ripe for success.

Owing to the war conditions, costs of milk production had been steadily increasing and with the return of spring, the milk companies were preparing to lower prices to the producers. Notices had been sent out that the price of milk would be 55 cents per lb. butter fat, commencing with June 1, the season of flush production. The winter and spring prices had not been remunerative, and the producers who had been slow to turn as the proverbial worm, were at last aroused into action. Meetings were held in all the principal centers throughout the Fraser Valley and the producers were asked to sign a contract to ship their milk for one year to their own association, being given the assurance that they would not be held to their contracts unless 75 per cent of the milk produced in the Fraser Valley was contracted to the association. The campaign was successful, and the required amount of milk was signed up, although it afterwards turned out that there was more milk in the Valley than had been estimated.

Armed with these contracts, the five provisional directors of the association interviewed the milk companies and instead of 55 cents they secured 65 cents per lb. butter fat. This practical demonstration of what co-operation could accomplish turned the scale, and farmers began to flock into the association unsolicited.

At the start producers were asked to sign contracts for one year, and to take stock on a can basis. Subsequently they were asked to sign three year contracts and were simply assessed on the amount of butter fat they had shipped during the year. On the amount of milk signed up at the start, the shares at $50 per can gave them a capital of $140,000. Today the capital is $350,000.

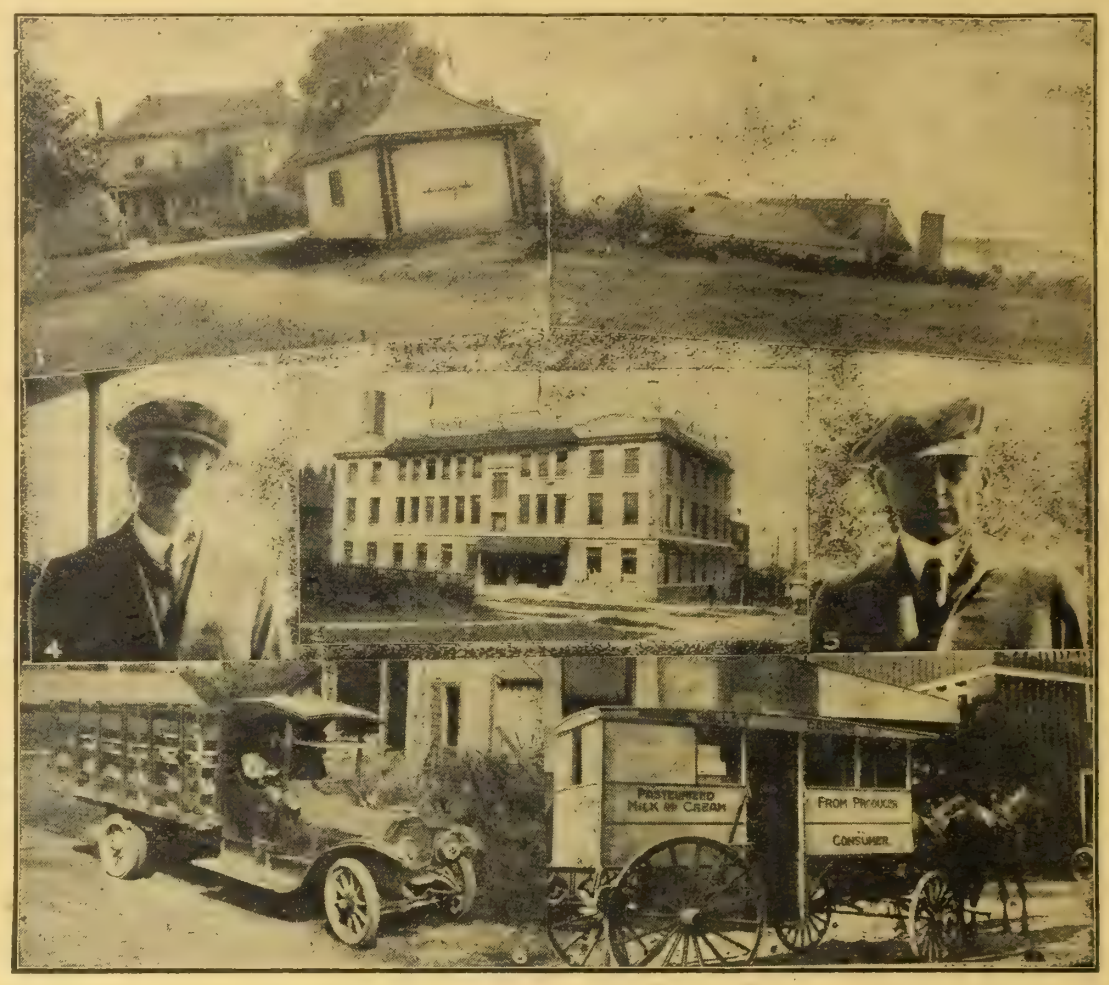
The association has been very fortunate in having some able and far sighted leaders. Both the present premier of British Columbia, Hon. John Oliver, and the present minister of agriculture, Hon. J. D. Barrow, were on the first board of directors, both being farmers chiefly engaged in dairying, Mr. Oliver at East Delta and Mr. Barrow at Chiliwack.

The association's early efforts at financing a large business did not meet with any better support from the banks than some other farmers' companies have met. The first loans they secured at the bank were secured on the farmers' notes, on which the banks would only loan 50 cents on the dollar.

Later on they secured a credit at the bank of $10,000. The association's business was growing very rapidly and much larger credit soon became necessary. The officers of the association went to the bank and asked for $150,000, offering farmers' notes as security. They were met with a refusal. "You know the bank's rules," stated the manager, and he offered to loan up to 50 per cent of the value of the notes. The officers of the association believed that they were entitled to the credit and they appealed to the higher officials of the bank and found there a business man with some faith in farmers' organizations, with the result that the credit was forthcoming to the full extent of the notes. At the present time the organization has one-half million dollars invested.

Ten per cent of the paid-up capital goes into what is called a redemption fund, out of which at any time any member who is going out of the dairy business may receive the full value for his shares which he turns in to the association, plus six per cent interest on his money. This fund was started mainly for renters, of whom they are a fairly large number among the dairymen and who might at any time be obliged to sell out. It has been an important factor in getting the support of these men. Up to the present time, however, there has been more than enough demand for stock from prospective new shareholders to redeem all the shares turned in to the association without drawing upon the redemption fund.

(Continued on page 19)



Illustrating Some of the Activities of the Fraser Valley Dairymen.

1—Farm house of J. W. Berry, President, Fraser Valley Milk Producers' Association. 2—Buildings on a Fraser Valley dairy farm. 3—One of the large milk plants in Vancouver taken over by the company. 4—W. Park; and 5—H. W. Vanderhoof, two of the mainsprings of the association. 6—Collecting milk near Vancouver. 7—One of the 47 rigs used in delivering milk to consumers in Vancouver.

MILK PRODUCERS' marketing problems are about the same the world over. Various solutions have been tried but the only one that stands the test of time and approved business ethics is the plan here discussed. Milk associations may cut and try and compromise, but we predict that their experience will eventually lead them to the "direct-from-producer-to-consumer" system which has been tried with much success by our Canadian brothers.

A good start is half the battle, in growing corn. The corn at the left was grown on fertilizer applied as directed by our Agricultural Service Bureau, and yielded three times as much grain and nearly twice as much stover per acre as the strip of corn at the right, which for purposes of comparison, was not fertilized. No manure was used.

Don't Work for Your Farm— Make Your Farm Work for You

Real mastery of the soil cuts out much of the labor and worry of farming. What would it be worth to you now—*today,* for example,—when prices of farm products are at high level, to know just what course to follow with some unproductive meadow or field where all your efforts have failed to bring the results desired. The proper selection and use of fertilizer are important; so is the selection of seed, but the ***proper management of the soil*** is important as well.

Why not find out just what to do? Why not consult our

AGRICULTURAL SERVICE BUREAU

THIS Bureau has carried on field tests for many years with many kinds of fertilizers and fertilizer materials, lime and other soil amendments in many states on different soils, under different conditions of rainfall, climate, etc. It has demonstrated to many farmers the best fertilizers for their purpose and the best ways of using them as well as the best methods of managing the soil. Each farmer has his own soil problems. Perhaps our Bureau may help you solve yours. It is under the personal charge of Dr. H. J. Wheeler, formerly Director of the Rhode Island Agricultural Experiment Station.

This service is free to you.

"How to Make Money with Fertilizers"

is the title of a 56 page book (46 illustrations) containing information every farmer needs in relation to the proper use of fertilizers; it shows where profit is to be found, and how to get it. It is different from other fertilizer books and is not a catalogue. Any one of our offices named below will send it to you free. Simply mention this paper and ask for the book. Do it now. Don't work for your farm. Make your farm work for you.

If we have no agent in your town, we want one. Write us for nearest agent's name or ask for an agency yourself.

Many of our brands have been on the market for forty to sixty years.

Profiteering

THIS IS one of our new words. It became very popular during the war and still has its uses. The only people in the good old U. S. A. who are not profiteering are I and thou and even thou wouldst profiteer if thou hadst the chance. From different sources we learn that labor, farmer, manufacturer, store keeper, and landlord are all profiteering. If that's the case, why grumble?

We go to labor and say: "You are accused of profiteering? What have you to say for yourself?" Labor replies: "True, wages have gone up but no higher than the cost of living. Some in our ranks are making big money but the most of us are barely making a decent living."

We go to the farmer and say, "The consumer says you are a profiteer. Can you afford to cut down your prices?" The farmer answers: "No. Higher prices for my products mean nothing to me if the cost of producing them increases the same ratio. I still work early and late and have no more, if indeed as much, as I used to have when wheat was 80 cents and corn 60 cents a bushel."

To the manufacturer we say: "How is it that the prices of your commodities have advanced one hundred per cent in the last three years? Surely you are profiteering?" But the manufacturer denies it. "Wages have increased; materials cost more;; production is less and the purchasing power of my profit dollars is only one-half what it used to be. In order to secure a fair return on my investment I have to charge double for my product," he says.

The store keeper also denies the charge that he is laying away big profits. "My overhead has increased enormously, but my number of customers is about the same. Competition is so strong that I find it hard to increase my margin enough to pay the extra cost of doing business. Look up the number of failures in my line of business the last year or so and you will not think that I am profiteering."

These are all good arguments and for the most part they are borne out by the facts. Here and there is a laborer filling a very important position requiring skill and experience. He is earning $25 a day. In comparison with his fellow workers he is profiteering. In other words he is making more money than he requires to live comfortably and save a sufficiency for old age. Here and there is a farmer who by rare good luck and exceptional foresight produces a crop that pays him large profits. Perhaps in comparison with his less fortunate neighbors he is a profiteer. Yet it would be wrong to label all farmers "profiteers" because of the chance good fortune of a very few of their numbers.

A little investigation, coupled up with good horse sense, will make us realize that those who deliberately profiteer are very few and far between. We have no doubt but that the high monkey-monks of the profiteering ring could be counted up on the fingers. Most of them are trusts who have exploited natural resources and squeezed competition to death. There is the oil octopus, the steel trust, the coal combination, the packer ring, and that mysterious monster which has a finger in every pie that is cut and is known by the indefinite title of Wall Street. Cut the talons and clip the wings of these and the cost of living will come down with a thud.

Canadian Dairymen Take Lead

EVERY ONCE in a while we are painfully reminded that the farmers of Canada are about two jumps ahead of American farmers and gaining every jump. We may as well look the truth in the face and acknowledge that we are mere pikers in the co-operative and political game as compared with our Canadian cousins.

The biggest farmers' co-operative success in the western hemisphere is the United Grains Growers of western Canada. We wouldn't dare to tell you the volume of business this association did last year. The figures would give you a head-ache. And that is only one of scores of big co-operative agricultural ventures across the border. We think of the Non-Partisan League as a tremendous political power, but it doesn't hold a candle to the united political power of the agricultural forces of the several Canadian provinces. In Canada the farmer is a force that is mightily respected and feared.

In this issue we present the story of another example of Canadian agricultural progressiveness. It is the story of how the dairymen of Vancouver, B. C., tackled a quarter of a million dollar milk business, busted the milk trust, tried the direct-from-producer-to-consumer system, and made it PAY,—both the farmer and the consumer. Like all other cities of sizable proportions Vancouver bought its milk from twenty to thirty different distributors who paid the farmers what they pleased. But after the farmers came to their senses and decided to conduct their own business, Vancouver has been buying most of its milk direct from the farmers' organization, the consumer paying less and the farmer receiving more. And so far as the farmer is concerned he is free at last from the dictation of the milk trust.

The plan adopted by the Vancouver farmers would work admirably in many Michigan localities. Properly organized and financed producers' associations could very profitably market milk of their members in such cities as Detroit, Grand Rapids, Jackson, Lansing, Kalamazoo, Saginaw, etc. All that is required is leadership, vision, backbone and capital. The farmers have all these essentials to command. The opportunity is here. The iron is hot. Strike before it cools.

Will It Stand the Test?

THE AMERICAN Farm Bureau Federation has arrived. It has been introduced to the world in sundry flowery speeches illuminated with flambouyant and extravagant superlatives. One enthusiastic admirer modestly proclaims that "it is the most promising child ever born of agriculture." Another that "it marks the greatest epoch in the history of agriculture." When the winds of reason have dissipated the gas clouds and we are able to see this "child" in its naked immaturity, we shall find many interesting things about it.

The first thing that will impress us is that its leaders represent the highest type of American citizens. They are strong for Americanism. Amen for that! They are well-educated, intelligent, successful. All are good qualifications. Look at their hands. Some of them show callouses,—signs that they work. Also good.

Trace the farm bureau back to its origin and we find that it did not spring from the farmers. It was an idea that came out of the Department of Agriculture. Men of good motives and bad saw in it the seed of a wonderful nation-wide organization of farmers. Fearing that it might not function to their liking and desirous perhaps of putting this new organization under obligations to them, bankers, manufacturers and commercial interests of the country rushed forward with funds to hasten the work of organization. Aided by this money several state farm bureaus have built up a large membership in an incredibly short time.

So then we find the Federation starting out under the handicap of debt,—a debt, both of honor and money,—owing to large corporate interests. Perhaps the state farm bureaus can pay their obligations of money and go on their way rejoicing, free and unencumbered. But we doubt it. The debt of honor still remains, and those who hold that debt, will exact their pound of flesh. In fact, some of the resolutions passed by the American Farm Bureau Federation would indicate that they have already exacted several pounds of flesh.

If the American Farm Bureau Federation can become an independent agent, acting solely and at all time in the interests of the farmers, we shall expect great things of it. But it will have to stand the test. If it wavers or shrinks from its duty to the farmers; if it compromises where victory only is honorable and just; if it accepts orders from the same source it has accepted money,—it will not,—it cannot survive. It will pass away to the bone-yard where rests the remains of many a farm organization, conceived from high ambitions and ideals, but blasted sooner or later by corruption.

We are willing to make liberal concessions to the American Farm Bureau Federation. Mighty potentialities lie dormant in the infant prodigy. Let us hope that they may be developed properly that the child may grow in strength and power to become a stalwart and a never-faltering champion of the farmers' rights.

Farm Organizations and the Railroads

WHILE western representatives to the National Grange at Grand Rapids were submitting resolutions favoring government ownership and a continuation of federal control for aothern two years, delegates to the convention of farm bureaus at Chicago passed strong resolutions against government ownership and demanded the early return of the roads to the private owners.

The Grange is the oldest farmers' organization in existence. It is also one of the most conservative. Ten years ago the Grange membership would have held up its hands in horror at the mere suggestion of government ownership. But the Grange tries to keep abreast of the times, and we are not surprised to find a strong sentiment prevailing among the voting delegates favoring rigid government control of the transportation systems.

The resolution adopted by the farm bureau federation reads as though it might have been penned by a railroad corporation attorney. It is of the stereotyped form that has made its frequent appearance in various conventions and has been guided safely through resolutions committees and voting delegates under the special tutorship of corporation agents trained and paid for the job.

A simple way of getting rid of annoying proposition is to "resolute" ag'in it, but it seems singularly inappropriate for an organization that claims to represent the farmers who pay the freight both ways to vote for a return of the old policies and conditions of railway transportation.

Dr. T. C. Atkeson, Washington representative of the National Grange, who is personally opposed to the Plumb Plan, has said to us: "It is not impossible to oppose the Plumb Plan and at the same time be in favor of government ownership or control of the railroads."

The transportation problem is worthy of the best thought and the closest investigation of our farm leaders and organizations. If they who speak in public for the farmers are not prepared to investigate the problem and frame a policy that will afford a practical and satisfactory solution, they should leave the subject strictly alone. We fervently hope no more farm organizations will take the role of Punch and Judy and squawk out in public whenever rail corporations give them the sign. It may be good entertainment for the corporations, but it's old stuff to the public

WHAT THE NEIGHBORS SAY

FARMERS-LABOR WILL NOT HITCH

Speaking of team-work between agriculture and the so-called labor organizations, I heartily agree with M. B. F. It would be a crime against nature to hitch old Dobbin who has always plowed his furrows long, straight and deep, with such a crazy and balky animal as the so-called labor beast seems to be. Or is it that the fool drivers have got their lines crossed? Many a splendid outfit has been put into the ditch because the driver got his lines crossed. There are more fool drivers than balky animals and that seems to be the case here.

For instance, when the war started the farmer was told to go ahead and plant corn, sow wheat, etc., and to hump himself generally. He knows his business and would have done it anyhow, and did do it, and only when the great books are opened will it be known how much suffering was averted, how many mouths were fed in a starving world. Did they deliver the goods? They certainly did.

Now look at the other side, organized labor. Did they call their men together and say, "now boys, we are in trouble up to our knees head first and need your help. Thousands upon thousands of our sturdiest manhood have been called from the various industries to rescue a bleeding world. Your brothers' lives and the life of this nation depend to a large extent on the ships, the guns, the aeroplanes and the thousands of other things that you may produce and upon the speed with which you deliver them. Come, get busy; put in two, three or four more hours per day, thereby do your bit."

Did they do this? Not on your life! When they pulled the lines and clucked, it sounded like this, "Whoa, Emma, you are working too hard. You'll get some guns and aeroplanes and other things over there before the war is over. Go slow. Now is your time to skin your Uncle Sam; go through his pockets; more money and less work. (Your uncle will have to stand for it.)

Well, our boys and our allies ate American food, our boys used guns of British manufacture (from American models) and used French and English aeroplanes.

What, hitch agriculture with organized labor and let President Gompers drive? I think not. Dobbin prefers Uncle Sam, not Sam Gompers. Kick him in the bread basket Dobbin, if he touches the lines. Politicians are falling all over themselves to pass laws against child labor for fear of competition in the labor ranks and at the same time putting up posters urging boys to join the farmers' working reserve and save the world from starving. Surely they have got their lines crossed.—*H. L. B., Unionville, Mich.*

While it is undeniably true that many labor leaders and many unpatriotic workmen took advantage of the war to force higher wages, do you think that it is fair to hold all labor to account on the same charge? Is it not possible that profiteering manufacturers and scheming politicians may have been as much to blame for hampering production as dissatisfied workmen? We think the rank and file of labor showed itself patriotic and willing to help win the war. True, wages were voluntarily increased, and with the exception of a handful of manufacturers, no class of people profited more from the war than did labor. If we were dealing today with the rank and file of labor our industrial problem would be very simple, but since we are obliged to deal with the same radical labor leaders who raised hell during the war and are still busily engaged in the same pursuit, the problem is very complex. I admire your argument and am sure the majority of our readers will agree with you. My only caution is that we do not permit the unauthorized and extreme actions of labor leaders turn us against labor as a body and cause us to forget that it may have just as real grievances as the farmer.—Editor.

INDIVIDUAL COURAGE OF CONVICTIONS

These are indeed trying times to us all. One wonders where M. B. F. editors have been while the hog trust has been nosing the producers around so ruthlessly of late. After all, it looks like a real, independent editor is a thing of the past. I, too, have occupied a swivel chair in an office and I know that Big Business rules supreme. I still write from the farm but what I write is absolutely uncensored by an special organized interests. What really is needed is less bureaus, committees, yea investigations, and more individual courage of convictions and real backbone. Where is the much vaunted power of "get together" when the test comes, that is while store prices are simply soaring and farm produce going? Maybe you are not enjoying this, but neither do some of us. The continual harping on organization when we know that Big Business has everything in its keeping and that to organize will really work more hardships upon children, widows and the poor and defenseless. Awake, ye sleepy editors, the rocks upon which Rome foundered are near in the channel. A full stomach, a fat bank account and smart city clothes will not quiet the farmers' conscience or kill his sense of fair play to all. The time is doubtless coming soon when farmers will have to take over active management of affairs in general, only let that come before others have ruined everything.—*R. L. Lamm, Litchfield.*

Your rebuke stings as you intended it should. Here's the other cheek. Smite it as hard as you please. It cannot hurt any worse than the first blow. To a publication that has lost thousands of dollars worth of business because of its unyielding defense of the farmers' rights, there is a grist of irony in your remarks. It is easy to criticise, brother Lamm. You'd do better service to M. B. F. and the farmers' cause if you would sit down tonight and tell us exactly what YOU would have done to what you call the "Hog Trust," and how you would proceed to release the world from the clutch of "Big Business."—Editor.

IS FARMER CAPITAL'S MONKEY?

Your very able articles against affiliating with organized labor calls for a word of caution. "Once upon a time a fox had some chestnuts which he wished to have roasted before he ate them. There was a nice fire to roast them in but no way to get them out of the fire once they were roasted, without drawing them out with the fingers. This the fox disliked to do. So he called a monkey and showed him the chestnuts roasting and told him that he could have half of them if he would pull them out of the fire. The monkey promptly pulled the chesnuts out of the fire but burned his fingers so badly in doing it that the fox had disappeared with the chestnuts before the monkey could use his fingers." So I am suggesting that "organized capital may be the fox in the case, labor may be the chestnuts and we farmers may be the monkey. If we farmers were organized we could take sides either way that suited our interests and our ideals of the morals and patriotic motives involved. Until we are organized it seems as though we are spending too much energy in worrying about the closed shop, labor's demands and the patriotism of strikers. It seems to me that we would better spend all our energies in organizing our organizations.

It was my privilege while attending the Farmers' National Congress last week to spend two days traveling among the striking coal miners. I went there expecting to find them living in fine houses with Fords at least to travel in, but I found them living in shacks and the only vehicle they owned seemed to be a dilapidated baby cab. I thought they were striking to work only 30 hours a week but they were striking to get a chance to work that long and as much more as the operators (mine owners) would allow them to work. I found that the miners had been lied about in the world's greatest newspapers and that the farmers had been lied to by the same papers. I came home with the firm conviction that the "world's greatest newspapers" are the world's greatest liars. That these newspapers are in the pay of profiteers who are robbing both agriculture and labor and that we farmers are being deceived by them.

Let's go a little easy in putting our foot on anybody's neck but if we must put one foot on the neck of labor let us get the other firmly on the neck of the profiteers. The mine owners have been giving their men only enough work to keep them alive and by so doing have been able to keep the price of coal very high. This has caused "unrest" among the miners and unrest among the consumers and has given government ownership a black eye because peaple have believed the false claims of the mine owners that they could not get cars. Seldom before this has a group of rich profiteers been able to fool the public in three different directions at once to their own profit.—*John C. Stafford, Lawrence, Mich.*

You ought to know, friend Stafford, that M. B. F. and the majority of American citizens are heart and soul with labor in its constructive efforts to secure fair wages and working conditions. When has the purchaser of the products of labor shown so keen an interest and sympathy in the welfare of labor as today? We all want labor to receive the highest possible reward for its work, but so long as the public and the government are responsive to the needs of labor and willing to see that it gets a square deal, why encourage irresponsible labor leaders to get their clutches on industry and agriculture and wring from them the fruits of their own efforts?

We are face to face with this fact: Organized labor, representing about one-fifteenth of the nation's laboring men, is in the hands of leaders whose ideas and methods represent only a small fraction of those for whom they essay to speak. These leaders, realizing that the general public will never stand for such unAmerican, cut-throat principles as the "closed shop," "sabotage," etc., are appealing to a special class, the farmer, whose ignorance of strikes, walk-outs, picketing, etc., make him an easy prey to their wiles. The question is, "Shall the farmer take the bait that has been offered?" We say, "God forbid." The coal strike could have been arbitrated. The government was willing; the operators were willing; the public was willing and perhaps some day when we know the truth we will find that the majority of the coal miners were willing. But a group of stubborn labor leaders was not willing. They wanted to show their power. They would not arbitrate.

If what you say about the operators is true, do you think the public would have [illegible] for it? Who are [illegible] upon the soft coal mines? The government [illegible] "profiteers," [illegible] the matter [illegible] of the mines. Do you think that any other employer of labor aside from the mine operators there were in sympathy with these [illegible] the operators? Would it not be to the selfish interests to have the grievances of the miners adjusted to the satisfaction of the miners rather than risk a long strike. There was every reason in the world to believe that the coal miners could have practically dictated their own terms at a conference table, but the labor leaders rejected the idea. It was power they were after.

Take the steel strike. Have we a scrap of evidence to show that the steel workers were mistreated or underpaid? A little group of men decided that their power would be enhanced if they forced the steel manufacturers to "recognize" their union. One of these men was named Foster, formerly secretary of the Syndicalist League of America, in which capacity he preached such doctrines as these, 'The syndicalist proposes to bring about a revolution by a general strike." "The syndicalist goes on strike to tie up industry. If his striking fails to do this, * * * * * he accomplishes his purpose by "putting the machinery on strike" thru temporarily disabling it. * * * * * He cuts wires, puts cement in switches, signals, runs locomotives into turntable pits. * * * * * If he is a machinist or factory worker, and hasn't ready access to the machinery, he will hire out as a scab and surreptitiously put emery dust in the bearings of the machinery or otherwise disable it. * * * * * by hiding, stealing, or destroying some small indispensable machine part which is difficult to replace," etc., etc.

And the scamp who wrote this is occupying a high position in a great labor union with which farmers are asked to affiliate. But the farmers who fall for it should remember that "chickens come home to roost" and that the time may come when they will have to protect their own machinery from the destroying hand of the rural syndicalist.

Let the farmer "organize his organizations" as you suggest and he will not need to seek the protection of any other organized class.—Editor.

THE NEW WORD

The one harsh word we hear so often these days of chaos is Bolshevism, and the definition I am told "is to destroy,"—and in most cases the word is used in connection with property. But to my mind there is a more cruel bolshevism than the destruction of money values—the system that by oppression crushes the joy and happiness out of life.

Any business or system that by its nature destroys men's minds and souls, the customs that rob one of their just share in the things God meant for his entire human family. The scathing rebuke; the scorching scandal; the cold hearted contact with hardened souls, the greed of gain which stops at nothing, the desire for force and power over others. The system which does not apply the golden rule and which we see have such undisputed sway on all sides, which reaches from the places in our land on down the line to the very humblest door, the system so dwarfing in its working that would make the poor man a slave in every sense of the word.

Modern business methods are productive of bolshevism, for it is impossible to keep pressing down on any part of humanity and still expect that humans will never reach the limit of endurance.

We all know for every effect there is a cause, and it does not require a scholar to see the cause of bolshevism. Each of us should do our share to help remedy this condition, and then when right does triumph as it surely must, tho 'tis slow, earth will be what it was first intended to be, very good.

If the luxury living part of humanity will but see, and that soon, and be brothers and come across with a smile and play the game of life fair, it will be far better than to wait and be compelled to come across, for then they would not feel like smiling.

Let us each see our duty and do it.—*E. G. B., Bear Lake.*

Bolshevism does not mean "to destroy." It means "of the majority." So much destruction has resulted from the efforts of the majority to rule in Russia that to Americans at least the word has become almost synonomous with the term you have used. You have expressed a very fine thought, however. [illegible] almost total disregard of the Russian peasant's rights by the landed aristocracy classes prepared the ground for Bolshevism which flourishes now in that country. No doubt a large part of the blame for the current unrest in the United States can be laid to the door of such men as you describe. A little less struggling for the almighty dollar, and a little more regard for the welfare of our neighbors would work wonders in removing discontent and making the world a safer and happier place.—Editor.

Sense and Nonsense

MOSES' METHOD

One Moses Lee was up before the judge on a charge of cruelty to animals.

"' Deed I wasn't abusin' dat mule, jedge," the old man demurred.

"Did you not strike it was a club?"

"Yes, jedge."

"And do you not know that you can accomplish more with animals by speaking kindly to them and coaxing them?"

"Yes, jedge; but dis animal am diff'runt. He am so deef dat he can't heah me when I speaks to him in the usual way; so I has to communicate in de sign language."

CYCLONIC

Two Kansas farmers met at the county seat shortly after a cyclone had visited that neighborhood.

"Well, sir," said one of them, "she shook up things out my way, to be sure. By the way, Henry," he added, "did that new barn of yours get hurt any?"

"I can't say," replied the second farmer. "I haven't found it yet."

UNFAIR COMPETITION

From a pier a couple of Irishmen were fishing one afternoon. McIntyre wagered McGuire the sum of five dollars that he would catch the first fish; and the two continued earnestly to fish until late in the day.

It was a warm afternoon, and McGuire, overcome, by drowsiness, fell into the water, which accident aroused McIntyre, who had also been dozing.

Whereupon he jumped to his feet and called down to McGuire:

"See here, Mike; if you're goin' to dive afther thim, the bet's off!"

CONSISTENT PERFORMANCE

Shoeless, he climbed the stairs, opened the door of the room, entered and closed it after him without being detected. Just as he was about to get into bed his wife, half-aroused from slumber, turned and said:

"Is that you, Fido?"

The husband, telling the rest of the story, said:

"For once in my life I had presence of mind. I licked her hand."

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

THANKSGIVING PROCLAMATION

President Wilson has set aside Thursday, November, 27th as Thanksgiving Day. He has asked that we not only gather to give thanks but that we consecrate ourselves anew to the ideals which make for a true and lasting Democracy. The proclamation follows:

"By the President of the United States of Amercia.

"A proclamation:

"The season of the year has again arrived when the people of the United States are accustomed to unite in giving thanks to Almighty God for the blessings which He has conferred upon our country during the 12 months that have passed. A year ago our people poured out their hearts in praise and thanksgiving that through Divine aid the right was victorious and peace had come to the nations which had so courageously struggled in defense of human liberty and justice. Now that the stern task is ended and the fruits of achievement are ours, we look forward with confidence to the dawn of an era where the sacrifices of the nations will find recompense in a world at peace.

"But to attain the consummation of the great work to which the American people devoted their manhood and the vast resources of their country, they should, as they give thanks to God, reconsecrate themselves to those principles of right which triumphed through His merciful goodness. Our gratitude can find no more perfect expression than to bulwark with loyalty and patriotism those principles for which the free peoples of the earth fought and died.

"During the past year we have had much to make us grateful. In spite of the confusion in our economic life resulting from the war, we have prospered. Our harvests have been plentiful, and of our abundance we have been able to render succor to less favored nations. Our democracy remains unshaken in a world torn with political and social unrest. Our traditional ideals are still our guides in the path of progress and civilization.

"The great blessings vouchsafed to us for which we devoutly give thanks, should arouse us to a fuller sense of our duty to ourselves and to mankind to see to it that nothing we may do shall mar the completeness of the victory which we helped to win. No selfish purpose animated us in becoming participants in the world war, and with a like spirit of unselfishness we should strive to aid by our example and by our co-operation in realizing the enduring welfare of all peoples and in bringing into being a world ruled by friendship and good will.

"Therefore, I, Woodrow Wilson, president of the United States of America, hereby designate Thursday, the 27th day of November, for observance as a day of thanksgiving and prayer by my fellow countrymen, inviting them to cease on that day from their ordinary tasks and to unite in their homes and in their several places of worship in ascribing praise and thanksgiving to God the author of all blessings and the master of our destinies.

"In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done in the District of Columbia, this fifth day of November, in the year of Our Lord, one thousand nine hundred and nineteen, and of the indpendence of the United States the one hundred and forty-fourth.

"(Signed)

"WOODROW WILSON."

"Seal—By the president:

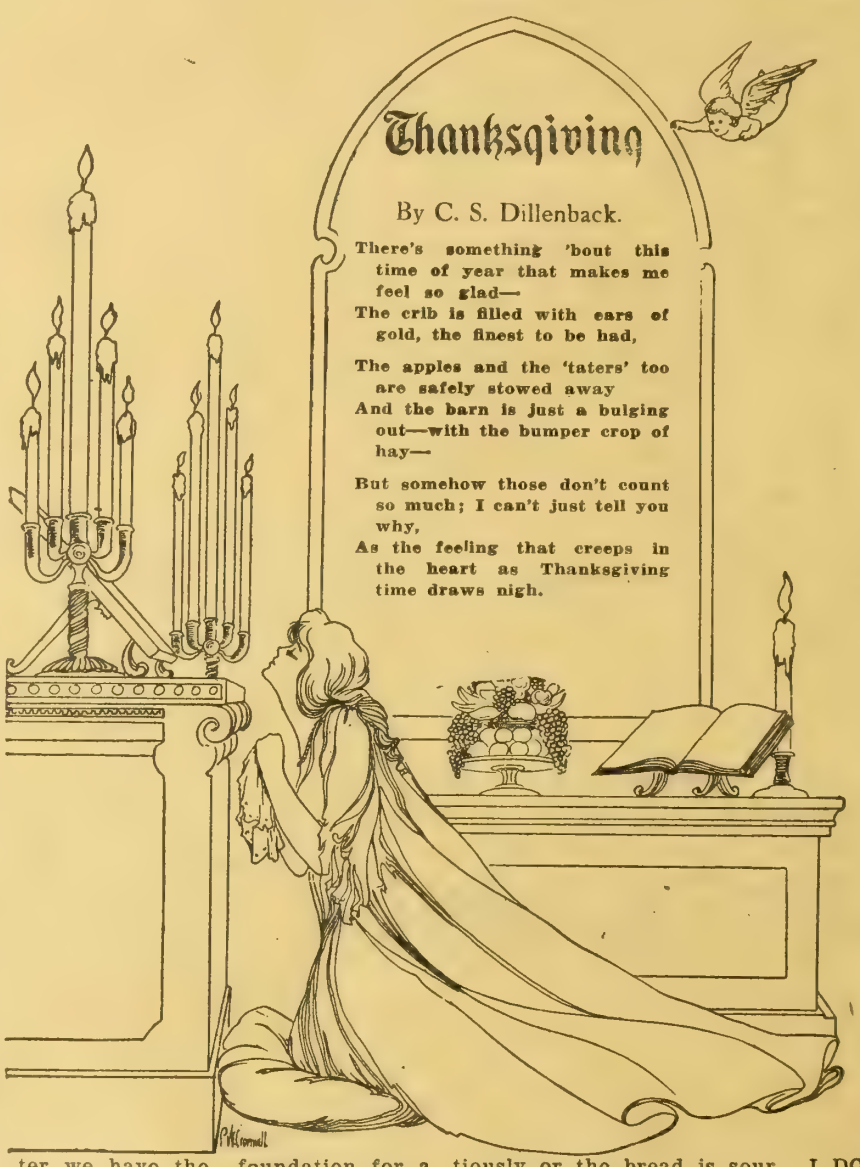
"Robert Lansing, secretary of state."

Home Cooking Department

(Conducted by Miss Elizabeth Matheson, of the Valley City Milling Co.)

There has been much cause for complaint through the country because of sour bread, some housewives claiming that it was the flour. Miss Matheson wants you to test out your yeast, as she has found this to be the biggest source of trouble.

The question of providing good bread is one of vital importance to every good housewife. Most of us feel if we have good bread and butter we have the foundation for a good meal, and if necessary we can do without much else beside that.



Thanksgiving
By C. S. Dillenback.
There's something 'bout this time of year that makes me feel so glad—
The crib is filled with ears of gold, the finest to be had,
The apples and the 'taters' too are safely stowed away
And the barn is just a bulging out—with the bumper crop of hay—
But somehow those don't count so much; I can't just tell you why,
As the feeling that creeps in the heart as Thanksgiving time draws nigh.

But bread-making, during the past few months has had problems of its own and many women, who have always made most excellent bread, are at a loss to know the reason of their failure.

It has been my experience that the reason does not lie primarily in the flour as many are inclined to think. I grant you that there is some poor flour upon the market—even some war flour has not yet been absorbed by the trade and due to the condition of the western wheat, some of the western millers are not making the same high grade flour they did before the war.

Millers, as well as housewives, are having their difficulties with flour this year. There seems to be an unusual condition for flour that tests out perfectly chemically and looks and feels all right, DOES NOT bake out well. And thus far no one seems able to make any explanations regarding the difficulty.

But frequently the trouble does not lie in the flour at all, but in the yeast. Now don't say "you can tell good yeast when you see it, and know that isn't so," for since the war even yeast seems to have changed!

The yeast will come up beautifully, and the bread will appear as usual until about the second kneading. Many women have found they get the bread into the tins or even as far as into the oven, when it refuses to rise and the result is a heavy, dark coarse grained loaf. So far as taste goes, it is all right, but it certainly is a big disappointment to have such a result after all the hard work entailed. Now that trouble is more than likely to be a yeast trouble. Sometimes by increasing the quantity of yeast used one's trouble is over, but that is something that must be done cautiously or the bread is sour. I DO think it necessary to use one and one-half cakes of yeast where we formerly used one.

Many women tell me they make a point of using two, but I would advise a little experimenting before adopting that rule. It may be found advisable to shorten the process of bread making, omitting one kneading. Your bread will not be so fine-grained as formerly but it will be edible at any rate. We formerly liked to give our bread an extra kneading to have an especially fine-grained loaf, but often these days that process is fatal. The yeast seems to lose all its strength, or vitality, and the bread refuses to rise again.

I wish I were able to give a positive remedy to each of you, but conditions are so variable that it is impossible. So the best I can do is to point out some of the causes. But I am thoroughly convinced that the chief reason is due not to the flour but to the variable quality of the yeast appearing upon the market.

Many have proved this to their own satisfaction by using a good home-made yeast and securing a good bread without making any change of flour.

Below are given two reliable recipes for the best of home made yeast.

If you have had difficulty and have been able to solve the problem otherwise, won't you tell us how you did it? For many women need your help and what seems to you but a little suggestion may be just what another woman needs sadly.

"Potato" Yeast

Soak four cakes of yeast for several hours in one pint of luke warm water, to which has been added 1-3 cup of sugar. Boil about 2 medium sized potatoes and mash thoroughly. Strain the softened yeast onto the potatoes and add enough freshly boiled water, which has been cooled to luke-warm, to make a quart. Add two level tablespoons full of salt and let stand at least 24 hours before using. Keep in a fruit jar in a cool place. This yeast must be used at least twice a week to insure success in baking.

Hop Yeast

Steep two rounded tablespoons full of compressed hops in a pint of water. Scald 3-4 cup of flour with this hot water. Boil six medium sized potatoes and mash thoroughly. Add to the scalded flour, and enough freshly boiled water to make one quart. When luke warm add two yeast cakes which have been thoroughly softened in a little luke warm water. Also add one 1-3 cup salt. Let stand 24 hours before using. When fresh, a cup will be necessary for a baking of 5 or 6 loaves, but after standing a few days 1-2 cup is sufficient for that much bread. A stronger fermentation is secured by using three yeast cakes. I frequently use 4 these days.

ELIZABETH MATHESON.

Winter Styles

2596—Girls' Dress.

Cut in 4 sizes: 4, 6, 8 and 10 years. Size 6 requires 2 3-4 yards of 36-inch material.

2681. Girl's Dress.

Cut in 4 sizes: 6, 8, 10 and 12 years. Size 12 will require 3 3-4 yards of 44-inch material. Price 10 cents.

2986-2865. A Pretty Gown.

Blouse 2986 Cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2865 Cut in 7 Sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A medium size requires 7 1-2 yards of 44-inch material. The width of skirt at lower edge, with plaits extended is 2 3-8 yards.

2996. Ladies' Coat.

Cut in 4 Sizes: Small, 32-34; Medium, 36-38; Large, 40-42; and Extra Large, 44-46 inches bust measure. Size Medium requires 4 5-8 yards of 54-inch material. Price 10 cents.

The Children's Hour

DEAR CHILDREN: All of our holidays have a special meaning; at New Year's we make good resolutions for the New Year that is before us, the Fourth of July spells a great big jolly picnic out of doors, with noise and fire works in the evening, but the holiday nearest us right now, the one we celebrate this week is that of Thanksgiving, and it is a good thing for all of us, no matter how small, to realize what a wonderful country we have and what our forefathers did for us when they braved the perils of the sea and life in an unknown land, to come to this country and begin life anew, where they could worship as they thought right. They were grateful for the new found home, and so we today should be grateful that we are privileged to live in a country that is free and we should be doubly thankful this year that the war is over and all our brothers are home again. To show that we are truly thankful, means that we do something for someone less fortunate than ourselves. In all the pleasure of family gatherings with heaps of good things to eat, let us not forget those who haven't so much, and share our good things and our blessings with them.

Such a lot of wonderful letters reached me during the past two weeks from children competing for the prizes for the best Thanksgiving stories. Some were very good indeed but were so long that they would have taken all our space so we could not print them, one was written by three little girls, but as they didn't sign their names, that one could not be counted, for of course prizes couldn't be awarded when we didn't know the names. The two which were awarded the prize of a Christmas package of cards, labels, tags, etc., are those written by Elsie Burnett, of Deford, and the pretty little fairy story of Thanksgiving by Florence Homes, of Ithaca. The first one is a story of the First Thanksgiving while the second is an original story. Both are printed below, and we have asked the printers to crowd in just as many others as they have space for.

I can't close my letter this week without telling you that a whole lot of you people are busy earning the Christmas prizes and one of the most popular prizes has been the pencil boxes, another of which I just shipped out today to Philip Machek, of Spring Lake. Affectionately yours.—LADDIE.

First Prize

Dear Laddie:—I have never written to you before, so would like to see my letter in print. I am 12 years old and in the 7th grade. My teacher is Mrs. Clarke. I have two brothers. I enjoy reading the Children's Hour page. My father owns 120 acres of land. We have two horses and two colts, six cows and about 60 hens. For pets we have two cats and two dogs. I am writing a story about Thanksgiving.

"The First Thanksgiving in America".

In 1620 a hundred Pilgrims sailed for America in the ship, Mayflower. It was a long, rough passage across the Atlantic. On November 11, 1620, they saw land. They landed on the northern extremity of Cape Cod bay.

The Pilgrims set to work to build the log cabins for their little settlement and called it Plymouth. During that winter half of the little band died of hunger and cold.

Some of the Indians were very friendly to the Pilgrims and taught them how to raise Indian corn; (they call it maize) and to fertilize their fields with fish.

A day was set to give thanks to God, which is now called Thanksgiving Day. The Pilgrims were to have a fine dinner. Some of the men went hunting and brought home a fat deer and some turkeys. The boys went fishing and caught a great abundance of fish. When the day came there was no good thing left out. The Pilgrims invited some friendly Indians to come to the feast. They had games of ball and foot races. The Indians could run very fast, but they did not know how to play ball very well. The Indians seemed just as happy as the Pilgrims. They gave thanks to God that they lived in a land of liberty, and that they had a home of their own.

This was the first Thanksgiving in America.—Elsie Burnett, Deford, Mich.

Second Prize

Dear Laddie:—I have never written to you so thought I would write now. I am 10 years old and am in the 6th grade. My teacher is Mrs. Mae Burch. For pets I have five cats, two bantam chickens. We have two little calves and one little colt. We have 160 acres of land and nine head of horses. I have three sisters and a brother-in-law. Well I am writing a story so I will have to finish it so I can send it with my letter.—Florence Kornes, Ithaca, Mich.

"The Thanksgiving Day"

Once upon a time there were two little girls, named Rachel and Gladys Copperhead. They were poor little children with no father nor mother. One day as they were looking for food in the forest they came to a little cottage which they entered. They found a little table set for two with a lot of good things to eat. They ate until they could hold no more. Then they went into the parlor. There in the corner was a little Pathe machine and a lot of little records, and in another corner was a little piano and a piano bench. Then the two girls noticed that the room had electric lights and looking on the table they saw a small note which read, "For Rachel and Gladys Copperhead; look at the calendar and live up to the day. From your fairy god-mother." Rachel looked at the calendar and saw it was Thanksgiving Day. All day the little girls were very thankful.

When the Turkey's on the Table

When the leaves have turned and fallen, leaving branches black and bare,
When the signs of coming winter can be noticed everywhere,
When the squirrels and the snow birds are a-jumpin' in the trees,
And your blood is all a-tinglin' in the frosty autumn breeze,
Then I love to wake up early on a bright Thanksgivin' morn
And to hear the horses whinnyin' to get their feed of corn;
But what I like the best of all when that day comes aroun'
Is the turkey on the table and the folks a-settin' roun'.

Oh! it's jolly fun when daddy takes his place up at the head.
And he smiles around at Jimmy and at Susan and at Ned;
Then he rubs his knife against the steel until it's like it's ground
Well, it kinder helps your appetite —that old, familiar sound—
There's a drumstick here for Jimmy and a piece of breast for Jane,
And some dressing here for mama —when you've finished come again.
I tell you what, it's hard to keep a fellow's spirits down
When the turkey's on the table and the folks are settin' roun'.

Good

"A Very Happy Thanksgiving"

It was turning cold and leaves on the trees were falling fast. A young couple who had just got married before winter had made themselves a home in the woods. Their house was made of huge logs hewn at each end so as to fit snugly. At one end of this house was a big fire-place. They had very little furniture. It consisted of a table, a bed, two chairs and a home-made cupboard.

The man's name was John, and one morning he said to his wife named Mary, "Say, Mary, I am going to go hunting for some wild turkey because tomorrow will be Thanksgiving." "Very well," said his wife, "since tomorrow will be Thanksgiving Day I will do some extra baking." When night came John came home with two wild turkeys, a rabbit and a nice large box. They both went to bed happy as they thought of the feast they were going to have the following day. They were awakened early the next morning by a faint cry at the door. "What is that noise?" said Mary. "I don't know," said John, "quite likely it's a squirrel." JuJst then they heard the noise again. "John, go to the door and see what it is." John went and opening the door saw a small basket with something all rolled up in it. He brought it in the house. "Let me see what's in it," said Mary. She took the cloth off the top of the basket to find a little baby. "See this paper all folded up," she said. She opened it and read as follows:

"Dear Mary and John:—

"I shall not tell you who gave you this little one. But I shall give it to you as a Thanksgiving gift."

It was a happy Thanksgiving for them, indeed.—Clark Kerr, Sterling Mich.

Dear Laddie:—This is the first time I have written to you and hope this letter will be in print. I live on an 100-acre farm. We have ten head of cattle, eight of horses, five head of sheep, 116 chickens and 144 geese. I have three pets, two cats and a dog. I live three and one-half miles northwest of Sterling. I attend High School at that place and am in the 10th grade, and am 14 years old. In intend to finish High School and go to the M. A. C. at Lansing for a while then return home and farm. I had a small [illegible] It was about 35 square feet and I had 18 bushels. Well I must close as my letter is getting long. My father gets the M[illegible] will write [illegible] story this week [illegible] of the week.—Clark Kerr.

A Thanksgiving Story

[illegible] is the last Thursday in November. It is the day on which to give thanks. The Pilgrims had a thanksgiving feast in the olden times and invited the Indians to share it with them. That was the first Thanksgiving Day. They had wild turkey and fish and pumpkin pie.

When the Pilgrims came over to our country there was snow on the ground. They had to live in log houses, and when spring came many of them had died. Some of the friendly Indians gave them corn to plant and told them how to plant it. Some of the Indians were not very friendly so the Pilgrims had to carry their guns to church when they went.—Mildred Schlemmer, Spencer, Mich.

Dear Laddie:—I am going to write a few lines and let you know I got the pretty gift you sent me and I thank you for it. I think it is pretty. My little sister, Margaret and I are trying to get enough subscribers so we can get a camera and I hope we succeed. I am writing this letter in school. My teacher is Miss Zina Goodrich and I like her. This year I am in the 8th grade. There are 18 pupils in my room and four grades, the 6th, 8th, 9th and 10th. There are eight pupils in my grade. It is getting colder and it snowed yesterday here so the ground was white and looked pretty. The other day I counted the weeks till Christmas and it was only seven so it will soon come and I will be glad. We are building a new house and expect to move in by the last of this week. We had a Hallowe'en program at the hall. I was in two songs, a drill and a play called "The Lost Dog." I must close my letter and hope to see it in the M. B. F.—Dora Peterson, Bitely, Mich.

Dear Laddie:—I read the Children's Hour and like it very much. I wish some girl or boy would write to me and tell me how their school is coming on. Our teacher wishes us to and see what other schools are doing. I have three brothers and two sisters. I am 12 years old and in the 7th grade with my sister who is 11 years; her name is Frances. I hope this will escape the wastepaper basket. It is getting long so I will say goodbye.—Isabel Stevens, Kalamazoo.

How to Make Pincers

HAVE the boys of today forgotten how to whittle, or have they never learned? I often wonder about this fact, for the boy with the jack-knife does not seem to be so much in evidence as when I was a youngster. How I did prize my first knife! And I tried to have it always sharp, too. Many were the hours that I spent just whittling with a sharp knife on a piece of white pine. I did not always make something, either, for there seemed a deep interest in just making nice smooth surfaces on that piece of pine.

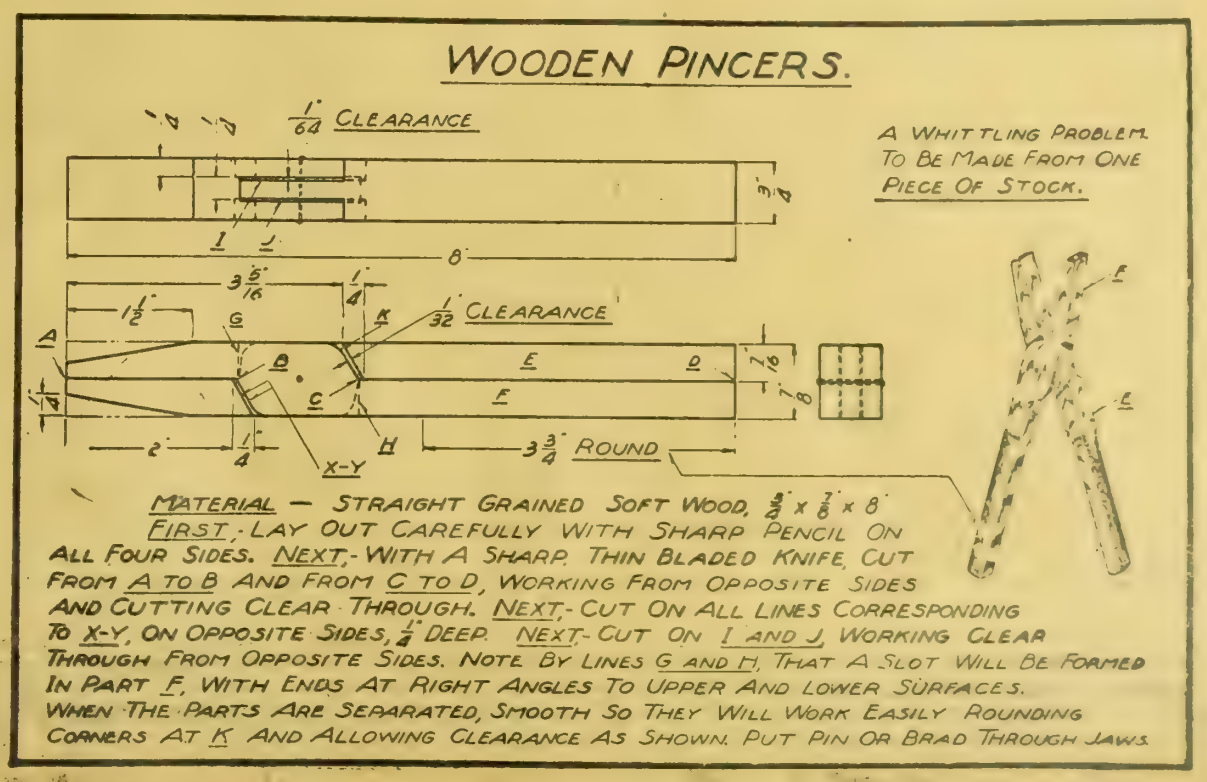
The shop of an old shoemaker in our little town was a place of much interest to me. He was an expert in whittling, or perhaps in his case I should use the word CARVING, for he fashioned all kinds of animals from just a piece of wood by the aid of a knife. He really was an artist for his horses looked just exactly like real horses so far as their shape was concerned. I never could accomplish what he did, but I made chains and various other objects that were equally interesting to me.

This article presents a problem that I have called a whittling exercise. Not only should you derive much pleasure in fashioning it, but it will serve a useful purpose when it is finished. I have called it a pair of wooden pincers or tongs. You will be able to think up uses for it, but I will suggest one for you. A great many boys are interested in photography and are able to do their own developing and finishing. A small pair of tongs is a convenient tool to have for this work, but a metal pair is easily affected by the chemicals used. This is not true in the case of the wooden pair.

A piece of pine, straight grained, is the best material for this problem. Reduce it to the dimensions indicated on the drawing, after which carefully lay out the outline of the object on the pine, using a sharp pointed lead pencil. The layout should be made on all four sides. The top and bottom will, therefore, have the same layout and the two sides will have the same.

With a good sharp knife, one having a thin blade preferred, cut from A to B and from C to D, working very carefully and from opposite sides. Continue until the two cuts meet. Next, cut on all lines corresponding to X-Y going only one-quarter of an inch deep and working from opposite sides. Allow clearance as shown and very carefully round all corners corresponding to K. Next start cutting on lines I and J, working from opposite sides and cutting clear through. My this time you will begin to see what the object of this cutting is and can proceed with a better understanding. Continue the cutting until part E is separated from part F, that is, so they will operate like a pair of tongs. Of course, there will be some trimming and smoothing to be done before the tongs will work properly and this will be evident to you as the work progresses. Round the upper parts of the handles to suit. If longer handles are desired, the original piece of stock should, of course, be longer.

To the average boy it probably would seem impossible to cut out a problem of this kind from a single piece of wood, but after following the drawing and directions carefully, you will be convinced that it can be done. All it requires besides the material and tools is patience and careful work.



WOODEN PINCERS.
A WHITTLING PROBLEM. TO BE MADE FROM ONE PIECE OF STOCK.
1/64 CLEARANCE
1/32 CLEARANCE
ROUND
X-Y
MATERIAL — STRAIGHT GRAINED SOFT WOOD, 3/4 x 7/8 x 8
FIRST, LAY OUT CAREFULLY WITH SHARP PENCIL ON ALL FOUR SIDES. NEXT, WITH A SHARP THIN BLADED KNIFE, CUT FROM A TO B AND FROM C TO D, WORKING FROM OPPOSITE SIDES AND CUTTING CLEAR THROUGH. NEXT, CUT ON ALL LINES CORRESPONDING TO X-Y, ON OPPOSITE SIDES, 1/4" DEEP. NEXT, CUT ON I AND J, WORKING CLEAR THROUGH FROM OPPOSITE SIDES. NOTE BY LINES G AND H, THAT A SLOT WILL BE FORMED IN PART F, WITH ENDS AT RIGHT ANGLES TO UPPER AND LOWER SURFACES. WHEN THE PARTS ARE SEPARATED, SMOOTH SO THEY WILL WORK EASILY ROUNDING CORNERS AT K AND ALLOWING CLEARANCE AS SHOWN. PUT PIN OR BRAD THROUGH JAWS.

Cow HEALTH is as Important as Good Feeding

When a cow's milk yield falls off, it is more likely to be a question of health than of food. Over-feeding will only make matters worse. Milk cows are subject to impairment of digestive and genital organs and the milk production is immediately reduced.

These vital organs can be toned up and strengthened by feeding KOW-KURE, the great cow medicine. This remedy is also used in treating such ailments as Abortion, Barrenness, Retained Afterbirth, Scouring, Bunches and Milk Fever. The best dairymen keep it constantly on hand. Sold by feed dealers and druggists; 60c and $1.20.

Send for valuable free treatise on cow diseases, "THE HOME COW DOCTOR".

KOW-KURE

Sold By Druggists and Feed Dealers

A Guaranteed Remedy for

Contagious ABORTION

Are you letting this scourge cost you calves, milk and cows? If your cows are affected, stamp it out.

ABORNO

the guaranteed treatment for Abortion, has been successful on thousands of cows. Give it a chance in your herd. Easily administered by hypodermic syringe—acts rapidly on germs in the blood. Can't harm the cow. Write for our booklet and guarantee.
